THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXVIII. SEVENTH-DAY, NINTH MONTH 16, 1854. NO. 1.

PUBLISHED WEEKLY.

Price two dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 50 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

For "The Friend."

JAQUELINE PASCAL.

The history of the French community of Port-Royal is well known. Its members fell under condemnation and persecution because of their partiality for the doctrines of Jansenius, which, in truth, savoured rather of Protestantism than Romanism. Two successive popes had condemned them, and in the "Constitution," as it was called, pronouncing this judgment, had specified five propositions as heretical.

In 1661, a form of submission was prepared by ecclesiastical authority, for the signatures of the Port-Royalists, of whom Jaqueline Pascal was still one. It was in the following terms:—"I sincerely submit to the Constitution of Pope Innocent X., of May 31, 1653, according to its true sense, as defined by the Constitution of our Holy Father, Pope Alexander VII., of October 16, 1656. I acknowledge myself bound in conscience to obey this Constitution, and I condemn from my heart, and with my mouth, the doctrines of the five propositions of Cornelius Jansenius, which are contained in the book entitled 'Augustinus,' which both these popes and the bishops have condemned; and this doctrine is not of St. Augustine, which Jansenius has falsely set forth; but contrary to the true sense of the holy doctor." The Port-Royalists could not sign this, because "they did not believe the propositions were in Jansenius, and they did not believe that Jansenius had misrepresented St. Augustine" . . . . . "the work being in Latin, they could not declare what its contents might be, for they had not even read it; they knew however that no one had pointed out the propositions, as condemned, in the work itself."

A compromise was suggested, and it was eagerly caught at by some leading men of the Jansenist party. "Arnauld and Nicole, for the sake of the nuns, were in favour of a signature to be given with certain reservations, but Blaise Pascal, though confined to his bed by illness, determined at all hazards to abide by the truth. He felt convinced that the Pope, by condemning the work of Jansenius, not only proved that he misunderstood its meaning, but virtually condemned the doctrine of justification by faith and salvation by grace, which the apostles taught, and for which the primitive church and St. Augustine had contended. It grieved him, he said, to find himself in a strait between God and the Pope, but he could not sanction the sacrifice of truth to expediency, knowing such a course to be wrong, and believing it to be useless. Arnauld and Nicole urged that it was disrespectful to the Pope and the bishops to assert that they had condemned the doctrines of grace, as well as prejudicial to the doctrines themselves, to have it generally known that they were given up by the great mass of ecclesiastics in authority, and only defended by a small clique. But Pascal was stubborn in his unconscious Protestantism, and would not admit any consideration as superior to the duty of maintaining God's truth against all odds. He did not object however to the nuns' signing the modified formulary, provided they made a distinct exception in favour of the meaning of Jansenius, and of the doctrines of grace. The last conference was held in his chamber, when the majority of those present, yielding to the influence of Arnauld and Nicole, voted for the signature. 'Seeing which,' says Margaret Perier, 'M. Pascal, who loved truth more than all things else, and who, in spite of his weakness, had spoken with great earnestness in order to impress his own convictions upon the others, was so overcome with grief that he became suddenly faint, and lost both voice and consciousness. Great astonishment ensued, and remedies were eagerly applied, after which the gentlemen all went away, except M. de Roanner and M. Domat (Pascal's most intimate friends), and Etienne Perier. When Pascal had quite recovered his senses, Madame Perier asked him what had occasioned the swoon? He replied, when I beheld so many persons to whom I believe that God has made known his truth, and who ought to be its defenders, thus giving way, I confess to you such a feeling of distress came over me, that I could not bear it, nor keep myself from fainting.

In this conjuncture, Jacqueline Pascal manifested the same intrepid disposition as her brother. Indeed, the women of Port-Royal, as a general thing, displayed more decision and courage than the men. Witness the expressions with which Angélique, though bowed under the weight of age and infirmity, sustained the drooping spirits of the desolate nuns. 'What! do I see you in tears? My children, what do those tears mean? Have you no faith? Are you afraid of the wrath of men? They are but flies, who spread their wings and make a little noise. You hope in God, how then can you be alarmed? Believe me, if we fear him, all will go well.' Or her reply to the Dutchess de Luynes, who was congratulating her on the possession of so much courage, 'Madame, so long as God continues to be God, I shall hope in Him and not be afraid.'" The nuns at length "submitted to the decision of their confessors, and signed the qualified declaration." Even Jaqueline, not yet prepared to throw off the yoke of Romish bondage, after a long struggle, added her signature under protest. Her grief was such that her health failed, and in less than four months after this forced compliance, she was in the grave. Before signing, she sent a full and able exposition of her objections to Arnauld, which it is the object of this narrative to introduce to the notice of the reader.

(To be continued.)

A person who undertakes to raise himself by scandalizing others, might as well sit down on a wheelbarrow and undertake to wheel himself.

From "Household Words."

PEATAL AGGRESSION.

Once upon a time, no one can say how long ago, there were, if wise men say true, broad, shining lakes and smaller ponds in the middle of Ireland, where now there are no such lakes at all. The middle of Ireland is a mass of limestone, with heights and hollows, which vary its surface in all manner of ways, from sea to sea; from the Irish Channel to the Atlantic. How this stone foundation is covered now, we may see by and by. Let us first look at it under its ancient aspect, as far as our very scanty knowledge enables us to do so.

First—some thousands of years ago—we see from such a point of view as Kildare, ridge behind ridge of hills retiring to the north-west; and on these hills, thick forests of oaks, beeches, elms, ash, and fir. These woods are terrible places for wolves. In the vales there are fresh green pastures lying between the lakes and ponds; and here cattle are seen grazing by day, and swine come out from the woods at evening, to pass the night near the dwellings of men. These dwellings are a sort of box, open at one side. They are made of oak logs or thick planks; with the roof flat, and a sort of shelf laid all through the middle, dividing the house of nine feet high into two rooms, each four feet high. Nothing being known of nails as yet, grooves and holes are made with a stone chisel; and the pieces of wood are fitted together, so as to make a strong box of twelve feet square, where the people may sleep, and find shelter in bad weather. It is not a place for cooking; and that is the reason why we see a little path, paved with stones, leading away from the dwelling to some place behind, where a smoke is rising from the ground. This place is the family hearth-stone, made of freestone slabs, nicely laid. There are logs of wood burning; and in the ashes are roasting, if we are not mistaken, acorns, and chesnuts, and roots. And what a quantity of nut-shells one may see scattered about! It is late autumn, and the people are in a hurry, evidently, to get on with that strange work that they are doing in the middle of the water. What *are* they about, those strange little men, with their very small heads, and their dress of skins of beasts merely strapped about them, and their mallets—mere stones, with a wooden handle run through any accidental hole? Look at those two getting into their boat. Can one call it a boat—a mere skin stretched over a frame? Off they drift. And what for? Are they beavers making a dam? They are driving in stockades, and plastering them with mud. They are certainly making an island: and there is a second artificial island! and far away, in the middle of that river to the north, there is a third. When they have made their circle of piles, they bale out the water and put in stones, and wood, and earth, till they have an island high and dry. Very odd! when they have hills and green pastures ready made to their hands. Winter is coming, and they are afraid of the wolves by night, and, perhaps, of foes by day. See how they settle themselves, huddled together on the island, with their boats hung up to dry on the stockades!

What now? Music? A procession? It is

either a wedding, or a royal feast, or something of that kind. What a glittering of gold! Look at the diadems of gold, and the curious round plates as large as the palms of my hands, fitting close to the cheek-bones. It is a becoming head-dress, is it not? And so is the circle—like a twisted cord—of gold round the men's heads, and round their waists. Those ornaments, like cymbals, hung round their necks, and the heavy finger-rings of the same shape, and the neck-plates are all very well to show how much gold people can hang about them; but they are not very pretty. But you see these people have got hold of at least one metal. Of more than one? True! That man has a sword—a bronze sword—just like the old Greek. Their bronze will not bear an edge that will split or saw wood, I suppose; but it may give a very ugly thrust in a hand-to-hand fight. Has that little child got one? He seems to be flourishing a sword about. No; it is only a toy—a wooden sword; but it is just like the bronze one, at this distance. Now, they are going to feast. There are the roasted animals steaming away! To think that the smell should be wafted to our nostrils across this great space of centuries! What a pity they have no salt, though! They do not seem to miss it. They might find some, not so very far off, if they had any longing for it. Hark! how the wild beasts howl from the forest, as the scent of the feast is borne on the evening breeze, and the fires from the islands shine broad and red over the surface of the waters. See by that light how the revellers are making a clearance, throwing the bones and refuse into the water over the stockade. That is one convenience, to be sure, of living on an artificial island. But I should be afraid that something useful—tools, arms, utensils, even people—would slip over now and then, and go to the bottom.

Look at that long string of wild fowl winging their way to the south, showing clear against the last red light of the western sky. Listen to the bustle of the wild swans in the sedgy creeks of the lake. Is that the raven's night cry, ringing hard, as from a solid firmament? Peep into the covert, and see what is doing there. Here are deer crouched down in the withering fern. I wonder they can sleep, with foes so near. What shakes the ground, as with the tread of Goliath? It is not a giant, with a pine-tree for his staff, that is coming from between the hills, but, as it were, a branching oak moving towards the water? . . . . . What a creature! The elk of fable, beside which the cattle show like dogs, and the young fawns like mice. As it bends to the brink, what a shadow it casts far into the lake; and how the fishing-boats draw off to the further shore! Something humbler is it that you want me to see—something very small and mean? Is it the snake under the fallen leaves, or, . . . It is under the water, you say. Is it the salmon, come up from the sea, lurking in its sandy cove under the shadow of the bank? Is it . . . Nothing of that kind, you say, but a very small thing, with a very small movement, which is destined to outlast and to bury all the living creatures we have seen, with their posterity, and even these oaks of a thousand years, rooted firm in the everlasting hills. And what is this very small thing? That little moss?—that tiny plant which the child with the wooden sword could pluck up with his finger and thumb? O yes; we will watch it—for two or three thousand years, if you please.

Small and silent as it is, I see it does grow and work diligently. Here is where it began—here, where this water-hen's nest stopped the flow of this little drip into the cove. Here sprang the moss; and see how its filaments are now spread among all the vegetation on the bank, and how it is stealing out all along the margin of the lake, even covering its bottom for some way in. Already it intercepts and soaks up the smaller tributaries that feed the lake. Already it holds, as in a sponge, the water of the lake itself. By absorbing its supplies, and at the same time encroaching upon its bed, it is actually starving the lake. See, in half a century, it is perceptibly smaller; and, instead of the sandy and pebbly beach, which was so pretty and convenient, there is now a margin of wet sponge, which it is not easy to cross. There is a natural bridge—that fallen tree: it was the little moss that gave us that bridge. That yew stood firm, a few years since. The soaking of the sour water about its roots loosened them, and down it sank by its own weight. Yes—you promised me that the moss should bury everything; and I see that it is creeping about the fallen yew—growing up among its branches. At the rate of an inch and a half a year, is it growing? Then the poor yew will be soon covered up—away from human sight for ever. Not so? Are we to see it again? Well, time will show. But I see no oaks down, as you promised. Their turn is by and by, is it? Ay, I see that they are rooted differently from the firs and other inferior trees; they stand rooted each in its own hillock of gravel and firm soil: they may resist the moss for a good while.

But what is to become of this whole district, if the moss goes on unchecked? It is higher now than the surface of the lake. It is rising in the middle, and sending back the waters where there is no channel for them; so that they soak and loosen the soil far and wide. The cushion is climbing the stockade, and will quite cover the island soon; and nobody will resist this, for the place has long been deserted—there being no approach to it now but over a shaking bog, which is neither land nor water. The live cushion is creeping over the green sward where the cattle used to graze. Some of those strange old cattle, unwilling to give up their pasture, venture to pick their meals there still. There! there goes one poor animal, down to death! She was deceived by the greenness of that knoll, and, committing her weight to it, down she went—the deeper, the more she struggled in the slough, till the black mud closed over her horns. I am certain I saw that heavy oak shake. See! down it goes, with a snap and crash, and a plunging sound as it buries itself in the wet moss. Its roots are still firm, you see: it was the trunk that snapped, and now it lies along on its bed of sponge, ten feet thick. Now that one has gone, more will quickly follow. I see now how the little moss may lay low, and bury the mighty forest.

What now? What is all this? The little moss grows very greedy and impatient. What a slide there was! Half an acre of parasitic soil pushing on over what was once the track of the royal boats; and from the cracks and chasms a bubbling up of hideous black mud, rolling on and actually surrounding that old house that we saw building. The bog had long ago begun to grow up about it, but now it is to be buried in this pitchy stream of decayed vegetation. See how the mud fills up the house, and how it flows on to the hearthstone, and covers up everything, leaving only a level black surface, on which vegetation will soon again sprout and spread.

A century passes away, and the house is covered deep; and the oak is hidden, both the scraggy root and the fallen trunk. The mossy surface is strong enough now to bear the tread of small animals; and some one of them has dropped an acorn in a favourable spot, where it sprout and grows; so that an oak strikes root on a level considerably higher than the old one, even directly over it. There is a new layer of firs, and more are tumbled down from their places on the hills. There is a new race of people in the land, who do not suspect that there was ever a lake occupying the space usurped by the ambitious and devouring moss. These people wear steel arms and curious dresses, and have come from abroad, and those unaccountable round towers which appear here and there must, one would think, have been built by them. Then comes in another race, with iron armour and utensils, and new wars and ways. How generation after generation, race after race, comes to the edge of the moss, and tries to set foot on it, and draws back, because it is a treacherous slough! And how they pursue their enemies to the shelter of the forest, and slay them and the wolves together! And how, when this is found dangerous and troublesome, they fell whole acres of the woodland, to destroy the harbourage of man and beast; and the moss grows and spreads, and rises all the while, to receive whatever falls from the hills, and swallow up all that lies at their base! Ah! there is to be a new prey for the cruel moss in consequence of this felling of the woodland. Fugitives, outlaws, rebels, must have a place of refuge. The limestone hills are laid bare, and a rough grass, which affords no shelter, is soon the only covering of the ridges. See how the hunted fugitives learn by necessity to walk where wolf and wild-cat would not venture! First, they shoe themselves with light boards, or plates of wicker-work, and go fearfully into the swamp; but soon they learn how to pick their way from clump to clump of moss and heath, and can go best barefoot. They find out dry spots where they can hide their heads and kindle a sod to warm themselves, secure from being followed by armed men whose weight would sink them. One has ventured, and presently sunk, stifled in black mud: there sticks his body, without other burial. Another has tried, and perished at once—drowned in dark-brown water. Day by day, for scores of years, must their bones dissolve in the juice of the bog—the skull melting and evaporating, and the brain and muscle shrivelling up, and the skin turning to leather in this natural tanpit. The antique cattle are lying far below, the modern men near the surface,—the hazel with its nuts, the oak with its acorns, the yews and firs in successive layers, all tanning together in this mighty tanpit of four thousand acres, without break.

And what is to be the end of it? Is the moss to go on growing, till it has swallowed up all Ireland? Oh no; for a wall is enough to stop its growth; and there are strong rivers to stop it in more directions than one. This bog will not outgrow its four thousand acres; and indeed, if that space does not satisfy the ambition of the little moss, it is hard to say what would. The change is sad and dreary enough. Instead of forests, we see hills, carpeted, it is true, with oats and grass, but without a single tree. We see, instead of gleaming lakes and bright alluvions between, a dingy, brown expanse, tufted with hillocks, and . . . But what is this? What are these people doing?

What are they doing? They are visiting the little moss with retribution. It is very late, after thousands of years: but the hour of retribution has come at last. There are plenty of people engaged in undoing the work of so many ages, and beginning a new era on this spot which has seen so many changes. Which corner shall we look at first?

(To be concluded.)

EXTRACT FROM LETTERS OF MARY JANE GRAHAM.

It seems to me that all the Lord's dealings with his redeemed children speak this language, "Cease ye from man." Put not your trust in any earthly comforter. Lean not on any arm but the arm of your Beloved. "For the hearts of the people" of this world "are full of idols." Self is the great idol that is loved and honoured more than God. Then comes a multitude of lesser things, all subservient to this one; and if some little corner in the heart is reserved for God, or if the shadow of a throne is set up, where he may sit on solemn occasions, at the pleasure of the great idol, then they think all is going on well; and God loved as much as He could reasonably expect to be loved by creatures who have such a press of business on their hands. But, my beloved friend, we may not do so. God has purchased us for his own inheritance; will have our whole heart and our whole dependence; and though we must rejoice in the friends he gives us, yet we must not think we cannot do without them, or that we should go on better if we had more of their help. Christ is all sufficient, and teaches, comforts, and reproves in his own time and way, and by his own means, without any need of our direction. In looking back to every event of my life, since I have known something of the grace of God, I find that there never has been anything on which I very much depended, but He has straightway removed or embittered that thing, or in some way made it useless to me, till I returned to place my whole dependence on Him. But let us not accuse our dearest Lord of acting unkindly towards us in sending these disappointments; for he only takes away other helps and props to make room for Himself. He loves us too well to suffer any rival in our affections. I have read your letter over and over again, and scarcely know how to answer it, or what to make of it. Oh, that you had some better counsellor than I! for I know not how to advise you. I fear lest you should think me strict and gloomy, if I tell you all I think; but I will tell you since you desire it; and I know that God is able and willing, too, to give you joys so much superior to every worldly amusement, that you will wonder you could ever think them worth a thought. I must say then, that the world and worldly amusements appear to me inconsistent with the character of a real Christian; and that we never can enjoy happy converse with God till we give them up. The Christian is described in the Scriptures, as the "temple of the living God." Now, where the Holy One takes up his abode, surely that heart must be sanctified and set apart from every common use, and devoted to his service. But can God and the world reign in the same heart? or, as it were, reign by turns? Shall we admit the Lord of Glory in the morning, and shut him out in the evening, while we are going to a place of amusement? for we may be well assured He will not go with us there. The spirit of the world, which reigns in such places, is quite opposite to His spirit; and "the friendship of the world," which is there sought, is enmity with God. I know this would be called uncharitable; but I do not wish to be more charitable than the Bible. And surely experience proves it to be true; for go into any fashionable assembly whatever, and there begin to speak of those things of which we ought to talk, "when we are sitting in the house, and when we walk by the way, and when we lie down and when we rise up," and see if politeness itself can suppress a smile at your strange and unwarrantable impertinence in forcing the attention of the company to subjects which they are met for the very purpose of forgetting. No, my dear young friend, that cannot be a proper place for a Christian, where religion is the thing that must not be named; and where even something in our hearts will tell us that such subjects are out of place. Neither can you say, your own heart may be as well employed there as elsewhere; for the very sweetest meditation on heavenly things (if we could thus meditate in the midst of vanity) would be spoiled by the thought that there were none who enjoyed like communion with ourselves; and we should soon have, like Joseph, to "seek a place to weep in," to weep over our companions and friends, who are thus "feeding on ashes," and delighting themselves in things which cannot profit.

(To be continued.)

God Pruneth the Vine of our Affections.

A vine, which is one of the most fruitful of trees, (made use of by God to compare the Christian unto,) if it be left to its natural growth, unregarded and unpruned, shoots forth into many superfluous branches and stems, and spendeth its most generous strength that way, and so becometh weak and fruitless. If God should leave the best Christian to the vicious exorbitancies of his own heart and affections, and not curb and prune them, and retrench the extravagancy of his desires, his strength would be spent on that which profiteth not, and he would soon grow barren and useless. There is need that, both by his returning grace, he reduce and limit our desires; and that by the sharp knife of affliction, he cut short and check their excesses. When mine heart doth irregularly run after vanity, let the smart of thy hand correct my wandering, and tame the wildness of my affections. It is better I should bleed by thy pruning hook, than be cut down by the axe as withered and fruitless, and cast into the burning! —*Spiritual Bee.*

A Case of Conscience.

Some twelve years ago, a wagon-shop, belonging to a Mr. Kline, at Eaton, Ohio, was burned to the ground. About the same time, a building at West Alexandria was likewise consumed by fire. None of the conjectures at the time concerning the origin of the fires were correct; the real originator was not suspected. Twelve years had elapsed, and the disasters mentioned had been almost forgotten. Last week, says the Eaton Register, came a weary footman from Pennsylvania, leaning on a staff, and entered the house of Mr. Kline. Time and trouble had brought so great a change in the man's appearance, that, though formerly known to his entertainer, he was not recognized until he had told his name. He was the man who had set fire to both the aforementioned buildings! His object had been plunder, but he says his nefarious enterprise resulted in nothing but disappointment. Peace nor enjoyment has he known since the commission of those crimes. Afflicted by the pangs of a guilty conscience, and feeling that he could not die in peace without confessing and atoning for his crimes, he came for the latter purpose. He confessed his guilt, and expressed his equal willingness to receive either punishment or forgiveness, whichever should be preferred by those whom he had injured. It was deemed more noble to forgive than to chastise, and the penitent was permitted to "go, and sin no more." The unhappy man then proceeded to West Alexandria, and was there told that the man whom he sought, and whose building he had fired, had moved to Indiana. The penitent then resumed his pilgrimage in that direction.—*Daily paper.*

The man who thinks before he speaks, stands *above* his antagonist.

For "The Friend."

THE CROSS OF CHRIST.

The Lord appeared inwardly to console David's soul, that waited for his help, and to deliver it from the temptations and afflictions that were ready to overwhelm it, and gave him security and peace. Therefore he says, "The Lord hath established my going;" that is, fixed his mind in righteousness. Before, every step he took, bemired him, and he was scarce able to go without falling. Temptations assailed him on all hands; but he waited patiently upon God; his mind retired, watchful and intent to his law and Spirit; and he felt the Lord incline to him. His needy and sensible cry entered Heaven, and prevailed; then came rescue and deliverance, (in God's time, not David's,) strength to go through his exercises, and surmount all his troubles. For which he tells us, "A new song was put into his mouth, even praise to our God." It was a song of God's making and putting, and not his own.

Another time we have him crying thus: "As the heart panteth after the water-brooks, so panteth my soul after thee, O God. My soul thirsteth for God, for the living God; when shall I come and appear before him?" This goes beyond formality, and can be tied to no lesson. We may by this see, that true worship is an inward work; the soul must be touched and raised in heavenly desires, by the heavenly Spirit, and that the true worship is in God's presence. "When shall I come and appear." Not in the temple, nor with outward sacrifices, but before God in his presence. The souls of true worshippers see God, make their appearance before him; and for this they wait, they pant, they thirst. O how is the greater part of Christendom degenerated from David's example! No wonder that this good man tells us, "truly, my soul waiteth upon God;" and then gives it in charge to his soul so to do; "O my soul, wait thou upon God; for my expectation is from him." As if he said, none else can prepare my heart, or supply my wants; so that my expectation is not from my own voluntary performances, or the bodily worship I can give him; they are of no value: they can neither help me, nor please him. But I wait upon him for strength and power to present myself so before him, as may be most pleasing to him; for he that prepares the sacrifice, will certainly accept it. In two verses he repeats it thrice, "I wait for the Lord, my soul doth wait. My soul waiteth for the Lord, more than they that watch for the morning." Yea, so intently, and with such unweariedness of soul, that he says in one place, "Mine eyes fail, while I wait for my God." He was not contented with so many prayers, such a set worship, or a limited repetition. He leaves not till he finds the Lord and the comforts of his presence; which brings the answer of love and peace to his soul. Nor was this his practice only, as a man more than ordinarily inspired; for he speaks of it as the way of worship amongst the true people of God, the Spiritual Israel, the circumcision in heart of that day. "Behold as the eyes of servants look to the hand of their masters, and as the eyes of a maiden unto the hand of her mistress, so our eyes wait upon the Lord our God, until he have mercy upon us." In another place, "Our soul waiteth for the Lord, he is our help and shield. I will wait upon thy name, for it is good before thy saints." It was in request with the truly godly of that day, and the way by which they came to enjoy God, and worship him acceptably.

From his own experience of the benefit of waiting upon God, and the saints' practice of those times, he recommends it to others. "Wait upon the Lord, be of good courage, and he shall

strengthen thy heart: wait, I say, upon the Lord." Wait in faith and patience, and he will come to save thee. Again, "Rest in the Lord, and wait patiently upon him." Cast thyself upon him; be contented; and wait for him to help thee in thy wants: thou canst not think how near he is to help those that wait upon him. O try, and have faith. Yet, again, he bids us "wait upon the Lord, and keep his way." Behold the reason so few profit! they are out of his way, and such can never wait rightly upon him. Great reason had David for what he said, who had with so much comfort and advantage met the Lord in his blessed way.

The Prophet Isaiah tells us, that though the chastisements of the Lord were sore upon the people for their backslidings, yet in the way of his judgments, in the way of his rebukes and displeasure, they waited for him, and the desire of their soul (that is the great point) was to his name, and the remembrance of him. They were contented to be chid and chastised, for they had sinned; and the knowledge of him in this way, way very desirable to them. But did he not come at last, and that in mercy, too? Yes he did, and they knew him when he came; a doctrine the brutish world knows not. "Lo, this is our God, we have waited for him, and he will save us." O blessed enjoyment! O precious confidence! Here was a waiting in faith which prevailed. All worship, not in faith, is fruitless to the worshipper, as well as displeasing to God. This faith is the gift of God, and the nature of it is to purify the heart, and give such as truly believe "victory over the world." But they go on: "We have waited for him, we will be glad, and rejoice in his salvation." The Prophet adds: "Blessed are all they that wait upon God." And why? "For they that wait upon the Lord, shall renew their strength;" they shall never faint, never be weary. The encouragement is great. O hear him once more: "For since the beginning of the world, men have not heard, nor perceived by the ear, neither hath the eye seen, O God! besides thee, what he hath prepared for him that waiteth for him." Behold the inward life and joy of the righteous, the true worshippers! those whose Spirits bowed to the appearance of God's Spirit in them, leaving and forsaking all that it appeared against, and embracing whatever it led them to.

New Jersey, Eighth mo., 1854.

There is the same difference between people now as there was between the Egyptians and Israel of old. Multitudes are buried alive under a cloud of thick darkness; but all the Lord's people have light in their dwellings. Ah! how many great and fair houses are there without the heavenly inhabitant! It might be written upon their doors, "*God is not here*;" and when you go in you may be sure of it, for there is neither *peace* nor *truth* within the walls.

Intercourse with the Poor.—"I am glad you have made acquaintance with some of the good poor. I quite agree with you that it is most instructive to visit them; and I think you are right in what you say of their more lively faith. We hold to earth and earthly things by so many links of thought, if not of affection, that it is difficult to keep our view of heaven clear and strong; when this life is so busy, and therefore so full of reality to us, another life seems by comparison unreal. This is our condition, and its peculiar temptations; but we must endure it and strive to overcome them, for I think we may not try to flee from it."

From the National Era.

THE HERMIT OF THE THEBAID.

O, strong, upwelling prayers of faith,
From inmost founts of life ye start—
The spirit's pulse, the vital breath
Of soul and heart!

From pastoral toil, from traffic's din,
Alone, in crowds, at home, abroad,
Unheard of man, ye enter in
The ear of God.

Ye brook no forced and measured tasks,
Nor weary route, nor formal chains;
The simple heart that freely asks
In love, obtains.

For man the living temple is:
The mercy-seat and cherubim,
And all the holy mysteries,
He bears with him.

And most avail the prayer of love,
Which, wordless, shapes itself in deeds,
And wearies Heaven, for naught above
Our common needs.

[At noon, the Thebaid hermit leaned
O'er record of Christ's loving word:]
Was it an angel or a fiend,
Whose voice he heard?

It broke the desert's hush of awe,
A human utterance, sweet and mild,
And, looking up, the hermit saw
A little child.

A child, with wonder-widened eyes,
O'erawed and troubled by the sight
Of hot, red sands and brazen skies
And anchorite.

"What dost thou here, poor man? No shade
Of cool, green downs, nor grass, nor well,
No corn nor vines." The hermit said:
"With God I dwell.

"Alone with Him in this great calm,
I live not by the outward sense:
My Nile his love, my sheltering palm
His providence."

The child gazed round him. "Does God live
Here only?—where the desert's rim
Is green with corn, at morn and eve,
We pray to him.

"My brother tills beside the Nile
His little field; beneath the leaves
My sisters sit and spin the while
My mother weaves.

"And when the millet's ripe heads fall,
And all the bean-field hangs in pod,
My mother smiles, and says that all
Are gifts from God.

"And when to share our evening meal,
She calls the stranger at the door,
She says God fills the hands that deal
Food to the poor."

Adown the hermit's wasted cheeks
Glistened the flow of human tears:
"Dear Lord!" he said, "Thy angel speaks,
Thy servant hears."

Within his arms the child he took,
And thought of home and life with men;
And all his pilgrim feet forsook
Returned again.

The palmy shadows cool and long,
The eye that smiled through lavish locks,
Home's cradle hymn and harvest song,
And bleat of flocks.

"O, child!" he said, "thou teachest me
There is no place where God is not;
That love will find where'er it be,
A holy spot."

He rose from off the desert sand,
And, leaning on his staff of thorn,
Went with the young child, hand in hand,
Like night and morn.

They crossed the desert's dreary line,
And heard the palm-tree's nestling fan,
The Nile bird's cry, the low of kine,
And voice of man.

Unquestioning, his childish guide
He followed, as a small hand led
To where a woman gentle eyed,
Her distaff fed.

She rose, she clasped her truant boy,
She thanked the stranger with her eyes:
The hermit gazed in doubt and joy
And dumb surprise.

And lo!—with sudden warmth and light
A tender memory thrilled his frame;
New-born, the world-lost anchorite
A man became!

"O, sister of El Zara's race,
Behold me!—had we not one mother!"
She gazed into the stranger's face:
"Thou art my brother!"

"Taught by thy child, whom God hath sent,
That love is more than fast or prayer,
I come, toil, care and pain, content
With thee to share."

Even as his foot the threshold crossed,
The hermit's better life began;
Its holiest saint the Thebaid lost,
And found a man!

J. G. W.

For "The Friend."

The Snare of Wealth.

"I was sitting in a Friend's house in Dublin, with several elders and brethren, and it sprung afresh in my heart to say to them, that the Lord would make this earnestness of getting the riches of this world, in the end unto many with whom he hath long striven, and often faithfully warned of the danger thereof, that they might be weaned from the same, even as the flesh that God gave to the Jews in the wilderness, when they slighted the bread which he gave them from heaven, and lusted after the flesh-pots, onions, and garlic in Egypt." *W. Edmundson.* "And while the flesh was yet between their teeth, ere it was chewed, the wrath of the Lord was kindled against the people, and the Lord smote the people with a very great plague." Num. xi. 33. Is there no plague within our camp? Have not many forsaken the fountain of living waters, and hewed to themselves cisterns, broken cisterns, that can hold no water? Is not the great strife to become rich in this world, even with many who want to be active in the visible church, and who may value themselves on account of their riches, and think to add to their power by it? But what changes have taken place in some instances, where wealth had given great influence!

From the Annual Monitor for 1854.

WILLIAM TAYLOR.

William Taylor, of York, deceased First month 21st, 1853, aged 85 years—

Was born at Greenwich, in 1768; he was nephew to Green the astronomer, who accompanied Captain Cook on his voyages of discovery in the southern hemisphere. William had another uncle, who was a partner in an extensive pottery at Leeds; to this uncle he was sent while a boy. On his way he passed through London, at the time of Lord George Gordon's riots, and saw many houses burning which had been set on fire by the lawless mob. The journey from London to Leeds was performed in the stage wagon, which, on this occasion, travelled eight days and two of the intervening nights.

William worked in the pottery for several years, and then returned to London, where he was employed in a large glass and china warehouse.

When he was about eighteen years of age, trade became much depressed and several of the hands were in consequence discharged, and William amongst them. He then enlisted into the army, and three days afterwards the regiment he had joined sailed for the East Indies. He was in India during the war with Tippoo Saib, and on one occasion he, with some others, intercepted three men, who were afterwards ascertained to have been sent by Tippoo Saib on an errand of destruction, and who were galloping furiously towards the object of their vengeance. One of these men, on being intercepted, set upon William Taylor, and would have killed him, but at the moment when the sword of the infuriated man was upon William's breast, a pistol shot from an English soldier brought the man off his horse, and William escaped. He was also at the siege of Seringapatam, in 1792. Referring to this he said, "I saw the sun rise that morning, and thought I may never see it set; but at that time I was called off to an outpost, where I could hear and see the engagement from a distance. If I had fallen that day, I should have been lost to all eternity." These deliverances, though he was then in an unconverted state, made a deep and lasting impression on his mind. He remained in India about eight years, and the experience he gained during this period convinced him that in war there is a direct violation of the precept of Christ, "All things whatsoever ye would that men should do to you, do ye even so to them;" and that it is a system of robbery and outrage on a large scale; he was shocked moreover at the intemperance and licentiousness prevalent in the army. He often expressed thankfulness in his latter days that something always occurred by which he was kept from active service in battle, as this left him the consoling reflection of never having killed a fellow creature; and he mentioned with regret having seen many in India, who presumed to call themselves Christians, conduct themselves with less circumspection than the Mahomedans or the Gentoos, and other native tribes. When about twenty-six, he obtained his discharge and returned to England in a large ship of war; the children of an officer, who were sent home for education being committed to his care during the voyage. On the passage, which occupied ten months, the ship put into St. Helena, and took thirteen Dutch vessels, which made no resistance to the royal marauders. In the anticipation of a conflict with these vessels, he was solicited to assist, but he excused himself by querying, who would take care of the children committed to him if he should be killed in the fight? The immediate cause of his return to England was the promise of a relation to leave him some property if he would do so. This promise was not fulfilled, but, speaking of the disappointment many years after, William said, "It was no matter; it brought me from India, and if I had staid among so much wickedness I might have lost my soul." On arriving in England he returned to Leeds, where he again became engaged in the pottery. Here he was salesman for many years, until, in connection with an attempt on the part of the owners to sell it, the affair was thrown into chancery. The commencement of a chancery suit has too often been equivalent to the shutting up for ever from the parties then interested in it the property involved, as the settlement has frequently been delayed till long after the decease of those originally concerned in it; and as respected William, who had invested what he possessed with the concern, the result was much the same as if he had been robbed of his property; for though he lived many years after, the suit remained unsettled, and he often expressed it as his opinion, that neither he nor any of his relations would ever see its termination. In the meantime, he had married Esther Jepson, a pious woman, professing with the Society of Friends. She united with her husband in labourious industry to obtain a provision for their old age; and when their little property was thus unexpectedly swallowed up, William said, "We cried sore, but we found it was of no use; so we looked to the Lord for help, and tried to do our best."

Though William Taylor was a man of more than ordinary reflection, he did not become alive unto God till after returning from India. Speaking, a few days before his decease, of the circumstances of his awakening to the importance of eternal things, he said, "I was sitting alone and in silence in the house, when about twenty-seven years of age, and an awful sense of divine things came over my mind. This was a visitation of God's Spirit, and it led me to seek a Saviour." To former visitations of Divine grace William had not yielded. He remarked, that they had been to him as "as the Light shining in darkness; but the darkness comprehended it not." There is reason to believe, however, that the convictions of Divine grace, though not before yielded to, had, nevertheless, an enlightening effect on his understanding, and if he had finally turned away from them, they would doubtless have increased his everlasting condemnation. But, happily, now he "was not disobedient to the heavenly vision; a great change was wrought in him, and he began to attend the meetings for worship of Friends. Soon after this he received a visit from Mary Watson, of Waterford, Mary Ellis, of Gildersone, and Elizabeth Copeland, of Leeds, who, as ministers of the gospel, were paying religious visits to the Friends of Leeds, in their families, and to such persons as attended the meetings of Friends. In their visit to William, they were brought into close sympathy with his religious state; and Mary Ellis, especially, was enabled so to minister to him and to encourage him in a faithful attention to the guidance of the Spirit of Truth, made known to him in the secret of his own heart as materially to help him in his Christian course.

After leaving the pottery at Leeds, William and Esther Taylor engaged in different kinds of service. For many years they were in the employment of the farmers of the post-horse duty, keeping, successively, various toll bars, including that on the bridge over the Ouse, at York; and, when that was removed, the one at Ferrybridge. Subsequently, and when considerably advanced in years, they removed to a cottage attached to Friends' meeting-house at Pontefract. In this situation, as well as when employed at the toll-bars, they were evidently growing in grace, and though of rough exterior, there was much of Christian circumspection and of that spirit of godliness about them, which not only attracts and unites Christians one to another, but which also often draws the irreligious to think of their own course, and to wish for a better state. Esther died and was buried at Pontefract, in 1841. William continued to reside in the lone cottage till 1851. Among the evidences of his love to the Lord, may be noticed the pleasure he took in keeping the meeting-house in order and in attending the meetings held in it, as well as occasionally those of Ackworth, Leeds, and other places, to which he often walked for this purpose. He was diligent in reading his Bible, and books detailing the religious experience of those who had trodden the Christian's path before him, and in waiting upon the Lord, the feeling of whose love he spoke of as being often very comforting to him when sitting alone and in silence.

He had now been for some years a member of the Society of Friends, and beloved by those who knew him for his uprightness and integrity. Age had rendered him no longer able to provide for himself, and his own means were insufficient for his maintenance; he therefore gratefully accepted the help of the Society in the supply of his wants. His friends being uneasy at his living alone, when having become liable to frequent attacks of illness, he returned to York in his eighty-third year, and became an inmate in the family residing in the cottage at the Friends' burial ground. Here his kind, cheerful, pious conversation and Christian example, were instructive and engaging; and he took pleasure in calling on the sick in the neighbourhood. One of his poor neighbours, aged upwards of eighty years, becoming unable to read, he often called and read the bible to her, occasionally adding a few pertinent remarks. This he continued to the day of her death. Having great pleasure in reading the bible himself, this exercise of Christian love was particularly grateful to him.

In the summer of 1852, he had an attack of illness, from which it did not seem likely he would recover; but alluding to the probability of his decease, he said to a friend who called to see him, "I am very happy. My peace is made." His health, however, improved; and on another friend remarking his improvement, he said, "I thought I was going; at least I hoped so." And speaking of the maternal attention paid him by one of the friends with whom he resided, he said, "It was very kind of Providence to raise up for me a mother; I did not expect to have a mother in my old age." As soon as he was able he got to meeting again, walking with a brisk step, unlike a man of eighty-five years, the age to which he had now attained. Another attack of illness soon succeeded, attended by pains so violent, that he said he did not know at times how to bear it, but that it was little to what his Saviour had suffered for him. In allusion to the state of his mind, he remarked, "I am very comfortable, very happy. I do not wish to live, and I do not wish to die, but just to wait till my Master pleases." He often prayed for patience and for Divine blessings upon himself and his fellow creatures, including those whom, in the darkness of the war spirit which prevailed in his early days, he had been trained to regard as enemies, but whom he now saw in the light of the gospel to be also children of the same Universal Parent with himself, and fellow objects of the redeeming love and mercy of his own Saviour; among these he often enumerated "the Frenchmen, the Dutchmen, and the poor blacks," whom he remembered with much interest.

Looking back upon his past life, and afresh recognizing the goodness and mercy which had followed him, and had granted him the evidence of his sins being forgiven for Jesus's sake, he said, "I am a five hundred pound debtor, but there is one who cares for me." At another time he spoke with great thankfulness of the mercy of his God and Saviour, who, he remarked, would lead all unto the truth that would submit to be led by the Spirit. The comforting influence of the love of God in Christ Jesus was often sensibly felt in sitting by the bed of this good old man, who entertained a very humble view of himself.

First month 9th, 1853. On a friend calling and finding him again down stairs, and very cheerful, he said he had passed through some severe discipline since they last met; that he had been in dreadful pain of body and stripped of all comfort of mind, but that

it had been good for him; and referring to his Saviour he said, "The good Samaritan found me out, and brought me comfort again by his Holy Spirit, and now I am better."

On the 16th, after reading aloud a portion of Holy Scripture and sitting a considerable time in silence with his eyes closed, he opened them and said, "I think Friends will be about leaving meeting. I have had a good meeting." Soon after, he was again taken ill, and on the 19th he conversed about the probability of a few days finishing his journey, and said he felt it to be "a brave thing to have a Saviour's arm to lean upon."

From this time he became rapidly weaker, but maintained his usual patient, cheerful, and thankful temper of mind. He passed a restless night on the 20th, and the following morning breathed with difficulty, but spoke cheerfully to those around him. In the afternoon, he became easy, but increasing feebleness in his breathing showed that the close of life was drawing on. He became unable to speak, but on the friend with whom a few days before he had conversed on the probability of his journey being nearly at an end, entering the room and laying a warm hand on the cold ones of the dying man, which were folded over his breast, he opened his eyes, looked at him, and smiled. There was a language in this smile which seemed to say, "The happy hour of departure for my heavenly Father's house is come:" and again closing his eyes, he passed away like one falling asleep.

Though walking in an humble path through life, and filling no conspicuous station in the church or in the world, the lengthened testimony borne by such a life and crowned by such a stingless death, is a powerful evidence of the value of true religion, and of its divine origin, as well as a striking comment upon the declaration, "The path of the just is as the shining light, that shineth more and more unto the perfect day."

There are critical times of danger. After great services, honours, and consolations, we should stand upon our guard. Noah, Lot, David, Solomon, fell in these circumstances. Satan is a footpad: a foot-pad will not attack a man in going to the bank, but in returning with his pocket full of money.

A Willow Dock.—At La Crosse, Michigan, a dock is in course of construction, made entirely of willow twigs, in bundles twelve feet long and one foot thick, each containing about one hundred trees, and it will take fifty-thousand bundles to complete the dock. It is said the willows will sprout and grow, rooting firmly together, thereby forming a living superstructure, which will last for ages, without the least tendency to decay. Docks like these occur very frequently on the banks of the Rhine, in Germany.

A Snow Arch.—The newspaper called the "State of Maine," published at Portland, says that one of the greatest curiosities ever witnessed at the White Mountains, is now to be found at "Tuckerman's Ravine," about three miles from the Glen House. It consists of an arch of pure snow, spanning the brook that tumbles over the rocks from the summit of the mountains. The ravine is the receptacle of all the snow that blows from the top of Mount Washington, and there can be no doubt that during the winter it accumulates to the depth of several hundred feet. As the brook begins to run in the spring, it wears its way through under the snow, which gradually melts away at the approach of summer, making the cavity larger and larger. On Seventh mo. 16th, this ravine was visited by several gentlemen, one of them being an engineer, by whom the arch was measured. It was found to be 180 feet long, 84 wide, and 40 feet high, on the inside, and 266 feet long and 40 feet wide on the outside. The snow forming the arch is twenty feet thick. The gentlemen walked through the arch in the bed of the brook, and ate their dinner at the foot of the cataract, which falls a thousand feet down the side of the mountains. The arch is on the south-east side of the mountain, and is exposed to the rays of the sun during most of the day. Last year it remained until Eighth mo. 16th, when a warm rain of several days' continuance melted it away.

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 406, vol. xxvii.)

THOMAS MUSGRAVE.

Thomas Musgrave was an inhabitant of Yorkshire, England, who, being called to the work of the ministry, laboured extensively therein. Samuel Smith, in his History of Friends in Pennsylvania and New Jersey, states that he was in this country on a religious visit about the time that John Delavall was convinced of Friends' principles, and he intimates that the ministry of Thomas Musgrave and Jonathan Tyler were effective towards his convincement. If so, he must have been in America about the year 1685 or '86. In 1687, he was labouring in Ireland, and again, in 1694, in which latter year he came to America. His visit appears to have been throughout the whole country, and, when in Maryland and Virginia, Richard Gove, a minister of Philadelphia, was his companion. His labour at the Yearly Meeting of Philadelphia, in 1695, is stated in the epistle from that body to London to have been of good service.

After finishing the work assigned him by his Divine Master in America, he returned to England, where he continued until the year 1699, when, believing the path of duty for him led to a settlement in Pennsylvania, he left his native country early in the summer. During the passage a pestilential fever broke out on board the ship, and he was one of fifty who died on the sea. About twenty more died after the ship reached the Delaware.

When the true dedicated follower of the Lord Jesus Christ is called home to his eternal resting-place, it is a matter of little moment where he is when he receives the summons, or what the attendant circumstances of his burial may be. The call is in mercy extended, and the reward of faithfulness through the mercy of God in Christ Jesus, is sure.

RICHARD HOSKINS.

This friend appears to have been a physician in the island of Barbadoes, where he suffered various distraints on account of fines laid on him because of his Christian testimonies against war and an hireling ministry. Early in the year 1697, he settled in Philadelphia with his wife Esther and family. Esther was one of those mentioned as valuable Friends, who were carried off by the malignant distemper of 1699.

Richard, although following his very confining profession, did not suffer the concerns of this world to prevent his filling up his religious duty as a minister of the gospel, but laboured therein at home and abroad.

Early in 1698, Richard Hoskins visited the meetings in New England, and towards the close of summer those in Maryland and Virginia. Beside these he was in various important services that year, one of which was to prepare an epistle to Friends in the island of Jamaica, inciting them to faithfulness in supporting the testimonies of Truth.

In the First month, 1699, he was liberated to visit England in the service of Truth, taking Barbadoes on his way thither. After fulfilling his duty at Barbadoes, he proceeded to England, where he entered into the field of gospel labour. After some service therein his health failed him, and he found a home and nursing at the house of his friend, William Ellis, at Airton. But kind care and attention could not restore him, and in 1700, perhaps near its close, he was released from further labour in the church militant.

HUGH ROBERTS.

From accounts preserved by his descendants, it appears that Hugh Roberts was born in Wales, in the year 1650. His father died in his childhood, and the care of his education and early discipline was left to his mother, who was a pious woman, and one well calculated to control and rightly direct her children. Hugh, in after life writing of her, says, "My mother was a religious woman since I can remember, which is about forty years. She kept good order in her family and amongst her servants, being a widow some years before, and so continued all the rest of her days. She walked then amongst the Presbyterians, and had a great zeal for God, and was much esteemed by these people. In the year 1662, she was convinced of Friends' principles, though there were none of that persuasion then in the part of Britain [Penllyn] where she lived. Friends hearing of her convincement came from far to visit her. Many of her neighbours were also convinced of the principles she held, and a meeting was set up at her house; on which account she was summoned before the Bishop's court, where she held a great deal of discourse with him. Soon afterwards a mighty persecution arose, which she bore with great courage. The informers took from her for a fine of *fifteen shillings*, for holding two meetings, four oxen that were valued at *fifteen pounds*. She was cast into prison divers times, often had irons put upon her, and was once kept in a dungeon with murderers for several days and nights. But none of these things alarmed or disheartened her, or weakened her testimony. She had great confidence in the Lord, and loved his truth and people. We were five children, and were convinced of God's blessed Truth; and that mostly by our mother's faithfulness thereunto, for surely she was a good example unto us."

Such is Hugh Roberts's account of his mother, and the manner of his own convincement. He was soon called on to bear a testimony for the truth himself, in word and doctrine, and to show his sincerity in his faithfulness under persecution. He had received an excellent education, and was in various ways qualified for usefulness amongst men.

When William Penn was about receiving the grant of the province since called Pennsylvania, of King Charles II., he consulted his friend Hugh Roberts, who agreed to purchase a large tract of land in the as yet unseen country. He was also one who met the proprietary at London, to devise the conditions of the original plan for the settlement of the newly acquired land.

He came to Pennsylvania in the year 1682, being then in the thirty-second year of his age. A number of his countrymen from Wales came with him; and his estate being west of the Schuylkill, at the place since called Merion, he settled there, many of his friends purchasing around him.

(To be continued.)

R. Shackleton to Mary Dudley.

BALLITORE, 6th of Ninth mo. 1788.

My Dear Friend:—I am by no means satisfied with myself, but I am delighted with the prospect of my earnest, solicitous, importunate petitions being answered, that if I should never be of any material service in religious society, that I might but be preserved, thrown by in any obscure corner, so as not in Divine displeasure, and that the visited rising generation might be a generation to serve the Lord God of their forefathers in their day, and to lift up the ensign of his Truth among the nations. I salute thee, my dear friend, returned from that unfrequented, uncultivated field of labour in which thou has been employed.* Thy dedication, thy sacrifice was noble, and I trust has been acceptable. Thy debility and infirmities of body, as well as of mind, are perfectly known to him with whom we have to do, and he estimates in his just balance the measure of our devotedness and obedience. May he reward thine with the blessing of preservation, and if such be his will, may an increase of ability, both natural and spiritual, be experienced by thee, that so thy beautiful gift may be fully and forcibly exercised to the praise and honour of the Great Giver who has done so great things for thee, to the edification of the churches, and to the gathering of the other sheep to the fold of Christ. Our beloved E. P. is, it may well be imagined, much in my thoughts. I trust she is of the weighty, ponderous grain, which every ruffling, whiffling wind will not agitate. The perturbation of her mind, from various causes, has no doubt been great, and the nailing to the cross attended with agonizing pangs; but thou canst tell her that by continuance in faithfulness and obedience, the pain to the natural part will decrease, and courage and confidence abound; so that, as the apostle says of the daughters of Abraham and Sarah, she will "do well," and "not be afraid with any amazement." We had the company of dear Mary Ridgway and Jane Watson here for a few days. Mary was rather poorly in health, but mended in spirits, and lively in the exercise of her gift; she is faithful, so she is happy; and though wave succeeds wave, she emerges clean, clear, and bright.

Farewell, my dear friend, R. S.

"He has not an Enemy in the World."—Hasn't! Well, we are sorry for him! For he has mighty little character who has no enemies. He is nobody who has not got pluck enough to get an enemy. Give us rather, as our ideal of virtue and manliness, one who has many enemies—one who has made them by his manhood and downright sincerity, candor, and fearless love of the thing he sees to be right. The man of earnest purposes, strong will, and love of principle, for its own sake, must have enemies. But this, so far from being ill, is to him a good. The strong tree is more deeply rooted and fastened in the soil by the blast than the summer breeze. A man never knows how much there is of him, until he has confronted and braved bitter opposition.

Efficacy of Cold Water.—On Fourth day, 13th inst., the house of William H. Moody, of Standish, Maine, was struck by lightning, which demolished the chimney, burst a large hole in the ceiling of the sitting-room, smashed the stove and broke the door. It struck a daughter of Wm. Moody's, six years old, on the back of the neck, the side, and leg to the foot, leaving a discoloured mark half an inch wide, the whole distance. Cold water was at once copiously applied to the apparently dead girl, who, in twenty minutes from the time she was struck, revived, and is expected to recover.

* The visit to France and Germany performed by M. D., S. R. Grubb, &c.

THE FRIEND.

NINTH MONTH 16, 1854.

We have received the following information respecting

OHIO YEARLY MEETING.

Ohio Yearly Meeting convened at Mount Pleasant on Second-day, the 4th inst., the meeting for ministers and elders having met on the previous Seventh-day. Owing to sickness having prevailed at Mount Pleasant, exaggerated reports of which had widely spread, and to the great drought prevailing throughout many parts of the State, obliging some to remain at home in order to provide daily both food and water for their cattle, the meeting was smaller than usual. Ministers and their companions were present, with certificates or minutes from several other Yearly Meetings. On calling the representatives, they were found to be all present. After reading the reports from the respective Quarterly Meetings, and the certificates and minutes sent from the Select Meeting, objection was made by some individuals to proceeding further with the business, while two Friends belonging to the smaller body in New England, then present, remained in the meeting. This brought the subject of the division in New England into discussion, and a wide difference in sentiment thereon among the members was apparent. Many charges were made against different individuals who, it was said, encouraged intruders to come into the meeting, and reflections cast upon the clerk as sympathising with them, &c., when one of the Friends from New England rose and stated to the meeting the circumstances that had brought them there, and exonerated the clerk from all responsibility for their presence. Several Friends adverted to the tried situation in which the meeting had long been placed, some stating that a large portion of it could not consent to the exclusion of the members of the smaller body in New England, and they had never raised any objection to the presence among them of members of the larger body, and those who held different views from them, ought to act in a similar manner. The clerk referred to the course pursued by the meeting in different years, under circumstances similar to the present, that he had repeatedly set aside his own feelings, and gone as far as he conscienciously could in delaying the transaction of the business of the meeting because of the objections raised, and that now those offering the objection were at liberty to make the meeting as they considered select, if it was done in a proper manner, but it could not be expected that the whole business of the Yearly Meeting should be delayed by the objections raised. After much expression, it was concluded to adjourn; previous to which a minute was made, directing the representatives to confer together, and, if way should open for it, bring forward the name of a Friend for clerk, and another for assistant.

Third-day the 5th. The meeting being opened and the report of the representatives called for, a Friend stated to the meeting they had conferred together, and a portion of them had concluded to propose Jonathan Binns for clerk. Another Friend immediately rose and informed the meeting he had been authorized by the representatives to report they could not agree on persons to be nominated for clerk and assistant.

[When the representatives met, twelve out of the forty-two urged the nomination of the Friends named above, to which the others would not agree, and concluded to report the representatives were were not united in bringing forward any names.]

Unity with the appointment of Jonathan Binns was now expressed by several, and he called on to go up and take his seat at the table; and James B. Bruff being mentioned as assistant, his appointment was united with by the same individuals. In the meantime, a large number expressed their disunity with these disorderly proceedings, and the clerk informed those who urged the individuals named to the table, that their whole proceeding was a violation of the discipline and usage of the Society, and would, if carried out, separate them from it. He then informed the meeting he would make a minute in accordance with the course heretofore pursued by that Yearly Meeting under similar circumstances. While he was making this minute, Jonathan Binns and James B. Bruff went up and occupied the usual seat of the assistant clerk. The clerk now read the minute, recording the report of the representatives that they were unable to agree to bring forward any name, and therefore that the Friends under the appointment were continued in the respective stations, viz. Benjamin Hoyle for clerk, and Wm. S. Bates for assistant. This minute was united with by as large a portion of the meeting as is usual, and the assistant clerk was requested to take his seat at the table. Several, who said it was known they united in sentiment, as to the two bodies in New England, with those who were striving to place a new clerk at the table, now entreated them to desist, warning them that it must inevitably result in separation, and that they could not go with them into it. They desired them to allow at least one more night for reflection, before they went so far as to make their measures past recall, and to try other modes of relief. Friends also entreated them to desist from their disorganizing course, and warned them that if persisted in, it must separate them from the Society of Friends. But it was evident the whole movement had been agreed on beforehand by a few who were determined to carry it through. The meeting was informed by one of the representatives that during their meeting on the subject of clerks, some of their number, who were now urging the appointment of a new clerk, had stated that the withdrawal from the meeting of those whom they called intruders, would not remove the difficulty, and that the clerk had disqualified himself for his station. Several of them in the meeting admitted this was correct.

Jonathan Binns read a minute, purporting to appoint himself clerk, and J. B. Bruff assistant. Wm. S. Bates informed the meeting that he considered himself the regularly appointed assistant clerk of the meeting, but that the meeting knew how he was situated in regard to his friends, and therefore he desired it, in consideration for his feelings, to excuse him from taking his seat at the present time.

When the Yearly Meeting adjourned, which it did by minute to ten o'clock the next morning, those who had separated from it staid behind, and thus declared their secession from Ohio Yearly Meeting of Friends.

The next morning the Separatists met at eight o'clock, and a part of the female members of the Yearly Meeting met at the same time. In the women's meeting, the representatives had reported they could not agree in proposing Friends for clerk and assistant, and those occupying those stations had been continued therein as heretofore. When that meeting adjourned on Third-day, it was to meet

at the same time at which the mens' meeting should conclude to convene. Those who went with the Separatists met at eight o'clock, while the others constituting the Yearly Meeting met at ten o'clock, and finding that the clerk was not present, they appointed a Friend to act in that capacity for the meeting, and another to assist her. Since which time the meeting has continued its regular business.

Fourth-day the 6th. The meeting met at ten o'clock, and appeared to be nearly one fourth smaller than the day before.

It being thought best to call over the representatives, twenty-seven answered to their names, the meeting being informed that one other was detained by indisposition. It is supposed the remaining fourteen have gone with the Separatists.

A minute of the separation of some of the members from Ohio Yearly Meeting was adopted, and a committee appointed to draw up a statement of the manner in which it was effected.

Epistles from London, Dublin, and Yearly Meetings on this continent, (North Carolina not having come to hand,) were read, and a committee appointed to essay replies thereto.

The minutes of last year respecting the establishment of a new Quarterly Meeting, out of the three lower Monthly Meetings now belonging to Stillwater, together with the report of the joint committee of men and women Friends appointed to visit those meetings made last year, were read, and after a time of solid deliberation, it was concluded to adopt the recommendation of that committee, to grant the request made, and a committee was appointed to attend the opening of the new quarter. A committee was appointed to bring forward the names of Friends to fill four vacancies in the Meeting for Sufferings, which had existed for a considerable time. Other committees, for different services, were also appointed. The meeting adjourned to Fifth-day afternoon at 3 o'clock.

Fifth-day. The meeting assembled pursuant to adjournment. The statement of the manner in which the separation was effected, was read and referred for future consideration.

The state of the Yearly Meeting as exhibited by the answers to the queries, was brought before it, and pertinent counsel and encouragement given.

Further information will be hereafter given.

The meeting closed solemnly on the 9th inst.

SUMMARY OF EVENTS.

EUROPE.—Liverpool dates to the 26th ult. Philadelphia and Baltimore flour, 31s. to 32s. The London money market was easy. Consols had advanced to 94¾.

The War.—Immediately after the surrender of Bomersund, General de Hilliers, accompanied by Earl Grey, left for Stockholm, with the view, it is supposed, of urging Sweden to declare herself on the side of the Western Powers. The French troops at Bomersund were suffering terribly from cholera. The Russian forces are still concentrated on the Pruth, and the Turks have their head-quarters at Bucharest. Russia has prohibited the export of grain into Austria. The Turks had sustained a disastrous defeat near Kars, in Asia; according to the Russian account, a great number were taken prisoners, and three thousand left dead on the field. The cholera was on the decline at Varna, but was raging at Adrianople and other places with great violence, in consequence of which the French troops intended for Turkey had been ordered to return to Gallipoli. In this contest, so far, pestilence has laid low many more than the sword. The French division under General Canrobert, had lost three thousand men by cholera. The losses of the English were also heavy, and many of the officers had been sent home broken down in health. At Varna a conflagration, attributed to Russian incendiaries, had destroyed about one third of the city.

SPAIN.—At the last accounts was subsiding into quietness. It is supposed the ministers will contrive to let the Queen Christina escape from the country.

ITALY.—The work of clearing the monastic establishments of their inmates is rigorously proceeded with at Turin, on the plea of the buildings being required for sanitary purposes. There are in Turin thirteen monasteries and ten convents, and it is said that if the wishes of the nation are regarded, the monks and nuns will never be permitted to return to them. Two-thirds of the inhabitants of Naples have emigrated on account of the cholera; among its victims have been the Duke of Lieto and others of high rank. At Genoa, there are still over 100 cases of cholera daily.

HOLLAND.—The crops this year are remarkable for excellence.

CHINA.—On the 16th ult., the clipper North Fleet arrived at San Francisco in forty-four days from China, bringing intelligence that the city of Canton was surrounded by the insurgents, and that the foreign residents had all left.

SANDWICH ISLANDS.—By the last arrival from California, we are informed that a treaty for the annexation of the islands to the United States had been concluded by the U. S. Commissioner. The treaty, it is stated, was forwarded on the 16th ult. by mail to Washington.

NEW BRUNSWICK.—The cholera has abated in this province. The crops of all kinds are unusually good.

UNITED STATES.—*Specie movements.*—The receipts of gold at the Mint in Philadelphia, for the first eight months of the present year, are only $28,476,579; being nine millions less than in the first eight months of last year, and three and a half millions less than in the same part of 1852. The disparity may in part be accounted for by the establishment of the San Francisco Mint, much of the coinage of which is shipped directly to Europe and New York. The exports of specie in the same period have been about thirty millions, corresponding nearly with the total receipts from California.

The Drought and the Crops.—A daily paper of large issue, which professes to have taken pains to obtain correct information on these points, says, "The result is a conviction that the injury which has been sustained is greatly exaggerated, and that not only is a famine impossible, but even any very considerable scarcity." It is however certain that large sections of country have suffered greatly. "In general terms, it may be said that the drought has raged severely in the Ohio valley, and partially injured the Middle and Eastern States, but entirely passed over the south and southwest.

The Chicago Daily Tribune of the 4th inst. says, "Advices from the corn crop throughout the West and South are coming in more favourable. In the western portion of Ohio, including the Miami and Sciota bottoms, and all the north-western part of the State, the corn promises well, and will yield an average crop. In the northern portion of Indiana and Illinois, the crop is also good; and the same remarks will apply to Michigan, Iowa, Minnesota, and the northern part of Missouri. From the Southern States the accounts are very encouraging, so that taking the whole West together, there is no cause for alarm, nor is there much safety in speculations based upon a failure of the corn crop. We hear of no place, however, where the potato crop is good, or even middling. In central Missouri, Illinois, and Indiana, and in south Kentucky, and the north-west part of Tennessee, north-eastern portion of Ohio, and western Pennsylvania, there is no doubt that the drought has proved very disastrous to corn and potatoes, and in these sections there will be a scarcity." The injury to the crops of corn and potatoes, in the Middle and Eastern States, is so unequally distributed as to make it difficult to estimate the deficiency, but the writer first quoted is of opinion that a fair average would not show more than a fifth wanting from the usual yield. It is believed that the wheat crop of the present season, viewing the country as a whole, and allowing for partial failures, has been quite a large one, and it is also computed that fair stocks of last year's maize still remain.

Losses by Fire.—During the Eighth month many fires occurred in various parts of the United States. The total losses from this cause are believed to exceed $2,500,000.

Coal in the Ohio.—The lowness of the river has made accessible a vein of coal in the bars opposite Cincinnati, on which a large number of persons lately found profitable occupation; some of the men engaged in this water mining, it is said, were procuring $10 worth of coal in a day. They are obliged to work in water from two to three feet deep.

Pennsylvania.—The canal navigation of this State has not suffered any interruption for want of water during the present dry season. The Johnstown Reservoir has come into use this year for the first time as a feeder of the western division. At the commencement of the season it contained eighty feet of water, which a few days since was reduced to forty-eight feet.

Philadelphia.—According to the record kept at the Pennsylvania Hospital, the mean temperature of the Eighth month was 75½°, which is more than 2½° above the average of the corresponding month for the last twenty-nine years. The highest temperature in the month was 96°, and the lowest 57°. The amount of rain was 0.84 inches, which is less than has fallen in any Eighth month since 1834, when only 0.62 inches fell.

The deposits of gold and silver at the mint during the the Eighth month, amounted to $3,272,000, and the coinage to $5,308,836, of which $360,000 was silver.

There were 234 interments last week, of which 17 were from cholera.

New York.—Interments last week, 732, of which 129 were from cholera.

California.—From this distant State we have news to the 16th ult. The agricultural interests are stated to be much depressed, in consequence of the low prices of produce, the current rates scarcely meeting the expense of gathering, sacking, and transportation. Salt has been discovered in great abundance in Los Angelos county, and coal in considerable quantities in Bellingham Bay.

New Orleans.—There were 160 deaths from yellow fever in the ten days ending 3d inst.

Savannah.—There were 123 deaths in this city for the week ending 7th inst., that is about one for every sixty of the present population. A similar ratio applied to Philadelphia, would give a weekly mortality of more than eight thousand.

FEMALE TEACHER WANTED.

A Teacher is wanted for Friends' female school, at Woodbury, N. J. For one well qualified to teach the ordinary branches of a good English education, a liberal compensation will be secured. Apply to George M. Paul, or Wm. R. Tatum.

YARDLEY WARNER proposes to reopen his school on the 30th of Tenth month next; and can accommodate six or eight Girls as boarders; to these, with about the same number of Girls as day scholars, the school will be limited. For Terms, &c., apply early.

Address, Warren Tavern P. O.,
Chester Co., Pa.

A TEACHER WANTED,

For the Girls' second arithmetical school at West-town Boarding School. Apply to Anne Tatum, Woodbury; Sidney Coates, 330 Arch st.; Elizabeth Peirson, 254 N. Fifth st.; or Sarah Allen, 146 Pine st.

Evening Schools for Adult Coloured Persons.

WANTED.—A Principal and three Assistant Teachers for the men's school, and a Principal and four Assistants for the women's school. Application may be made to either of the undersigned. John C. Allen, No. 179 S. Fifth street; William L. Edwards, No. 37 Arch street; Samuel Allen, No. 134 S. Front street.

RECEIPTS.

Received from Samuel Townsend, Chatham, Pa., $2, vol. 28; from Joshua B. Pusey, $2, vol. 28; from Amos Battey, agent, Vt., for George Harkness, Benjamin Macomber, Russell Taber, and Benj. Taber, $2 each, for vol. 27. "Omitted Eleventh month, 1853, from Benj. Macomber, $2, vol. 26."

DIED, at the residence of her son, John Livezey, in Philadelphia, Eighth month, 1st, ABIGAIL LIVEZEY, in the 92d year of her age, a member of Frankford Monthly Meeting of Friends, Penna. For a number of years she has been unable to mingle with her friends in public worship; but whilst she retained her faculties, her love for the truth as it is in Jesus, abounded. We trust her redeemed spirit has been admitted into the mansion of everlasting rest.

—— at Germantown, Pa., on the 24th of Seventh month last, LYDIA L., wife of David Scull, in the 52d year of her age, a member of Philadelphia Monthly Meeting. Through the course of a lingering and suffering indisposition, this dear friend gave frequent evidence that her mind was stayed upon her God, and there is the consoling belief to those who remain, that she hath fallen asleep in Jesus.

—— on the 25th ult., at his residence in this city, after a short illness, LEWIS WALKER, in the 88th year of his age, for many years a much esteemed member of Western District Monthly Meeting.

PRINTED BY KITE & WALTON,
No. 3 Ranstead Place, Fourth above Chestnut street.

JAQUELINE PASCAL.

(Continued from page 1.)

Jaqueline's letter on the *Formulary* was long: some parts, chiefly illustrative of her objections, will therefore be omitted. It was addressed to Mere Angelique, the female head of Port-Royal. After a few introductory words, she says: "The feelings of the entire sisterhood upon this subject are now unanimous. Yet we distinctly understand the pretence that the requisition of our signatures only binds us to submission to the church, that is, to silence on matters of fact, and belief in matters of faith. But the time for this has gone by. Most of us heartily wish that something worse had been demanded, because, if it were worse, we should all feel at full liberty to reject it, while as it is, many will be almost constrained to accept it, and false prudence or real cowardice will cause many others to embrace it as an easy mode of procuring safety for the conscience, and for the body as well. But for my own part, I am convinced that in such a course there can be safety neither for body nor soul. Truth is the only real Liberator, and she makes none free but those, * * * * * who bear witness to her with a fidelity that entitles them to be acknowledged as the true children of God the True.

I cannot any longer conceal the regret which gives my very soul when I see persons to whom God has committed his own truth so unfaithful to it, and, if I may be allowed the term, destitute of the courage necessary to brave suffering and even death by its open confession.

I am well aware of the reverence that is due to the authorities of the church. I would gladly lay down my life in order to preserve that reverence inviolate, just as in the present juncture, I am prepared, by God's help, to die for the confession of my faith, but it seems to me that nothing can be easier than to unite the two. What is to prevent us—what is to prevent every ecclesiastic cognizant of the truth, from answering, when the formulary is presented for signature, 'I know that I am bound to respect their Lordships the Bishops, but my conscience does not allow me to subscribe the statement that anything is contained in a book which I cannot discover in that book,' and then quietly to await the result? What are we afraid of? Banishment and dispersion, the seizure of property, prison, death if you will,—but are not these things our glory, and ought we not therein to rejoice?

Let us either give up the gospel, or let us carry out its principles and esteem ourselves happy in suffering for the truth's sake. But we may perhaps be cast out from the church! True, and yet who does not know that *no one can be really detached from the church except by his own will?* The Spirit of Jesus Christ is the tie that binds his members to himself and to one another, and though the outward signs of that union may be taken from us, its effect cannot be taken so long as we retain the spirit of love, without which no one is a living member of that holy body. Is it not plain, therefore, so long as we do not erect altar against altar, while we are not wretched enough to form a schismatic church, and while we continue within the limits of simple remonstrance, and meek endurance of persecution, that the charity which leads us to love our enemies, must of necessity attach us to the church by inviolable bonds. Our enemies alone will have excommunicated themselves, since the divisions they are trying to produce do but sever the bond of charity which once united them to Jesus Christ, and rendered them members of his body. Alas! my dear sister, what joy ought we not to feel, if we are permitted to endure some special reproach for Christ's sake! But there is too much pains taken to prevent this, when truth is so skilfully painted with the colours of falsehood, that she cannot be recognized, and the most keen-sighted can with difficulty detect her. . . . . I pray God this day rather to strike us all dead, than suffer such an abomination to be introduced into the church! I find it difficult, dear sister, to believe that this sort of wisdom comes from the Father of lights, for it seems far more like a revelation of flesh and blood. Forgive me, my dear sister, I beg. I speak in the agony of a grief which I am certain will kill me, unless I have the consolation of seeing that some are willing to come forward as martyrs for the faith, to protest either by refusal or by flight against the acts of others, to become themselves champions of the truth. Not that I am desirous that any uncalled for declarations should be made, especially at the present time, when the enemies of truth are so envenomed and powerful. By the way the condemnation of Jansenius is by no means the only question in debate. His condemnation includes that of the doctrine of our Saviour's grace. If, therefore, our age be so degenerate that none are found willing to die in defence of a righteous man, is it not far more dreadful to think that no one is disposed to suffer for the sake of righteousness itself?

(To be continued.)

From "Household Words."

PEATAL AGGRESSION.

(Concluded from page 2)

Here are men probing the bog, to find a good place to dig in on their own account. They trench deep; and, having pared away the loose fibrous sponge, near the top, find beneath a brown peat, which they know will be worth digging out. But below that again is a black peat of a closer grain; and this goes down and down, blacker and denser with every foot, from having borne the weight of more centuries, and the pressure of a thicker overgrowth. Into the trench dribbles and drips the black water, which has been imprisoned so long—too far below the sunshine to be evaporated, and too far away from any natural channel to flow down into any stream. It is hardly like water now—salt, astringent, and spirituous; but it will still reflect the blue sky from its surface, and it can run away down hill, as fast as ever. As it dribbles out and runs away, the banks of the trench sink, and the soil becomes more compact. The poor come to slice the peat away, and cut it into oblong pieces like bricks, and set the pieces on end in little groups to dry; and when they are dry, pack them into a sort of large hamper, which is fastened on a truck drawn by an ass or pony—the whole being dignified with the name of a car. There goes the train of cars along the road—the burial procession of the little moss, which is being carried to its funeral pile.

What is that group of buildings at the edge of the bog—the tall chimney—the brick houses—the curious range of metal pipes, dripping and splashing with water—and the yards, with sheds, and tubs of black liquor, and spirituous and pungent smells hanging all about, and men, bearded and begrimed, flitting about the place?

Why, this is the very centre of retribution, whence vengeance goes forth against the usurping moss. This is the head-quarters of those who have pledged themselves to the utter annihilation of the destroyer. These are the premises of the Irish Peat Company . . . . They undertake so to deal with the peat moss as that it shall be utterly decomposed, and every part turned to use. They have taken in hand five hundred acres of this bog; and there, scattered as far as one can see, are one hundred labourers—men, women, and children. The trenches are so wide and deep as to be like little canals. The depth is already fourteen feet; and it is understood that it is to go down to thirty-two feet. To the eye, the mass of peat appears inexhaustible. There are the men, barelegged in the trenches, slicing the vegetable earth and throwing it up, to be caught by the "catchers" above, who, for sixpence a day, receive and deliver the sods. They are the women who, for sixpence a day, place or set up the sods, and turn them to dry. There is something picturesque in the wild scene; the brown waste in clear contrast with the blue hills; the lines and patches of sunlight, catching a bunch of yellow weeds or purple heather here—a little pool there—a group of women or of diggers elsewhere. These people say that it was quite another sight last February, when the scene was wrapped in flame. They say it was a frightful sight; but it must have been, as a mere spectacle, very grand. A man had carried out a live sod into the bog with him, to light his pipe. It was far away from the Company's land: but fire observes no boundaries. The man piled up his little heap of fuel about his sod, and blew up the spark. It was a windy day; and the heap burst into flame, and the flame burst away to seize upon any thing that would burn. The spikes of fire shot up the slopes of the turf stacks of the Company. The stakes (called clamps) were burned from the top downwards—no less than sixty-eight of them. The flame went leaping, running, and dancing towards the buildings, and threatened to devour them; but

they were saved. It was the river that stopped the mischief at last, and not till six hundred pounds' worth of damage had been done. This was a great blow to the Company; though no triumph to the little moss. Fewer people have been employed since; the tone of the establishment is relaxed, and its spirits are lowered. But its demolition of the works of the little moss is as thorough as ever, within the scope of its operations. There is the great furnace, into which air is perpetually blown by the steam-engine. If we peep within certain slits in the furnace door, we see the gases alight, fuming and dancing—blue and yellow—keeping every thing within reach at a mighty heat. Elsewhere there is the tar, oozing hither and thither: and the oils in casks, scenting the air; and the paraffine, of which candles are to be made, but which now is seen in the form of yellow waxy cakes, blistered and unshapen, and lying between oily woollens. It has had some of its oil pressed out; but it is to be steamed and bleached, and squeezed in the hydraulic press, before it is fit to make such candles, as those which were lighted, as a specimen, on the table of the House of Commons. And there lies a lump of salt—salt got out of the vegetable decay of the spot where the ancient inhabitants ate their food without salt. There is not much in this salt, however, that would give a relish to food. It is worse than the flakes that whiten the shores of the Dead Sea. The minutest grain poisons the palate and throat for many hours. And there is a great heap of slag—the black, light, shining refuse of the small part of the peat that is actually burnt. Here is the little moss so treated as to come out, for human use, in the forms of sperm, oils, salt, spirit, and gases. This is being used up, indeed! . . . . . .

What is doing in that far corner of the bog, quite out of sight of the Peat Works? A man digging for fuel is carefully extracting sundry logs of wood. The scraggy roots and lighter branches he puts aside to dry; they are fir, and their fate is to be burnt, as people burn cannel coal in England, for the sake of the cheerful blaze in the autumn evenings. Why are the digger and his wife covering up so carefully those blocks of black wood? They are oak, those blocks, and worthy of so careful and gradual a drying as will prevent their splitting. If they split and crack, they will be good for nothing but the fire: if carefully and successfully dried, they will sell at a good price to the carvers. So yonder log is covered with damp sods; and the wife will come pretty often and look to it—turning it, and shading it, and, at last, sunning it, till it is absolutely dry, and so tough that it will not splinter under any treatment. And then it will go into the bare garret in Dublin, and some of it into the comfortless prison where the reckless artist who can make his two guineas a day is confined for debt. In such places, breathed upon by many sighs, will this Irish ebony be carved and perforated, and beautifully wrought, into forms of the extinct Irish wolf-dog, and the national oak, and shamrock, and round tower, and harp, and whatever is Irish. Beautiful ink-stands, and paper-knives, and snuff-boxes, and little trays come out of these long-drowned oak logs; and they are of an everlasting wear. A great number of wood-carvers make from ten shillings to two guineas a day as their share of the profits from the destruction of the fabric of the little moss.

But what now? See the people running from far and near, and clustering round the ditch in the bog! On they come, in a sort of huddled procession, carrying something. A mummy! actually a mummy! but not swathed like those of Egypt, nor embalmed, except in the primitive antiseptics of the place. He is clad in the skin of a beast, and has a sort of sandal on his feet. He is a man of an ancient race. But we must not judge of the stature of his race by his. He is almost as light as a doll, and as small as a child of ten years old. Well he may be, for his bones were all gone, centuries ago—dissolved in the juices of the bog. His head is just as hard as the rest of him. He is a piece of stiff leather, through and through, from his wasted foot to his shrunk crown. He was one of the first persons murdered by the little moss—probably as he was coming home to his hearthstone from fishing in the narrowing lake, or hunting on the wooded hills. His lot now is to be made a show of in a Dublin museum; and there, alas! to have his leather limbs filched, bit by bit, by persons who believe mummy to be a fine cure for the falling sickness; till at length, to preserve any remains of this antique citizen, he is locked up carefully under the charge of learned men.

This is not the last of the treasures which the moss is compelled to yield up—not by many. Again and again, the surveyors and their men, who are exploring the land and deepening the rivers, gather about some new mystery or marvel. What is this brown floor on which the spades strike, at a depth of twenty feet from where the surveyor is looking down? The surveyor scrambles down to see. The edge of the floor is found, and they dig down nine feet further, declaring that they have found a cupboard twelve feet square. It is the old house, to be sure, that stood so prettily upon the green. They are finding the paved pathway to the hearthstone, and now the hearthstone; and now they are picking up the charred nuts that were gathered to be eaten thousands of years ago. Instead of being eaten, the destiny of those nuts was to lie in tan for tens of centuries, and then to lie on the shelves of a cabinet for successive generations to wonder at. Something more touching than that is going on at some distance. What can be a more transitory affair than a child's toy? We talk of childhood itself as transient, gone while we are admiring it; and its toys are childhood's experience of transience. Yet here is the toy—the wooden sword—that was wielded by a little hand hundreds of generations back. That hand, probably hardened in war and the chase, was dissolved ages ago; and here is the wooden sword, brown, polished, entire, singular in its antique shape, and mysterious as to a certain knob upon it, but otherwise fit to be made a toy again. No child is to have it, however. It has become a grave affair by lapse of time, and it is to lie among the treasures of the Royal Irish Academy for the consideration of the learned. Truly, here the great and the small have lain down together. The mock sword lay lightly, as if put down upon a cushion. Here is something so firmly bedded in, that it seems to be rooted in the rock below. Here are bones, but they are like guarled limbs of a great tree. It takes a dozen men, with ropes and strong arms, to move the mass. Then up it comes—an awful head of an unknown beast. Can it be the head of a beast? Feel for the spine; dig down along the expanse of shoulder, and the depth of limb. It is the skeleton of an animal. When a naturalist sees a bone or two, he pronounces it an extinct elk, and when it is set up, men gaze up from below, and walk between its legs, and talk wonderingly of the days when the earth contained such gigantic creatures as these. The sea has them still; and in far climates there is the elephant; but that little Ireland should have been trodden by these hoofs—how eloquent it makes our philosophers about the olden time, when the elk came to drink at the margin of our lakes!

At different stages of the cuttings, the woods reveal themselves—some growing (as may be calculated) a hundred years under the roots of others. The compactness of the lowest soil may be judged of by this. In this compact soil lies a stem, its wood of the closest grain. It is the yew that we saw fall one of the first victims of the moss. Where is it last seen in the block? In a garret, where a young artist lays it across his bench and saws a slice off it laboriously, and indents it with his chisel to show a stranger from over the sea how fine is the chocolate-coloured grain, and how well-tempered are the tools required to carve such a rare piece of ancient yew.

If the natural lake and woods have been absorbed and devoured, it is no wonder that the artificial islands are dissolved. The stream is to flow here again, and the people are deepening the channel. In doing so, they come upon a curious variety of old treasures, scattered abroad. The more modern iron and steel weapons have been found on a higher level—such as were light enough to be borne up by the little moss. The heavier ones, and the most ancient bronze weapons, are found the last—sunk in the soil under the bog. Around are picked up bones—the bones of the cattle and game eaten at the ancient feasts; and skins which may have covered boats, or served as clothing. Last of all—down in the sand half buried in the clay, there is a shining of gold. Those old ornaments are there, once more glancing to the sun now that it is too late ever to know what was the race that wore them, and why they were shaped and worn as they were. Here are the cheek-plates, and the diadems, and the gorgets, and the heavy cymbals, and the strange rings, and the twisted coronals and belts. Here they are! and when they too are locked up in a metropolitan museum, we may consider the little moss pulled up by the roots, and visited with its full retribution.

The long series of ages is past; the valleys have been filled up with sponge, four thousand acres large; and they are in the course of being cleaned out again. What then? Will the lakes and ponds be brought back, and the woods made to spring afresh upon the hills? Will all things be as they were before, except the men who live there? No: such a restoration as that is a thing that never happens. We should like to see some woods in the hollows, and on the ridges; but there are none planted yet. Where the lake was, the soil is ploughed up, and drained, and fertilised; and the valley will in time be smiling with waving corn and green pastures. Where there were fish, there will be flocks. Where there were perishable islands, there will be human dwellings. Where there was the howling of wolves, there is already the lowing of herds. Where there were murderous conflicts with barbaric swords, there will be reaping and binding by men armed with nothing worse than the peaceable sickle. So we may hope it will be in the end; but there are hundreds of acres of desolation to clear away first. It is only in prospect and in purpose that we have yet plucked up the little moss by the roots.

The Whale's Dread of Swordfish.—I recollect, one beautiful morning in October, when hundreds of huge whales, both young and old, were enjoying themselves in their native element, and were often seen leaping out of it like salmon, and falling with a thundering noise as if they had nothing to fear, a "school" of swordfish was observed in the offing, and in less than half an hour the whales were on their flight, and far out of our sight.—*Sutherland.*

"For The Friend."

SLAVERY.

Among the evils incident to and inseparably connected with this unrighteous system, are the poverty and ignorance entailed upon a large proportion of the white population. This view of the subject is well exhibited in the following remarks of the Philadelphia Ledger:

"*Education at the South.—Ignorance at the Polls.*—A Georgia paper asserts that forty-one thousand white citizens of that commonwealth are unable to read. A Virginia paper declares that in the "Old Dominion" there are eighty thousand in the same predicament. Moreover, the evil is conceded to be a growing one. In Virginia, for instance, the number in 1840 was only sixty thousand, while in Georgia, at the same period, it was but thirty thousand. It thus appears that in each of those States the number of uneducated whites is increasing more rapidly than the entire population.

"What is true, in this respect, of these two Southern commonwealths, is true, to a greater or less degree, of every republic below Mason and Dixon's line. Few, if any, can be in as good a condition as Georgia, for that commonwealth, by its greater attention to productive industry, has earned for itself the title of the "Empire State of the South." South Carolina, Alabama, and Mississippi, if not North Carolina also, must, in fact, be far worse off. It is not saying too much, therefore, to assert that ignorance is spreading everywhere below the Potomac, and that as liberty is only safe where the voters are educated, the national republic runs a constantly increasing risk, from a quarter hitherto little suspected.

"It may seem strange at first sight, to a Northern reader, that ignorance can thus extend itself at the South. The error, however, arises from the popular notion that every white man in that section of the country is rich, and capable, consequently, of educating his children at his own expense. But the fact is that a few hundred thousand men, probably not over three hundred thousand, monopolize all the wealth of the South. To be a farmer in Pennsylvania or Massachusetts, much less in a Western State, demands comparatively little money. But to be planter in the Carolinas, in Mississippi, or in Texas, requires a large capital. With able-bodied slaves, at a thousand dollars a piece, it takes a small fortune to till even an ordinary-sized estate, the more especially as slave labour is less thrifty than free, and therefore calls for a larger number of hands to work a given quantity of acres. The comparative idleness in which the master lives, tends, moreover, to foster habits of luxury and extravagance. As a general rule, in consequence, most planters are a year ahead of their crop: that is, they live this season, on the anticipated profits of the next. Such a system involves wide-spread bankruptcy, whenever what is called a *crisis* occurs; and indeed is as fertile in breeding decayed gentlemen as ever was the absentee system of Ireland.

"Nor is this all. The system of slave-labour exhausts land, and can only be maintained by continually bringing a virgin soil under cultivation. The old tobacco farms of the middle slave States, and the deserted cotton fields of the Carolinas testify to this fact. There is a continual impulse, in the South, towards new territories, because the old soils annually grow poorer, and finally cease to repay the planter. The result of all this is that families are incessantly being impoverished. Those who see their perils in time, and emigrate to the virgin soils of the Southwest with their slaves, arrest ruin, at least for a few generations; but those who remain, after struggling for awhile to save themselves, by mortgaging their lands or selling a few servants, sink at last to hopeless beggary. Is it a wonder, therefore, that ignorance is spreading at the South? The children of the families becoming impoverished in this generation, added to the offspring of those who grew poor in former ones, accounts for *the otherwise anomolous fact*, that ignorance increases, on the other side of the Potomac, on the showing of the Southern newspapers themselves, faster than the population.

"The difficulty of applying a remedy, it is apparent, is in exact proportion to the deep-seated character of the evil. We see no road open for the South except a liberal provision for public schools by the legislatures of the several States. The rich there must educate the poor, the nation, if not themselves, suffer from the neglect.

For "The Friend."

Coffee Leaf Tea.

Some attention has been latterly attracted to the leaves of the coffee tree, which, it is stated, can be procured most abundantly and cheaply, and, it is asserted, will furnish a beverage as pleasant and useful as the coffee berry. From an article in a late London paper, it appears that Dr. Stenhouse had made a chemical examination of the coffee leaves, and found them to contain more cafeine (Theine) than the berries, the former averaging 1.14 per cent. of theine, the latter from 0.80 to 1 per cent., leading to the inference that the stimulating and nutritious qualities of the leaves must be at least as great as those of the berries. The dried coffee leaves examined were from Sumatra. Dr. Stenhouse says of them, "The sample had a deep brown color, and consisted of the leaves of the coffee tree mixed with fragments of stalks. The leaves had been strongly roasted, in rather a rough manner, and consequently acquired a slightly empyreumatic odour. In this respect they pretty closely resemble Paraguay tea, the leaves and twigs of the Ilex paraguayensis, which is subjected to a somewhat similar process. The coffee leaves, when digested with boiling water, yielded a deep brown infusion, which in taste and odour, closely resembled an infusion of a mixture of coffee and tea." It is evident that the care and skill exercised in the preservation of the leaves, in the roasting and even the manner of making the infusion, are likely greatly to affect the quality of the beverage. Dr. Stenhouse states that the leaves can be imported into England at a cost of less than two pence per pound. Dr. S. also examined the Paraguay tea (Mato,) and found it yielded on an average 1.23 per cent. of theine. Good black tea from China he found yielded 2.13 per cent. of theine. *

The Great Wants in a City.—There is in this great city, all the time, two great wants,—the one of poor, earnest, ambitious men, young and old, in want of place; and the other, of well-off, suffering employers, in want of just such place men. Men often nearly starve here for the want of something to do, and well-off men work themselves almost to death in need of these very place men. The difficulty comes from there being no way of bringing the two classes together. The employer cannot—will not, and dare not, pick up every straggler that comes along, and they who are in pursuit of place, begin with such high hopes and demands, that they ruin their chance of employ in the very outset,—and hence, can get nothing to do. In a city like this, there is always work enough for men unembarrassed with families to do—work that would at least keep them alive, until they could show what they were good for,—and such work, as when they demonstrate themselves to be fit for it, will make them comfortable and perhaps rich.—*N. Y. Express.*

For "The Friend."

In reading in last week's number of the "The Friend," a piece headed "Encouragement to the seed of the righteous," it was comforting to believe the Head of the church has raised up, and is qualifying sons and daughters in different meetings, to fill the vacant places of those, who having faithfully served the Lord in their day, are gathered to the reward prepared for the righteous at the end of the race. And though there may be cause to mourn the church is deprived of many upright pillars in this time of sifting and discouragement, "Is it time for you, O ye, to dwell in your ceiled houses, and this house lie waste?" Let us rather gird up the loins of our minds, and watch unto prayer, and whatsoever our hands find to do, do it with our might. And though weakness may be ours, yet strength is laid on One that is mighty to save and able to deliver. And while many of the beloved youth are ensnared and captivated, with the delusive pleasures of this fading world, the testimonies held by our worthy predecessors will not be permitted to fall to the ground for want of supporters, for there are many hidden ones, who have been holding back, who will have to come forth and show themselves on the Lord's side, that our Zion may again arise in her ancient beauty. O the times call for increased diligence, that the enemy may not entrap the feet of the unwary. Let those who are placed as watchmen and watchwomen on our walls, make straight steps to their feet, for there are many watching for the halting of these. We may be ready to say with the prophet Elijah, "I have been very jealous for the Lord God of hosts: because the children of Israel have forsaken thy covenant, thrown down thine altars, and slain thy prophets with the sword; and I, even I only, am left; and they seek my life to take it away;" yet a remnant will be preserved; for what said the Lord unto him: "I have left me seven thousand in Israel, all the knees which have not bowed unto Baal, and every mouth which hath not kissed him." Let the weak be encouraged to hold on their way, trusting in the Lord. "There is none like unto the God of Jeshurun, who rideth upon the heaven in thy help, and in his excellency on the sky. 'The Eternal God is thy refuge, and underneath are the everlasting arms:' Happy art thou, O Israel: who is like unto thee, O people saved by the Lord, the shield of thy help, and who is the sword of thy excellency."

Philada., Ninth mo. 11th, 1854.

Motion.—The common watch ticks 17,160 times an hour, and as a good watch will sometimes run one hundred years, in that time it would tick 15,042,456,000 times. The watch is made of hard metal, but we can tell you of a curious machine, which is made of something not so hard as brass or steel—it is not much harder than the flesh of your arm—yet it will beat more than five thousand times an hour, one hundred and twenty thousand times a day, and 43,830,000 a year. It will sometimes, though not often, last one hundred years; and when it does it beats 4,383,800,000 times. One might think this last machine, soft as it is, would wear out sooner than than the other, but it does not. We will tell you one thing more. You have this little machine about you. You need not feel in your pocket, for it is not there. It is in your body, you can feel it beat; it is—your heart.—*Selected.*

For "The Friend."

"In Him all Fulness Dwells."

There are a multitude of apparently desirable things which require arduous labour, that yield nothing but disappointment when obtained. The reason of this, few seem enabled to discover, and most are apt to charge some adventitious circumstance with the cause of the deficiency. Much wealth does not possess the prize towards which so many aspire, for those possessing it may be so harrassed by anxiety and perplexity, as to be tired of existence, and even sunk into an irremediable dejection, and a permanent mental gloom. Learning of itself is also defective in furnishing what is substantially beneficial, for after an acquisition of all that can be known by the most unremitting assiduity, the student will find himself greatly deceived if he depend principally upon this to promote his happiness; for still he may remain beclouded by selfishness; and pride with its attendant evils, anger, envy, and emulation, remain unsubdued, and so prominently obtrude themselves, as entirely to prevent that serene enjoyment, which is realized by the ransomed and redeemed from the corruptions of a vain world. Others again may seek in gaiety and pleasure the means of diverting the mind and wresting the thoughts from a serious consideration of accountability, till these wear away and lose their charm, and like vessels that will no longer hold anything refreshing, become empty of all that can satisfy.

The only pure and regenerating principle, is that which teaches to pursue good and reject evil. By yielding obedience to this word of life, help is given to live in a devout and waiting state of mind; here the thoughts are severed from an idolatrous love of the things of time, and by the way of the cross there is a knowledge of entering as upon a new existence, wherein we experience our affections and desires to be changed, and from a life of emptiness and want, one of peace and fulness to be enjoyed. It is only by and through our Lord and Saviour Jesus Christ, "in whom all fullness dwells," as He is mercifully pleased to clothe us with a portion of his life-giving presence, that anything truly substantial is conferred: it is then that the toil-worn traveller finds a place of rest and satisfaction, which could not be found in any worldly pursuit. This holy unction the experienced Christian regards as the substance of enjoyment, and finds that it must grace every temporal blessing to make it truly valuable. If through honest endeavours and the Divine permission, we are favoured with the good things of this life, and know them to be sanctified to us, they possess the means of imparting a real satisfaction, which greatly contrasts with a sordid and unsavoury disposition.

Then how forcibly is caution enjoined, when mercifully possessed of a little of the true substance, and an experimental evidence of regard by Him, in whom all fulness dwells, that we do not neglect to follow in the way of his leadings, as a matter of the highest necessity, seeing that all acquisitions, unless savoured with his Spirit, come short of yielding any real quietude or actual comfort in this temporary abode. For it may be well for us to remember, "if we sin wilfully after that we have received the knowledge of the Truth, there remaineth no more sacrifice for sins." (Heb. x. 26.) Still an apparent devotion even then might exist, with endeavours to climb up some other way, instead of entering by the door into the true fold. Paul reminded Timothy, that "if a man also strive for masteries, yet is he not crowned, except he strive lawfully. The husbandman that laboureth must be first partaker of the fruit."—(2 Tim. 2 ch. 5, 6 vrs.)

State of New York.

Ship Building on the Clyde.

The Scientific American states, on the authority of the London "Artizan," that "since March, 1853, there have been built, or are now building on the river, no fewer than 265 vessels, of which 87 were sailing vessels, and the rest, 178, steamers. Of this large number, only 31 are built of wood; all the rest, 234, are of iron. Of the steamers, 47 were built with paddle wheels, and 131 were screw propellers. The total tonnage of these vessels amounts to 166,804 tons. The river Clyde, or that portion of it on which these vessels have been built, or are building, is in length twenty miles, from Greenock to Glasgow." Probably in no other part of the world embracing such a small extent of territory, were so large a number of steamers built. The district would seem to be the steamship shop of the world; the vessels referred to having been constructed for parties of many different nations.

TRUST IN GOD.

"If thou hast ever felt that all on earth
Is transient and unstable; that the hopes
Which man reposes on his brother man
Are oft but broken reeds; if thou hast seen
That life itself is 'but a vapour,' springing
From Times upheaving ocean, decked perhaps
With here and there a rainbow, but full soon
To be dissolved and mingled with the vast
And fathomless expanse, that rolls its waves
On every side around thee;—if thy heart
Has deeply felt all this, and thus has learned
That earth has no security; then go
And place thy trust in God. The bliss of earth
Is transient as the coloured light that beams
In morning dew drops. Yet a little while,
And all that earth can show of majesty,
Of strength or loveliness, shall fade away
Like vernal blossoms. From the conqueror's hand
The sceptre and the sword shall pass away;
The mighty ones of earth shall lay them down
In their low beds, and death shall set his seal
On beauty's marble brow; and cold and pale,
Bloomless and voiceless, shall the lovely ones,
Go to the 'congregation of the dead.'
* * * * But the power
Of God, his goodness and his grace, shall be
Unchanged, when all the worlds that he has made
Have ceased their revolutions. When the suns
That burn in yonder sky, have poured their last,
Their dying glory o'er the realms of space,
Still God shall be the same—the same in love,
In majesty, in mercy:—then rely in faith,
In faith on Him, and thou shalt never find
Hope disappointed, or reliance vain."

MARY OF BETHANY.

BY W. W. CALDWELL.

She sat within the lonely room,
Where last in life her brother lay,
Ere fell that dark and cheerless gloom
That shadowed all her weary way.

Her eyes were dim with frequent tears,
No gleam of hope can Mary see,
Till like a voice from heaven she hears—
"The Master comes and calleth thee."

Oh! then, a sweet and peaceful calm
Stilled the deep anguish of her mind;
With eager steps she sought the balm
Which there alone her soul could find.

And lowly at the Saviour's feet
She knelt in trusting faith, and cried,
In accents low and sadly sweet—
"Hadst thou been here, he had not died."

Her words the fount of memory stirred,
And filled with tears his pitying eyes;
And soon by Lazarus' grave she heard
The voice that bade her brother rise!

O! happy thou, with loving heart,
Thus all thy grief on Christ to lay!
Thine was indeed the better part
Nor life, nor death, could take away!

Congregational Herald.

Speed on Railways.—Mr. Meigs has recently published a book, in which he states that the Emperor Nicholas, of Russia, has taken the first great step in the construction of railways which looks to the attainment of the highest practical speed in travelling on them. Instead of opening narrow cuts and going round every obstacle, the road from St. Petersburg to Moscow, five hundred miles, is made on a straight line, and opened two hundred feet wide, so that the running engineer can see everything on the way. The gauge of the track is broad, and the locomotive is on wheels of large diameter, and the signals and time are perfectly fixed, and the roads crossing the track are shut off by gates as the trains approach. In this way a speed of one hundred miles an hour is obtained.

"After so many years of uninterrupted activity, to be imprisoned, to be silenced, and almost incapable of writing or reading, is more wearisome than even the pain that often accompanies it. And yet hence the following instruction may be gathered:—How much activity belongs to some natures: and that this nature is often mistaken for grace. How much we are called to suffer as well as do the will of God. When I have bid one of my children sit down quietly, and remain silent, during my pleasure, I enjoin him a much more difficult task than the most active service; and yet I expected it to be done, because I ordered it. How is it that I have not yet learnt to sit still when I am bid."—*Cecil.*

About three hours before the death of the well-known James Hervey, he affectionately addressed his friend, Dr. Stonehouse, on the importance of his everlasting concerns, and entreated him not to be overcharged with the cares of this life; but to attend, amidst the multiplicity of his business, to the one thing needful, adding:—

Which done, the poorest can no wants endure;
And which not done, the richest must be poor:

Upon the nearer approach of dissolution, being raised a little in his chair, he said, with great serenity and sweetness in his countenance, "Lord now lettest thou thy servant depart in peace according to thy most holy word, for mine eyes have seen *thy* most precious and comfortable salvation. Here Doctor is my cordial; what are all the cordials given to support the dying, in comparison of that which arises from the promises of salvation by Christ? This, this, supports me!"

An Example of Industry.—The Baltimore Patriot says, that Samuel Williams, a coloured man, has one of the finest farms in Washington county, Md. The Hagerstown Herald states that, at the age of 38 years, he was a slave in Stafford county, Va., but subsequently purchased his freedom from his own earnings. He then bound himself to years of servitude until he could purchase his wife and children, which he accomplished when he was 50 years of age. He now owns a farm, worth $10,000, and personal property amounting to several thousand more, all earned by his own labour. He is now 73 years of age.

Singular Stock.—Robt. Scott, of Woodford county, Ky., who owns one of the splendid farms of that region, has a large pond of water upon his domain, by which he has half domesticated a flock of wild geese. He first procured eleven and cropped their wings, which reclaimed them for the season. They migrate northward in the spring, and return in the fall with their full-fledged young. The flock now numbers two hundred and eighty, and it increases annually.

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 6.)

HUGH ROBERTS.

Hugh Roberts was a man of much activity of mind, and was employed by his fellow citizens in public life, being one of the council of the Province. He however was principally concerned, after knowing his own calling and election made sure, to fill up his measure of service for his Divine Master, in the church militant, as a minister of the gospel, and as one called and prepared for the exercise of Christian discipline in religious meetings.

After being some years in Pennsylvania, he deemed it right to pay a visit to his native country, to remain for awhile among his friends and relatives. His friends of Haverford Monthly Meeting, held Fourth month 14, 1688, gave him a certificate to take with him, of which this is a transcript.

"To all Friends and people, everywhere, to whom this may come, Know ye, that whereas our dear friend and brother, Hugh Roberts, of the township of Merion, in the county of Philadelphia, in Pennsylvania, in America, having had an inclination upon his mind a considerable time to visit his friends and relations in his native country, in Wales, and having laid it before our Monthly Meeting, to which he doth belong, and Friends having nothing against it, this is therefore to certify all, that we have endeared love for our friend and brother, with true unity and fellowship, having had experience of his faithfulness to Truth, and his carefulness in walking answerable unto it, both in life and conversation, having been serviceable amongst us, and a helper in the work of the Lord, and of good report and esteem amongst men, and we believe clear upon the account of marriage, or anything relating to it.

"And now, that the powerful presence of the Lord our God may go along with him, to preserve and guide him (if it be his will) to us again, is the earnest desire of your dear friends and brethren in the everlasting Truth, and well wishers to all mankind."

Hugh Roberts remained in Great Britain two years during which time he married* Elizabeth John, a valuable Friend, of Llwyn y Branar, in Wales. They were married in 1689, and in 1690 came over to their home in Pennsylvania. Many Welsh Friends accompanied them. Hugh Roberts was now much given up to attend his Master's business, and to work his will, not permitting the new and endeared connection he had formed in life to prevent his going from home wherever religious duty led. He was one of the ministering Friends who signed the testimony against George Keith, and he felt closely united with those who not only professed the truth, but manifested a concern to oppose error.

Of his various religious journeys to strengthen Friends in the faith, and to labour for the instruction and convincement of others, northward and southward on this American continent, we know little more than that they embraced all parts where there were were any Friends from Virginia to New England.

A concern having been for some time on his mind to pay a religious visit to England and Wales, he spread the matter before his Monthly Meeting, who, on the 17th of Tenth month, 1696, gave him the following certificate addressed—

"To our dear friends and brethren in England, Wales, and elsewhere.

"Entirely and truly beloved Friends,—

"The tender salutation of our dear love in the blessed and unchangeable Truth, is unto you, whom the Lord hath gathered by the eternal arm of his power, in this his gospel day of free love and salvation, and our sincere breathings unto the Lord are, that he may keep and preserve you, and us, with all his people, to the end of our days. Our dear and well beloved friend, Hugh Roberts, being drawn forth to visit you, and having laid it before us, we, having unity therewith, could do no less upon Truth's account, and in his behalf than to give this following account concerning him, viz., That he is a man, whose innocent life and blameless conversation doth adorn the gospel of our Lord and Saviour, Jesus Christ, of which the Lord hath made him a serviceable minister, and hath owned him by his blessed power and heavenly presence, to the comforting, refreshing, and confirming of many, and is well owned by his people also. He is a man well beloved among whom he lives, where the Lord hath made him a pillar in his church, and very serviceable in divers respects. He is one that the Lord hath made willing to spend and be spent for Truth's sake. His service hath not been only amongst us, and in this province, but also in New England, Long Island, East and West Jersey, Maryland, and Virginia. His services and sufferings, when in our native land, divers of us were acquainted with, which are also known to many of our Friends and brethren there. He hath stood firm in his testimony, as at other times, so also in the time of the late separation and division,* in these parts. Our sincere desires and humble prayers are unto the Lord, that he may keep, preserve, and accompany with his Divine power and blessed presence, in this his intended journey, and at all other times, with us, and all his people everywhere, to the glory of his great name, comfort and edification of his church and people, to the convincing of many that are yet strangers to the blessed way of Truth."

Some time towards the close of the First month, 1697, Hugh Roberts took leave of his family, and proceeded towards James river, in Virginia, to embark for England. He had a tedious journey to the ship, occupying several weeks. Samuel Carpenter and John Ascue accompanied him to the Susquehanna river, from whence he proceeded to West River, thence to the dwelling of Richard Harrison. Richard Harrison and the neighbouring Friends sent him forward with a man and two horses to the Potomac river, where he was left at the house of one not in profession with Friends, who entertained him with great kindness for two days and nights, until a passage offered for getting him over the Potomac, at that place six miles broad. Those who ferried him across, would take no pay for his passage, but he found it impossible to procure a horse to convey him to the Rappahannock. He accordingly was obliged to walk thither through the woods. In his solitary journey he reached the house of a Captain Taylor, who proved very hospitable and kind, furnishing him food, and putting him over the river. On the other side of the Rappahannock he procured a man and horse, and was taken forward fourteen miles. Being then left, he proceeded for six miles to the house of a Friend where he had been on one of his religious journeys. Thus it was, sometimes walking and sometimes waiting for conveyances, that weeks were consumed in reaching the mouth of James river, where he met the vessel he was to sail in. But the vessel had to wait for her consorts, nothing less than a fleet, under an armed convoy, venturing in that time of war and piracy to put to sea. At the expiration of fifteen days from his reaching the vessel, they sailed, it being the 7th of the Third month. The voyage was then accounted rather a short one, occupying only 46 days.

He diligently occupied his time for about two years in visiting the meetings of Friends, and in various gospel labours in different parts of England. Among other neighbourhoods visited was Penllyn, his native place. He thus describes what occurred there. "I desired notice might be given to as many of my old acquaintance and relations as they conveniently could inform, that I did not expect to remain long, and so go on my way. I knew abundance would be willing to see me, and I was desirous to see them at meeting, rather than at any other place, for I had a secret hope, that some of them would be reached. This place was chiefly set before me before I went from home, and blessed be the name of the Lord, he did not only require me to go, and leave them that were near and dear to me, but also enabled me, by his power and wisdom, to perform the work and service he had for me to do, for which my soul is more engaged unto him than ever. In this meeting the Lord in a wonderful manner opened my heart and mouth, to proclaim his truth, and the way of it, and that in great tenderness, so that the witness of God was reached unto, I believe in all that were present, and many were convinced of God's truth and way. Oh, what shedding of tears there was amongst young and old! Truth was uppermost and over all. Blessed and magnified be the name of the Lord for ever."—(*To be continued.*)

* He was a widower, having been married early in life. His first wife died before he removed from Wales.

* Under George Keith.

COLOUR OF THE MEDITERRANEAN.

The usual tint of the Mediterranean Sea, when undisturbed by accidental or local causes, is a bright and deep blue; but in the Adriatic a green tinge is prevalent; in the Levant Basin, it borders to purple; while the Euxine often has the dark aspect from which it derives its modern appellation. The clear ultramarine tint is the most general, and has been immemorially noticed, although the diaphanous translucence of the water almost justifies those who assert that it has no colour at all. But notwithstanding the fluid, when undefiled by impurities, seems in small quantities to be perfectly colourless, yet in large masses it assuredly exhibits tints of different intensities. That the sea has actually a fine blue colour at a distance from the land cannot well be contradicted; nor can such colour, however influential the sky is known to be in shifting tints, be considered as wholly due to the reflection from the heavens, since it is often of a deeper hue than that of the sky, both from the interception of solar light by the clouds, and the hues which they themselves take. This is difficult to account for satisfactorily, as no analysis has yet detected a sufficient quantity of colouring matter to tinge so immense a body of water; wherefore Sir Humphrey Davy's supposition of an admixture of iodine cannot be admitted, for its presence is barely traceable under the most careful analysis. Those who contend for their being no colour at all, may remind us that the blue rays are the most refrangible; and that being reflected in greatest quantity by the fluid (which, because of its density and depth, causes them to undergo a strong refraction) they cause a tint which is only apparent. Be that as it may, seamen admit of one conclusion, namely, that a green hue is a general indication of soundings, and indigo blue of profound depth.—*The Mediterranean, by Admiral Smith.*

From "Chambers's Journal."

Customs and Manners Under the Water.

Science has become intimate with animal life on the land—even with those creatures that are too minute to be seen with the naked eye; but, till recently, the ocean appeared to baffle its researches, and in its turn to say to man in the hollow and mysterious voice that threatens as well as charms: "Thus far shalt thou go and no farther!" But all was in vain. Science, which explores the further heavens, was not to be arrested in its progress by the waters; and moving steadily onwards in this new direction, it has now invaded the depths of the sea, and examined, with its calm, observant eye, the forms and manners of its inhabitants. This has not been accomplished by means of perilous adventure—and, indeed, no perilous adventure could have achieved the feat. The French zoologist who proposed, some time ago, to pay a domestic visit to the fishes of the Mediterranean, provided with a water-tight dress and a breathing-tube, would have come back doubtless well able to furnish a pleasing superficial sketch, but quite ignorant of those minute details of individual life which form the materials of natural history.

This is well illustrated in a beautiful little work now before us, in which the author declares that the records of animals which form the foundation of all our correct generalization, are strictly biographical.* He traces an idiosyncrasy in the lower orders of creation somewhat akin to that of man; remarking that the shepherd recognizes every sheep of his flock by its face—that the groom is a physiognomist in horses—and that he himself comprehends the expression of birds. By this alone he was able, while in Jamaica, to tell one from another the wild doves in his cages, although they were perfectly alike in colour.

* * * * * * * *

To visit the inhabitants of the sea, in the constrained manner that would have been compulsory in a being formed like man, would have been of little use as regards biographical details. What, then, was to be done? To bring them to us, to be sure, since we could not go comfortably to them—to have them up in a witness-box and make them give an account of themselves. But it was necessary to do this in a particular way, for fish are no more at their ease out of the water, than we are under it; it was necessary to bring a portion of their element with them, and to have all their little comforts about them, such as stones, sand, mud, and marine plants; it was necessary, in short, for the purposes of science, to have *a piece of the sea* laid upon our table: and, being necessary, this was done. The principle upon which the Aquarium is constructed—the mutual dependance of animal and vegetable life, the former supplying the carbonic acid essential to the latter, and the latter the oxygen essential to the former—is already known to our readers; and we have only to add, that the desired portion of the sea, with its animals, plants, rocks, and sand, is contained in a glass tank, and that thus the philosopher has nothing to do but to sit down in his night-gown and slippers, and watch the goings on, and pry into the family secrets—using his lens when necessary—of the inhabitants of the deep.

To preserve the transparency of the tank would seem a difficult matter, from the floating myriads of spores or seeds of the algæ that are constantly finding a resting-place on the glass, and trying to curtain the whole from the water's edge to the bottom. To avert this danger, we employ a couple of little slavies, the common periwink, and as common top (*Trochus*); and these creatures go constantly about, shearing away the tender growth of vegetation as soon as it is formed, and taking the crop in lieu of wages. Mr. Gosse watched, through his pocket-lens, a top at his work; and this was the *modus operandi:* "At very regular intervals, the proboscis—a tube with thick fleshy walls—is rapidly turned inside out to a certain extent, until a surface is brought into contact with the glass having a silky lustre: this is the tongue. It is moved with a short sweep, and then the tubular proboscis infolds its walls again, the tongue disappearing, and every filament of conferva being carried up into the interior from the little area which had been swept. The next instant—the foot meanwhile having made a small advance—the proboscis unfolds again, the tongue makes another sweep, and again the whole is withdrawn; and this proceeds with great regularity. I can compare the action to nothing so well as to the manner in which the tongue of an ox licks up the grass of the field, or to the action of a mower cutting down swath after swath as he marches along. The tongue with which the confervoid plants are swept away is a curious instrument: "It is, in reality, an excessively delicate ribbon of transparent cartillaginous substance or membrane, on which are set spinous teeth of glassy texture and brilliancy. They are perfectly regular, and arranged in three rows, of which the middle ones are three-pointed, while in each of the outer rows, a three-pointed tooth alternates with a larger curved one, somewhat boat-like in form. All the teeth project from the surface of the tongue in hooked curves, and all point in the same direction. The action of this sort of tongue is that of a rasp, the projecting teeth abrading the surface of the plants on which the animal feeds, just as the lion is said to act with the horny pupillæ of his tongue on the flesh of his victim.

Among the strange animals described by our author as inhabiting his Aquarium, is the cephalopod called the *Sepiola vulgaris;* a curious little creature, which, when first taken from its native haunts, betrays much agitation, but finally suspends itself in mid water, "like a brown moth hovering over a flower," with its protuberant eyes gazing on either side. "While thus hovering motionless in the water, the sepiola presents a fair opportunity for observing its curious transitions of colour, which are great and sudden. We can scarcely assign any hue proper to it. Now it is nearly white, or pellucid, with a faint band of brown specks along the back, through which the internal viscera glisten like silver; in an instant the specks become spots, that come and go, and change their dimensions and their forms, and appear and disappear momentarily. The whole body—arms, fins, and all—the parts which before appeared free, display the spots, which, when looked at attentively, are seen to play about in the most singular manner, having the appearance of a coloured fluid, injected with constantly varying force into cavities in the substance of the skin, of ever-changing dimensions. Now the spots become rings, like the markings of a panther's skin; and as the little creature moves slightly, either side beneath the fin is seen to glow with metallic lustre, like that of gold-leaf seen through horn. Again the rings unite and coalesce, and form a beautiful netted pattern of brown; which colour increasing, leaves the interspaces a series of white spots on the rich dark ground. These and other phases are every instant interchanging, and passing suddenly and momentarily into each other with the utmost irregularity. But here is a change! One is hovering in quiescence, his colour pale, almost white; one of his fellows shoots along just over him: with the quickness of thought, the alarmed creature turns from white to a uniform deep brown, the rich full colour suffusing the skin in a second, like a blush on a young maiden's face. The hue is very beautiful; it is the fine, deep sienna-tint of tortoise-shell; a substance which, indeed, the mingling clouds of brown and pellucid horn closely resemble in the intermediate phases of colour.

(To be concluded.)

* The Aquarium: an Unveiling of the Wonders of the Deep Sea. By Philip Henry Gosse, A. L. S., etc. London: John Van Voorst, 1854.

For "The Friend."

The Traffic in Church Livings.

"The market for church livings continues to be well supplied, and the demand appears to be brisk. During the past month, fifty-eight advowsons, or next presentations, have been offered for sale by public auction, or through private agency, and the aggregate annual value of these amounts to £27,600; forty-six have been offered in exchange for others, of the annual value in the aggregate, of £17,140; twenty-two have been inquired for by intended purchasers, of the annual value in the aggregate, of £12,112; and it appeared that an extensive business is done in property of this description, through the medium of lists privately circulated." — *London Daily News.*

The preceding statement of an English paper excites surprise, that in a country so enlightened as England, and containing so many honest and zealous advocates of the Christian religion, such shameless traffic in professedly sacred things should be still tolerated. The fact is probably explained by its being one of the incidents attached to a corrupt system, which grew up in days of comparative darkness; and which the conservative feeling, so strong in English character, has so far prevented from being dealt with according to its merits, and the prevailing judgment of the better classes of the people.

Dislike to Controversy.

"I quarrel with no man for his religion; I am no bigot. Every one may hold whatever sentiments he chooses, so far as I am concerned; and if there is one thing I hate beyond another, it is religious controversy."

Such were the very liberal views expressed by B——, on an occasion when an attempt was made to controvert some exceedingly erroneous doctrines which certain false teachers were propagating.

B—— was himself a professor of religion, and yet gloried in the liberality or toleration which excused him from defending the cause of Truth, when most bitterly assailed. He seemed never to doubt that his position was a right one, and that in maintaining it he was vastly superior to those who thought the faith once delivered to the saints worth contending for. He never suspected, what was the true state of the case, that his extreme generosity was nothing less than indifference to the Truth. Like many professors, his religion was nominal; and as he had no practical appreciation of the Truth as a source of consolation and triumph to his own soul, he could, or would, see no difference in the various forms of faith. All were alike to him, and he was even intemperate in his condemnation of those who firmly insisted on a difference. He never engaged in a religious controversy, for the simple reason that he felt not the slightest interest in the matters at issue. His tolerant spirit failed him under other circumstances. In matters of business, he was tenacious even to obstinacy in his opinions;

and in politics, he was one of that class of partizans who could find no terms sufficiently denunciatory to characterize his opponents. He would have regarded the man as a traitor to his country who could calmly say, "I quarrel with no man for his politics. Every one may hold what sentiments he pleases, so far as I am concerned, and if there be one thing which is the object of my special abhorrence, it is political squabbles." As a politician, his heart was in the matter; as a religionist, he was contented with an empty profession. He could be extremely tolerant about things in which he felt no interest; in other matters, his charity failed him.

In this, B—— is the type of a class. There are hundreds who can violently quarrel for an unimportant opinion, who are horrified at religious controversy. They can take delight in a partizan political paper, with all its distortions and misrepresentations, and are particularly entertained when the characters of political opponents are torn into shreds; but when they see in a religious newspaper an earnest defence of that truth which the Son of God came down from Heaven to teach for our eternal salvation, they denounce it as bigotry, and profess to be scandalized by such a desecration of religion!

Our object is not to encourage the spirit of religious controversy. It is greatly to be lamented that there ever should be occasion for it. Neither are we disposed to defend the human passion and infirmity which often mingle with a legitimate defence of the Truth; but we wish to detect and expose the true motives of those who, under a pretence of liberality, would sacrifice Truth to its enemies, and who would weaken the hands of its defenders, by denouncing them as disturbers of the peace. They can contend for a dollar, because they know its value; they have not a word to say in behalf of the Truth, because to it they have never affixed any value. Their tolerance is sheer indifference; they are willing cheerfully to sacrifice that in which they feel no hearty interest.—*The Presbyterian.*

Gleanings.

"A Southern Remedy for the Abolition Movement."—The spirit in which the newspaper organ of the administration is conducted has often offended conservative men of all parties, but we have noticed few more flagrant illustrations of it than an editorial recently published under the above head. The Union says:—

"We have to call the attention of the reader to a very remarkable communication, taken from the New Orleans Delta, on the subject of *the revival of the African slave trade*—an alternative which now begins to acquire significance from the savage violence and inhuman threats of the fanatics of the free States. This article is from the pen of Dr. Cartwright, of New Orleans. . . . . His argument is so full, clear, and convincing, that we give it to our readers without another word."

A large portion of this essay is a mere diatribe against the British in the East Indies, and the British in the West Indies; the tyranny of the British everywhere. This is the favourite tactic of a certain class of politicians; they have so little faith in the good sense of the people, that they imagine any atrocity may be covered up by abusing the British. The Doctor, after thus preparing, as he imagines, the minds of his readers, proceeds to develop his plan, as follows:—

"'If Connecticut, Vermont, Massachusetts, Western New York, and the Ohio reserve will continue to be the dupes of British policy, and force upon the country a dissolution of the Union, it is but right and proper that one of the consequences of disunion, which their blind fanatacism has disqualified them from seeing, should be made known to them in advance; and that is, that the South would be compelled, in self-defence, to revive the African slave trade on a grander and more extensive scale than the world has ever witnessed. General Huston has proved that negro slaves in war (the more the better,) are an element of invincible strength, and not of weakness, as abolitionists vainly suppose. All our wars prove it. The history of the revolution proves that Washington's army in Pennsylvania and New Jersey, at the most gloomy period of the war, when the government had neither money nor credit, was kept together and supported with provisions, made, while the war was going on, by Virginia negroes; and that Burgoyne's captured army was sent from the north into the heart of the slaveholding region for safe keeping.

Our present slaveholders are not numerous enough to contend against the combined armies of the non-slaveholding States and Great Britain. The South could and would, if driven to the wall, raise an army, if need be, of any number of men, in addition to her own citizen soldiery. *There are negroes enough in Africa,* and land enough in tropical and tropicoid America, to enable the South to guaranty to each and every warrior she might see proper to call to her aid, a hundred slaves and a thousand acres of land, as a bounty for services during the war. She could thus pay an army of five hundred thousand of the fiercest warriors in the world, without exhausting her resources of American lands and African negroes. She would be compelled, likewise, to give the free negroes of the West India islands, Central and South America, the alternative of slavery or death. The decree of God, that Japhet, the white man, shall be enlarged, and Canaan, the negro, shall be his servant, cannot be made a nullity by the combined power of a world in arms to prevent it.'"

Here is the Southern remedy for the abolition movement, distinctly presented by a venerable Southern doctor, and earnestly recommended by the organ of the administration.—*Abridged from the New York Commercial.*

It is not very long ago that the British parliament were informed, on high authority, that the slave trade was virtually at an end. Now parliament is assured by the British Consul at Havana, (Crawford,) that the trade in slaves to Cuba was more active in 1853, than for eleven years before, 1844 excepted. During the past year eleven or twelve ships landed between 9,000 and 10,000 slaves from the coast of Africa.

A Cuban, who is vouched for by Joseph Hume, a member of parliament, as one of the largest proprietors of the island, says:—"The treaties have proved to be inefficient, because interested parties have contrived to influence the Spanish government, and to make them believe that the slave trade is necessary and indispensable in Cuba. With respect to the twenty-five or thirty British cruisers on the African coasts, it is notorious that they are of little or no use in preventing the trade, because, in spite of them, some hundred thousand of slaves have been introduced into Cuba, and continue to be now introduced in large numbers. British commissioners and judges residing in Cuba are equally inefficacious, because, although they witness the illegal traffic daily, they have no power at all in the island, and have not the means to prosecute actively, or to interfere with the slave traders.

By report of the Secretary of the Treasury on steamboat accidents during the first half of the present year, it appears that 65 boats were lost, 10 by collision, 18 by fire, 5 crushed in the ice at St. Louis, 23 snagged, 8 exploded, and 1 lost at sea. The number of lives lost was 516, and the amount of property two and a quarter millions dollars.

Of these boats, 52 were lost on the rivers of the southern and western states, 1 on the lakes, 1 in New Jersey, none on the Hudson, and none in all New England. Either our northeastern boats must be better built, or more carefully guided than those of our neighbours. We use low pressure and they high. Ours cost the most, but considering the loss of two millions worth of theirs in six months, which is cheaper?—*Albany Journal.*

THE FRIEND.

NINTH MONTH 23, 1854.

We intend giving further particulars of Ohio Yearly Meeting, when we receive the printed minutes. A letter, referring to the latter part of the week, says:—"We have not had such a quiet orderly meeting for a great while; and if I may be allowed to come to a conclusion, must say, that there was spread over the meeting such a covering of solemnity, that no other than our Divine Master could have produced by his presence."

SUMMARY OF EVENTS.

EUROPE.—News to the 2d inst. Throughout Great Britain the weather had been favourable for the harvest, and a large portion of the crops had been secured. The yield is abundant, and bread stuffs were rapidly falling in price. Philadelphia and Baltimore flour had declined in Liverpool to 28s. per bbl. The money market was easier, and the British funds continued to advance. The accounts of the state of trade in the manufacturing districts were favourable. The potato crop of Ireland is thought to be very large; the Belfast Mercury says its magnitude is certainly very much beyond that ever before known in the country, and thinks £15,000,000 a low estimate of its value.

The cholera continues its ravages in various parts of Europe. The Baltic fleet was suffering severely from this cause. On the 10th ult., twenty-four ships arrived at Varna with fourteen thousand troops, 1500 of whom were sick with cholera. In the Dobrudscha the French troops have lost 7000 men out of a division of 14,000.

The War.—The loss of property by the fire at Varna amounted to £500,000, and included large supplies of provisions for the army. The departure of the long threatened expedition for the Crimea was said to be fixed for the 30th ult. It was to consist of 50,000 French and English, and 20,000 Turks to be conveyed in 600 transports. The allies have abandoned Bomarsund, and re-embarked the troops; it is supposed to make a descent on Finland, west of Helsingfors. In the Swedish Diet the House of Peasants proposed a petition to the King, to take measures to prevent the Aland Islands from returning to the dominion of Russia. The German papers announce the approaching conclusion of a treaty, offensive and defensive, between Austria and the Western Powers, the preliminaries being settled.

FRANCE.—The corn market was tending downwards; the price of wines was advancing, in consequence of the very unfavourable accounts of this year's vintage.

SPAIN.—A decree confiscating the property of Queen Christina has been issued, under the cover of which she has left Madrid for Portugal, with the sanction of the government. Much of her wealth is safely invested in foreign securities. A few barricades were erected in Madrid, when it became known that she had escaped; but these were pulled down by the National Guards. The government was taking measures to suppress the republican clubs.

BARBADOES.—A late letter from this Island gives the number of deaths from cholera, up to that time, as 18,000, or one in eight of the entire population. The disease continued its ravages, the deaths, over the Island, being thought to average about 100 per day.

UNITED STATES.—*Growth of Commerce.*—In 1789, the tonnage of the United States amounted only to 201,562; in 1853, it had grown to 4,407,011 tons.

The war in Europe appears to increase the emigration from Germany. During the eight months ending 1st inst., no fewer than 116,400 Germans arrived at New York, many of whom are said to be men of capital.

Manufacture of Paper.—There are 750 paper mills in the United States, producing about 270,000,000 pounds of paper, worth on an average of ten cents per lb., twenty-seven millions of dollars. The cost of rags consumed is estimated at sixteen millions of dollars.

Violent Storm.—About the 7th inst., a storm of wind and rain commenced on the Florida coast, and during the succeeding three days extended northwards along our whole seaboard, and to a considerable distance inland. It was more violent and longer in duration at Savannah and Charleston than at points further north. Great damage appears to have been sustained by the planters in the destruction of their rice crop. At Charleston, the injury to the city wharfing and to merchandize, is estimated at 300,000 dollars. Various disasters to shipping along the coast are reported.

California.—The San Francisco papers state, that the supply of labour generally, in California, is now in advance of the demand, and its value has consequently declined. Joiners, workers in metals, and seamen are among the classes whose labour is best paid. There has been a great falling off in the import trade. From First month 1st to Eighth month 8th last, there arrived at San Francisco, 117 ships from the Atlantic ports of the United States, and from other parts of the world, 168—total, 285; while, in the corresponding period of 1853, the arrivals from the United States, were 232, and other parts of the world, 361—total, 583.

Nebraska.—On the 19th ult., Lieut. Grattan, with an interpreter and twenty-six soldiers from Fort Laramie, were killed by the Indians encamped in the vicinity. The catastrophe appears to have been caused by the rash and violent manner in which the party attempted to arrest one of the Indians, who had been charged with a petty depredation upon the property of an emigrating party of Mormons.

Louisiana.—The sugar crop of the year is set down in Champomier's annual statement at 449,324 hhds., weighing nearly 500,000,000 pounds. The number of sugar-houses in Louisiana is stated to be 1437, of which 956 are worked by steam power.

Savannah, Ga.—The deaths for the week ending 12th inst., number 210. On the 12th inst., there were 51 interments, 34 of which were from yellow fever. The cholera has made its appearance in the rice plantations on the Savannah river.

Charleston, S. C.—The deaths for the week ending 11th inst. numbered 116, including 76 of yellow fever.

Pittsburg, Pa.—During the last week, cholera made its appearance in a highly malignant form, and a large number of persons having been attacked, much alarm was felt. The most recent accounts represent the disease as abating.

Columbia, Pa.—The cholera broke out in this town, on the 8th inst., producing a panic and the hasty removal of the greater part of the inhabitants. About eighty persons died in the first four days after its appearance; since then the mortality has been smaller, and the early abatement of the disease is hoped for.

New York.—From the semi-annual report of the Chief of Police, it appears that this city contains 6,885 places at which spirituous liquors are sold; of these 3917 are licensed, 2968 unlicensed, and 3087 are open on the first day of the week. During the last six months the number of arrests for criminal offences was 25,110. Of the arrests, 48 were for murder; 12, arson; 35, forgery; 115, burglary; 115, passing counterfeit money; 572, grand larceny, and the remainder mostly for petty larceny, assault and battery, and drunkenness.

Interments last week, 675, of which 124 were from cholera.

Philadelphia.—Interments last week, 226, of which 11 were from cholera.

A TEACHER WANTED,

For the Girls' second arithmetical school at West-town Boarding School. Apply to Anne Tatum, Woodbury; Sidney Coates, 330 Arch st.; Elizabeth Peirson, 254 N. Fifth st.; or Sarah Allen, 146 Pine st.

FEMALE TEACHER WANTED.

A Teacher is wanted for Friends' female school, at Woodbury, N. J. For one well qualified to teach the ordinary branches of a good English education, a liberal compensation will be secured. Apply to George M. Paul, or Wm. R. Tatum.

WANTED,

An Apprentice to the Retail Drug and Apothecary Business. Apply to J. Lewis Crew, Cor. Frankford Road and Phœnix streets; or at Friends' Bookstore, 84 Arch street.

RECEIPTS.

Received from Sl. Marriott, $2, vol. 28, and for Abm. Macy, $2, vol. 27; from John F. Hull, agt., N. Y., $2, vol. 28, and for S. C. Hull and Richd. Marriott, $2 each, vol. 28; from Jehu Fawcett, agt., O., for Ruth Stanley, Nathan H. Armstrong and Jos. Armstrong, $2 each, vol. 27, for Barton Dean and C. Allen, $2 each, vol. 28, for Aaron Steward, $4, vols. 26 and 27; from Asa Garretson, agt., O., for M. Bailey, $1 to 27, vol. 28; for Jos. Gibbons, $2, vol. 28; from A. Dirkin, Engd., for Jos. T. Price and Jonathan Harris, 10 shillings each, vol. 28; from George Harrison, agt., Manchester, Eng., £11 8s.; from Hartas Hedley, $2, vol. 27; from Henry Robinson, N. Y., $2 to 21, vol. 28; from Z. Hampton, agt., Io., for Caleb Gregg, $2, vol. 28; from H. C. Post, $2, vol. 28.

West Grove Boarding School for Girls.

This School is situated in London Grove, Chester county. Accessible daily from Philadelphia and Baltimore, by railway and stage, via Newark and New London. The locality is pleasant, retired and healthful. The course of instruction embraces all the useful branches of an extended English Education, including Linear and perspective Drawing. Lectures, illustrated by experiments, are given weekly. The Sessions commence on the first Second-day in the Fifth and Eleventh months respectively, and continue twenty weeks. For further particulars,

Address, THOMAS CONARD, Principal.
West Grove P. O., Chester county, Pa.

WEST-TOWN SCHOOL.

The Committee to superintend the Boarding School at West-town, will meet in Philadelphia, on Sixth-day, the 6th of next month, at 7 o'clock, P. M.

The Committee on Instruction meet at 4 P. M., and the Committee on Admissions at 5 P. M., on the same day.

The Visiting Committee attend the semi-annual examination of the schools, on Third, Fourth, and Fifth-days of the same week. THOMAS KIMBER, Clerk.

Philad., Ninth mo. 23d, 1854.

Select Schools for the Children of Friends.

Primary Schools for Children of both sexes are kept in the Northern and Western Districts, in school-rooms attached to the respective Meeting-houses. The Boys' mathematical school is situated on Cherry street, between Eighth and Ninth, and that for Girls' on St. James street, near Sixth. These valuable seminaries, to which the attention of Friends has been recently called, by a circular address of the committee charged with their care, are now in session, and open for the reception of pupils.

YARDLEY WARNER proposes to reopen his school on the 30th of Tenth month next; and can accommodate six or eight Girls as boarders; to these, with about the same number of Girls as day scholars, the school will be limited. For Terms, &c., apply early.

Address, Warren Tavern P. O.,
Chester Co., Pa.

DIED, of Pulmonary consumption, at the residence of her father, in West Philadelphia, on the 12th of Eighth month last, REBECCA, daughter of Joseph FOX, in the 27th year of her age. Although of a quick, lively disposition whilst in health, during her sickness, calmness and resignation appeared to be the clothing of her spirit; and her relatives have a consoling hope, that the work which her heavenly Father had begun, was carried on by Him and finished in righteousness, to whom be all the praise.

——, in this city, on First-day, the 3rd instant, SARAH ROCK, in the seventy-ninth year of her age, a member of Philadelphia Monthly Meeting of Friends for the Northern District. In the latter days of her pilgrimage, this dear Friend was concerned to be found in a deep indwelling with the seed of Divine life. On her death-bed she was queried with, if she would not like to see a ministering Friend, whose name was mentioned. She said, "*Yes; if the Master sends her;*" but declined having her invited; she had learned the important lesson, "to cease from man." It may be truly said, she possessed a meek and quiet spirit; and to her was verified the language, "Thou shalt come to thy grave in a full age, like as a shock of corn cometh in in his season."

For "The Friend."

JAQUELINE PASCAL.

(Continued from page 9.)

"I do not wish for any one to make a public profession of faith, for unquestionably, in the present state of affairs, yes and of persons also, whom God has left to become the slaves of their own will and passions, nothing short of a miracle could save the truth from condemnation. And the more clearly we explained that truth, the more occasion of sin should we furnish to those who are obstinately bent on condemning it. But what I do desire is, that while strictly observing all proper deference towards the powers that be, and making neither accusations nor reproaches, there should at the same time be a firm determination of giving no reason to believe that the truth itself has been condemned, or even evaded. For I ask you, dear sister, in God's name, to tell me what difference you can find between these evasions and the offering of incense to an idol, as defended by the pretext of having meanwhile a crucifix hidden in one's sleeve.*

"You will perhaps say that this does not concern us, because of our own private formulary. But I have two things to say on that head. One is, that St. Bernard teaches us, in his admirable manner, that the most insignificant member of the church not only may but *ought* to cry aloud and spare not, when he sees the bishops and pastors of the church in such a state as we behold them now. Who, says he, can blame me for calling out, though I am but a feeble sheep, if I try to awaken my shepherd when I see him asleep, and on the point of being devoured by a wild beast? Even were I so ungrateful as not do this out of love and gratitude, ought not a sense of my own peril to prompt my utmost efforts to arouse him. . . . I do not say this in reference to our spiritual fathers and friends; I know that they themselves detest every species of duplicity quite as much as I do, but I say it in reference to the general condition of the church, and to justify the deep interest I take in this matter, both to you and to myself.

"My other answer is, that hitherto I have not been able to give my thorough approval to your formulary as it is. I should like to have a change made in two places. The first at the beginning, because it seems hard for persons like us to offer so freely to give an account of our faith. I would do this, however, with a little preamble, explaining away the consequences and the unseemliness of such a confession; for there is no question, but that this whole affair of the required signature and declaration of faith is a usurpation of power, which brings very dangerous consequences in its train, more especially as it is demanded by authority of the king: now I do not consider that private individuals ought to resist that authority, but neither ought they to yield to it without some intimations that they do so, not out of ignorance, or because it is their duty, but as submitting to endure wrong rather than occasion scandal. The second is towards the close, where I would rather not mention the decisions of the vatican; for though it is true that we submit to those decisions in matters of faith, yet the vulgar confound fact and right by reason of ignorance, and interested persons choose to confound them by reason of self-will, and thus they are looked upon as one and the same thing. What effect, then, would your formulary produce except to make ignorance believe and malice assert that we have agreed to everything, and that we condemn the doctrines of Jansenius? . . . . . .

"A comparison occurs to me, which may serve to illustrate my idea upon the decisions of the Holy See. Though every one knows that the mystery of the trinity is one of the prominent articles of our faith, which St. Augustine would unquestionably coufess and willingly sign, nevertheless if his native country were in possession of a pagan prince, who wished to have the unity of God denied, and a plurality of deities acknowledged, and supposing that some of the Christians, in order to quiet the commotions excited by such a proceeding, were to compile a formulary of faith on the subject, running thus: 'I believe that there are several persons to whom we may give the name of God, and address our prayers,' without any further explanation, would St. Augustine sign it? Assuredly I do not believe he would. Still less do I think he *ought* to sign it. . . . . You can easily make the application. It may be said that our authority is not of the same weight as St. Augustine's, and that, in fact, it is of no weight at all. To this I answer in the first place, that I have only mentioned St. Augustine by way of reference to the reply given by you a few days ago, when I stated my difficulties, which was, that our fears would only be laughed at, and that St. Augustine would sign the paper that we were so much afraid of. But what I say of St. Augustine, I say also of you and of myself, and of the least important in the church, for *the feebleness of our influence does not lessen our guilt if we use that influence against the truth.* Every one knows, and M. de St. Cyran says it in a thousand places, that the least truth of religion ought to be as faithfully defended as Christ himself. Where is the Christian who would not abhor himself, if it were possible for him to have been present in Pilate's council, and if, when the question of condemning our Saviour to death arose, he had been content with an ambiguous way of stating his opinion, so that he might appear to agree with those who condemned his Master, though his words in their literal meaning, and according to his own conscience, tended to an acquittal.

"Is not the sin of St. Peter trivial in comparison of so extreme a timidity, and yet how did he regard that sin through his whole after life? And we are also to note well, that his was only the sin of a private believer, who did not say, as in the present case, 'This man is a sinner, he is worthy of death, crucify him,' who did not even pretend to say it. But what he said was, simple, 'I know not the man.' Follow this comparison to its last results, I beseech you.

"My letter is only too long already. This, dear sister, is what I think about the formulary. I see clearly that it need not contain a full confession of faith, but I should like to have what it does contain, clearly and distinctly expressed. For ignorant as we are, all that we can reasonably be required to sign is a testimonial to the sincerity of our belief, and to our perfect submission to the church, to the Pope as its supreme head, and to the Archbishop of Paris as our superior, stating that although we do not consider it right to demand an account of their faith in this matter from persons who never gave any occasion for that faith to be called in question, nevertheless in order to avoid the scandal and the suspicions to which our refusal might give birth, we do hereby testify, that esteeming nothing so precious as the treasure of a pure and unadulterated faith, and willing to yield our lives for its preservation, we desire to live and die as humble daughters of the Catholic church, believing whatever she believes, and ready at all times to die in defence of her least important truths. If they are satisfied with this, well and good; if not, for my part I shall never sign any other, if it please God. This is all that I think we ought to concede, let what will happen. Poverty, dispersion, imprisonment, death, all these seem as nothing to me compared with the anguish of my whole future life, if I should be wretched enough to make a league with death, instead of profiting by such an opportunity of paying to God the vows of fidelity which my lips have pronounced.

"Let us pray to God for one another, my dear sister, that he would more and more strengthen us and make us humble, since humility without fortitude, and courage without humility, are equally pernicious. Now, more than ever, we should recollect that the fearful have their place with the perjured and the abominable.

"Do not be shocked at my complaints that so little notice has been taken of our scruples. This gave me no trouble whatever. I am used to be treated as a child, and God grant that it may be so always. But the subject led me thither undesignedly, and I do not regret it, because if similar circumstances should ever occur again, it will be known that we are not to be satisfied with the assurance that our scruples are ridiculous, while no reasons are assigned. . . . . .

"I believe, my dear sister, that it is needless for me to say I make no objection whatever to the *words* of your formulary, and that I do not care what terms are used, provided no reason be given to think that we censure either the grace of Jesus Christ or him who has so well explained its doctrines.

"Therefore, in adopting the words—'believe all

* The Jesuits allowed their converts in India and China to pay outward homage to idols, provided that they referred that worship mentally to an image of Jesus Christ hidden under their clothes.

that the church believes,'—I have omitted—'and condemn whatever she condemns;'—though I do in reality condemn what the church condemns, but I do not believe it a fitting time to say so, lest the church should be confounded with the present decisions. Even as M. de St. Cyran says, that the pagans having placed an idol on the very spot where once stood the cross of our Lord, the Christians would not go thither to worship, lest it should be supposed that they were worshipping the idol."

(To be continued.)

From "Chambers's Journal."

Customs and Manners Under the Water.

(Concluded from page 14.)

The Black Goby is a ferocious little cannibal, about three inches long. Like other robbers and murderers, he loves the dark, lurking at the bottom under the shelter of rocks and weeds. If very hungry, however, he will dart up even to the surface to seize his prey; but turning instantly, he will dive down again into his lair. A youngster of the same tribe, but of a different family, was put into the tank, and unfortunately caught the eye of the skulking goby, who at once made a dash at him, and caught him by the tail, ingulfing it in his capacious throat. "The Blackie glared like a demon, as with dilated head, he held fast his victim, clutching further and further holds by repeated jerks: the delicate pellucid head of the unfortunate prey, projecting from the cavernous mouth, panted and rolled its eyes in pain, but there was no escape; for now nothing was visible but the head, when the ferocious victor shot under an umbrageous weed, and on my next sight of him all traces of his meal was gone."

Among the denizens of the Aquarium was rather a rare animal, the strawberry-crab, so called from its being studded with pink tubercles on a white ground; and between this creature and the ourang-outang, Mr. Gosse traces a somewhat striking analogy. "The strawberry-crab," says he, "is a *climber*. If it were a terrestrial animal, I should say its habits are *arboreal*. True, it now and then wanders over the bottom of its abode with slow and painful march, the hind feet held up at an angle above the level of the back; but generally it seeks an elevated position. We usually see it in the morning perched on the summit of some one of the more bushy weeds in the Aquarium, as the *Chondrus* or *Phyllophora rubens*, where it has taken its station during the night, the season of its chief activity, as of most other crustacea. It interested me much to see it climb: seizing the twigs above it by stretching out its long arms alternately, it dragged up its body from branch to branch, mounting to the top of the plant deliberately, but with ease. While watching it, I was strongly reminded of the ourang-outang at the Zoological Gardens; the manner in which each of these very dissimilar animals performed the same feat was so closely alike as to create an agreeable feeling of surprise."

Every page of this fascinating work is quotable; but perhaps nothing will be read with more pleasure than the account of the *Aphrodite*, or sea-mouse. "In the Aquarium the sea-mouse crawls restlessly to and fro, and round the margin of the bottom; once or twice I have seen it essay to burrow under the fine gravel, but generally it lives exposed. It is uninteresting in its manners, though the brilliance of its changing colours will always attract admiration. Perhaps it is most beautiful by candle-light, when red and orange reflections predominate; by day, pearly greens and blues prevail. This difference is owing to the position of the light, and the angle at which it is reflected. Thus, if the eye glance along the bristles towards the light, which is reflected at an obtuse angle, the reflected rays will be lilac, passing into ultra-marine; if the angle of reflection be a right angle, the rays will be green; if the light be between the observer and the animal—not directly, but obliquely, so as to make the angle of reflection more or less acute—the reflections will take yellow, orange, scarlet, and crimson hues."

The most curious part of the sea-mouse is the expiratory machinery. "As it crawls, the *Aphrodite* usually elevates the tail, which is so folded together as to form a deep groove beneath. By watching this, we see now and then ejected a stream of water, with considerable force. I found that the jet occurred once in twenty-five seconds, with punctual regularity. This is a respiratory act. The grooved orifice through which the jet is poured is not the termination of the intestine, as we may at first suppose, but the exit of a capacious chamber, which is external to the body, though concealed. A very marvellous and quite unparalleled structure here comes into view. If we take a sea-mouse into our hand, we see the whole breadth of the back occupied by a woolly substance, closely resembling felt, and formed by the interlacing of fine hairs. If we insert a penknife into the tail-groove, and slit up this felt-like cover, we expose an ample cavity running the whole length of the animal, the floor of which is the true skin of the back, on which are set two rows of large overlapping plates, or membranous scales (*elytra*.) The dense tissue of interwoven hair resembling felt acts as a filter for the water to be respired, straining off the earthly particles held in it, which thus accumulate in its substance, and impart that peculiar dirty appearance which it possesses. The scales, according to Dr. Williams, are periodically elevated and depressed. In the former action, the water permeates the felt and fills the vacuum formed between them and the back. As soon as it is full, they collapse, and the filtered fluid, now deprived of its oxygen, is forcibly expelled at the anal groove."

Mr. Gosse throws much new light upon the manners of the soldier-crab, a creature destitute of the usual defensive armour of his tribe, but making up for the want by courage and address. He seizes upon any empty shell of suitable size, and makes it his habitation; and it is curious to observe him in the Aquarium becoming discontented with his house, and looking out for a new one. This process, however, has been frequently described; but it is less known that the soldier has generally a fellow-lodger inside, while the roof of his dwelling, the spire of the shell, is often the chosen abode of an anemone. This extraordinary creature is a parasite, although it has been known to exercise some volition in choosing its site. When displaced from a shell, it will plant itself on a stone by means of its suckers; but of its own good-will, it would always get upon the roof of another individual's wagon, and so enjoy the pleasure of being carried. The anemone resembles a tall, thick pillar, surmounted by a fringe of tentacles, that wave gallantly at every motion of the Sinbad chosen for his porter by this Old Man of the Mountain. The companion who chums inside with the soldier is a worm—but we will allow our naturalist to introduce him: "While I was feeding one of my soldiers by giving him a fragment of cooked meat, which he, having seized with one claw, had transferred to the foot-jaws, and was munching, I saw protrude from between the body of the crab and the whelk-shell, the head of a beautiful worm (*Nereis bilineata*), which rapidly glided out round the crab's right cheek, and, passing between the upper and lower foot jaws, seized the morsel of food, and retreating, forcibly dragged it from the crab's very mouth. I beheld this with amazement, admiring that, though the crab sought to recover his hold, he manifested not the least sign of anger at the actions of the worm. I had afterwards many opportunities of seeing this scene enacted over again; indeed, on every occasion that I fed the crab, and watched its eating, the worm appeared after a few moments, aware, probably, by the vibrations of its huge fellow-tenant's body, that feeding was going on. The mode and the place of the worm's appearance were the same in every case, and it invariably glided to the crab's mouth between the two left foot-jaws. I was surprised to observe what a cavern opened beneath the pointed head of the *nereis* when it seized the morsel, and with what force comparatively large pieces were torn off and swallowed, and how firmly the throat-jaws held the piece when it would not yield. Occasionally, it was dragged quite away from the crab's jaws, and quickly carried into the recesses of the shell: sometimes, in this case, he put in one of his claws, and recovered his morsel; at others, he gave a sudden start at missing his grasp, which frightened the worm and made it let go and retreat; but sometimes the latter made good his foray, and enjoyed his plunder in secret. The worm is itself a striking and even handsome animal; and there is in its colours and their distribution—two bright white lines running through the whole length on a light red ground—a curious similarity to the colouring of the crab." This worm, we may add, is much prized by fishermen as bait; and so commonly is it found in the companionship above described, that at Weymouth they always break the shells tenanted by the soldier-crab to look for it.

The common cockle one would think, has not much more facility of voluntary motion than the anemone; but in reality its gymnastic feats are of some note. The tuberculated cockle, however, the giant of the tribe, is quite a formidable vaulter; and when a number of them are thrown into a heap, they seem to defy the riot act. Our author once turned out some of these creatures into a dish, as he knew they liked the air sometimes; but by and by when the family were quietly reading, an awful uproar commenced among them, as if a crowd of flint-stones were battling and rattling over one another. We must now have done, however; many of our readers will doubtless get the volume for themselves, and, independently of its other merits, they will find it a fitting ornament for the drawing-room table, on account of the gorgeous chromo-lithographs with which it is illustrated. Some will likewise find it important to be able to obtain in so agreeable a way, full instructions for forming a marine aquarium, with the cost of the different sizes.

Number of Slaves in the World.—The African Institute at Paris—an association for the diffusion of civilization and Christian light in Africa—has issued a circular in which the number of blacks held in slavery in different countries is stated at seven and a half millions, of which 3,095,000 are in the United States, 3,250,000 in Brazil, 900,000 in the Spanish Colonies, 85,000 in Holland Colonies, 140,000 in the Republics of Central America, and 30,000 in European establishments in Africa.

Artesian Well.—The well at Belcher's refinery, St. Louis, has been bored to the depth of 2,200 feet. At 700 feet they struck salt water; at 1,500 a sulphur spring, which has poured forth the best sulphur water ever since. They are boring on to get the pure element.

"For The Friend."

"Cast all Crowns at His Feet."

It is necessary to be guarded against the error into which some professing Christians have fallen, respecting the propitiatory sacrifice, who believe it to be sufficient for them without an earnest engagement of mind on their part; and that though their lives may not evince the regulating and restraining influences of the Redeemer's love, subduing all vicious practices, and bringing every lofty imagination and evil desire into captivity, in accordance with the Divine requisition, as it is inwardly made known, yet that all will be well with them in the end. The obvious tendency of this doctrine is to settle many down at ease, and to promote a careless, indifferent, and idle life, to whom the language would be applicable: "Wilt thou know, O vain man, that faith without works is dead?" Here there is danger of reposing too much on a literal faith, which is overcome by the world, a mere assent to an outward and theoretical belief in Gospel truths, and a profession of acting in the name of Christ Jesus, the only hope of glory, without witnessing his blessed power to operate upon the heart "converting the soul."

It is highly important to avoid acting in our own will and wisdom, by yielding to the idea that our exertions as men and creatures will bring us into a state of acceptance; that we must adopt certain formulas with the most scrupulous accuracy, and preach and pray without waiting for a qualification; at the same time, taking much praise to ourselves for indefatigable exertions, as we are willing to believe, in our Christian duties. Here there is a proneness to boast in self-complacency of the great good which our own hands have effected. But alas! this unhappy state of mind will allow pride to increase from a dependance on works without the only true and living faith, till like one formerly who died a miserable death in consequence of not giving God the glory, there is danger of being pleased with an acclamation similar to this: "It is the voice of a God, and not of a man." A constant exercise must be maintained, lest like some who warmed themselves by the sparks of a fire of their own kindling, there may yet be a lying down in sorrow, and that there may be a renewed preparation of heart experienced from the Lord, who alone can qualify for the right performance of every service in the church, so that in our public endeavours to serve Him, He may condescend to bless our labours and exercises to his own honour, and for our eternal well-being. Before we can arrive at a profitable state, there must be a humble desire to dwell under the qualifying impressions of the preparing hand, and an unfeigned acknowledgment, that "except the Lord build the house, they labour in vain that build it." We must know that no service is acceptable to One, whose wisdom is infinite, and whose ways are past finding out, unless He call for it at our hands, and strengthen and steady them for the work; for He alone can cause us both to will and to do according to his own good pleasure. As we witness old things to be done away, and all things to become new, through the operations of the Saviour's love, we are prepared to show forth unto others "*our faith by our works;*" and by adhering to this our holy and blessed faith, know a redemption from all iniquity; and that a crown of glory is laid up for us eternal in the heavens. In this condition we have a view of the infinite goodness and mercy of the holy Redeemer, our weak, undone, and entirely helpless state, before we felt that we were made joyful partakers of the one faith and baptism, through the one blessed Lord, knowing experimentally an inward cleansing from every spiritual pollution, and that He died that ignominious death upon the cross, that we might lay hold of eternal happiness, rejoicing in the hope, that because He lives we live also. As we come to this, we shall be prepared to ascribe, "blessing, and honour, and glory, and power, unto Him that sitteth upon the throne, and unto the Lamb for ever and ever." Here all human wisdom and power wither and fade, and we realize, that if any good is done, it is not of ourselves, but has been effected by and through the Holy One of Israel, to whose righteous sceptre we are enabled reverently to bow in humble submission, and then only can we "*cast all crowns at his feet.*"

State of New York.

Passing Events.

The Christian should be an interested and discriminating observer of passing events, not to be unduly elated by what may appear encouraging, or seriously depressed by circumstances of an opposite character; but ever regardful of the supreme governance of God, who controls all events, and disposes of them in such a manner as to accomplish his own ultimate purposes. Those who are not under the habitual influence of religious principles, confine their speculations to mere temporalities, and have neither the ability nor wish to trace the consequences of daily occurrences beyond the period in which they themselves live, and in ony other relations than as they may affect their own temporal interests. In commerce, politics, and general trade, the most significant occurrences are interpreted within these narrow limits, as they may affect these several interests. Thus, one is endeavouring to solve the problem of the probable results of existing wars on the general interests of commerce, while others, contemplating the giant strides of our country, and the unprecedented increase of its population, are chiefly occupied in speculating on the political complexion of its future. We do not regard these as trivial or unsuitable subjects of consideration; far from it; we only postpone them to those which are less thought of, although of much greater moment. The Christian, as we conceive his position and character, is taught to regard all providential occurrences as having an important bearing upon man's spiritual destiny, and the ultimate successes of Christ's kingdom. Nothing, in his view, happens by chance, and nothing which forms a link in the chain of providences, by which God's ultimate purposes are to be accomplished, is to him insignificant.

Terrible as are the wars which are now raging, and disastrous as are their effects on individuals and communities, he can trace in them the hand of God, who, in this way, as in others, punishes sin and breaks down the obstacles which have been reared by man's wickedness to oppose the progress of his kingdom. He can await the final results with confidence, and he can believe in their certainty, although he may not live to see them. Vice and false religion are the two great foes of God, which he must and will finally subdue, and their defeat may be near when their triumph seems to be greatest. When the "kings of the earth set themselves, and the rulers take counsel together against the Lord and against his anointed," how easily can he unseat them, and hurl them to destruction! He can use them as instruments for the punishment of the sins of the people, and he can use the people, in turn, to break their yoke, and wrest from them their sceptres. He may punish nations which have disregarded the claims of his precious truth, by making them the victims of ruinous delusion; and he may again arouse the people from their lethargy, and arm them with vigour to shatter in pieces the systems of false religion which have so cruelly held them in bondage. Of one thing we feel confident, that there is a true religion in the world, which is the source of the highest present happiness and the guaranty of unspeakable future blessedness, of which most men are utterly regardless at present, infatuated as they are by the artifices of Satan; but which shall ultimately prevail, exerting its now comparatively dormant power over all hearts and minds, and, in the end, triumphing gloriously over all opposition. With such reflections every Christian mind should become familiarized. They are as comforting as they are true, and amidst all the tumults of earth they afford a blessed and secure refuge.—*The Presbyterian.*

For "The Friend."

THE CROSS OF CHRIST.

"If those wants that are the subject of prayer were once agreed upon, (though that might be a weighty point,) yet how to pray is still of greater moment than to pray; it is not the request, but the frame of the petitioner's spirit. The *what* may be proper, but the *how* defective. As I said, God needs not be told of our wants by us; he must tell them to us; yet he will be told them from us, both that we may seek him, and that he may come down to us. But when this is done, to this "man will I look, saith the Lord, even to him that is poor, and of a contrite spirit, and that trembleth at my word." To the sick heart, the wounded soul, the hungry and thirsty, the weary and heavy laden ones; such sincerely want an helper.

Nor is this sufficient to complete Gospel worship; the fourth requisite must be had, and that is faith, true faith, precious faith; the faith of God's chosen, that purifies their hearts, overcomes the world, and is the victory of the saints. This is that which animates prayer and presses it home, like the importunate widow, who would not be denied: or she to whom Christ said, "O woman, great is thy faith." This is of the highest moment on our part, to give our addresses success with God. Yet it is not in our power, for it is the gift of God: from him we must have it; and with one grain of it more work is done, more deliverance is wrought, and more goodness and mercy received, than by all the runnings, willings, and toilings of man with his inventions and bodily exercises. This duly weighed, will easily show why so much worship brings so little profit to the world, as we see it does, viz., true faith is lost. They ask, and receive not; they seek, and find not; they knock, and it is not opened unto them. The case is plain; their requests are not mixed with purifying faith, by which they should prevail, as good Jacob when he wrestled with God prevailed. The truth is, the generality are yet in their sins, following their hearts' lusts, and living in worldly pleasures, being strangers to this precious faith. The reason rendered by the deep author of the Epistle to the Hebrews, of the unprofitableness of the word preached to some of those days, is, its "not being mixed with faith in them that heard it." Can the minister then preach without faith? No: and much less can any man pray to purpose without faith, especially when we are told, "That the just live by faith." For worship is the supreme act of man's life; and whatever is necessary to inferior acts of religion, must not be wanting there.

This may moderate the wonder in any why Christ so often said to his disciples, "O ye of little faith!" Yet he tells us that one grain of it, though as little as that of mustard, one of the least of seeds, if true and right, is able to remove mountains. As if he had said, there is no temp-

tation so powerful that it cannot supply. Therefore, those who are captivated by temptations, and remain unsupplied in their spiritual wants, have not this powerful faith; that is the true cause. So necessary was it of old, that Christ did not many mighty works where the people believed not; and though his power wrought wonders in other places, faith opened the way: so that it is hard to say, whether that power by faith, or faith by that power, wrought the cure. Let us call to mind what famous things a little clay and spittle, one touch of the hem of Christ's garment, and a few words out of his mouth did, by the force of faith in the patients. "Believe ye that I am able to open your eyes?" Yea, Lord, said the blind, and they saw. To the ruler, "Only believe;" he did, and his dead daughter recovered life. Again, "If thou canst believe;" I do believe, says the father, help my unbelief; and the evil spirit was chased away, and the child recovered. He said to one, "Go, thy faith has made thee whole;" and to another, "Thy faith has saved thee; thy sins are forgiven thee." And to encourage his disciples to believe, when they were admiring how soon his sentence was executed upon the fruitless fig-tree, he tells them, "Verily, if ye have faith, and doubt not, ye shall not only do this, which is done to the fig-tree; but also, if ye shall say unto this mountain, be thou removed and cast into the sea, it shall be done; and all things whatsoever ye shall ask in prayer, believing, ye shall receive."

But some may say, it is impossible to receive all that a man may ask. It is not impossible to receive all that a man, that so believes, can ask. The fruits of faith are not impossible to those who truly believe in God, who makes them possible. When Jesus said to the ruler, "If thou canst believe," he adds, "all things are possible to him that believeth." But some will say, it is impossible to have such faith. But Christ's answer to the infidelity of that age, will best confute the disbelief of this. "The things that are impossible with men, are possible with God." It will follow, then, that it is not impossible with God to give that faith; though, it is certain, that "without it, it is impossible to please God; for so the author to the Hebrews teaches. And if it be impossible to please God, it must be so to pray to God, without this precious faith. But some may say, what is this faith, that is so necessary to worship, and that gives it such acceptance with God, and returns that benefit to men? I say, it is an holy resignation to God, and confidence in him, testified by a religious obedience to his holy requirings, which gives sure evidence to the soul of the things not yet seen, and a general sense and taste of the substance of those things that are hoped for; that is, the glory which is to be revealed hereafter. As this faith is the gift of God, so it purifies the hearts of those that receive it. The Apostle Paul is witness, that it will not dwell, but in a pure conscience. He therefore in one place, couples a pure heart and faith unfeigned together: in another, faith and a good conscience. James joins faith with righteousness, and John with victory over the world. "This," says he, "is the victory which overcomes the world, even your faith." The heirs of this faith are the true children of Abraham, though the uncircumcision in the flesh, for they walk in the steps of Abraham, according to the obedience of faith, which only entitles people to be the children of Abraham. This lives above the world, not only in its sin, but righteousness; to which no man comes, but through death to self, by the cross of Jesus, and an entire dependence, by him, upon God. Famous are the exploits of this Divine gift; time would fail to recount them; all sacred history is filled with them. But let it suffice, that by it the holy ancients endured all trials, overcame all enemies, prevailed with God, renowned his truth, finished their testimony, and obtained the reward of the faithful,—a crown of righteousness, which is the eternal blessedness of the just.

New Jersey, Ninth mo. 1854.

The Greyhounds of Africa.

Nothing evinces more the aristocratic tastes of the Arabs of Sahara, than their treatment of their greyhounds. Here, as in all other Arab countries, the common dog, whatever the utility of his employment in protecting the tents and flocks, is still regarded a contemptible and troublesome servant—a disagreeable necessity. The greyhound alone, as the companion of his chivalrous pastimes, is treated by the Arab with affectionate attention and respect. While, therefore, the faithful watch-dog is driven forth from the tent, treated as a vulgar brute, and allowed to seek his food among the offal and bones that have been thrown out, the greyhound sleeps in the men's apartment, on a carpet beside his master, or even on his bed. He is abundantly but carefully fed with kooskoos; and in summer, cakes are made for him of milk and stoned dates, which are said to be highly tonic. If a thorough bred animal, he will not drink out of a dirty vessel, nor will he taste milk in which any one has put his hands. He is defended from the cold with coverlets like the horse, the Arabs having no objection to his being sensitive in this respect—it is an evidence of high blood. They delight in decking him with ornaments, and make for him collars of cowry shells, to which they attach talismans to secure him from the blight of an evil eye.

At the age of forty days the pups are removed from the mother, and fed with goats' or camels' milk, mixed with dates and kooskoos.

At the age of three or four months, the education of the greyhound is begun by the children starting jerboas, or small deer, and inducing him to give chase. He soon becomes so fond of this pastime, that he will bark round the holes, to induce the youngsters to renew the sport. The next game on which he is tried is the hare; then the young gazelle. At the end of a year he has attained his full strength, and is advanced to be the companion of the master of the tent, who teaches him to hunt the full sized gazelle. The Arab talks to him as a human being; "Listen to me, friend; thou must bring me some venison; I am tired of eating nothing but dates;" whereupon the dog leaps, wheels about, and intimates as plainly as possible, that he understands his master's wish, and is abundantly willing to comply.

When the dog perceives a herd of thirty or forty gazelles, he trembles with joy, and looks wistfully at his master. "Ha! young Jew," says the Arab, "thou wilt not say this time that thou hast not seen them." He then unties an ox-skin, and refreshes the body of the dog with a sprinkling of water. The impatient animal turns on him an imploring eye; he is loosed on the game, and bounds away; but yet conceals himself, crouches down if he is perceived; makes a zigzag course; and it is not till fairly within reach that he darts, with all his strength, choosing the finest of the herd as his victim. When the hunter cuts up the gazelle, he gives the dog part of the loin; if he were offered any refuse, he would reject it with disdain.

A thorough bred hound will hunt with no one but his master; and he manifests due self-respect in his choice of a prey. If on loosing him his master has pointed out a fine gazelle, and he has succeeded only in taking a small and middling looking one, he seems to feel the reproach that attaches to the failure, and sinks away ashamed instead of claiming his accustomed share. He always accompanies his master when visiting, and shares whatever hospitalities he receives. By his extreme cleanliness, the kindliness of his manners, and his respect for the usages of society, he shows himself worthy of the attention thus bestowed on him. When the Arab returns home after a somewhat prolonged absence, his dog makes a single bound from the tent to the saddle, and welcomes him with caresses.

The greyhound of Sahara is very superior to that of the coast. He is tall and fawn-coloured, has a thin muzzle, black tongue and palate, large forehead, short ears, muscular neck, very soft hair, no paunch, dry limbs, and the muscles of the croup well marked. A pretty good one is considered worth a fine camel; but those which take the largest gazelles will bring as much as a horse. A family hunter, however, is never sold: an Arab would almost as soon think of selling one of his sons. When he dies, it is a time of mourning in the tent; the women and children weep and lament as for a member of the family.

A SHOWER.

BY RALPH HOYT.

In the valley that I know,
Happy scenes!
There are meadows sloping low,
There the fairest flowers blow,
And the brightest waters flow
All serene;
But the sweetest thing to see,
If we ask the dripping tree,
Or the harvest-hoping swain,
Is the rain.

Ah, the dwellers of the town,
How they sigh!
How ungratefully they frown,
When the cloud-king shakes his crown,
And the pearls come pouring down
From the sky!
They descry no charm at all
When the sparkling jewels fall,
And each moment of the shower
Seems an hour.

Yet there 's something very sweet
In the sight,
When the crystal currents meet,
In the dry and dusty street,
And they wrestle with the heat,
In their might!
While they seem to hold a talk
With the stones along the walk,
And remind them of the rule,
To "keep cool!"

But in the quiet dell,
Ever fair,
Still the Lord doeth all things well,
When his clouds with blessings swell
And they break a brimming shell
On the air;
There the shower hath its charms,
Sweet and welcome to the farms,
As they listen to its voice,
And rejoice!

LINES

Written by John Berridge, and pasted on his study clock.

"Here my master bids me stand
And tell the time with either hand:
What is his will, is my delight,
To tell the hours by day or night;
Master, be wise, and learn of me
To serve thy God, as I serve thee."

In all things consider thine own ignorance, and gladly take occasion to be taught;
But suffer not excess of liberality to neutralize thy mental independence.

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 13.)

HUGH ROBERTS.

During his travels he met at Bristol with his dear friend William Penn; of their interview he says, "We were not a little glad to see each other. We were together but a short time, and parted very unwillingly; the weight of my service then drawing me to Monmouthshire, in Wales, whither I hastened."

His heart was drawn in affectionate Christian concern towards his children, and he addressed an epistle to them from England, of which some extracts are given:

"Dear children,—This is to let you understand that I am in health, also that my love is unto you, desiring you to fear the Lord in the days of your youth,—which is the best counsel I can give. I know it to be better than all the riches of the world. None can understand or know the value of it, but those that taste thereof. It is the beginning of wisdom, the only means to keep clean from the corruption and vanity of the world. Therefore, my request to you above all is, that ye fear the Lord! Secondly, shun vain, light, and airy company, nor suffer such to come unto yours. Rather follow them that are sober, and who fear God. The company of such will be a help to bring you nearer to the Lord. Thirdly, I desire you frequently to wait on God, to beg and beseech him for grace and wisdom to walk justly before him, by which my soul hath received much good. Fourthly, I desire you to read the Scriptures, and Friends' books. On First-day, especially, after meeting, read, rather than go to old or young, that may draw you to lightness. Fifthly, go in time to meetings, and when there, desire of the Lord to enable you to perform your duty, to love and to serve God, and worship him in purity and truth, not in form or show only, for that will not serve turn in Heaven, nor on the earth. I warn you that ye avoid the vain and idle; do not keep the company of such; I believe you will not be untried in this respect. I do not mean those only who make no profession, but such as make profession, and are out of the *possession* of the virtue which is in the Truth. Such are most dangerous. From such company withdraw and shun it.

"I desire each of you to take a copy of this letter, and act only so, but desire strength of the Lord to fulfil what I have requested of you, which, if you do, it will be a greater joy to me, than if you had all the treasure of the world. I must conclude, because I cannot add for weeping; who am your dear father, whose care is over you.

HUGH ROBERTS."

In both of his visits to Europe, Hugh Roberts was accompanied by his friend and fellow-labourer in the Gospel, John Bevan. As we do not find the latter taking a certificate as a minister, it may be that he was not acknowledged as such at that time.

Hugh Roberts returned from England about the close of 1698, but was not permitted long to rest at home. At the General Meeting of Ministering Friends, held First month 4th, 1699, he obtained a certificate for religious services in New England. Who accompanied him on this labour of love, we do not find any record. At the Meeting of Ministering Friends in the Seventh month of the following year, he was liberated for labour in Maryland, and there away; and John Bevan was set at liberty to accompany him.

His last service of this kind was performed early in 1702, to the meetings of Friends in New England. This labour was accomplished to his satisfaction, and the edification of those amongst whom he travelled, notwithstanding his growing weakness of body. Soon after his return home, he was relieved from work in the church militant.

We subjoin the testimony of his friend, John Bevan, concerning him:

"Truth in the inward parts God loves, and those that love it and give way to the operation thereof, are made precious and lovely in the sight of God, and he makes them instrumental in his hand for the good of others; among whom was my dear friend and brother, Hugh Roberts deceased, who was qualified by God's power, to be a serviceable instrument to the churches of Christ in our parts of America. He came to this country about eighteen years since; we were near neighbours and entirely loved each other, not having had a cross word, nor I believe an hard thought one of another, at any time since our first acquaintance. Having passed through many trials and exercises, he could by experience speak a word in season for the encouragement of weary travellers; his doctrine often "dropping as the dew, and distilling as the small rain upon the tender plants," for in the openings of life, "things new and old" came forth of the treasury of wisdom, which gladdened our hearts and comforted our spirits in a sense of God's love, who is the author of all good to his people. He was zealous for good order in the church, serviceable in the discipline, and skilful in accommodating differences. And it is my desire, that we, especially of that meeting he belonged to, and the adjacent meetings, which mostly received the benefit and advantage of his labour of love, may lay to heart and consider our loss of him, and in the sense thereof, may breathe and cry unto the Lord, who is the repairer of breaches, to raise up instruments in his room, for carrying on of his great work that he hath begun in the earth, to his own praise, who is alone worthy of the same forever.—I was twice with him over sea, and in many places in our native land, also in Maryland, and in his last journey to visit Friends on Long Island, Rhode Island, and New England, where he had good service. And though he was often very weakly, yet his heart was bent to accomplish the work the Lord laid upon him, which he was enabled to perform to his great comfort and satisfaction.

"On our return homeward, being sick and in much pain, he told me at the house of our Friend John Rodman, on Long Island, *nothing lies in my way as an obstruction to hinder my peace and well being with God.* He afterwards came home, and a few days before his departure, a dear Friend taking leave of him said, "I believe thy deep trials and exercises are near at an end, and that peace and joy everlasting will be thy portion from the Lord." In much brokenness of heart and sense of the sweet presence of God upon his spirit, he answered, *I am satisfied thereof, and can bless my God for it.*

"He died the 18th of the Sixth month, 1702, and on the 20th was interred at Merion, after which a large meeting was held, wherein the Lord's presence was sweetly enjoyed, and several living testimonies borne concerning his faithfulness to God, and Friends' satisfaction of his eternal well-being. JOHN BEVAN."

We read that in certain climates of the world, the gales that spring from the land, carry a refreshing smell out to sea; and assure the watchful pilot that he is approaching to a desirable and fruitful coast, when as yet he cannot discern it with his eyes. And, to take up the comparison of life to a voyage, in like manner it fares with those who have steadily and religiously pursued the course which Providence has pointed out to them. We shall sometimes find by their conversation towards the end of their days, that they are filled with peace, and hope, and joy; which, like those refreshing gales and reviving odours to the seamen, are breathed forth from Paradise upon their souls; and giving them to understand with certainty, that God is bringing them unto their desired haven.

For "The Friend."

Despondency, Short-sighted.

A writer in the North British Review of the Eighth month, this year, says:—"We recently ventured, at the close of some long conversations with a retired philosopher and statesman, who, for many years, was the first minister of a great kingdom, to ask him the following question:—'You have lived through some of the most interesting and troubled times of human history; you have studied men contemplatively, as well as acted with them and governed them; you have long had the fate of your own country, and a portion of that Europe, in your hands. What feeling is strongest in your mind as you look back and look forward—hope or despondency for your country and the world—contempt and disgust, or affection and esteem, for your fellow-men?' His reply was, as nearly as we can recall it, this:—'I do not feel that my experience of men has either disposed me to think worse of them, or indisposed me to serve them; nor, in spite of failures which I lament, of errors which I now see and acknowledge, and of the present gloomy aspect of affairs, do I despair of the future. On the contrary, I hope; I see glimpses of day-light; I see elements of rescue; I see even now faint dawnings of a better day. The truth I take to be this:—The march of Providence is so slow, and our desires are so impatient; the work of progress is so immense, and our means of aiding it so feeble; the life of humanity is so long, and the life of individual men so brief, that what we see is often *only the ebb of the advancing wave*; and thus discouragement is our inevitable lot. It is only history teaches us to hope. No! I feel no disgust, no despair; my paramount feeling is simply a sense of personal fatigue. I am weary of the journey and the strife. *Ego Hannibal, peto pacem.*'

"Yet the statesman who spoke thus had witnessed stranger catastrophes, had encountered deeper discomfitures, had steered through mirier ways, had witnessed more cruelty, more cowardice, more tergiversation, more corruption—had seen more splendid glory tarnished, more gorgeous hopes frustrated, more brilliant promises belied, than any previous period of modern history could have displayed; but he was profoundly acquainted with the past annals of other countries as well as of his own; and one of the most unquestionable and encouraging facts which these annals bring out into day, is full of promise and of consolation, viz., the gradual improvement in the character of public men,—the higher standard of morality they set before themselves,—and the far greater purity which the world exacts from them now than formerly. This is seldom perceivable from year to year—not always even from generation to generation—not always and at all times in every country—but no one who compares age with age, will hesitate to record it as one of the great truths of history."

Murder in New Orleans.—The True Delta says that though there is on an average, a murder committed in New Orleans every *twelve hours*, there have been but two convictions for the crime in *eight years*.

From the Annual Monitor for 1854.

Ann Lucas.

Ann Lucas, of Hitchin, a minister, widow of William Lucas, deceased Second month 27th, 1853, aged 83 years.

The daughter of Samuel and Hester Bowley, was born on the 8th of Ninth month, 1769, at Cirencester, in Gloucestershire, where her family had lived for several generations. In the early days of our religious society, John Roberts records, that Richard Bowley, her direct ancestor, was fined £20 for preaching, and £20 for attending a meeting in Friends' meeting-house, in that place. Her father was actively engaged in business, which took him a great deal from his family; but under the care of a religiously concerned, judicious and tender mother, Ann, who in early life was very delicate, but possessed a mind of no ordinary strength, grew up a serious and thoughtful child; desiring, at times, above all things, to serve God, and to be useful to her fellow-creatures. Her return from school was marked by increased submission to the power of religion, and she became more qualified for usefulness in her family, and amongst her numerous acquaintances and friends, to whom she was a bright example of dedication to what she believed to be her duty.

In a memorandum found after her decease, she says: "In a religious opportunity in a friend's family, when I was about eighteen, under the ministry of a friend, a strong impression took hold of my mind, which I hardly know how to describe,—the subject being unexpected, and not alluded to in what was expressed by the minister; —it was, that I should be sometime required to yield to a similar service. I well remember the force with which it was presented, and the effect it had to bring me under great conflict of mind. There was a desire to be faithful, if such were my line of duty; yet there was also a disposition to shrink from the exposure, and an unwillingness to surrender the will; neither was there, I apprehend, a preparation of heart for such an engagement. Therefore much tossing succeeded, and continued for seven years, before I gave up to it, although I had, during that interval, been sometimes on the very point of giving up, and condemnation and sorrow were the consequences of disobedience." But to this period of trial, succeeded one of clearer perception, and more simplicity and faithfulness in following the leadings of the good Shepherd; and she became increasingly qualified for the work of her Lord and Master, whom she had so anxiously desired to serve. She was acknowledged a minister in 1793, in the 29th year of her age.

About three years previous to this period, she undertook, under a sense of duty, the care of a day school for Friends' children, which was about to be relinquished in her native town; and this service was marked by the judicious treatment of her pupils, and her solicitude for their best welfare.

In this engagement she continued till near the time of her marriage with William Lucas, of Hitchin, which took place on the 15th of Eleventh month, 1798. Her husband was a man little known beyond the immediate circle of his friends, but within that circle he was greatly esteemed and beloved. With a cultivated mind, and good literary taste, strongly attached to country pursuits, fond of natural history, of a generous disposition, a lover of peace, an humble Christian, and a consistent friend,—he lived to a good old age, and his memory is precious.

Thus united, these beloved Friends, in their circumspect walk through the varied scenes of life, in a course of active usefulness, were living witnesses to the reality of religion, and proved, what our early Friends were concerned to testify, that Christianity is not a mere barren theory or speculative system, but a vital principle, purifying the heart by faith, and leading unto all righteousness.

Ann Lucas was not called upon to travel much as a minister, but was long known for her services in our religious Society. Her diligience in her own meeting and neighbourhood in the exercise of her gift, her concern for the right maintenance of our discipline, and her readiness to sympathize with the afflicted, and assist those who in any way needed her help, were conspicuous traits in her character. The clearness of her judgment, for which she was always remarkable, rendered her a truly valuable counsellor, and many brought to her their cares and sorrows, as to a bosom friend, in whom they could entirely confide, and who would give them such counsel as was best suited to their need. She had clear views of Christian doctrine; and an unwavering attachment to our peculiar testimonies, and was enabled to serve the church on various critical occasions.

She was several times clerk to the women's Yearly Meeting, and a regular attender of it for many years. She had often, on these occasions, a conspicuous part to take; not by the expression of many words, but by the few fitly spoken, under the influence of the Holy Anointing, and with a judgment and tact as to time and place almost peculiar to herself; which increased her influence and contributed much to the edification of the church. At the same time, her whole bearing gave the impression to those who knew her, that the experience of every year was deepening her in true Christian humility.

Ninth month, 1839, she writes: "My seventieth birth-day. Is there oil in the vessel, with the lamp? If not, it is not a time to slumber, or sleep, but earnestly to seek for it, where it can alone be had."

It was evident that she was accustomed to examine herself by a high and holy standard, and that close was her self scrutiny and watchfulness whilst very fearful of transgressing the law of love, and charity in her judgment of others. Yet, in watching over others for good, she was faithful and honest towards them; and her tenderness in administering reproof was such, that she seldom gave offence, but often produced grateful feelings in those to whom she felt bound to hand a word of admonition.

She was ready to unite with her neighbours in many objects of general utility, and diligent, when her health permitted, in visiting the poor, more particularly those who were suffering from illness The wants of these she supplied with a liberal hand.

In 1846, she was deprived by death of her beloved husband. For about twelve months he had been the object of her tenderest care, and she deeply mourned her loss. From that time, though diligent in the attendance of her own meeting, she withdrew from the more extended sphere in which she had been occupied. But her faculties continued unimpaired, her interest in her friends undiminished; her spiritual life seemed vigorous as ever, and brighter and clearer was her vision in things pertaining to salvation. In humble submission to the Divine will, she endeavoured in faith and patience to support the increasing weight of infirmity, which, as she advanced in years, at times almost bore down the enfeebled frame. She suffered much from want of sleep, though her wakeful hours were often seasons of peace and comfort.

In 1849 appears the following memorandum: "On looking back to some omission of apprehended duty in early life, I have seen, and much regretted, that my mind had not been more clearly directed to the *constraining love of Christ*, as the only sufficient motive for obedience to his requisitions. And I am glad to believe that of later times the youth of our Society are better instructed on this important point, and that it will assist them to prove that declaration of an apostle,—'We have not followed cunningly devised fables, when we made known unto you the power and coming of our Lord Jesus Christ.'"

The following remark is without date: "True simplicity is indeed beautiful; but by looking for examples of it in our fellow-creatures, and measuring ourselves by them, we are in danger of falling short of the right standard. It is only to be attained by close attention to the teachings of the Spirit of Christ, in the heart, bearing in mind that memorable reply to the inquiry, 'And what shall this man do?' 'What is that to thee? Follow thou me.'"

She continued gradually declining, till the 25th of Second month, 1853, when a slight cold suddenly prostrated all her bodily powers. With her usual clearness of discernment, she perceived that her end was near, but was not able to converse much. To one of her grand-children, she said,—"Thou art the eldest of the family; there is a great deal in *that*. I know I have not held *my* place as I should. I hope you will not depart from the testimonies and practices of Friends; I have never seen occasion in my long life to deviate from them; I believe the New Testament sets forth our views very clearly." At another time, she remarked,—"Nothing can exceed the awfulness of an unseen world. I have but one hope, that set before us in the Gospel."

She spoke of her love to her friends, being undiminished, saying,—"I have been very much favoured to receive great love and kindness." She referred her children to the passage in Isaiah,—"In returning and rest ye shall be saved; in quietness and in confidence shall be your strength," and made some appropriate remarks to others who were present, indicative of her affectionate interest in their welfare. Her beautiful consideration for others appeared to the last, and she was anxious that the convenience of Friends should be consulted in reference to her funeral. After expressing something of this sort, she sunk into a quiet slumber, and while all her children were surrounding her bed, she peacefully expired.

Deeply as a large circle of children and grandchildren mourn the loss of a tenderly interested parent, sorrowfully as the church regards the vacant place, once filled by a firm and upright pillar, there is abundant consolation, in the belief that her day's work was done; that as a good and faithful servant, yet, having her sole dependence placed on redeeming mercy, she has entered into the joy of her Lord. And loud is the call on survivors, when another prophet is thus removed from the church militant, to be prepared to receive the mantle so quietly and peacefully laid down, to seek for a large measure of that Spirit which qualified her, and many others, for the service of their day; that, through individual faithfulness, "our cords may be lengthened, and our stakes strengthened, that the place of our tent may yet be enlarged."

The Price of Freedom.—The diamond for the finding of which a Brazilian slave received his freedom a few months since, has been deposited in a London banking house. It weighs 254 carats, and its estimated value is £280,000—or, in round numbers, $1,400,000.

The Blessedness of a Lowly Mind.—The greater the submission, the more grace. If there be one hollow in the valley lower than another, thither do the waters gather. The more lowly we are in our own eyes, the more lovely we are in the sight of God. When to ourselves we are despicable, to Him, through Christ, we are acceptable. We are unworthy: let us be lowly. Job was coming near to the blessing, when he said, "I am vile; what shall I answer Thee."—*R. Younge*, 1655.

When the elephant went up the lake on the steamer Lady Elgin, a few days since, we remarked that the huge traveller might be a somewhat ugly customer on board a boat. It appears that on the passage the wheelsman suddenly found difficulty in changing the boat's course. For, tug and pull, and bear on as much as he would, the wheel would not budge an inch.

"Port helm!" cried the captain.

"Aye, aye, sir," responded the wheelsman.

But still the helm was "hard a starboard," and the boat was taking a turn into the middle of the lake. The captain railed, and the mate made for the wheel-house. Pushing the man aside, he took hold himself. It was of no use—the mate was no more successful than the wheelsman.

"Port helm! Can't you see where the boat is going?" shouted out the captain.

The mate declared that something was the matter with the wheel, as he could not stir it. The thing was perfectly inexplicable. The engine was stopped, and master, mate and all hands went below to see what could be the matter. After a search of some minutes, it was discovered that Mr. Siam, the "Elephant" of the menagerie, not liking the noisy rattling of chains overhead, had taken upon himself the responsibility of giving a new "turn" to affairs. With his trunk wound around the chain, he was holding on with the grasp of a vice, and it was with some difficulty that the keeper persuaded him that such liberties could not be allowed. It is said that he behaved quite well during the rest of the voyage.—*Buf. Com. Adv.*

When the Temple of Solomon was to be erected, all the materials were in the first instance hewn into shape, and polished for their uses; and when afterwards they had been put together, without a sound in the house of any tool of iron, beautiful was the harmony which resulted from the *fitness*. So would it be with Christians, were they fully subject to the Divine power, which would level their pride, abate their prejudice, and polish down their roughness. Their junction with Him, on whom depends the security of the whole building, and their union with each other, would be more *complete* than it is at present. The holy temple would arise and spread in its true beauty and harmony, and the inextinguishable flame of love would diffuse a generous glow of warmth and brightness through the whole sacred edifice.

"No hammer fell, no ponderous axes rung,
Like some tall palm the mystic fabric sprung,
Majestic silence!"

Party Spirit.—Party spirit environs and contracts many hearts, separates many families, divides many societies, undermines real religion, incapacitates for sweet communion with God, and encourages self confidence and other evil passions.

Keep in the peaceable spirit of the Lamb, which will wear out all contention, and give the victory over that earthly spirit, which leads to separation and strife.—*G. Fox.*

THE FRIEND.

NINTH MONTH 30, 1854.

In one of our late numbers, in the "Summary of News," it was stated on the authority of another paper, that during the late drought a vein of coal had been discovered in the Ohio river, opposite Cincinnati. A letter from that city, says this is "a mistake, as we are geologically below the coal formation." It adds, that "owing to the extreme low water this summer, the sand has been washed off of coal sunken from flat boats, some years since. As stated, a good business has been done collecting this coal. There is also a curious machine worked by horse power, dredging the same bar for boulders, which have been brought to the city in large quantities, and used for paving our streets."

A communication from a respected Friend, relative to certain articles printed at different times in our journal, which appear to her "lacking in that Divine spirit of charity, which would rather seek to cover the multitude of little weaknesses, often seen among the truly great, rather than give them in strong colours to a world prone to rejoice in iniquity," has been received, and read with careful attention. We unite with our Friend generally in the views expressed by her, and desire that personal remarks holding up the weaknesses and failings of any may never find a place in our pages, except where we conscientiously believe important good may result to others from the publication of them. In the present day, there are so many departures from the principles and practices of our forefathers, manifested by some who claim still to be Quakers, that unless earnest and vigorous appeals on behalf of the Truth are made, and the attention of Friends awakened to the changes going on around them, by instances cited and commented on, there is great danger, that after a time the members generally may come to consider the doctrines and practices of the lapsed professors as the primitive form of Quakerism, or at least as near it as is consistent with the spirit of the nineteenth century. We have far greater pleasure in "holding up the Truth" "in its beauty," than in descanting on the errors and weaknesses of those departing from it. But we have a testimony against error; and we do believe, that in bearing it firmly, openly, and consistently, we are doing far more towards promoting true love and spiritual unity, than by so screening the wrong with a mantle of charitable forgetfulness, as to hide its deformities. An overflowing of miscalled charity, has led some to think there is little evil in departures from the Truth, except that which springs from their rebuke and exposure.

We then, in conducting the journal, desire to do it in the spirit of love, yet under a sense of the duty devolving upon us as Christian men, members of the religious Society of Friends, and anxiously desiring its prosperity, of contending for the faith once delivered to the saints, when we see its principles forsaken, or attacked by any.

We are glad of the freedom exercised by the Friend in thus writing to us, and acknowledge the kindly appreciation expressed by her of much published in our journal.

SUMMARY OF EVENTS.

EUROPE.—News from England to the 9th inst. During the previous week, a small advance in flour and grain had taken place, the former being 1*s.* higher. The board of trade returns for the month ending Eighth month 5th, indicate a general activity in business. The exports for the month had been unusually large, especially in metals. Prince Albert, and the Kings of Portugal and Belgium had visited the Emperor Napoleon at the French camp at Boulogne, where an army of 100,000 men are assembled. The object of the visit seems to have been to manifest their respect and friendly feeling towards the head of the French nation.

The War.—There is nothing of moment from any of the scenes of warlike operations. The Russian government declines further negotiations on the basis proposed by the Western Powers. The Russians having retired behind the Pruth, and the Austrian army having entered the Principalities, it is considered improbable, that further engagements will take place, in that quarter, between the Turks and Russians this year. The cholera is said to have abated in both armies.

UNITED STATES.—*The Slave-trade.*—The captain of the brig Julia Moulton has been arrested at New York, on the charge of having been engaged in the slave-trade. He is charged with having taken 660 negroes on board his vessel on the African coast, a few months since, which were subsequently landed in Cuba. Another individual in New York (said to be highly respectable) has also been arrested on the charge of fitting out the vessel for the nefarious business.

Foreigners.—A certain degree of jealousy and prejudice has probably always existed between portions of our native citizens and those of foreign birth; but this unchristian feeling has latterly been excited to unusual activity, especially in some of our large cities. Recently a series of riotous conflicts between these classes have occurred in New Orleans, which have been attended with destruction of property and loss of life, and similar outrages have disgraced some other cities.

Texas.—Information has been received from the frontiers, that the Southern Camanches, and other tribes of Indians were making preparations to settle upon the lands set apart for them. These lands are all located upon the waters of the Brazos. This river and also the Big Wachita are said to flow through a vast field of gypsum or plaster of paris. The latter stream and some of the tributaries of the Brazos have their sources in immense hills of this substance, the strata in some places being four hundred feet in thickness. Some bands of Indians are still hostile, and continue their depredations. The town of Galveston was suffering severely from yellow fever. The present population of Texas is estimated at five hundred thousand. There are fifty-four newspapers published in the State.

Florida.—The Seminole Indians, who refuse to emigrate, and persist in their determination not to leave the swampy districts hitherto occupied by them, are said to be few in number, the tribe not being able to muster two hundred warriors. They appear to be peacefully disposed, but apprehended difficulties between them and the settlers are made the pretext for keeping a large military force constantly in the Peninsula.

Wisconsin.—The Attorney-General of the United States is preparing to carry the Booth case, (in which the Wisconsin Court decided against the constitutionality of the Fugitive Slave Law,) up to the Supreme Court.

New York.—On the 19th inst., there were 777 vessels, exclusive of river craft lying at the wharves. This is said to be the largest number of vessels in port for many months. Freights to Europe are much depressed. The exports of specie continue very large. Deaths last week, 625, of which 86 were from cholera.

Philadelphia.—Deaths last week, 272, of which 20 were from cholera.

Pittsburg, Pa.—It was hoped last week, that the cholera was abating, but such did not prove to be the case. In the first eight days after its appearance, 500 persons died, and on the 21st inst., 74, showing a fearful prevalence of the terrible malady; on the 22d, there were 45 deaths.

Columbia, Pa.—The cholera has nearly ceased here; about 120 persons died of the disease during the short period it prevailed.

New Orleans.—The mortality in this city continues large. In the week ending 10th inst., there were 484 deaths, of which 284 were from yellow fever. In the week ending 17th inst., there were 340 deaths from fever.

Savannah, Ga.—The white population has been reduced to about 1600 persons, and yet the fatal malady which prevails, still finds a large number of victims, the deaths for the last week numbering 189 of all diseases.

Augusta, Ga.—This city has been nearly deserted by the white inhabitants on account of the fever.

Charleston, S. C.—On the 21st and 22d instant, 37 persons died of yellow fever, and in the week ending 16th inst., there were 160 interments, 127 of which were from yellow fever. The coloured population, which forms the larger portion of the inhabitants, are quite healthy. During the week in which the mortality

reached 160, only twelve blacks died, one of which was from fever.

Miscellaneous.—The Reciprocity Treaty has received the sanction of the Provincial Parliament of Canada; that of the British government has been already given. The Legislatures of New Brunswick and Nova Scotia have yet to act upon it.

The remonstrance of the British government against the Greytown outrage, which has been received at Washington, is said to be very moderate in its tone.

Such is the scarcity of printing paper in the United States, that the New York Sun has imported paper from France, paying a duty of thirty per cent.

The State of Costa Rica (Central America) having offered a bounty for the destruction of the locusts, which have ravaged the country, up to Seventh mo. 24th last, 3000 sacks each weighing sixty pounds, had been presented for the purpose of obtaining the bounty. The sacks contained about 150,000,000 locusts.

Emigrants from Texas, Arkansas, and other States, are said to be already on their way to the Mesilla valley, recently purchased from Mexico by the United States, with a view to select the best locations.

INDIAN CIVILIZATION.

The committee is desirous of engaging the services of a well qualified Friend to teach the school at Tunessassah—also, one to aid in carrying on the farm, superintending the school, &c. Friends who may feel concerned to engage in either of those stations, are requested to make early application to Joseph Elkinton, No. 377 S. Second street, or Thomas Evans, No. 180 Arch street, Philadelphia, or Ebenezer Worth, Hamerton, Chester county, Pa., or Thomas Wistar, Fox Chase, Philadelphia co., Pa.

Philad., Ninth mo. 20, 1854.

RECEIPTS.

Received from Isaac Huestis, O., $2, vol. 28, for Jesse Hiatt, $2, vol. 28; from G. F. Read, agt., Mass., for Stephen A. Chase, $6, vols. 26, 27 and 28, for Josh. Buxton and D. Buffum, $2 each, vol. 28; from S. Hobson, agt., O., for Thos. Bundy, $4, vols. 27 and 28, for Joel Garretson, $3 to 27, vol. 26; from J. Mathews, P. M., Som., N. Y., for Josh. Haight and Jacob Haight, $2 each, vol. 28; from Dl. P. Griffith, agt., Pa., for Jon. Sharpless, $2, vol. 27, Wm. Darlington, $2, vol. 28; from Stephen K. Church, N. Y., $2, vol. 28.

Select Schools for the Children of Friends.

Primary Schools for Children of both sexes are kept in the Northern and Western Districts, in school-rooms attached to the respective Meeting-houses. The Boys' mathematical school is situated on Cherry street, between Eighth and Ninth, and that for Girls' on St. James street, near Sixth. These valuable seminaries, to which the attention of Friends has been recently called, by a circular address of the committee charged with their care, are now in session, and open for the reception of pupils.

WEST-TOWN BOARDING-SCHOOL.

The Summer Session of the School will close on Sixth-day, the 6th of Tenth month. The pupils will return to Philadelphia on that day, by way of West Chester. The cars will arrive at the depot, about half past 9 o'clock.

The Winter Session of the School will commence on Second-day, the 6th of Eleventh month next. The pupils will be conveyed by railroad to West Chester, where conveyances will be in waiting to take them and their baggage to the School, on the arrival of the morning and afternoon cars, on Second-day, the 6th, and Third-day, the 7th of Eleventh month. The cars will leave the depot, south side of Market street, above Eighteenth street, (formerly Schuylkill Fifth,) at half past 7 o'clock, A. M., and 3 o'clock, P. M. The agent of the School will be at the railroad depot, on Second and Third-day *afternoons*, and will furnish pupils with tickets, and accompany them to West Chester. Those who go by the *morning* train, will be furnished with tickets by a person in attendance. To those who procure tickets as directed, the fare from Philadelphia to the School, including baggage, will be one dollar, which will be charged to the scholar at the School. All baggage should be distinctly marked West-town, and with the name of the owner, and should be sent directly to the railroad depot.

The West-town office is at Friends' bookstore, No. 84 Arch street, where all small packages for the pupils left before 12 o'clock on Seventh-days, will be forwarded. *All letters* for the pupils and others at the School, should be sent by *mail*, directed to *West-town Boarding School, West Chester P. O., Chester Co., Pa.* Postage should be *pre-paid*, and packages should be distinctly marked and put up in a *secure manner*, so that their contents will not be liable to be lost by handling. The stage will leave West Chester during the *Winter Session*, for the School, on Second, Fourth, and Seventh-days, on the arrival of the *morning* cars from the city, and from the School to West Chester, on the same days, to meet the morning cars to Philadelphia. The fare for each passenger to and from West Chester *by the stage*, will be 25 cents. When special conveyances at other times are provided at the School, an extra charge will be made.

West-town, Ninth mo., 1854.

A Stated Meeting of the "Philadelphia Association of Friends for the Instruction of Poor Children," will be held at the Committee-room, Arch street Meeting-house, on Second-day evening, Tenth month 2nd, at 8 o'clock.

EDWARD RICHIE, Clerk.

West Grove Boarding School for Girls.

This School is situated in London Grove, Chester county. Accessible daily from Philadelphia and Baltimore, by railway and stage, via Newark and New London. The locality is pleasant, retired and healthful. The course of instruction embraces all the useful branches of an extended English Education, including Linear and perspective Drawing. Lectures, illustrated by experiments, are given weekly. The Sessions commence on the first Second-day in the Fifth and Eleventh months respectively, and continue twenty weeks. For further particulars,

Address, THOMAS CONARD, Principal.
West Grove P. O., Chester county, Pa.

WEST-TOWN SCHOOL.

The Committee to superintend the Boarding School at West-town, will meet in Philadelphia, on Sixth-day, the 6th of next month, at 7 o'clock, P. M.

The Committee on Instruction meet at 4 P. M., and the Committee on Admissions at 5 P. M., on the same day.

The Visiting Committee attend the semi-annual examination of the schools, on Third, Fourth, and Fifth-days of the same week. THOMAS KIMBER, Clerk.

Philad., Ninth mo. 23d, 1854.

MARRIED, at Friends' Meeting-house, in Fallsington, on Fifth-day, the 21st instant, MORTON A. WALMSLEY, of Byberry, Philadelphia, to ELIZA H., daughter of James Moon.

DIED, at Hudson, N. Y., on the 16th of Eighth month, 1854, ANN, wife of Hiram Macy, in the 46th year of her age, a much esteemed member of Creek Monthly Meeting. This dear Friend, during her residence amongst us, so far as could be judged by others, led a peaceable, gentle, and innocent life. Faithful and affectionate as a wife, discharging her duties as a mother with exemplary fidelity, kind and generous to the poor, cordially sympathising with the sick and the afflicted, diligent in the attendance of all our meetings for religious worship and discipline, and serious and weighty in her deportment in them, she appeared to those who watched her external conduct to be very near to the kingdom of God. At the commencement of the protracted illness, which finally terminated in her death, "He who searcheth the heart, and trieth the reins," and "who is of purer eyes than to behold iniquity without abhorrence," was mercifully pleased to strip away all disguises, and reveal to her the true condition of her heart. She saw, at length, in the clear light of the Spirit's teachings, that she had been an "unprofitable servant," and that the comparative blamelessness of her external conduct was no sufficient passport to heavenly mansions, without the baptism of the "Holy Ghost and of fire," and a true and experimental acquaintance with Christ as her Saviour. Her spiritual understanding being opened to discern on the one hand the hidden corruptions of her own heart, and on the other the infinite purity of the Divine law, she was plunged into the deepest affliction lest her day of grace had passed away. She entreated those around her to pray for her, saying, "I am such a sinner!" "O, I am such a sinner! will He accept me?" At another time she exclaimed, "O, I am so weak in faith; I have not served him as I ought." "My practice has fallen far short of my profession."—But He who doth not "willingly afflict the children of men," was, in his own good time, graciously pleased to arise for her help, and bestowed upon her the glorious liberty of the children of God. Christ was now revealed to her as *her* Saviour, and she was permitted to receive "beauty for ashes, the oil of joy for mourning, and a garment of praise for the spirit of heaviness." She could now testify with humility, yet with much assurance, that "she was not afraid to die. The sting of death is taken away. I feel the arms of Jesus round me; O blessed Jesus! I feel that he *is* with me, and will carry me through the dark valley of the shadow of death. Thy rod and thy staff they *do* comfort me." She earnestly disclaimed any merit in herself, but attributed the great work, which had been wrought in her soul, wholly to the unmerited mercy of God in Christ Jesus, repeating frequently these lines—

"Nothing in my hand I bring
Simply to thy cross I cling."

She said with much feeling, "I come to thee in the simplicity of a little child; if I perish, I perish at the foot of the cross."—During her protracted sickness, she gave much pertinent and savory Christian counsel to her husband and children, as well as to other branches of the family, exhorting them not to follow the vain fashions of the world, nor to trust in uncertain riches, but to follow the Lamb whithersoever He might lead them so that they might all meet a reunited family in heaven.—As her life gradually ebbed away, the fervency of her love towards God and man perceptibly increased, unconfined to family or friends; it embraced the whole world in its grasp, and she longed earnestly, that all, without exception, should taste of that grace, which filled her own bosom with such unspeakable joy. On one occasion when she believed herself dying, she took the hand of a coloured domestic, and exhorted her to follow Christ with fidelity, assuring her that God was no respecter of persons, and that both black and white would unite in singing the song of Moses and the Lamb.—Thus, without fear and in calm and tranquil confidence in the efficacy of a Saviour's blood, our dear sister passed away from earth, to join as we humbly trust the church triumphant in heaven.

——, in Johnston, R. I., on the 18th of Eighth month last, PATIENCE CHACE, widow of Oliver Chace, late of Tiverton; a worthy and exemplary member of Swansey Monthly Meeting, aged 74.—The life of this dear Friend has been marked by severe trials in the loss of two husbands and a lovely daughter. Through her daily watchfulness and earnest seeking for Divine support, she was enabled to bear up under these repeated bereavements. She was through life a diligent attender of meetings, and endeavoured by all suitable and consistent means to bring up her children in plainness, and the simplicity of the truth, and to encourage them in the attendance of religious meetings. She was faithful in the maintenance of the doctrines and principles as held and promulgated by ancient Friends. She was, in the true sense of the word, a peace-maker, and ever ready to throw the veil of charity over the faults of others; her great and sole aim was to live the life of the righteous, and we doubt not that she obtained it. Her sickness which was short but severe, was marked with peculiar calmness and resignation. Several times, in the agony of her distress she would petition to be released, but closed by saying, 'Not my will but thine, O Lord, be done.' On the day of her death, and not many hours previous thereto, she inquired of one of her family, where this passage of Scripture was, adding she believed it was in Isaiah, and then repeated it. 'Speak ye comfortably to Jerusalem, and cry unto her, that her warfare is accomplished, that her iniquity is pardoned; for she hath received of the Lord's hand double for all her sins.' After a little quiet, one present inquired of her, if she had anything on her mind she wished to communicate; she answered, she did not know that she had, and added, 'I have been striving through life to prepare for the change, which seems near, by discharging my duty to all, according to the ability given. A daughter remarking, 'Mother, thou hast been giving us instruction all thy life, and hast fully done thy duty.' She replied, '*I believe it it is so;* I see but little to do.' She had an unwavering trust and confidence in the mercy and goodness of her Redeemer: this was apparent to all who beheld her, and caused one present to exclaim, 'How glorious it is to behold the fear of death overcome!' Her love was unbounded; she desired it to all her dear friends everywhere, and particularly to the little company composing the meeting where she attended, at Fall River.—Thus has a mother in Israel passed from works to rewards, and her family and friends have the consoling assurance, that she was prepared, through the mercy of God in Christ Jesus, to join the angelic host in singing the praises of redeeming love.

For "The Friend."

JAQUELINE PASCAL.

(Concluded from page 17.)

Jaqueline, on reflection, thought it would be more honourable as well as truthful to send this letter to M. Arnauld, hoping that he would not feel hurt at the severe terms in which she had expressed herself, although her remarks touched him more nearly than they did any one else. She therefore enclosed her letter on the formulary in another, which ran as follows:

"At Eve, June 23, 1661.

"My Father,—The ordinary rules of politeness would require of me many compliments, and the expression of much delight at having an opportunity of writing you, since, as you are aware, it is so rare a pleasure; but in truth the state of the church and of our dear mother [the Abbess Angelique], deprives me of the heart to attempt such civilities. And besides, my father, I should be very unjust to your kindness, did I imagine that you could think it possible for my regard for you to vary. The command you have sent us in the note received this morning, gives me a suitable occasion of doing something to which I have hitherto been prompted only by internal desire, which is not always a safe guide. Yesterday, my father, after having received the communion with a very sad heart, on account of what has transpired, I felt, while returning thanks, or rather while sighing out my soul before God, a strong desire to write down all my thoughts on the matter, or at least the chief of them, for many quires of paper would not contain the whole. Not knowing whom to address, I bethought myself of sister Angelique, and to her I at once indited this long letter, first invoking God and his Holy Spirit on behalf of the persons, who should answer it, and afterwards writing what I had to say without premeditation as fast as my pen would move. Your note of to-day enabled me to finish it with more courage, and I send it to you as it is, my father, because I cannot find time to write it over again, and address it to yourself.

"You will see that it is written with a margin. If you will have the kindness to answer each paragraph upon that margin, I shall feel greatly obliged; but if you prefer to write a separate answer, and if you think fit, after reading it yourself, to send it to sister Angelique, I will inform her that I have asked you to do so. . . . . You will perceive, my father, that I have felt and expressed no little indignation at the proceedings, for it appeared to me that, apart from the right, which each one has to take his own view of things, and sustain it with what reasons he can, it was my privilege to speak with more freedom than others, on account of one [her brother] who is so much concerned in the matter. I am beyond measure delighted with his zeal, and I cannot but think that it is the work of God's Spirit inspiring him to do that which will relieve the consciences of a large number of persons, who would otherwise suffer themselves to be led as sheep to the slaughter. For in times like these, when it were useless to hope that those, in authority over the church at Paris, would be courageous enough to set an example of martyrdom, it was worthy the piety of some to devise a way whereby it became possible to avoid doing anything in opposition to the truth." [The declaration now required contained no false assertion, yet was so expressed as to admit of a false interpretation.] "But," continues Jaqueline, "it does appear to me, my father, that what suffices for some, would be a terrible falling short in others. It is all very well to have things arranged as they now are, provided that persons possessing more courage, are permitted to go further, and provided that it is not pretended we are to be saved by concealing the truth, and being satisfied with not openly *censuring* it, although we do not *apparently* censure it. Truly, my father, this seems like an imitation of those who say that we are not obliged to love God, and it is enough if we do not hate Him. But if I begin to argue again, it will be difficult for me to stop. Forgive me, therefore, my father; and do not imagine, I beg, that though I seem courageous, nature does not dread the consequences,—but I trust that grace will support me, and indeed I almost seem to feel its power even now. I entreat you most humbly, my father, to implore this grace on my behalf."

The illness of Angelique exempted her from the necessity of signing. She made however one more effort in behalf of Port Royal, by addressing a long and eloquent letter of remonstrance to the Queen. After several weeks of severe bodily and mental anguish, she expired on the 6th of Eighth month, 1661, aged 70. Among her last words were these: "Oh, Jesus! Thou art my God; Thou art my righteousness; Thou art my strength; Thou art my all!"

Dufargis d'Augennes, the prioress, shared the opinions and scruples of the sub-prioress, Jaqueline. Arnauld, instead of feeling annoyed at the strong objections of the two nuns, did his best to answer them, in a letter which has not been preserved. His high authority had such weight, that all the members of Port Royal signed, the prioress and Jaqueline adding yet another protest, in order to clear their consciences in some degree. Notwithstanding which the remorse of these two noble women was so great, that both became seriously ill. The prioress was with difficulty restored to health. Jaqueline sank under her sufferings, and according to the presentiment expressed in her letter, died of a broken heart, after an illness of three months. When Blaise heard the tidings, though she was the being most dear to him on earth, he merely said, "God give us grace to die as well!" And he ever afterwards maintained the same admirable spirit of resignation to the appointments of Divine providence. When thinking of the peculiar circumstances under which his sister died, he often exclaimed, "Blessed are the dead, provided they die in the Lord;" and when he saw his sister Perier in continued sorrow over a loss, which she keenly felt, he told her that it was not right.

For "The Friend."

THE UTTERMOST FARTHING.

The exacting disposition, which is found so generally to prevail in religious society, as well as in the world at large, affords abundant evidence of the unregenerate and selfish condition of the hearts of men, which no profession, however high, is able to disguise; and it is this which is seeking to build up a wall of partition in the church. A want of subjection to the cross of Christ, causing a full surrender of our own wills to the peaceable government of his holy Spirit, is leading us away from the foundation upon which we profess to build, to a dependence upon human strength and reason, to enable us to carry our own selfish points, under the profession of zeal for the Truth, without the manifestation of the fruits of the Spirit, against which there is no law, and by which the true followers of the Lamb are to be known.

The long-suffering, forbearance, and forgiveness of our holy Head are forgotten, in our dealings one with another, and many, being desirous of vain-glory, are engaged in provoking one another, and envying one another, seeking to the uttermost, the end of their own selfish wills, to the promotion of confusion and every evil work; and thus is the ever blessed Truth trampled under foot, to the grief of those who are prepared to feel for the affliction of the church, and silently and quietly to suffer for its sake.

The extremes into which opposing views are found to lead, are evidences of the necessity of gospel restraint, and Christian charity, without the exercise of which the unity of the Spirit in the bond of peace cannot be known, and without which every effort to hush the storm of human passion will prove unavailing. But when the stubborn will is made to bow in submission to the love and power of Truth, even opposing views may be entertained and expressed, without jarring or commotion of feeling; and thus might the enemy of Zion's peace be kept out, while we reasoned and took counsel together, respecting those things, about which we should not strive. "The servant of the Lord must *not* strive; but be gentle to all men, apt to teach, *patient*, in *meekness* instructing those who oppose themselves; if God will peradventure give them repentance to the acknowledging of the truth: and that they may recover themselves out of the snare of the devil, who are taken captive by him at his will." The convincing of gainsayers is a gradual forbearing work, and he that believeth will not be hasty, but patient and long-suffering.

In speaking of a Yearly Meeting which he attended, where the power of Truth was largely extended, to the strengthening of the honest-minded, John Woolman says, in respect to a testimony of the meeting in the support of which he had at other meetings stood almost alone, "observing

now the increasing concern in our religious Society, and seeing how the Lord was raising up and qualifying servants, for his work, not only in this respect, but for promoting the cause of Truth in general, I was humbly bowed in thankfulness before him; and that now though there were different ways of thinking amongst us, in some particulars, yet, if we mutually kept to that Spirit and power, which crucifies to the world, giving up our hearts to fear and serve the Lord, true unity may still be preserved amongst us. If such who were at times under sufferings on account of some scruples of conscience, kept low and humble, and in their conduct in life, manifested a spirit of true charity, it would be more likely to reach the witness in others, and be of more service in the church, than if their sufferings were attended with a contrary spirit and conduct. In this exercise, I was drawn into a sympathizing tenderness with the sheep of Christ, however distinguished one from another in this world; and the like disposition appeared to spread over others in the meeting. It arose in my mind to show how deep answers to deep in the hearts of the sincere and upright; though in their different growths all have not attained to the same clearness in some points relating to our testimony." At another time he remarked, "True charity is an excellent virtue: and to labour sincerely for their good, whose belief in all points, does not agree with ours, is a happy state;" and again, in a case where his view was not adopted in a meeting; "I did not see it my duty to *press* for an alteration; but felt easy to leave it all to Him who alone is able to turn the hearts of the mighty, and to make way for the spreading of Truth on the earth by means agreeable to His infinite wisdom."

There seems to be in the writings of all true believers, but one unvarying testimony to the power of good and evil in producing their like; and Samuel Fothergill, in enlarging upon the love and unity which ought to subsist between brethren, remarks, how cautious ought we to be of saying anything detracting one of another—of saying, "Report," say they, "and we will report it;" and how great ought to be the care on the minds of Friends, lest at any time they should be led to speak in any way to lessen any elder, minister or overseer, or any others before their children; and of what hurtful consequence such conduct might be to the youth in fixing prejudices in their minds that could not be easily removed; so he would have Friends keep to that wisdom, which is from above, and then that implacable disposition would be removed, which *insists* upon whatever it thinks right, saying, "I will have rigid justice; I will be paid to the uttermost farthing;" and not giving up anything for peace's sake. He much desired that all such feelings might not have any place, and that none might give way to such a spirit of resentment, but be willing to suffer, rather than to contend; this was the true way to live in peace.

The spirit of forbearance which was manifested by these, and many other devoted and faithful servants of our Divine Master, must needs commend itself to every sincere seeker after Truth, who is desiring the exaltation thereof above all selfish purposes and ends,—the success of which, can only bring suffering and reproach upon the church, and sorrow and shame upon individuals, who are unwilling to suffer for its sake, and who would—rather than to yield their own selfish views, or sacrifice their own feelings—witness the subversion of good order to the producing of sorrow and confusion.

If such as these would pause and reflect upon the design of the great Head of the church in gathering us together, as a people—which was to testify of his goodness and power, and to promote "peace on earth, and good will to men," and not to bite and devour one another—they must needs condemn their course as being opposed to His will; and then, beholding themselves as the enemies of Christ and his salvation—which we profess to seek through obedience to His cross—they would, it is to be hoped, seek for reconciliation unto God, and one unto another, forgiving one another, as they would desire to be forgiven. "If ye forgive not men their trespasses, neither will your heavenly Father, who, by his pardoning grace, forgiveth all who desire Him, ten thousand talents oftener than we forgive a fellow servant a hundred pence—forgive yours. Blessed are the merciful, for they shall obtain mercy."

TANNING.

The ancient process of tanning requiring a long period of time to produce leather, numerous processes have lately been set forth, and many of them tried on a working scale, for the purpose of shortening this lapse of time. Although the end has been attained in a variety of ways, yet the quality of the leather has proved so inferior, that the slower process is still preferred for the finer qualities. The deterioration has been nearly, but not, however quite, in direct proportion to the reduction of time in tanning, so that we may hope that methods will be devised for shortening the time without losing in quality. It is true that we are not thoroughly acquainted with the exact nature and progress of the change which a hide undergoes in its transformation, but we believe, on sufficient grounds, that it consists in the simultaneous metamorphosis of the hide into a gelatinous material and its combination with tannin. In some kinds of tanning, alumina, or aluminous salts, seems to act the part of material and its combination of tannin. It has been found that an elevated temperature hastens the transformation; that strong liquors, or the injection of liquors by force, hasten the combination of tannin. The same ends appear to be also attained by the free use of lime, whereby the hide is swelled and its pores opened. The precise action of acid is not well ascertained, except that the process is shortened. These are the main principles by which a shortened process of tanning has been accomplished. Where lime has been freely used, acid generally follows, and the hide is so puffed and porous, that tanning becomes expeditious; but the hide has been torn and rent asunder, and the organized structure must be necessarily impaired, and the strength and firmness of the leather consequently diminished. It will be observed that in the older processes the change was so slow that the organized structure of the skin was not impaired; that but little matter was removed from the hide, while a quantity was added to it. In accelerating the change, a portion of the matter is removed by solution while undergoing transformation, before it can unite with, and becomes fixed by, the tannin. Hence the greater looseness and levity of leather prepared by the more modern and rapid processes. It may perhaps be stated as an ascertained fact, that leaving the hide in the vats during two years instead of one, the increase of weight and quality thereby, compensates for the loss of time, by paying a fair interest on the capital invested.

A patentee, in Lond. Jour. xxxvi. 310, proposes a combination of the white leather (alum and salt) process, with the tanning process by means of catechu. Another (Lond. Jour. xxxvi. 319) suggests the use of sulphuret of calcium instead of lime for unhairing.

Since liming tends to lengthen tanning, by preventing the more rapid union of tannin with gelatin, Turnbull treats the hides after liming with a concentrated solution of sugar, so that the access of air is prevented during the action of the bark-liquors on the hides, and the formation of gallic acid thereby prevented. In this manner the same amount of leather is obtained in fourteen days from 100 lbs. of oak-bark as has been heretofore obtained in 18 months from 800 lbs. of bark.

TANNIN.—Kampfmeyer states as a result of his comparative experiments with oak-bark, alder bark, catechu, divi divi, that sole leather tanned with divi divi is, in dry weather, about as good as the oak tanned, but that in wet weather it is inferior. It may, nevertheless, be used in conjunction with oak bark.

Elsner states that in Wallachia, Moldavia, and Transylvania, the root of the tormentil or septfoil is largely and successfully employed in tanning, and that its value is shown by chemical analysis, which gives 17 to 34 per cent. tannin in it.

The best method of determining, practically, the amount of tannin in a substance is that proposed by Pelouze, which is to hang a strip of hide (freshly deprived of hair and ready for the tan-vat) in a tannic solution, and keep it there until it ceases to increase in weight. This increase is tannic acid, the gallic being left in the solution. —*Prof. J. C. Booth, in the Scientific American.*

Half a Century In Bed.

Susan Pierson, of Bridgehampton, Long Island, died February 24th, "in her 72d year, *and the fifty-second year of her extraordinary confinement.*" Thus was announced in the Observer of April 27th the death of one of the "excellent of the earth."

Her case was peculiar; it is probable it has no parallel. For more than fifty years she did not set her foot upon the floor, and in all that time did not sit upright in bed. One year of that time was spent in a neighbour's house, with which exception the extent of her travels in fifty years was from one corner of her room to another, once a week, in some strong man's arms. This change was always attended with an almost entire loss of voice, from which she did not recover until after a night's repose. The best medical skill and all her patrimony were expended in vain endeavours to restore her to health. The upright posture always and immediately produced violent retching. All hopes of her being restored to her former health were long since abandoned.

All who knew the deceased knew her as "Aunt Susie," and all who knew her knew an humble, truthful, *cheerful* child of God. It was the privilege of the writer to see her frequently. Rarely, if ever, has he seen more strongly developed these two traits of Christian character, viz., adoring views of God, and humble views of herself.

All her property being consumed, she was dependent. It was touching to hear her speak in gratitude of the goodness of God in providing her so good a home, and so many mercies.

For the most part she did not suffer pain. She had all the time of her confinement, excepting one year, the untiring attentions of an inseparable sister, a Christian woman, who survives her, about eighty years of age.

"Aunt Susie" lived a quiet, retired life, but not an idle nor a useless life. She was industrious in the use of her knitting-needles, almost her only employment. Her Bible was her constant companion, and was not out of her hands or out of reach for half a century. She was an instance of the divine faithfulness, a monument of God's mercy, and a trophy of his grace.—*N. Y. Obs.*

For "The Friend."

THE CROSS OF CHRIST.

Having in previous essays shown that the Lord's people have been in all ages of the world a self-denying people, living under the influence of the cross of Christ; not doing their own wills, in their own time, but ever labouring carefully to know the will of God; patiently waiting for ability to fulfil all his requirements, in his own time and way: I feel a deep and weighty concern of mind, that the Society of Friends, in America, England, Ireland and Scotland, and wherever they may exist, as a religious body of people, may be favoured to put on strength in the name of the Lord God of Hosts; and in his power, to arise and shake themselves from the dust of the earth; putting off the old man, with all that appertains to him; and individually be willing to come under the crucifying power of Christ Jesus, the new and heavenly man, the Lord from heaven a "quickening Spirit;" daily bearing the cross, and letting the light of the glorious gospel of Christ so shine, that honest inquirers may see it, and "glorify our Father who is in heaven."

Now as "Zion" is to be "redeemed with judgment, and her converts with righteousness," and as the time is come that "judgment must begin at the house of God," it appears to me, it is incumbent on ministers and elders to begin a reform in themselves and in their families, letting their moderation appear in all things; being good examples to the flock in keeping to sound Scripture doctrine without equivocation; keeping their spiritual eye open to see what the Holy Ghost shall show them; and their spiritual ear open to hear the language of the Spirit to the churches, so that they may, by their right stepping along in the path of self-denial, and in the right ordering and training of their families in the simplicity of the gospel of Christ, say cheeringly to Friends and others, "Follow us, as we follow Christ."

About the year 1656, George Fox wrote the following epistle to Friends in the ministry:

"Friends,—In the power of life and wisdom, and dread of the Lord God of life, and heaven and earth, dwell; that in the wisdom of God over all ye may be preserved, and be a terror to all the adversaries of God, and a dread, answering that of God in them all, spreading the truth abroad, awakening the witness, confounding the deceit, gathering up out of transgression into the life, the covenant of light and peace with God.

"Let all nations hear the sound by word or writing. Spare no place, spare no tongue nor pen; but be obedient to the Lord God: go through the work; be valiant, for the truth upon earth; tread and trample upon all that is contrary. Ye have the power, do not abuse it, and strength and presence of the Lord; eye it, and the wisdom; that with it you may all be ordered to the glory of the Lord God. Keep in the dominion; keep in the power over all deceit; tread over them in that, which lets you see to the world's end, and the utmost parts of the earth. Reign and rule with Christ, whose sceptre and throne are now set up, whose dominion is over all to the ends of the earth; whose dominion is an everlasting dominion, his throne an everlasting throne, his kingdom an everlasting kingdom, his power above all powers. Therefore this is the word of the Lord to you all: 'Keep in the wisdom of God,' that spreads over all the earth; the wisdom of the creation, that is pure from above, not destructive. For now shall salvation go out of Zion, to judge the mount of Esau; now shall the law go forth from Jerusalem, to answer the principle of God in all; to hew down all inventors and inventions. For all the princes of the earth are but as air to the power of God, which you are in, and have tasted of: therefore live in it, that is the word of the Lord to you all; do not abuse it; keep down and low; and take heed of false joys, that will change. Bring all into the worship of God. Plow up the fallow ground; thresh and get out the corn; that the seed, the wheat, may be gathered into the barn: that to the beginning all people may come; to Christ, who was before the world was made. For the chaff is come upon the wheat by transgression, he that treads it out is out of transgression, fathoms transgression, puts a difference between the precious and the vile, can pick out the wheat from the tares, and gather into the garner; so brings to the lively hope the immortal soul into God, out of which it came. None worship God, but who come to the principle of God, which they have transgressed. None are plowed up, but he who comes to the principle of God in him, that he hath transgressed. Then he doth service as to God; then is the planting, watering, and increase from God. So the ministers of the Spirit must minister to the Spirit that is in prison, which hath been in captivity in every one; that with the Spirit of Christ, people may be led out of captivity up to God the Father of spirits to serve him, and have unity with him, with the Scriptures, and one with another. This is the word of the Lord to you all, a charge to you all in the presence of the living God; be patterns; be examples in all countries, places, islands, nations, wherever you come; that your life and conduct may preach among all sorts of people, and to them. Then you will come to walk cheerfully over the world, answering that of God in every one; whereby in them ye may be a blessing, and make the witness of God in them to bless you: then to the Lord God you shall be a sweet savour, and a blessing. Spare no deceit. Lay the sword upon it; go over it. Keep yourselves clear of the blood of all men, either by word or writing; and keep yourselves clean, that you may stand in your throne, and every one have his lot, and stand in the Ancient of Days. The blessing of the Lord be with you, and keep you over all the idolatrous worships and worshippers. Let them know the living God; for teachings, churches, worships must be thrown down with the power of the Lord God, set up by man's earthly understanding, knowledge and will. All this must be thrown down by that which gave forth the Scriptures; and who are in that, reign over it all. That is the word of the Lord to you all. In that is God worshipped, that brings to declare his will, and brings to the church in God, the ground and pillar of truth; for now is the mighty day of the Lord appeared, and the arrows of the Almighty gone forth; which stick in the hearts of the wicked. Now will I arise, saith the Lord God Almighty, to trample and thunder down deceit, which hath long reigned and stained the earth. Now will I have my glory out of every one. The Lord God Almighty over all in his strength and power keep you to his glory, that you may come to answer that of God in every one. Proclaim the mighty day of the Lord of fire and sword, who will be worshipped in spirit and in truth; and keep in the life and power of the Lord God, that the inhabitants of the earth may tremble before you: that God's power and majesty may be admired among hypocrites and heathens, and ye in the wisdom, dread, life, terror, and dominion preserved to his glory; that nothing may rule or reign but power and life itself, and in the wisdom of God ye may be preserved in it. This is the word of the Lord God to you all. The call is out of transgression, the Spirit bids come. The call is now from all false worships, and from all inventions and dead works, to serve the living God. The call is to repentance, to amendment of life, whereby righteousness may be brought forth, which shall go throughout the earth. Therefore ye that be chosen and faithful, who are with the Lamb, go through your work faithfully in the strength and power of the Lord, and be obedient to the power; for that will save you out of the hands of unreasonable men, and preserve you over the world to himself. Hereby you may live in the kingdom that stands in power, which hath no end; where glory and life is."—*George Fox.*

New Jersey, Ninth mo. 1854.

Words of the Wise.

"The words of the wise are as goads, and as nails fastened by the masters of assemblies."—Eccl. xii. 11.

True happiness consists in dependence on God; it is to have no will of our own.

It is far less difficult to act well than to suffer in silence.

No one knows anything of himself till he is tried. Trial is the touchstone of character.

Dost thou love controversy? Suspect thy charity. Dost thou abhor all controversy? Suspect thy Christianity.

The deepest religious feeling makes the least noise, but its principle and action are steadfast and intense.

Experience proves, that an uninterrupted and extraordinary flow of prosperity is more fatal to generosity or interest in others, than anything else that can befall man here below.

If we would not fall into things unlawful, we must sometimes deny ourselves in those that are lawful.

Christians might avoid much trouble and inconvenience if they would only believe what they profess—that God is able to make them happy without anything else.

The best evidence of strength in grace, is to bear much with those who are weak in it.

Where sins lie heavy, crosses lie light; and on the contrary, where crosses lie heavy, sins lie light.

The afflictions of Christians are neither great nor long; for what can be great to him that counts the world nothing, and what can be long to him that counts this life but a span?

Many speak as if they thought the whole of religion consisted in activity; whereas the *patience* of the saints is equally honourable to God, and often exhibits to a greater advantage the lustre of a Christian profession.

Prayer is like our food. The natural life is weak and ready to faint if we eat little, and without appetite; the spiritual life declines when we have no hearty desire to pray, and are not affected with this decay.

To fight for our religion is forbidden: it is equally forbidden to dispute for it in a fighting temper. But we are not forbidden to deny ourselves for it—to labour for it—to suffer for it—to die for it.

As they, who for every slight infirmity take physic to repair their health, do rather impair it; so they, who for every trifle are eager to vindicate their character, do rather weaken it.

Victory alone shall wear the crown. We must not only fight, but overcome.

Clocks.—Connecticut has twenty-eight clock factories, employs 1,279 hands in the manufacture, has $1,000,000 capital invested, and makes annually 790,000 clocks. One-fourth of these timekeepers find a market in England.

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 21.)

JOHN ROBERTS.

John Roberts, born at Llanidloes, in Montgomery county, South Wales, was, before his removal to Pennsylvania, a member of Radnor Monthly Meeting, and a minister of the Gospel of Christ. He appears to have crossed the ocean with Hugh Roberts, in 1698, when that valuable minister returned from his religious visit to England. He settled at Haverford. In a brief biographical minute relative to him, prepared by the Monthly Meeting he belonged to, it is said that the certificate he brought from Wales, "signified Friends' unity, with his testimony, and also his good life and conversation. He came to Pennsylvania in the year 1698, and belonged to Haverford meeting. He was taken sick at the Yearly Meeting of Burlington, and died in Philadelphia, [towards the close of the Seventh month,] 1702, in the sixty-sixth year of his age. [His burial was on the first day of the Eighth month.] We can truly say whilst among us, his life was fresh and green, and that he greatly delighted in the peace and unity of the brethren, and was serviceable amongst us in many respects."

JOHN SIMCOCK.

John Simcock was born in England, about the year 1639. His residence was at or in the neighbourhood of Stoak, in Cheshire, where, after he grew to manhood, he received the Truth, was made a confessor thereof, and a sufferer therefor, by fine and imprisonment. Of his education we know nothing, and of his convincement not much. It appears, however, from his declaration on his death-bed, that his mind had been brought under exercise, with earnest desires that the Lord would make known his way of truth to him. Having been bowed in solemn prayer, he threw himself on a bed, and immediately he heard as it were a voice speaking to him. Through the revelation of that voice, he was in a little time satisfied that the people called Quakers professed the way of Truth, and were walking therein. Being thus brought into the knowledge of the Truth, he was faithful thereto, and grew in grace.

In the year 1670, he, with various others, were fined for their religious meetings at Stoak and the neighbourhood. Thomas Badcock, the active persecutor, being taken sick, was brought under distress of mind for what he had done, particularly as respected John Simcock. Being grievously burdened in conscience, he sent for John, who visited him in love,—freely forgiving the injury he had received, and under the constraining influence of heavenly charity, praying to the Lord that his persecutor be forgiven by him.

Having received a gift in the ministry of the Gospel, he often suffered for exercising it. At one time he had £41 taken from him for preaching, at another time eight cows and eleven heifers, worth £90, and was fined also on other charges; and was imprisoned for eighteen months for accompanying his wife to a public place of worship.

About the year 1682, he removed to Pennsylvania, and settled in Chester county. Smith says of him: "His services here as one of William Penn's first council, one of his first commissioners of property, and one of his most trusty and trusted friends in the government, and afterwards as speaker and member of the assemblies, seems to have been very considerable. And his station as an approved minister among his brethren, through a long course of time, rendered him still more useful."

Although much made use of by his Friends on important services in the church, and highly esteemed for his work's sake, he was not one who put himself forward; neither claimed he honour of men. When he saw people spreading themselves abroad, and making much ado as if they were acting or suffering for Truth's sake, he would say sometimes, "Truth needs no images." He was one who kept the concerns of this life in proper subordination, and this was what enabled him when suffering for the Truth the spoiling of his goods, to bear it patiently. At one time, when his persecutors were seizing and driving away much of the stock of his farm, his servant maid, who was not a Friend, looking with wonder at his quiet endurance, exclaimed, "How can you stand by and see them drive away so many cattle." In reply, he said, it did not trouble him "more than if they had been so many geese." In the words of one of his daughters, "he seemed to be of the Apostle's mind, and could rejoice because he was counted worthy to suffer for the name of Jesus."

One of the testimonies given forth concerning him says, "He was as a nursing father in Israel, and tender over the seed of God. Wherever he saw it in the least appearance, he was a cherisher of it, although it might be in the young. He was a man who abhorred deceit and hypocrisy ever since I knew him. I have known him nearly forty years, and this I may say of him, that God, through Christ Jesus our Lord, made his ministry sound, edifying and helpful to me, and many others in the church of Christ. God had endowed him with a spirit of discernment and wisdom beyond many in spiritual things.

"He was a great sufferer for Truth's sake, both in imprisonment and loss of goods in Old England. When it pleased the Lord to send his wife to the steeple houses to speak to the priest, or people, or for a sign, he went with her. For this they were both cast into prison, and continued there many months. The Lord made him willing to travel in Truth's service pretty much. Notwithstanding his great sufferings and travels, he was no ways chargeable to any, but was helpful to those who stood in need. He said before he died, "he never took a penny on account of his service or suffering of any person whatsoever."

John Simcock was one of the three persons appointed to visit George Keith, by the General Meeting of Ministers and Elders, on account of the false charges made against them by him, and he was also one of the committee who prepared the testimony of that body against him. Of his travels in the ministry, we have no certain account, but find abundant traces of his services in meetings for discipline. He appears to have been wise in counsel, skilful to oppose gainsayers, and prompt to support the Truth, and attack error. Thus he passed along, honoured by his friends, and lightly esteemed only by apostates from the Truth. His daughter says of him, "He was a man for God; yea, I may say, he was a man of God. He was very serviceable in his day and generation, ready and willing to serve Truth, and lend a helping hand to them that were weak. Many times he had a word of counsel and good advice to speak unto those that stood in need, which was very refreshing and comfortable to them. I know he was a man that was much concerned that good order and discipline might be kept up in the church of Christ. He will be greatly missed by the faithful who knew him, and were inwardly acquainted with him;—it may be the unfaithful may not seem to miss him so much."

(To be concluded.)

From the Christian Advocate and Journal.

Curiosities of Natural History.

EFFECTS OF POISON ON PLANTS.

Dr. Salisbury, of Albany, recently communicated to the American Scientific Association some experiments on plants, which illustrate the analogy existing between animal and vegetable physiology. Dr. Salisbury extracted the poison of a dead rattlesnake, a small portion of which he inserted in the plant by moistening it with the blade of a knife, with which he wounded a lilac, a horse-chesnut, a corn-plant, and a sun-flower. In sixty hours after the infliction of the wound they began to manifest symptoms of poisoning; and in a few days all the leaves above the wound were dead. In about fifteen days they manifested convalescence, and nearly all recovered from the injury.

THE SLEEP OF ARCTIC PLANTS.

M. Seemann, the naturalist of Kellett's Arctic Expedition, states a curious fact respecting the condition of the vegetable world during the long day of the Arctic summer. Although the sun never sets while it lasts, plants make no mistake about the time when, if it be not night, it ought to be, but regularly as the evening hours approach, and when a midnight sun is several degrees above the horizon, droop their leaves and sleep, even as they do at sunset in more favoured climes. "If man," observes M. Seemann, "should ever reach the pole, and be undecided which way to turn when his compass has become sluggish, his time-piece out of order, the plants which he may happen to meet will show him the way; their sleeping leaves tell him that midnight is at hand, and at that time the sun is standing in the north."

LONGEVITY OF THE GOOSE.

An English paper (the Leicester Mercury) says: Mr. Everett, farmer, of Kirby Lodge, near Rockingham, has a goose which he vouches to be at least ninety-three years old. It has been on his farm full fifty years, and passed the former part of its life on the farm adjoining. It is a large fine fowl, with a head and neck as white as snow, and has hatched a brood of goslings from its own eggs. Mr. E. has a book stating its age and history, which he can authenticate. If we were to pluck a quill from this antiquated goose, and write its biography, it might not be an uninteresting record. The echoes of the Scotch rebellion had scarcely ceased when it first peeped from beneath its shell into the wide world, and possibly its immediate ancestor smoked at the festive board at the coronation of the first George. It cackled at the Gordon riots, and hissed when Wilks was made a state prisoner. It was hatching with the first French revolution, and screamed when Napoleon le Grande threatened to invade our shores, and also when Castlereagh was made Prime Minister. Like many other bipeds it has brooded over scores of eggs, and grown no wiser from experience, but though year after year has flown by, they leave her the "giddy goose" still.

NEST OF THE TARANTULA.

The nest of a tarantula (spider) has been found in California, of most singular construction. It is about three inches in length by two in diameter, built of adobes, the wall being nearly half an inch thick. Inside is a projection, which nearly divides it into two apartments, about an inch in diameter. The inside is lined with a white downy substance, not unlike velvet, and presents one of the cleanest and most tidy little households imaginable. But the most curious part of it is the door, which fits into an aperture and closes it

hermetically. The door is secured by a hinge, formed of the same fibrous substance as the lining of the house, and upon which it swings with freedom. The nest is occupied by a dozen little tarantuls, which appear to subsist upon a yellow secreted substance that appears upon the wall of the front apartment. The arrangement of the door for the protection of the little inmates indicates great instinctive architectural knowledge. It is the intention of the finder to forward this curiosity to the Smithsonian Institute at Washington.

"For The Friend."

Iowa.

From two communications received from Iowa, we take the following extracts:

"The health of this part of the State has been good so far this season.

"We had it rather dry through the past fall, winter and spring, though not very dry; but since the fore part of the Fifth month last, rain has been very seasonable here, and for about forty or fifty miles south of us; beyond that, southward, it has been very dry, so much so, that it is estimated there will not be over five bushels of corn to the acre on many fields in the south part of the State. From the appearance of our rivers from that direction, and from information received, I suppose it has been quite wet further north. We have accounts by letter and otherwise of its being quite dry in places east, and generally where very dry, it is sickly.

"Here, from the fertility of soil and favourable season, our crops are abundant, wheat and oats good; corn, potatoes, clover, grass, and the vine crop in general, such as melons, pumpkins, cucumbers, beans, &c., over an average good crop. Native fruits more than the inhabitants can use,—plums now ripe, and have been for weeks, and will be till frost. We have a great variety of them in shape, size, colour, and time of ripening; some measuring four inches in circumference.

"The season has been unusually warm; my thermometer has stood above 90° more of the time this summer than ever before since I had one. Our prevailing prairie breeze prevents hot weather from having the same effect on the system here as further east."

The other is from Mahasum County:

"I have been a resident here for nearly eight years, so let me state a little of what I believe of these parts. Our winters are dryer here than in some other parts, but we have cold winds that come off the large prairies, and sometimes bring considerable snow. Most of the rain in these parts comes in the Fifth and Sixth months, and sometimes there are great freshets until in the Seventh month.

"I believe that if we do not keep upon the watch, we may sometimes set forth the advantages of a new country too high. I am aware that in this day of ease and prosperity, as to outward religion and property, it is very necessary that the love of the world is not uppermost in our moving, and I am well convinced that many do move, who had better stay [at their former homes] unless they feel a duty, more forcible, than [acquiring] property or popularity, which I fear [influence] too many.

"When we move, it is natural for us to wish to have some or all of our relations and valued friends again, for in many instances we settle where our neighbours are but few, or they are from different States, and of no religious profession, or of a different sort [from our own,] and as like begets its like, we and our children mingle with them, as Ephraim of old did, unless we keep up the watch, and take up a good resolution as Joshua of old, saying, 'As for me and my house, we will serve the Lord.'

"Some may say that the author of this does not like Iowa, but I feel at home here, and I know that the Lord has blessed us here, although our trials are not to be told at this time, neither is the truth to be spoken at all times; but if we do say anything, let us speak nothing but the truth, so et our yea be yea, and our nay nay.

Ninth mo. 14th, 1854.

Interesting from South Africa.

By letter from John G. Willis, Esq., United States consul at Loanda, southwest coast of Africa, to a friend in this city, we have some interesting information concerning an interior exploration of that portion of Africa, to the following effect:—

"On the 1st of June, Dr. Livingston, of England, arrived at Loanda, all the way from the Cape of Good Hope, through the centre of Africa. He started from one of the missions in the vicinity of the Cape, about twenty-seven months before, and had been given up for lost, as no news of him had been received from the time he left, up to the day that he arrived at Loanda. He describes the interior as very pleasant, and with a good climate, the land being high.

"His route was north until he got into the latitude of Loanda, when he shaped his course for that place. A short time after so doing he found the height of land was decreasing—so much so, that in a few days he descended 2,000 feet. His health was good until he commenced nearing the coast, after which he was unwell a great part of the time. Up to the 7th of June (the date of the letter,) he was confined to the house, but was improving every day.

"Dr. Livingston brought to Loanda twenty-seven negroes, who were given to him as a 'guard' by one of the chiefs in the interior, and his intention is to return to the Cape by land—partly to endeavour to make further discoveries, and partly to return the negroes.

"For many days he was in a forest, so dense that the light of day could hardly be discerned, and he was obliged to set the guard to work cutting down the trees, so that he could see the stars to take an observation. He started with many cattle, but lost all by flies. He was obliged for many days to live on the fruit of some of the trees, which fruit resembled the gourd. He has the latitude and longitude of every place of importance that he has seen; but as regards the country being a second edition of California or Australia, he does not say much.

"He was attacked by wild beasts only once during the route. That encounter was with a lion, which, as soon as he got the doctor's arm between his teeth, was wounded by one of the guard. The lion immediately left the doctor, and attacked the guard, wounding one in the leg and another in the arm; but, after his third spring, he fell down and died.

"Dr. Livingston was not much more fortunate in his intercourse with the natives, some of whom, as he approached the coast, took all his clothes, with the exception of a single very necessary garment; and he was obliged to use all his influence, and make a great many promises, in order to retain that.

"In the interior, where a white man had probably never been before, he was received by the different chiefs in great state, and was offered much hospitality. He speaks the language of the natives of the interior, which is entirely different from that of those about Loanda.

"It is understood that a report of his travels will be forwarded to the Geographical Society of London, as soon as an opportunity offers, and the doctor is able to put his notes in a proper shape."

Selected.

"HE CARETH FOR US."

BY COL. BLACKER.

"No man careth for my soul."—Psa. cxlii. 4.

'Twas thus that Salem's minstrel king
In plaintive strain was heard to sing,
When friends were false, and threatening foes
Disturb'd his wearied soul's repose.
Thus we, ourselves, are ready found,
When sorrows lower our path around,
With him in like desponding strain,
To lift our voices and complain,
Impatient of our lot, and prone
Our wayward fortunes to bemoan;
Mid real or imagined ill,
In bitterness despairing still.

And what though earthly friends may prove
Regardless of the claims of love?
What though no human hand is nigh
To wipe the tear from sorrow's eye,
Though sharper than the serpent's fang
Ingratitude may deal the pang?
O! shall we deem us all bereft,
No caring friend to aid us left?
No: there is One, whose guardian care
It is the Christian's bliss to share;
Whose angel-wings are round us spread,
When dangers threaten, friends are fled;
Whose saving power and love divine
Through all his dealings brightly shine.
Faith points to him, and him alone,
When earthly comforters are flown.
What but that care for worthless man
Devised redemption?—wondrous plan!
That care impell'd the sinner's Friend
From realms angelic to descend,
His heav'nly glories to forego,
Changed for a pilgrimage of woe.
For O, the life of pain he led,
With scarce a shelter for his head,
Despised, rejected of his own,
Still as the "Man of sorrows" known!
What but his anxious care for thee,
O sinner, nail'd him to the tree,
And sent, the work of love to crown,
The comfort-bearing Spirit down?
And has he ceased that care to feel,
Desponding mortal, for thy weal?
Say, dost thou dream his shorten'd arm
No longer shields thy soul from harm?
No: still he bids thee come, and prove
The boundless treasures of his love.

At times, to wake the slumb'ring soul,
The thunders of his warning roll;
But oftener far his mercy's call
Is heard in whisper "still and small."
His watchmen still the summons give,
"Weak child of error, turn and live."
And wilt thou not, lost as thou art,
Obdurate, heedless, slow of heart—
Wilt thou the proffer'd mercy spurn,—
Wilt thou not, prodigal, return?—
Be deaf to that persuasive voice,
That courts thee, sooner, to rejoice?
No; "heavy-laden," sin-oppressed,
Haste to the haven of thy rest:
Come ere thy coming be too late,
When closed at last is mercy's gate:
Address to him the grateful prayer,
Who thus has made thy soul his care.

"A solitary blessing few can find;
Our joys with those we love are intertwined,
And he whose helpful tenderness removes
The obstructing thorn that wounds the breast he loves,
Smooths not another's rugged path alone,
But scatters roses to adorn his own."

"*Fear* never sways a manly soul,
For *honest* hearts 'twas ne'er intended,
They, only they, have cause to fear,
Whose motives have their God offended."

For "The Friend."

IMPATIENCE.

Perhaps few persons are sufficiently aware of the importance of avoiding impatience in times of trial. When in the line of apprehended duty we meet with crosses and reverses, or from other circumstances which we are unable to prevent, are brought under affliction, patience is greatly required. These peculiar junctures seem to call for special care, lest we give ourselves up to impatience, and thereby lose the happy effect upon the disposition, which these troubles otherwise might have, were they properly borne. Patience, in many instances, seems almost to neutralize trouble, or so far to mitigate it, when a quiet acquiescence in the Divine will is sought for, as to render the mind contented and resigned under it, while there continues to be a faithful and confiding adherence to the Great Preserver of His people. In times of affliction, we may not always be permitted to see the great good, which is intended in best wisdom, and the marvellous mercy wherewith seasons of probation are fraught, and how they are dispensed and controlled for our advancement heavenward, perhaps effecting the suppression of something in us, which is of the natural and corrupt vine, capable only of bearing wild grapes: yet as we are properly concerned to dwell in the patience and faith of the saints, through condescending love, we are often permitted afterwards to see that all those trials have wonderfully wrought towards the consummation of our eternal happiness, as well as to our best interest and comfort in this state of existence. While suffering under them, we have perhaps put up our petitions for relief, and been comforted therein, though not relieved in the way we should naturally desire. I believe our heavenly Father, in His tender mercy and loving kindness, at times hears our prayers when he may see it best for our good in His inscrutable wisdom to withhold what we desire. As men we are short-sighted and frail, and are apt to regard temporal acquisition, fleshly ease, indulgence and unbroken prosperity in secular concerns, as things meet to be coveted, when in reality these may often prove as snares, having a tendency to lull into a fatal security, solacing in our lost and undone condition, never permitting us to be awakened by inquietude to our said situation, unredeemed from the corruptions of sin, so that we might adopt the language of a beloved apostle formerly, when he said, "O wretched man that I am, who shall deliver me from the body of this death!"

But how consoling is the truth, that our blessed Lord and Redeemer, who is touched with a feeling of our infirmities, does not delight in afflicting His children; and that the willing and obedient taste continually of His unfailing mercy, knowing all the reproofs of instruction to be kindly, gently and tenderly administered, and that the rod of correction is only extended to bring them into greater oneness, and more intimate connection with that eternal Power, of whom the Psalmist spoke when he exclaimed, "Why art thou cast down, O my soul? and why art thou disquieted within me? hope thou in God: for I shall yet praise Him, who is the health of my countenance, and my God."

But how blighting in the harvest of spiritual good, is impatience, and how it disqualifies and weakens in the heavenly race. Our intercourse with our Friends, both social and religious, is much interrupted and broken off by it, and it very much precludes profitable access to an erring brother, in that disposition of mind, which would furnish an opportunity of availingly reaching him, by dispassionately upholding living truths to his view, or clearly unfolding the mystery of iniquity to his understanding.

It is important, however, not to blend impatience with that uneasiness and concern which many may feel, in consequence of proving recreant to the clear convictions of Truth, while they continue to disregard or tolerate wrong things in their midst, which they have seen in the light of Christ to be of an unjust and oppressive character. In consequence of not keeping "the faith," such experience a falling away from the saving knowledge, of their Lord and Saviour Jesus Christ, inwardly revealed, till there is imminent danger of the "light within them, becoming darkness." In this state of mind, impatience would gain the ascendency, and that true and heavenly patience would be greatly weakened, which is spoken of by the apostle to the Romans in this passage. "*Tribulation worketh patience, and patience experience*, and experience hope: and hope maketh not ashamed, because the love of God is shed abroad in our hearts, by the Holy Ghost which is given unto us."

New York, Ninth mo. 1854.

For "The Friend."

Review of the Weather for Ninth Month, 1854.

The first ten days of the month were very warm, during which time there was no rain, except a slight sprinkle on the 4th.

The drought continued very severe in places,—particularly in some of the Western States.

On the 10th and 11th, nearly two inches of rain fell at this place, and two and one-third inches on the 14th and 15th; so that the ground was again pretty well soaked, and the landscape assumed a more lively aspect. The morning of 17th was clear, and some frost was seen in low places. The mornings were rather cool during the remainder of the month, with frost occasionally. There was no rain after the 15th, and the roads are becoming quite dusty, and the country rather dry again.

The average temperature of the month was 66½°; amount of rain 4.442 inches. Last year the average temperature for Ninth month was 65¼°, and amount of rain 5.989 inches.

Do not quarrel with your friends; there are more than enough enemies in the world for every Christian to strive against.

A Mighty Procession.—What a mighty procession has been marching toward the grave during the past year! At the usual estimate, since the 1st of January, 1853, more than 31,500,000 of the world's population have gone down to the earth again. Place them in long array, and they will give a moving column of more than 1300 to every mile of the globe's circumference! Only think of it! ponder and look upon these astounding computations! What a spectacle, as they move on, tramp, tramp, tramp—forward! upon this stupendous dead march!

"Art is long, and time is fleeting,
And our hearts, though strong and brave,
Still, like muffled drums, are beating
Funeral marches to the grave!"

Friends' Writings.—A thirst for good will naturally lead to good. To excite this thirst, then, seems the first object. To a mind not thirsty, Friends' writings are, I believe, often very dull and insipid; to a mind in which the thirst is excited, they are indeed as a brook by the way—*very precious, very sweet, very reviving.*—*W. Grover.*

Slaveholder's Argument.—The Governor of Alabama, in his message to the Legislature, suggested the passage of a law to prevent the separation of husband from wife, and parent from children, in the sale of slaves. This truly humane proposal excites the ire of the Richmond Enquirer, which thus gives its opinion in the case:

"This recommendation strikes us as being most unwise and impolitic. If slaves are property, then should they be at the absolute disposal of the master, or be subject only to such legal provisions as are designed for the protection of life and limb. If the relation of master and slave be infringed for one purpose, it would be difficult to fix any limit to the encroachment. If the slaveholder yield one point to the demands of Abolition fanaticism, he will but embolden the spirit which he aims to conciliate, and will be driven to some more substantial concession."

We feel great pity for the man who can pen such lines; pity that he so mistakes the sentiments of his northern brethren, but stronger pity that there could be any exhibition of such littleness of soul in a white man. We are thankful that he is not our father or son, or the husband of our daughter.—*Sun.*

THE FRIEND.

TENTH MONTH 7, 1854.

OHIO YEARLY MEETING.

Having received a printed copy of the minutes of Ohio Yearly Meeting, we have transferred from it the statement made by that meeting of the facts relating to the recent secession from it.

We shall give further extracts from the minutes in our next number.

As representations calculated to make a wrong impression have been widely and industriously circulated, we give the following additional information which has been communicated to us, in order that the whole subject may be placed in its true light.

When the Representatives were together for the purpose of choosing a clerk and assistant, the twelve who proposed the name of J. Binns for the former station, declined acceding to the report agreed upon by the thirty, viz., that "the Representatives could not agree on any name to be reported," because they said, it would necessarily result in the continuance of Benjamin Hoyle for clerk. This proves conclusively that they were

fully aware of the principle having been established in Ohio Yearly Meeting, that when the Representatives could not agree on names to be brought forward, it was tantamount to the appointment of those who held over from the previous year.

After the Friend informed the meeting that *part* of the Representatives had agreed to propose the name of Jonathan Binns, and the other Friend reported *on behalf of the Representatives* that they could not agree to bring forward a name, the Clerk, having first inquired of the latter Friend whether he was authorized by the Representatives to make that report, and been answered in the affirmative, stated to the meeting that that was the only report before the meeting, and he should minute it, which he did; and the information given of what the twelve Representatives who nominated J. Binns had concluded to do, was never received or entertained by the Yearly Meeting as a report upon which it was proper for it to act.

The Clerk called the attention of those who were urging the meeting to appoint J. Binns clerk, to the facts, that the minute of the Yearly Meeting directed the Representatives to bring forward the name of a Friend for clerk, *if way should open for it;* that when the difficulty relative to the appointment of clerk, in consequence of the Representatives not being able to agree, first occurred in Ohio Yearly Meeting, Benjamin Ladd, a Friend for whose judgment they professed to have a high regard, had expressed in that meeting his conviction, that under such circumstances the continuance of those who were in the stations of clerk and assistant, was a settled principle and usage in the Society, and the only safe ground on which the meeting could act; and that Ohio Yearly Meeting at that *time united in that conclusion, and had now for several years acted upon it, and therefore their whole proceeding was a violation of the deliberate judgment of the Yearly Meeting, as well as a violation of the order and usage of the Society, and if persisted in, must result in separating them from the Yearly Meeting.

When the Clerk made the minute of his continuance, and the continuance of Wm. S. Bates in their respective stations, it was done in conformity with the before mentioned decision of the Yearly Meeting; he was bound by that decision to do so, and had no discretion in the matter; and that minute was fully united with by a much larger number of the members of the meeting than at any time spoke in favour of Jonathan Binns.

It is true that but four persons spoke in direct opposition to the appointment of Jonathan Binns, because, as before said, his nomination, under the circumstances, was not, and could not be received or entertained by the meeting. The opposition to it was, however, abundantly and decidedly manifested by the continued efforts made to show those who urged it, that thereby they were separating themselves from the Yearly Meeting, and to warn them of the sad consequences that must result therefrom. When at one time, a Friend proposed, that those who favoured the appointment of J. Binns, having spoken again and again, should keep quiet for a little time, and allow others to express their opinions respecting it, another Friend immediately replied, No, Friends, this is a separation, they have taken it on their own shoulders, we can say nothing to their appointment, we can have nothing to do with the matter; and on this ground no further expression took place.

A number of those who afterwards joined in the Separation, did themselves declare before the meeting, that it was a Separation, and that they so considered it. One of the chief leaders having said that their measures did not necessarily lead to a Separation, another, equally influential among them, arose and said, [the substance is given, though the precise words may not be used,] they need not try to deceive themselves, or one another; that this measure, if carried out, must lead to a Separation, and all who engaged in it must prepare themselves to take that responsibility and meet the consequences. Another of the same party told them, that the course they were pursuing already amounted to a Separation, and though he united with them in many points, yet rather than put his hand to the plough to turn one furrow in a Separation, he would stay altogether at home with his family.

One of them said, this thing had been got up by a few out of doors, and they had undertaken a business beyond their ability to manage, and he desired them to stop before it was too late. Another expressed that he thought it hard, so many of their own friends should speak so discouragingly to them, and keep saying they *were so few in number*, that he believed it was time a *Separation* had taken place, for they could not unite with the others, nor consent that B. Hoyle should serve the meeting as clerk. Sentiments similar to these, which are given to show that they themselves considered their act one of Separation, were expressed in the meeting by many others of the Separatists, and a proposition was made by more than one of them, for a committe to be appointed by "each party," who should endeavour to reconcile the difficulty, so that they need not separate; but they were told, that so long as they entertained the proposition of appointing Jonathan Binns for clerk, they were engaged in a Separation, and the Yearly Meeting could take no notice of their proposition, but if that was abandoned, and the two individuals who had gone into the place usually occupied by the assistant clerk returned to their proper seats, then the meeting could take the proposal under consideration.

Whatever may be said to gloss over the action of those who Separated from Ohio Yearly Meeting, we think no person who values the order and discipline of our religious Society, and its preservation from schism, on a calm and candid consideration of all the circumstances attending this mournful event, can fail to perceive that the nomination and appointment of Jonathan Binns were the acts of a party, irregular, and subversive of the judgment of Ohio Yearly Meeting previously come to, and long acted on, destructive of the organization and harmony of the whole Society, and an act of Separation from the Yearly Meeting.

Minute on the Separation.

"A Separation of some of the members from Ohio Yearly Meeting having occurred during its sitting on the 5th inst., it becomes our duty, briefly but plainly to record the facts which led to and attended its consummation, in order that our absent brethren of this, and of other Yearly Meetings, may be correctly informed respecting it.

"The Yearly Meeting was opened as usual, on Second-day, the 4th inst. Benjamin Hoyle, who had served it in that capacity for several years, acting as clerk, and William S. Bates as his assistant. The representatives being called, all answered to their names. After reading the reports from the respective Quarterly Meetings, and the certificates or minutes for ministers and their companions, from other Yearly Meetings, objection was made by some Friends to the meeting proceeding further with its business, while two Friends, members of the smaller body in New England, then present, remained in the meeting. The objection being strongly urged by a few, and many unkind reflections cast upon the Clerk for not requesting them to withdraw, one of those Friends arose and stated the circumstances under which he and his companion were there, and exonerated the Clerk from the responsibility. The Clerk being repeatedly called on to make the meeting select, rose and directed its attention to the trying circumstances under which it had long been placed, respecting the two bodies claiming to be New England Yearly Meeting, owing to the difference of sentiment and feeling on the matter among the members, and the course heretofore pursued under these circumstances; and he stated that those who objected to the presence of those two Friends, were at liberty to make the meeting select, according to their application of the term, provided it was done in a manner conformable with our peaceable principles; but it was unreasonable that the whole Yearly Meeting should be detained from transacting its business on account of the objection made.

"Objection being continued, the meeting concluded to adjourn; and the Clerk made a minute requesting the Representatives to confer together, and *if way should open for it*, propose a Friend to serve the meeting as Clerk, and another as assistant.

"The meeting then adjourned. When the Representatives met, it was soon apparent that they could not agree to nominate Friends for the respective stations. Twelve out of the forty-two Representatives wished to have two Friends proposed, to whom twenty-eight decidedly objected, while the other two said they could not unite with the measure. Finally, the great body of the Representatives united in reporting to the Yearly Meeting, that they were unable to agree in bringing forward any name, leaving it with that meeting to pursue the course, which, under similar circumstances, in accordance with the long-established usages of the Society, it has heretofore adopted, in both the men's and women's meeting, viz., the continuance in the stations of clerk and assistant, of the two Friends occupying them.

"After the opening of the Yearly Meeting on the 5th instant, the report of the Representatives being called for, a Friend arose and said, the Representatives had conferred together, and a portion of them had agreed to propose the name of a Friend for clerk, and mentioned the name of the Friend urged by the twelve among the Represen-

---

* This was in 1846. There had been a proposition made among the Representatives in that year for those who approved of continuing B. Hoyle as clerk, to draw up and sign a report to that effect, but those who were opposed to him, (being of the same party who are now in favour of Jonathan Binns,) objected to it, on the ground, that such a course *might lead to a minority report*, which would be entirely out of order.

In 1847, the report of the Representatives was, "unable to agree," and the incumbents were continued. In 1848, the same. In that year the assistant clerk being sick, the Representatives were instructed to confer together again, in order to offer the name of a Friend for that station. They afterwards reported they had conferred together and it was "*the prevailing sense*" that Robert H. Smith should be proposed. The party who now sustain J. Binns, objected to his appointment on the ground *that the Representatives were not agreed*, and although the expression in favour of his appointment far exceeded the opposition made, it was thought best not to deviate from the established practice of the Yearly Meeting, and Wm. S. Bates was continued in the station. It was in that year that the meeting adopted the form of minute, instructing the Representatives to propose names "if way opens."

In 1849, the Representatives agreed, and B. Hoyle and Wm. S. Bates were reappointed clerk and assistant. In 1850 they did not agree, and the clerk and assistant were continued. In 1851, the Representatives agreed, and B. Hoyle and Wm. S. Bates were reappointed clerk and assistant. In 1852 they were unable to agree, and the clerk and assistant were continued. In 1853, they were unable to agree, and the clerk and assistant were again continued.

tatives, and objected to by them as before stated. Another Friend then informed the meeting, that he had been deputed on behalf of the Representatives to report to the meeting, they could not agree in bringing forward any name for clerk or assistant.

"Several persons now expressing their unity with the appointment of the Friend named as clerk, and of another Friend as assistant, whose name was now mentioned, the Clerk of the Meeting informed them, that their proceeding was altogether out of order, contrary to the discipline and usage of our religious Society; and to the course which Ohio Year Meeting had pursued for several years past, under the same circumstances.

"Much noise and confusion was made by a few individuals, who urged the persons named to go up and take a seat at the table: all which was decidedly objected to by a large number. The Clerk informed the Meeting he would make a minute in accordance with the practice of the Yearly Meeting, which he did, recording the report of the Representatives, that they could not agree in proposing a Friend for clerk or assistant; and that consequently the two Friends who were acting for the Meeting in those stations, were continued by it therein, viz., Benjamin Hoyle as Clerk, and William S. Bates as assistant. This minute was fully sanctioned by a large expression of the meeting, and the disorderly individuals repeatedly warned that by persisting in the course they had begun, they would separate themselves from the Society, and earnestly entreated to give up their separating, disorganizing measures. It was stated by them that the withdrawal of the two Friends from New England would not remove the difficulty, as they said the Clerk had disqualified himself for the office, and must be displaced. After much solicitation the two persons named as aforesaid went up into the seat of the assistant clerk, and the one named for clerk made a minute purporting that he was appointed to the station. When the Yearly Meeting adjourned, the Separatists remained behind; and thus the separation from Ohio Yearly Meeting was effected by them. Since then, we are informed, these disorderly individuals have continued to meet, and being joined by a portion of the female members of this Yearly Meeting, have assumed the name of Ohio Yearly Meeting of Friends, to which they have no just claim."

SUMMARY OF EVENTS.

EUROPE.—News from England to the 16th ult. There had been little change in the prices of bread stuffs. London has been severely visited with cholera, four thousand persons having died of the disease, in the three weeks ending 8th ult.

The War.—The expedition against Sebastopol sailed on the 4th ult. It is described as being of the most formidable character. The fleet mustered 25,000 sailors and 3000 cannon. The land forces, conveyed in 700 transport ships, numbered 74,000 men, of whom 35,000 are Turks, and 10,000 Egyptians. The expedition, it was thought, would reach the shores of the Crimea by the 10th ult. The Russians are said to have made ample preparations for the defence of this important stronghold. The city is fully garrisoned, and they have a large number of troops in camp. The defence has been entrusted to Prince Menschikoff. Gen. Krusenstern has ordered the inhabitants of Odessa to reduce the city to ashes, if the allies should attempt to take it, and then retire to Tirospol. A new levy of ten men in the thousand had been ordered throughout the western portion of the Russian Empire.

Orders calling home the Baltic fleet to England, created an apprehension, that the Russian fleet will escape from the Baltic, and commit depredations on the commerce of England and France. A portion of the French troops had returned from the Baltic to France. The fortifications at Bomarsund had been totally destroyed.

Prussia informs the Germanic Diet of her resolution to remain neutral. There is said to be a complete rupture between Persia and the Porte.

FRANCE.—The cholera in Paris was rapidly abating. A new French loan of 400,000,000 francs is proposed.

SPAIN.—Republicanism is reported to be extremely active in Spain, and another outbreak is apprehended. The Republicans are said to be well organized throughout the kingdom.

CHINA.—The overland mail had arrived at Trieste, bringing dates from Calcutta to Eighth mo. 12, and from Canton to Seventh mo. 20. The insurgents had taken several places near Canton, and were threatening that city, where great confusion existed.

CHILI.—Valparaiso papers to Eighth mo. 15 have been received. The winter has been severe, and accompanied with cold and protracted rains; but these are regarded as likely to increase the productions of the soil, and an abundant season is anticipated in consequence. The most lively attention is said to have been awakened among the intelligent classes of society, by an attempt to re-establish the Jesuits in Chili; a bill for that purpose having been presented and sustained by fourteen members of the Senate.

BOLIVIA.—The American minister is stated to have negotiated a treaty for the navigation of the rivers flowing into the Amazon, which was to be presented to the Bolivian Congress for ratification.

CANADA.—The 71st Regiment has embarked for Liverpool; other troops also are to be withdrawn, and not replaced.

UNITED STATES.—*Health of Cities.*—With the exception of New Orleans, in which the yellow fever continues its ravages, there has been a general abatement of the epidemics from which several of them have recently suffered. At Pittsburg the mortality from cholera has been greatly lessened, and at Savannah, Charleston, &c., the yellow fever appears to be subsiding.

Loss of Steamship City of Philadelphia.—This fine vessel, which was intended to replace the City of Glasgow in the Liverpool and Philadelphia line, has been wrecked in her first attempt to cross the ocean. She sailed from Liverpool near the close of the Eighth month, with a large cargo and about 600 passengers; and on the 14th ult., about 11 P. M., the night being dark and raining heavily, she ran ashore in Chance Cove, near Cape Race, Newfoundland. The passengers were all safely landed, and some of the cargo has been secured, but it is supposed that the ship will prove a total loss.

California.—At the latest dates a numerous overland immigration was arriving, and also great numbers of Chinese. The heat in many parts of the interior had been intense, the thermometer being at from 104° to 114° for several successive days.

Vermont.—The Supreme Court has decided that the prohibitory liquor law of this State is constitutional. It had been assailed on the ground of its submission to the people.

New York.—The expenses of the city for the year ending Seventh mo. 1 last, including the amount paid into the sinking fund, exceeded six millions of dollars. The expense of street cleaning averages about a thousand dollars a day, and the cost of lighting the city, about 775 dollars a night. The grand jury have found upwards of eleven hundred bills against persons for selling liquor without license; they have also found bills against the Mayor of the city for granting licenses to improper persons.

Pittsburg, Pa.—About 800 persons died of cholera in the first two weeks after its appearance; the disease then began to subside, and has now almost disappeared.

Philadelphia.—There were 237 interments last week, of which 10 were from cholera.

Miscellaneous.—The Opening of Japan.—Com. Perry writes to the Secretary of the Navy, that he has examined the ports of Simola and Hakodadi, which are to be opened for the vessels of the United States; and with respect to geographical position, convenience of ingress and egress, and commodiousness for all the purposes required, they cannot be surpassed.

A terrible storm visited the coast of Texas on the 18th ult., which continued for four days, and caused the destruction of a vast amount of property. Several vessels and many lives were lost. The town of Matagorda was destroyed, except three houses. The crops of sugar cane and cotton sustained great injury.

Apples are said to be abundant in Massachusetts, and the supply of potatoes good.

A return just issued of the population of Ireland, shows that the number of inhabitants has decreased two millions in the past five years.

It has been estimated that the rice planters of the South have suffered a loss of $3,000,000 by the storm, which raged from the 7th to the 10th ult.

A suspension bridge over the Mississippi at St. Anthony's Falls is nearly completed.

The railway connection between Lexington, Ky., and our eastern cities, has been made continuous, by the completion of the Lexington and Covington railroad.

It is stated that several cargoes of flour have been reshipped from Liverpool for New York.

On the 30th ult., a census of the inhabitants of Savannah was taken; the number of residents at that time was found to be 6285 whites and 5491 blacks.

The interments on that day were only four in number.

WEST-TOWN BOARDING-SCHOOL.

The Winter Session of the School will commence on Second-day, the 6th of Eleventh month next. The pupils will be conveyed by railroad to West Chester, where conveyances will be in waiting to take them and their baggage to the School, on the arrival of the morning and afternoon cars, on Second-day, the 6th, and Third-day, the 7th of Eleventh month. The cars will leave the depot, south side of Market street, above Eighteenth street, (formerly Schuylkill Fifth,) at half past 7 o'clock, A. M., and 3 o'clock, P. M. The agent of the School will be at the railroad depot, on Second and Third-day *afternoons*, and will furnish pupils with tickets, and accompany them to West Chester. Those who go by the *morning* train, will be furnished with tickets by a person in attendance. To those who procure tickets as directed, the fare from Philadelphia to the School, including baggage, will be one dollar, which will be charged to the scholar at the School. All baggage should be distinctly marked West-town, and with the name of the owner, and should be sent directly to the railroad depot.

The West-town office is at Friends' bookstore, No. 84 Arch street, where all small packages for the pupils left before 12 o'clock on Seventh-days, will be forwarded. *All letters* for the pupils and others at the School, should be sent by *mail*, directed to *West-town Boarding School, West Chester P. O., Chester Co., Pa.* Postage should be *pre-paid*, and packages should be distinctly marked and put up in a *secure manner*, so that their contents will not be liable to be lost by handling. The stage will leave West Chester during the *Winter Session*, for the School, on Second, Fourth, and Seventh-days, on the arrival of the *morning* cars from the city, and from the School to West Chester, on the same days, to meet the morning cars to Philadelphia. The fare for each passenger to and from West Chester *by the stage*, will be 25 cents. When special conveyances at other times are provided at the School, an extra charge will be made.

West-town, Ninth mo., 1854.

INDIAN CIVILIZATION.

The committee is desirous of engaging the services of a well qualified Friend to teach the school at Tunessassah —also, one to aid in carrying on the farm, superintending the school, &c. Friends who may feel concerned to engage in either of those stations, are requested to make early application to Joseph Elkinton, No. 377 S. Second street, or Thomas Evans, No. 180 Arch street, Philadelphia, or Ebenezer Worth, Hamerton, Chester county, Pa., or Thomas Wistar, Fox Chase, Philadelphia co., Pa.

Philad., Ninth mo. 20, 1854.

RECEIPTS.

Received from Thos. Bowman, O., $2, vol. 28; from Joshua Maule, agt., O., $2, vol. 28, for Israel Steer, $2, vol. 28, and James Steer, $2, vol. 28; from Jehu Fawcett, agt., O., for Mary Warrington, Josiah Fawcett and A. Stratton, $2 each, vol. 27, and for Sarah Hole and Jos. Painter, $2 each, vol. 28; from C. E., for Geo. Smith, Abm. Smith and Geo. Gilbert, Pa., $2 each, vol. 28, for Thos. Penrose, $2, vol. 27, for Henry Lupton, O., $3 to 52, vol. 27; from Asa Garretson, agt., O., $2, vol. 28, for M. Bailey, $1 to 52, vol. 28, for John Doudna, $2, vol. 28; from John Brantingham, Iowa, $2, vol. 28.

DIED, at the residence of her husband, on the 17th of Ninth month, 1854, ELIZABETH B. MOORE, wife of Robert Moore, and daughter of William Bailey, (deceased,) in the 49th year of her age; a member of Sadsbury Particular and Monthly Meeting, Lancaster county, Pa. We have the consoling belief, that the closing period of this dear Friend was peace.

PRINTED BY KITE & WALTON,
No. 3 Ranstead Place, Fourth above Chestnut street.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXVIII. SEVENTH-DAY, TENTH MONTH 14, 1854. NO. 5.

PUBLISHED WEEKLY.

Price two dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 50 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

From the Leisure Hour.

SUBTERRANEAN ROME.

Of the multitudes that throng the streets of Rome, mingling in the revelry of the carnival, or gazing with awe upon the colossal ruins of departed greatness, very few think of a city beneath their feet, by which not only a great part of the city is undermined, but whose ramifications stretch far out into the adjoining Campagna. If we may believe the Roman ciceroni, who, however, are not altogether trustworthy in the matter, the galleries and passages of this city extend for twenty miles. Certain it is that the excavations of the far-famed Roman catacombs—for to these we refer—are of vast and unknown extent. Seroux d'Agincourt, who devoted several years to exploring their dark and interminable recesses, describes an adventure which illustrates their immensity. It happened in that branch which reaches from the church of St. Agnes to the river. "These catacombs," he says, "had long been closed, and I had them opened in hopes of finding monuments. My undertaking was unsuccessful, and it involved me in extreme peril. My guides, as well as myself, were lost for more than an hour. We had the utmost difficulty in keeping our lights from being extinguished, and seemed on the point of ending our lives there. The same accident happened to my old friend M. Robert; and my draughtsman, M. Machiavelli, was once exposed to the same danger. Montfaucon, in his 'Diarium Italicum,' relates a similar accident to another Frenchman and himself. We made our escape from the catacombs at last, by discovering one of the openings which served for the purposes of letting down bodies in the first ages of Christianity." These holes for the lowering of bodies and the admission of light and air are numerous; and, together with chasms where the superincumbent soil has given way and fallen in, are dangerous pitfalls to the incautious horseman.

The catacombs of Rome originated, we may mention, in excavations for building material. The imperial city stands upon a soil of volcanic origin, which has extensive beds of travertin and other rocks, so soft as to be easily worked, and yet hard enough for the architect's purpose. Layers of sand likewise occur, which is greatly valued from its cohesive properties when made into mortar. With the very earliest ages of the city the work of excavating these beds and layers began, and materials for the greater part of the buildings on the surface were thus procured from the quarries beneath. This continued for many centuries, until the soil under and around the city has been burrowed into a network of galleries and passages, which are sometimes two or three deep, each of them being generally about eight feet high by four or five wide.

These dark and dreary caverns were once populous, but not with the living. Beneath imperial Rome was a necropolis—a city of the dead. Slaves, poor strangers, and others, who from any cause were excluded from family sepulchres, were buried here;* and here, too, the Christians brought their dead. The bodies of the martyrs, mangled in the amphitheatre, mutilated by the sword, burnt at the stake, here found rest, till the avarice of Papal Rome invaded the sanctity of the tomb, and dragged thence, ruthlessly and indiscriminately, crumbling skeletons and rotten grave-clothes, to replenish her coffers by their sale as relics. There exists, we may observe, at Rome, a society of twenty-four persons who are called *Cavatori delle Catacombe*, whose sole business it is to explore the catacombs and supply the demand for the remains of martyrs and saints. By a whimsical arrangement, they are paid out of the fees received from the sale of indulgences for marriage within the prohibited degrees.

It is their connexion with the early and persecuted church, however, which invests the catacombs with their deepest interest. They afforded a refuge for the Christians when living, and a place of sepulture when dead. Either by the conversion to the new faith of some of the quarrymen who worked in these subterrancan recesses, or by the consignment to these sepulchral vaults of some of the enslaved Christians (many of whom we know to have been condemned to work in the quarries), the persecuted church gained free access to the spot. Sheltered far underground, the melody of their hymns could not reach the upper air. Superstitious terrors rendered their enemies loth to follow them into this abode of death; and, if pursued, faithful guides acquainted with the intricacies of the place enabled them to baffle pursuit in the dark and tortuous passages. Some, indeed, of the galleries seemed to have been blocked up by artificial means, so as to render the more distant ramifications almost inaccessible; and sheltered in them, some of the early Christians, for a series of years, eluded the pursuit of their sanguinary persecutors. Hippolytus, a Christian fugitive, was thus for a long time hidden, being supplied with food by the children of his sister Paulina, who, with her husband Adrian, though heathens, were yet faithful and kind to their relative. The unconverted state of the latter, living in the darkness of heathenism, preyed upon Hippolytus' mind; and gratitude for their kindness, as well as affection for their children, who were the messengers of their bounty, rendered him growingly anxious that they should come to the knowledge of the truth. He therefore concerted a plan with his fellow fugitives for the detention of the children when they next came. The parents were thus compelled to seek them in the catacombs, where, after many efforts, they themselves at length yielded to the arguments and entreaties of their brother, and were baptized by Stephen, Bishop of Rome, who had long been a resident in the subterranean hiding-place. Being eventually discovered and seized, they all received the crown of martyrdom together.

Dark and intricate as these recesses were, they did not always afford a secure retreat. Guiseppe Sanchez asserts that, in the catacombs which he describes, several hundreds took refuge from the Diocletian persecution, and being pursued were put to death on the spot. Three bishops of Rome, Xystus, Stephen, and Caius, are also said to have suffered martyrdom there; the last, after residence in them for eight years.

For the purposes of worship, several passages into vaulted chambers were enlarged, and we can still discover indications of the religious assemblies, in fonts for the administration of baptism, slabs of stone on which the eucharistic bread and wine were placed, and sacred symbols inscribed on the walls. How inexpressibly affecting must have been the meetings for worship here! cut off by a frightful abyss from the abodes of living men—surrounded by the dead—the torch dispelling for a little space the sepulchral gloom which encirled the band of worshippers, with a wall of darkness so dense as to seem solid—while the silence of the grave is broken at intervals by hymns of joy and triumph, and by the words, "I am the resurrection and the life; whoso believeth in me shall never die." Suddenly the tramp of men and the clatter of arms are heard sounding along the vaulted aisles. In an instant the torch is extinguished, a few suppressed whispers are heard, and the guides have led the faithful band beyond the reach of danger. Or, perhaps, there has been treachery, and every avenue has been occupied by the soldiers. Driven like frighted deer from point to point, the toils close around them; and young children, timid virgins, brave young men, and aged pastors, are alike cut down with ruthless cruelty! A Christianity that endured perils like these joyfully, must have been—in most cases at least—a real, not a nominal thing.

The name of cemetery, derived from a Greek word meaning a bed-chamber or sleeping-place, has been given to the excavations we have described, in consequence of their having been the spot where the Christians interred their dead. The idea that death itself was, to the true Christian, but "a falling asleep," was thus brought to mind by the very name given to the body's final resting-spot. Numerous inscriptions have been discovered, marking the graves of the members of the primitive church; and these little mementos, unimportant as they may have appeared at the time, furnish very important historical evidence as to the state of feeling prevalent among the poor and illiterate Christians in early times. Dr. Maitland, adverting to this subject, admirably says: "The fathers of the church live in their voluminous works; the lower orders are only represented by these simple records, from which, with scarcely an exception, sorrow and complaint are banished; the boast of suffering, or an appeal to the revenge-

* Dr. Maitland, in his very valuable and interesting volume, "The Church in the Catacombs," seems to deny this; but the very passage he quotes from Horace is sufficient to prove it.

ful passions, is nowhere to be found. One expresses hope, another faith, a third charity. The genius of primitive Christianity, 'to believe, to love, and to suffer,' has never been better illustrated. These 'sermons in stones' are addressed to the heart, not to the head—to the feelings rather than to the taste." These inscriptions are sometimes so rude in execution, so ungrammatical in construction, and so incorrect in spelling, as to render it difficult to determine their meaning; but this rather increases than diminishes their value, since it proves them to be the natural and spontaneous utterances of illiterate believers.

The graves are niches cut in the rocky walls, one above another, in which the bodies were deposited, and then closed with slabs. These occur generally in three tiers, and the total number of interments must have been immense. M. d'Agincourt speaks of them as forming millions.

Many of these graves have been opened, but on most of them time, as might have been expected, has done its devastating work. "It would be difficult," says the French writer just named, "to form an exact idea of the remains of a human body reduced so nearly to annihilation. A little white dust showed where the head, the bones of the shoulder, thighs, knees, and ankles had been. This dust showed the direction of the bones, but it was not a body, not even in skeleton, that we saw; they were vestiges, hardly to be traced, and at a breath the whole disappeared."

For "The Friend,"

THE CROSS OF CHRIST.

It appears to me, that no part of the Society of Friends have more need to dwell daily under the influence of the cross of Christ than ministers and elders, who profess to believe in the doctrines and precepts of the Lord Jesus Christ, as handed down to us in the holy Scriptures, written by holy men of old, through the inspiration of the Spirit of Christ, the holy Head of the church, from whom every qualification for service in the church must come. It requires great reduction of self, and abasement of soul, to be prepared even to receive the truths of the gospel. It is said in Scripture, "I charge you, O ye daughters of Jerusalem, that ye stir not up, nor awake my love till he please." Here appears to be the place and beginning of every rightly prepared offering. The soul being sensible of its want, retires inward to its beloved, who hears all our cries, and knows all our wants, and who alone can prepare our offerings, and enable us to offer them with acceptance. It surely behooves the living members of the church of Christ, thus to dwell in all lowliness of mind; with their eye singly to Him their adorable Head and High Priest, who was made higher than the heavens, and continues to be set down on the right hand of the throne of the Majesty in the heavens; "the Minister of the sanctuary and of the true tabernacle which the Lord pitched, and not man." Now we are come to the latter house, (the glory of which was far to excel that of the former,) built of living stones, fitted by the power of Truth, without the noise of a tool upon them, and brought together into their proper places, and cemented together by the love and power of the great Master Builder, who rightfully presides over this house, as the glorious Head of his family, and dispenses talents and gifts to every one, to be improved to His honour, and for the edification of the church, by gathering souls to God, turning the people from darkness to light, and from the power of Satan, unto the power of God. Showing them their undone state and condition, until they cease from their own works, and bow their necks to the yoke of Christ; that they may indeed witness through the mercy of God their Saviour, all wrong things, yoked down and laid in the dust; their hearts plowed up and broken into tenderness, and prepared to receive the truths of the blessed gospel of peace and salvation. Witnessing the life of Jesus raised up in their souls; their minds quickened by the power of Truth, and set on heaven and heavenly things, and thus made willing to leave the things that are behind, and to press forward towards the mark of the prize for the high calling of God in Christ Jesus; so that they may be enabled from time to time to bring forth fruit unto holiness, and in the end to reap everlasting life.

As this is the great work and end of gospel ministry, it surely is a great and weighty work, and of such vast importance, that no man or woman can possibly perform it, except as their minds are enlightened by the light of Christ; and they thereby shown the states of those to be ministered to, and then afresh moved by Christ to declare what he has given them in charge, to deliver to the people, in the power and demonstration of the Spirit; rising in the life, keeping to it, and ending in it.

Now, if no minister can effectually preach the Word of life, but by the "unction from the holy One!" ought not the elders to keep to the same "anointing," that it may teach them how to judge of the soundness of the ministry, whether it be rightly timed, and delivered in the power of Truth, or is dead and lifeless; or whether too much is said, or not enough. These are weighty matters, and I believe if ministers and elders sufficiently dwelt under the weight of their calling, they would more frequently be baptized into oneness, by the holy Spirit; and a lively concern would be daily felt by the former, whenever they were called upon to exercise their gifts, that they might speak as the "oracles of God," and in the ability which He gives. Their ministry would tend to the edification of the church, and to the building up of the body in faith and love. But a dry, lifeless ministry, is worse than none.

The elders would be exercised with and for the ministers, that they might keep to their gifts, and that the Truth might have the dominion. A minister told me, that being at a meeting in the course of a religious visit, where he had hard work to get along, he observed to his companion, (who was an elder,) after the meeting broke up, what hard work he had had, who replied, "I knew it; thou preached, and I prayed."

If elders would faithfully attend to their own concern, (not listening to others,) and when they feel something to say to a minister, do it in a right way and spirit, it would have a salutary effect. I sincerely hope they may be encouraged so to do. I. Peuington, speaking of ministers and elders, says, "They must be called by God. The minsters under the law, this was their warrant; they were called and appointed of God. So the apostles and ministers, in the first publication of the gospel, were appointed by Christ. They must receive ability and power from God. The elders that were to help Moses, were to receive of his Spirit. Under the law, the priests were to be anointed with the outward literal oil, and the ministers of the gospel are to be anointed with the inward spiritual oil. Their work is spiritual; and how can they perform it, but by the anointing, by that presence, guidance, life, virtue, and power of the Spirit, putting itself forth in them? The apostles themselves, who had been taught by Christ, who knew his conversation and doctrine, who were eye-witnesses of what they were to publish, and had received an authority and commission from Him, yet were not to go forth merely upon this call and commission, but to wait for power from on high; and they must abide in the power, keep in the power, feel the motion, virtue, and assistance of the power in all their work and service. They must neither pull down, nor build up, nor watch over or oversee the flock in their own wisdom, in their own spirit, in their own wills; but in the anointing, in the light and guidance of the Lord. Indeed, unless ministers of the gospel be in the spirit, in the life, and in the power; how can they minister to the nature, to the spirit, to the life in the body? They may minister outward knowledge, to the man's wisdom, but to edify the church, they are to minister life from the living fountain, from the Head, from the Spirit of Christ in them, to every member, and so are to be good stewards to the flock, giving every one their portion in due season."

New Jersey, Ninth mo., 1854.

Interesting Facts in Natural History.

We sometimes feel that the innumerable facts, continually presented to the mind of the observer by nature, are almost too lightly regarded. The calm indifference with which men familiar to the external features of nature, are accustomed to regard facts as important as any extant, seems almost a species of stoical blasphemy. The law of life is by far the most marvellous in natural science, and especially in that department where, from the minuteness of forms, study has heretofore been very limited. We allude to Entomology. A little observation in this department will unfold to the student a series of wonders unsurpassed by the gigantic exhibition of phenomena presented in Niagara and Vesuvius.

Not the least astounding among these facts is the extraordinary multiplicity of species—innumerable diversity of forms connected with animate nature. The larger forms, such as are daily presented to us, seem comparatively limited, and we easily comprehend the reason; if they were very numerous so must be their means of subsistence. But as only a certain amount of subsistence can be gleaned from a square mile, under the most favourable conditions, and that amount is not large, the existence of the larger forms comprises extremely limited numbers. But when we descend to Entomology and Conchology, we are confused with the almost innumerable diversity of species and variety. Of the beetle alone there has been ascertained no less than thirteen thousand branches of this one family. When surveying these apparently disgusting insects, what an idea of creative power might we gather from a knowledge like this? The study of every branch of the insect creation presents the same fruitful reflection.

Lyonnet, a French naturalist, spent several years in examining the structure of a single insect, and left the work unfinished, thus showing the exceeding delicateness of the structure. In the body of an insect, about an inch in length, M. Strauss has enumerated three hundred and six pieces, composing the structure of the outer envelope; four hundred and ninety-four muscles, for putting these in motion; twenty-four pairs of nerves to animate them, and forty-eight pairs of trachæ, or breathing organs, equally ramified and divided, to convey air and sustenance to this complicated tissue.

We regard the common house-fly as a contemptible insect—but how important an object of study its structure may be, can be learned from the fact that its eye is one of the most singular and curiously constructed mirrors that science has yet invented, or study discovered. The number

of lenses in its eye is numbered at six or seven thousand—in the eye of a dragon fly, twelve thousand—the eye of a butterfly, seventeen thousand. The house-fly's wing has a power of six hundred strokes in a single second, which can propel it thirty-five feet, while the speed of the swiftest race horse is but ninety feet per second—more than a mile per minute. The beauty of the butterfly is proverbial; but how much more intense should be our admiration when we learn that it is a thing of 34,000 eyes, and that in a single wing there have been found 100,000 scales! The wings of many insects are of such extreme tenuity that 50,000 of them, placed over each other, would not compose the thickness of a quarter of an inch; and yet, thin as they are, each is double, so that the actual laminæ here would be 100,000.

We often see in pools of water small bits of elongated straw and wood, seemingly having the power of motion. With what interest has science invested these, when we find that each elongated tube is the home of a caddis-worm, which is ultimately to become a worm or fly—such as the ephermon fly, whose peculiar characteristics we have before noticed. These worms are exposed to the ravages of birds and fishes, and hence they glue together small bits of wood and straw to make a house for shelter; and when the frail castle is too buoyant, they add a piece of gravel to preserve the balance, in order that the castle shall not be burdensome nor too buoyant. We regard the web of a common spider as the trifling excrescence of a disgusting insect—but it is an object of intense curiosity when we reflect that each thread is composed of 4000 threads, and that 4,000,000 of these small threads would not make a cord thicker than a single hair from a man's head! There is one species of spider that lives in water, in a house of air, like a diving bell; and another builds a house in the ground, with a door upon elastic hinges, which keeps it constantly shut.

Pennsylvania Coal in London.—The Railroad Journal learns that a movement is about being made to introduce anthracite coal into use in London, and arrangements are in progress for the importation of it into England from Pennsylvania. It is said that the English bituminous coal is retailed there this summer at seven dollars and twenty-seven cents; that last winter it was retailed at ten dollars and eighteen cents per ton, and will probably be higher the coming winter. The writer suggests, that with our anthracite coal, our grates for burning it should be sent, as they differ somewhat from those now in use in London. Stoves, he believes, will not be tolerated in England, but the grates will be acceptable. He concludes by saying that "Londoners," he is convinced, will give the thing a fair trial, and it only wants this to make them give up "revelling in their own smoke." He has been in this country, and understands the subject well, particularly the difference in the quality of the two coals. If their bituminous coals sell at the above prices, the greater duration of our anthracite must certainly render it far more economical to the people of London.

Pulse of Various Animals.—The pulse of several domestic animals, as given by Vatel, in his "Veterinary Pathology," is nearly as follows:—Horse, from 32 to 38 pulsations per minute; ox or cow, 25 to 42; ass, 48 to 54; sheep, 70 to 79; goat, 72 to 76; dog, 90 to 100; cat, 110 to 120; rabbit, 120; Guinea pig, 140; duck, 126; hen, 140.

The Mormon Emigration.

The committee on emigrant ships, in the course of their inquiry, examined Mr. Richards, who described himself as "President of the church of Jesus Christ of Latter-day Saints in Great Britain," and "agent and passenger broker." In the course of his evidence he said—"We have about 60,000 members of our community in this country, including children. The country is divided into districts, each with its president, and the work of proselytism is proceeding quite satisfactorily. Our converts are more from dissenting bodies than from the Church of England. It is not a condition of conversion that they should leave this country within a certain time, but it is authoritatively advised that they should emigrate and gather to the main body in Utah, where our numbers are between 40,000 and 50,000. I engage vessels for the emigration; I sent 2,702 persons out this year from Liverpool for Utah, but 700 of them were from the continent. The cost is about $100 per head. They pay the cost of their passage if they can, but we have a fund for the emigration of poor persons who can be well recommended as moral characters and industrious people—mechanics who will be qualified to increase and enhance the interests of the community. About $90,000 have been applied this year in assisting emigration; most of the money was supplied from Utah. Those who are aided undertake to repay the advance when their circumstances will allow.—*London paper.*

The Umbrella Bird.

The next morning my hunter arrived, and immediately went out in his canoe among the islands, where the umbrella birds are found. In the evening after dark he returned, bringing one fine specimen. This singular bird is about the size of a raven, and is of a similar colour, but its feathers have a more scaly appearance, from being margined with a different shade of glossy blue. It is also allied to the crows in its structure, being very similar to them in its feet and bill. On its head it bears a crest, different from that of any other bird. It is formed of feathers more than two inches long, very thickly set, and with hairy plumes curving over at the end. These can be laid back so as to be hardly visible, or can be erected and spread out on every side, forming a hemispherical or rather a hemiellipsoidal dome completely covering the head, and even reaching beyond the point of the beak; the individual feathers then stand out something like the down bearing seeds of the dandelion. Besides this, there is another ornamental appendage on the breast, formed by a fleshy tubercule, as thick as a quill and an inch and a half long, which hangs down from the neck, and is thickly covered with glossy feathers, forming a large pendant plume or tassal. This also the bird can either press to its breast, so as to be scarcely visible, or can swell out so as almost to conceal the fore part of its body. In the female the crest and the neck plume are less developed, and she is altogether a smaller and much less handsome bird. It inhabits the flooded islands of the Rio Negro and the Solimoes, never appearing on the main land. It feeds on fruits, and utters a loud hoarse cry, like some deep musical instrument; whence its Indian name, Ueramimbe—"trumpet bird." The whole of the neck, where the plume of feathers springs from, is covered internally with a thick coat of hard, muscular fat, very difficult to be cleaned away—which in preparing the skins, must be done, as it would putrify, and cause the feathers to drop off.—*Wallace's Travels on the Amazon.*

Selected.

Be not conformed to this world.—Every command in Scripture can be evaded, every doctrinal assertion perverted, plausibly and handsomely, if we set about it in good earnest. Many there are who praise the principle of self-denial in general, and condemn it in its peculiar applications, as too minute, scrupulous, and severe, but let not any think that small which has a bearing upon the kingdom of Christ. The severest part of self-denial consists in encountering the disapprobation, the envy, the hatred of one's dearest friends, All who enter the strait and narrow path in good earnest, soon find themselves in a climate extremely uncongenial to the growth of pride. How strikingly obvious is the truth that Christ has never honoured the leaders of worldly fashion (while they remained such) by appointing them leaders in his cause.

Christian Life. — How sweet a life might Christians live, could they but bring their hearts to a full subjection to the disposing will of God! to be content not only with what he commands and approves, but also with what he allots and appoints! It was a sweet reply a woman once made upon her death-bed to a friend that asked whether she were more willing to live or die? She answered, "I am pleased with what God pleases." "Yea," said her friend, "but if God should refer it to you, which would you choose?" "Truly," said she, "if God should refer it to me, I would refer it to him again." Ah, blessed life, when the will is swallowed up in the will of God, and the heart at rest in his care and love, and pleased with all his appointments!

Lord, I would, I do submit,
Gladly yield my all to thee;
What thy wisdom sees most fit,
Must be, surely, best for me.

Only when the way is rough,
And the coward flesh would start,
Let thy promise and thy love,
Cheer and animate my heart.

"*In thy light shall we see light.*"—Psalm xxxvi. 9.—Of outward testimony it is said, every word shall be established by two witnesses, (Matt. xviii. 16.) But truths presented to the mind in the Divine light, require no such evidence: they produce a distinctive assent, and leave no more room for doubt and conjecture, than when in the clear sunshine we see any person or thing with which we are well acquainted.

Augustine.—I went out of the way like a wandering sheep, seeking that externally which was within me. I traversed the street and the ways of this great world, looking after thee, my God, and I found thee not, because I sought thee not aright, and therefore did not arrive at the spot where thou art to be found; I sought thee without and thou art within me; I sought thee afar off, and thou art near at hand; I should have met with thee at once had I sought thee where thou art.

"*I will be as the dew unto Israel.*"—Hosea, xiv. 5.—As the dew falls when all is still, when all is wrapt in silence, so it is in the silence of all flesh, with its noisy workings, that this sacred unction distils upon the soul, and causes it to *grow as the lily, and cast forth his roots as Lebanon.*

It is our own fault, if our greatest trials do not turn out to be our greatest advantages.

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 28.)

JOHN SIMCOCK.

Being taken sick, and lying at the house of his son Jacob at Springfield, waiting to be released, John Simcock gave utterance to many comforting expressions. On one occasion, after telling those around him he had a few words to deliver them, he thus spoke: "In the beginning was the Word, and in that Word is life, and this life is the light of men. This Light, though some may and do slight it, is sufficient for a leader and conductor in the way to eternal salvation. I am a living witness of it. As John holds it forth to us, it is God, by which all things were made that was made. Yea, by this Word man was created after the image of God, in the state of innocence and true holiness, and so was placed in heavenly paradise. But man, by giving ear, and hearkening to the voice of the subtle serpent, lost the innocency and purity in which he was created, and so became as a degenerate plant, fallen from that state of holiness. But the great, gracious and merciful God, out of his own bounty and kindness, in consideration of the lost and miserable estate mankind were in, promised a Seed which should bruise the head of the serpent. This is the Seed of the covenant, and living Word which in due time took upon it the seed of the woman; fulfilling the blessed promise made, that the seed of the woman should bruise the head of the serpent. Hereby man comes to be restored out of the state of the fall, and redeemed from under the power of darkness, and brought into blessed fellowship with his Maker; wherein his love is true to God, and God the Father, through the Son of his love, embraces his redeemed in the arms of his loving kindness. Therefore, my friends, live in love, that you may be seen to be children of the Word, and as such, who, through the holy begetting of the Divine power of the heavenly Saviour, may ever be found dwelling in the love of God. See that you be sure to endeavour to keep to the Spirit of Jesus Christ, which is love indeed, and will keep you in that peace and love which he gives his followers. I am a witness that it will keep in true and perfect love. If you keep to the Spirit of Christ, you will be dwellers together in love unto the end of time. This true love is a mark and badge of true discipleship, and [distinguishes] those who are followers of the Christ, the blessed, powerful, and eternal Saviour of the world; he, who gave his life to be a holy ransom for mankind.

"I am sorry I cannot have an opportunity to come to your meeting, to signify my love in Christ Jesus, and to say to them, to see that they live in true love, that they may be seen to be of those who are walking in the holy commands of our blessed Saviour and eternal Redeemer, Christ Jesus, the end of whose coming was to put an end to sin, and to bring in everlasting righteousness. So all might come to live together in heavenly love, in the holy love which travails and labours for the peace, welfare, and everlasting good of all.

"Now I desire my love may be remembered to Friends in general, and it is the desire and earnest prayer of my soul, that the heavenly spring of true love, and the stream of Divine life may ever be known to spring and run amongst those who would be accounted children of God and followers of Christ Jesus, our blessed Lord and eternal Savi ur, who laid down his life as a ransom for fallen man, and an atonement for all them that would come to God by Him, the living Word and promised Seed of the covenant."

On another time, addressing his son Jacob, he said, "I have had many hard besetments with the enemy of my soul, since I knew the Truth, and have been in many straits and difficulties, and in great combats and buffettings for the trial of my faith. But the keeper of Israel is near to all them that wait upon and truly put their trust in him. And their faith being made strong in him, they are able to make war against the adversary of souls, and to fight the good fight of faith. For them is laid up a crown of eternal and endless joy, peace, and heavenly comfort, and glory. I may say in truth, that I have kept this living faith, and my soul has renewed cause to magnify the name of my holy Redeemer and powerful Saviour, in whom my faith has been made strong at this time. Holy, living praises forever be ascribed and given to His ever blessed name."

During his illness, after mentioning to his daughter-in-law some particulars relative to his being led into the way of Truth in his youth, he spoke of the trials and besetments of the Christian, and the Lord's gracious purpose in permitting them to befal his children; to prove their love, faith and obedience. He spoke of Job and his varied afflictions, and added, "The end of all the Lord's dealing with his people in sending trials and hard besetments, is for the making man more pure, and that everything of self may be brought down, and removed out of the way, that so nothing may remain that will separate between man and his Maker."

Looking towards his close, he said, "There is nothing of terror or fear of death upon me, but I desire, if it be the Lord's will, that I may be removed out of this world." He added, he believed that he should be taken, saying in former sicknesses, he had seen that he should recover, but it was not so with him in this.

He died in peace, First mo. 27th, 1703.

KATHARINE VANDEWOESTYNE.

Of this Friend and her labours in the ministry we know little. She belonged to Dublin Monthly Meeting, Pa., which embraced Germantown, her place of abode. A minute of Dublin Monthly Meeting runs thus: "Katharine Vandewoestyne, a Dutch maid, came from Zealand, in Europe, to live in Pennsylvania, and there was convinced of the Truth, and received a part of the ministry. Deceased in Germantown the 27th of First month, 1704."

ELIZABETH JACKSON.

Elizabeth Palmer, widow, came from Kingston-upon-Thames, to Philadelphia, in the year 1682, bringing her family with her. Amongst her children was a daughter, Elizabeth, the subject of this memoir. In the Fourth month, 1684, the mother married Thomas Fitzwater, a Friend in the ministry, who was esteemed one of the valuable of that day. What effect his fatherly care and admonition had upon his step-daughter we know not, but she grew up into the spiritual stature of a mother in the church.

In the Third month, 1687, Elizabeth Palmer was married in Philadelphia, to Isaac Ricketts. They did not live very long together, for we find her in 1694, "a widow," with one child, but the time when she became so we do not know. In the Eighth month, 1695, she was married to Ralph Jackson, a valuable Friend and sound minister of the Gospel. Elizabeth had passed through various conflicts spiritually, and outward trials were not wanting, to prepare her for the work whereunto she was called. Some time after her first marriage, about 1690, her brother George, who probably was a mariner, was taken captive and carried as a slave to Barbary, where he was detained in servitude many years. Great exertions were made for his release, and for that of many other captives there who professed with Friends. Funds were raised by Friends of meetings in Chester county, and Philadelphia county, and remitted to England for George Palmer's release, but many difficulties were in the way of prompt relief. However, in or about the year 1698, his liberty was purchased.

Elizabeth Jackson was much esteemed by her friends, and was very useful in meetings for discipline. A minute concerning her closes thus:—"Raised up in testimony here, and *well received*. She departed this life the 25th of Fifth month, 1704."

Perilous Mountain Ascent.

It has long been known that some of the peaks of the mountain ranges in Oregon are of great height. Our California exchanges received recently, bring us very interesting accounts of the ascent of one of the loftiest of these, called Mount Hood, which has now been ascertained, by actual measurement, to be full 18,361 feet in height. This is the highest peak on the North American continent, and one of the highest in the world. The party which made the ascent was composed of a Mr. Dyer and Capt. Travaillot, who left Portland on the 4th of August, for the purpose, but were afterwards joined by Mr. Lake, Captain Burlow, Judge Olney, and others. After getting above the snow line it was discovered, by means of a telescope, that the mountain is volcanic, smoke being seen to issue from the summit. On the 8th the ascent of the upper mountain commenced on the south-east by east side. After ascending several thousand feet over continuous snow fields at an angle of almost fifty degrees, three of the party, Major Hallam, Capt. Travoillot and Judge Olney, gave out, and had to stop in consequence of dizziness, caused by the rarified atmosphere. From thence upward, the angle was more steep, until it reached 70½°, an Indian being the guide, and the road lying along a ledge of rocks perpendicular with the mountain. At 2½ o'clock, P. M., on the 8th, the summit was attained, and was found to be extremely narrow, and crescent shaped. From this peak mountain tops five hundred miles distant were distinctly seen. The peak of Mount Hood is thus described by the account before us:

"We found the top similar to that of Mount Helen's—extremely narrow, laying in a crescent shape. Mount St. Helen's facing the north-west by a crescent, while Mount Hood faces the south-west. The sharp ridge on top runs from the south-west to the north, making a sharp turn to the west at the north end. The main ridge is formed of decomposed volcanic substances, of a light reddish colour, with cones from 20 to 50 feet high at intervals of a few rods.

"These cones or rocks are full of cracks or fissures, as if they had been rent by some convulsion of nature at a remote period. Between these cones there are numerous holes, varying from the size of a common water bucket, down to two or three inches in diameter. Through these *breathing holes*—as we shall call them—and through the crevices in the rocks there is constantly escaping hot smoke or gas of a strong sulphuric odour. In passing over the ridge for near half a mile we discovered a large number of these breathing holes; through some the heat was more intense than in others.

"We did not carry up a thermometer; there-

fore, we could not get the exact degree of the heat; but from holding our hand over several of them, we have no doubt that the thermometer would have shown "boiling heat" in some of them."

For "The Friend."

Thoughts suggested by the State of our Society.

While many are the discouragements of this day, and many our deficiencies and short-comings, so that we are almost prepared to adopt the language of the prophet, "The whole head is sick, and the whole heart faint, from the sole of the foot, even unto the head, there is no soundness in it, but wounds, and bruises, and putrifying sores; they have not been closed, neither bound up, neither mollified with ointment;" yet is it not of vital importance, both to our well-being as a religious society and as individuals, that we allow not the consideration of this state of things so to occupy our hearts, as to prevent us from being engaged day by day in the work of our soul's salvation. Truly, it is only as we become purified "by the washing of regeneration and renewing of the Holy Ghost," that we can be made living members of the church of Christ.

Soundness in faith alone cannot make us such, neither will a strict conformity to all our testimonies; the *inward* part must be made clean, there must be a yielding to that which can alone purify and cleause, and were this now to become the engagement of each member of the militant church, how soon might our wounds be healed; while, on the contrary, if we are depending upon what may be done in a society capacity, or upon what we may do as members of society, there is little ground to hope for better days.

When the account of a recent separation in a neighbouring Yearly Meeting reached us, it seemed to me a renewed call to each one to examine his or her foundation, and to see whether it was placed upon that Rock against which storms beat in vain. Oh! that we might be found individually looking to the great Head of the church for guidance and support, not trusting in any arm of flesh, not indulging unprofitably in anticipations of the future, but endeavouring humbly to rely upon Him who, we cannot doubt, gathered our early Friends from the "lo heres" and the "lo theres," and united them together in one faith.

As we are thus engaged, access to the throne of Grace, will at seasons be mercifully granted, when we will not only be found interceding for preservation for ourselves and those uniting with us, but a liberty will also be felt to plead for those who have gone astray, whose eyes have become dimmed, and who "know not what they do." How would this restrain from any indulgence in an unchristian spirit towards any; not that it would induce a show of false love, but there would be a partaking in measure of that love, in which our dear Redeemer prayed for those who crucified him. "Father, forgive them, they know not what they do."

Some seem unable to distinguish between that love which desires the good of all, and that precious unity which is alone experienced by the living members in the church of Christ. It is quite possible to exercise the former towards those with whom we cannot unite in gospel fellowship, and without any sacrifice of principle to show forth the fruits of the Spirit, ("meekness, long-suffering," &c.,) towards those differing from us.

There is much instruction in perusing the writings of our early Friends, in observing that the further they advanced in their heavenly journey, and the more fully they were convinced of the Truth as professed by us, the more did "the meekness and gentleness of Christ" become conspicuous in their characters.

Let it then be our individual concern to "walk worthy of the vocation wherewith we are called, with all lowliness and meekness, with long-suffering, forbearing one another in love; *endeavouring* to keep the unity of the Spirit in the bond of peace;" and while we shrink not from contending nobly for the faith once delivered to the saints, when it may be required of us so to do, yet let it be done in that spirit which, proceeding from Christ, can alone draw to Him, remembering his injunction to the disciples formerly,—"Be ye wise as serpents, and harmless as doves." B.

Ninth mo. 21st, 1854.

Selected.

TOO LATE.

BY ABDY.

Too late—too late! How heavily that phrase
Comes, like a knell, upon the shuddering ear,
Telling of slighted duties, wasted days,
Of privileges lost, of hopes once dear
Now quenched in gloom and darkness. Words like these
The worlding's callous heart must penetrate;
All that he might have been in thought he sees,
And sorrows o'er his present wreck—too late.

Too late—too late! The prodigal, who strays
Through the dim groves and winding bowers of sin;
The cold and false deceiver, who betrays
The trusting heart he fondly toiled to win;
The spendthrift, scattering his golden store,
And left in age despised and desolate,
All may their faults confess, forsake, deplore,
Yet struggle to retrieve the past—too late.

Too late—too late! O dark and fatal ban,
Is there a spell thy terrors to assuage?
There is, there is! but seek it not from man:
Seek for the healing balm in God's own page;
Read of thy Saviour's love, to him repair;
He looks with pity on thy guilty state;
Kneel at his throne in deep and fervent prayer,
Kneel and repent, ere yet it be—too late.

Too late—too late! That direful sound portends
Sorrow on earth, but not immortal pain;
Thou mayst have lost the confidence of friends,
The love of kindred, thou mayst ne'er regain;
But there is One above, who marks thy tears,
And opes for thee salvation's golden gate;
Come, then, poor mourner, cast away thy fears;
Believe, and enter—it is not too late!

Ridicule.

It is a miserable weakness to be afraid of ridicule. Yet too many dread a sneer or a laugh more than they do anything else, and will sacrifice their most deliberate convictions to the finger of scorn. This is especially true of the young, or of sensitive natures at any age. The base know this and take advantage of it, by making their intended victims run the gauntlet of ridicule. Do they wish to lead a young man away from the influence of home, from the counsels of his parents, and from the paths of virtue? They jeer at him for being "tied to his mother's apron strings," as they call his natural gratitude for the care taken of him in childhood; or they call him "a prig," because he will not degrade himself to their low level; or they mock at him for thinking a father's experience wiser than theirs. The most sacred emotions are oftenest assailed with the greatest virulence. Where argument cannot go, ridicule steps in. Voltaire mocked where he could not reason, and Bolingbroke jeered when eloquence failed. In every period of history, that age which has been fertile of great satirists, has been rotten to the core, and has preceded one of open profligacy, if not decay and ruin. Juvenal sneered when Rome was dying. Swift's sardonic smile was cotemporary with the debauched age of George the First.

What is true on a great scale, and of nations, is as true in regard to the single individual. Disguise it as we may, there is something of nobility of character wanting in us, when we sacrifice truth for the sake of ridicule. We are false to ourselves if we permit the pointed finger, the sly innuendo, or the loud laugh of scorn to affect our opinions, or control our conduct. And if it is weak to fear ridicule, it is base to employ it, at least against truth. A sneer may terrify a coward, but yet cannot convince him: but a brave man fears nothing except doing wrong.

Rates of Labour in San Francisco.

Below we give a table of the rates of labour in this city which we have compiled with great care and considerable trouble, and which may be relied on as correct. It is the fullest which has ever been published here, and gives the rate, we believe, of every trade or occupation in which regular journeymen are employed. There are some tradesmen, such as engravers, who work solely by the piece, and for whom we can furnish no regular standard of rates. It must also be borne in mind that for one man employed there are two or three looking for work; and also that a good fast workman will obtain a situation at $10 a day, when a poor hand would not get a place at $2.

Blacksmiths, per day, $6; do. helpers, 4; ship smiths, 6; do. helpers, 4; turners, 3 a 5; coppersmiths, 3 a 5; brass founders, 5; lock makers, 5; gas fitters, 7; boiler makers, 5 50 a 6; pattern makers, 5 50 a 6; moulders, 5 50 a 6; finishers, 5 50 a 6; plumbers, 6 a 8; gun smiths, 5; watchmakers, 6 a 10; jewellers, 6 a 10; chasers 8 a 12; lapidaries, 9 a 10; carriage makers, 6; wheelwrights, 6; harness makers, 5; house carpenters, 5 a 9; shipwrights, 6 a 8; joiners, 6 a 8; boat builders, 8; caulkers, 8; stone masons, 7; bricklayers, 8; hodmen, 4; plasterers, 7; brickmakers, per month and found, 50 a 90; do. moulders, 75 a 100; do. burners, 125 a 150; lime burners, 60 a 75; butchers and slaughterers, 100; deck-hands, (steamboats), 60; engineers in chief, 250; do. assistants, 150; stokers, 70; waiters, 40; mates, 150; pilots, 200; cooks, 100; tailors, 75; shoemakers, per day, 2 a 5; hatters, 10; cartmen, 4; draymen, per week, 25; stevedores, per day, 6; house and sign painters, 6; lumbermen (in yard) per month, 100; mill sawers and planers, 100; pump and block makers, per day, 5; sail makers, 6; riggers, 6; coopers, 5; granite cutters and dressers, 5 a 6; quarrymen, (freestone,) 4; ballast cutters, 2 50 a 3; millers, 6; bakers, per month and found, 75 a 100; hostlers, 60; printers, per week, 50, or 1 25 per 1000 ems; bookbinders, per day, 6; do. folders, 3; pile drivers, 4 a 6; lithographers, 5 a 6; waiters in hotels, per month and found, 50 a 65; porters in stores, per month, 100 a 125; upholsterers, paper hangers, &c., 85 a 100; barbers, 100 a 140; day labourers, per day, $2 50 or 1 50 and found; servant girls, per month, 30 a 60.—*S. F. Prices Current.*

A Melancholy Avowal.—Bulwer, the novelist, in a letter to a gentleman in Boston, said, "I have closed my career as a writer of fiction. I am gloomy and unhappy. I have exhausted the powers of life, chasing pleasure where it is not to be found."

The more fully the Christian is persuaded of the justice of his own cause, the greater his magnanimity in the exercise of forbearance.

Some Facts in regard to Irish Emigration.

The Journal of Commerce says, America has contributed most successfully to the recovery of Ireland from that, at one time, hopeless state of depression, disorganization and degradation, which made her at once the curse and the shame of England.

"During the last seven years, this country has been receiving the poor Irish at the rate of about 220,000 a year. About a million and a half of her pauper population has, during that short period, found a home in our happier land—of that very population which could scarcely find subsistence of any kind in their own country, and which was felt as an incubus, and did indeed constitute a canker upon the United Kingdom. We gave them liberty, protection, and a comfortable livelihood—blessings to which they had, in a great measure, been strangers all their lives before. We afforded them the opportunity not only of helping themselves, but of assisting also their poor relations and friends whom they had left behind. The amount of money sent back from this country to Ireland by her poor emigrants, for the assistance of their connections there, is one of the most striking phenomena which her strange case presents. It is ascertained, through the medium of Anglo-American banking houses, that from the year 1848 to 1853, the amount has gone on gradually increasing from about two millions and half to upwards of seven millions of dollars a year! A return now before us makes a total of £4,351,000 sterling for that period —the amount for the last year alone of the return being £1,404,000 sterling, or upwards of seven millions of dollars. Thus, in five years, have these poor people been able to save out of their earnings, and send back to the Old Country, about twenty-one millions and three quarters of dollars. A calculation has been made that, supposing these sums to have been sent over by the emigrants of six months' or twelve months' previous dates, it amounts to about twenty dollars transmitted by each emigrant—a sum quite sufficient, with that which is known to be transmitted by private hands, to defray the whole cost of emigration—so that America, not Ireland, practically pays the expenses of Irish emigration to the United States. Thus, in a two-fold degree, are we aiding in the recovery of Ireland from the sad condition into which she had sunk."

Count upon troublesome occurrences, but keep the spirit quiet within.—*P. Henry.*

THE FRIEND.

TENTH MONTH 14, 1854.

We have received "Remarks on the appointment of the clerks in Ohio Yearly Meeting, in 1854," published in pamphlet form, and to be had at the store of J. Penington, Fifth street, below Market; and at the office of The Friend. We shall publish it in our next number.

OHIO YEARLY MEETING.

"Fourth-day morning, the meeting assembled near the hour adjourned to.

"The Assistant Clerk not being present, Nathan Hall is appointed to serve the meeting in his absence.

"A Separation having taken place in the meeting yesterday, brought on by a small portion of the Representatives, who, (contrary to the settled usage and practice of this meeting, when the Representatives have been unable to come to an agreement on names to offer as clerk and assistant,) forced names for those stations on the meeting, which, being supported by a portion of the meeting, led into this state of things. It is therefore thought proper that the circumstances of the case should accompany our Epistles to the other Yearly Meetings with which we are in correspondence. To prepare a statement thereof, the following Friends are appointed, to produce it at a future sitting, to wit: Robert H. Smith, George Gilbert, Joseph Edgerton, William Foulke, and Benjamin Hoyle.

"The names of the Representatives were again called over, twenty-seven answered, and the illness of the wife of another prevented his being present at this sitting;* fourteen did not answer, who, it is supposed, went with those who seceded from the meeting yesterday.

"The printed general Epistle from our brethren in London, the written one from that Yearly Meeting, from Dublin, New York, Philadelphia, Baltimore, and Indiana, have come to hand, and were read to our satisfaction. To prepare returning essays of epistles to those meetings and to North Carolina, from which none has come to hand the present year, the following Friends were appointed, to wit:† . * * *

[At this stage of the business the Clerk informed the meeting he had received a communication from an association at Poplar Ridge, in the State of New York, claiming the character of New York Yearly Meeting of Friends, accompanied with the request of the clerk of that body that it should be fairly laid before the Yearly Meeting; and that having said so much, he had performed his duty. It was decided without a dissenting voice, that the Yearly Meeting had nothing to do with it.]

"Salem Quarterly Meeting requests an explanation of that part of the discipline relating to the application of a person to be reinstated into membership by acknowledgment, who is and has been residing several years within the compass of another Monthly Meeting; therefore† * * * are appointed to unite with a committee of women Friends in examining the clause of discipline referred to, and report their judgment thereon to a future sitting.

"A minute was received from the Meeting for Sufferings, informing that Joseph Williams, a member of that body, had removed beyond the limits of the Yearly Meeting; the following Friends are appointed to confer together, and propose to a future sitting the name of a Friend to be appointed in his place, and also the names of four other Friends to fill the vacancies heretofore reported to this meeting, to wit:† * * * * * * * * are appointed to audit the treasurer's account, report to another sitting the state thereof, the sum necessary to be raised the ensuing year, and the name of a Friend for treasurer.

"The minute of last year, referring the consideration of the establishment of a Quarterly Meeting at Pennsville, coming under deliberation, it was solidly considered, and the proposition made to this meeting by our committee last year, that they were united in believing it would be best to grant the request, was fully united with, and a Quarterly Meeting is established, (having the concurrence of the Women's Meeting,) to be held at Pennsville, on Fifth-day preceding the fourth Seventh day in the First, Fourth, Seventh, and Tenth months, the meeting of Ministers and Elders the day preceding.

"Stillwater Quarterly Meeting, at its next session, is requested to direct that the Monthly Meetings of Pennsville, Chesterfield, and Plymouth, convene at Pennsville at the aforesaid time, in the First month next, in the capacity of a Quarterly Meeting; to which body their reports are to be forwarded; and that meeting is directed to forwards its reports to this meeting next year. And Joseph Hobson, Nathan Cook, Nathan Hall, Benjamin Hoyle, Robert Miller, and Thomas Bowman, are appointed to unite with a like committee of women Friends in attending the opening of that meeting, and make report of their care next year.

"Stillwater Quarterly Meeting shall, after its next session, assemble at Stillwater, on the Fourth day after the fourth Seventh-day in the Second, Fifth, Eighth, and Eleventh months; the meeting of ministers and elders the day preceding.

"The committee continued last year to receive contributions, to be applied in purchasing chemical and philosophical apparatus for our boarding school, report that the additional sum of $15 has been received, and paid over to the superintendent.

"Adjourned to 3 o'clock on Fifth-day afternoon.

"Fifth-day afternoon the meeting again assembled.

"The queries were read, and the answers from the quarters, and were solidly considered. * * *

"In the consideration of the state of Society, as brought into view by the reports from the quarters, the meeting was introduced into exercise, and a desire was felt that all our members might walk worthy of our high and holy calling; in order to which, it is indispensably necessary to obey the Spirit of Truth in our hearts, which will lead out of all error, giving us to see the stratagems of an unwearied enemy to lead us from under the daily cross, into the spirit, manners, and customs of the world, whereby the spiritual growth of individuals is greatly retarded, and the beauty and harmony of the church of Christ obstructed. As we are faithful to the Divine gift, we shall feel the force of the Apostle's exhortation, 'Forsake not the assembling of yourselves together, as the manner of some is; but exhort one another, and so much the more as ye see the day approaching.' Deficiency herein, as well as a lack of right concern when assembled, are evident marks of the want of true love to God, and of lukewarmness as respects the salvation of the soul.

"The duties devolving on parents were impressively brought into view, and they were encouraged to faithfulness in early exercising that authority which Divine Providence has given them, in subjecting the wills of their children to suitable restraint, and also instilling into their tender minds the love of our heavenly Father; thus combining suitable restraint, salutary precept, and a pious example, which may, through the Divine blessing, be a means of drawing them unto Christ, that he may lay his hand upon them and bless them.

"The frequent reading of the holy Scriptures, both in private and in families, with a solemn pause for retirement, is still felt, as on former occasions, to be a salutary practice; and Friends were encouraged to increased attention thereto, believing that as the mind, on these occasions, is humbly turned to Him of whom they testify, he will at times open to our minds the beauty and excellency of these invaluable writings, to our edification and comfort.

"The faithful maintenance of the testimony which our Society has always borne against an

* This Friend attended the remaining sittings of the meeting.

† The names of committees are omitted for brevity.

hireling ministry, performed in the time, will, and wisdom of man, remains to be felt to be of great importance to us as a religious body, as well as to the cause of vital Christianity. We would, therefore, earnestly but tenderly exhort our dear Friends not to give their attendance where such a ministry is exercised. Remember the obligations which rest upon us, who are the successors of a faithful people that were subjected to much suffering on account of this truly Christian testimony, that in all things we may be found walking in the footsteps of the flock, and enabled to grow up unto Him in all things who is the head, even Christ.

"The committee appointed yesterday on the reference from Salem Quarterly Meeting, made the following report, which is united with; and the portion of the discipline alluded to is to be so acted upon.

"The committee on the reference from Salem Quarter report, that they have conferred together, and are united in believing that the discipline, as it now stands, clearly implies that the application for reinstatement into membership is to be made to the Monthly Meeting within the limits of which the individual resides.

"Signed on behalf of the Committe,

"Asa Branson,

"Rachel Green.

"The committee charged with the nomination of Friends to fill the vacancies in the Meeting for Sufferings, are desired to confer together, and propose the name of a Friend for correspondent with other Yearly Meetings, to fill the vacancy occasioned by the death of our late Friend, Benjamin W. Ladd.

"Our Boarding School Committee, believing it would tend to the best interests of that institution, propose in their report, that an addition be made to their number. The following Friends are therefore appointed to consider the subject, and if way opens, propose to a future sitting, such number of Friends as they may deem useful, to wit; * * *

"Then adjourned to 10 o'clock tomorrow morning.

"Sixth day morning, the meeting met agreeably to adjournment.

"The meeting being brought under feelings of sympathy with our subordinate meetings in the peculiarly trying position in which some of them may be placed, arising out of the secession that has taken place from this meeting, and desiring that they may be strengthened in the support of the discipline, in the meekness and gentleness of Christ, and to abide in his love and forbearance, believes it right to set apart a committee to visit them as way may open, and give them such assistance as they may receive ability for, to wit: * * * * * and they are at liberty to request such adjournments of some of the monthly meetings, as may suit their convenience in attending them.

"The committee for the service, proposed that Joseph Stanton, Edmund Bailey, Elisha Hollingsworth, Jehu Fawcett, and Asa Branson, be appointed members of the Meeting for Sufferings. The proposition was united with, and the clerk directed to furnish that meeting with a transcript of this minute.

"That committee also offered the name of Nathan Hall for correspondent with other Yearly Meetings, which was united with, and the appointment made.

"The joint committee of men and women Friends appointed for the service, offered the names of * * * to be added to the Boarding School Committee, who were united with and appointed.

"The Quarterly Meetings report that there are 1,960 children within our limits, of a suitable age to attend school; that there have been forty-eight schools taught by members, and under the care of monthly meetings, varying as to time from three to eight months duration; that 1,019 children have attended them, and 781 have been attending district or public schools; and of the remaining 160, some have been attending schools of other descriptions, not under the care of our Society; some have been receiving instruction at home, and some not getting education since last year. Our Quarterly Meetings are desired to give renewed attention to this concern; and it is affectionately desired that Friends may become increasingly united in the maintenance and support of schools, consistent with the advice of this meeting in past years; and Quarterly Meetings are requested to report the state thereof to the meeting next year.

"The minutes of the Meeting for Sufferings since last year were read, and its proceedings approved. And that body is encouraged to give such attention to subjects relating to our religious Society, and for the promotion of the general good, as may seem to claim their attention.

"The committee on Indian concerns made the following report. Our Quarterly Meetings are desired to raise and pay over to Nathan Hall (treasurer of the committee,) their respective proportions of the sum named.

"'Report. No report from the committee on Indian concerns having come to hand, we are unable to inform the Yearly Meeting of the present state of that concern. We are united in proposing that the sum of three hundred dollars be raised, as heretofore, to aid in carrying out the object of the Yearly Meeting.

"'Signed, Nathan Hall, Clerk.'

"The committee to settle with the treasurer, made a report, which was approved, and N. P. Hall appointed treasurer.

"Nathan Hall and Parker Askew are appointed to cause to be reprinted 1000 copies of the General Epistle from London, and to have printed 500 copies of the minutes of this meeting, for the use of subordinate meetings, divide them among the quarters, and defray the expense by a draft on the treasurer.

"A short memorandum of the dying sayings of Elisha Bye, late a member of Chesterfield Monthly Meeting, introduced by the reading of the minutes of the Meeting for Sufferings, was now read. On this occasion, feelings of increased solemnity were spread over the meeting.

"The committee charged with conducting our Boarding School, made the following report, which was satisfactory; and the propositions for extending the present vacation, and fixing the price of board and tuition, were approved and adopted."

From the report we take the following:—

Average number of pupils during winter session, ninety.

Receipts,	$3,742 36
Expenditure,	3,633 09
Balance,	$109 72

Average of pupils during summer session, thirty-five.

Receipts,	$1,382 60
Expenditure,	1,300 42
Balance,	$22 18
Balance in favour of the school for the year,	$131 45
Expenditure for improvements and repairs,	243 38
Deficiency for the year,	$111 93

"'Owing to the high price of provisions, the committee concluded, at the opening of last session, to charge for board and tuition at the rate of sixty-eight dollars per year, as formerly established; and we suggest to the Yearly Meeting the propriety of the price being fixed at that sum in future.

"'Meetings for worship have been regularly held in the Institution, to a good degree of satisfaction.

"'The committee believe that an advantage would arise in having two weeks added to the vacation after Yearly Meeting; which, if adopted, will make the winter session to consist of twenty-four instead of twenty-six weeks; to take effect before the opening of next session.

"'The committee believe it right again to call the attention of Friends to plainness and simplicity of attire, in fitting out their children about to enter school. The duty of the superintendents, when it becomes necessary to make changes in the dress or otherwise, of the pupils, is not only an unpleasant task, on their part, but hardly fails to exert an unfavourable influence on the scholars.

"'A violation of the rules of the school has been more frequently attempted in the introduction of sack coats, and coats and waistcoats with falling collars; and we believe that the modern mode of making pantaloons for the boys, together with the shape of some parts of the female dress, are equally objectionable.

"'We desire that the advice on this subject, contained in the report of last year, may claim the serious attention of Friends, and that they become increasingly concerned to co-operate with the committee in endeavouring to carry out the concern of the Yearly Meeting, in the establishment of the Institution.

"'And while we would not wish to discourage a proper intercourse between parents and others, with the inmates of the school, we believe that visiting on the afternoon of the First-day of the week, when it can reasonably be avoided, is not of advantage.'

"Seventh day morning. At the hour adjourned to, the meeting met.

"Recurring to a conclusion come to yesterday, in regard to the extension of the present vacation of our Boarding School, and under the apprehension it may not become fully and timely known throughout the Yearly Meeting, the meeting now concludes to leave the subject undecided, that if scholars should be offered for reception, the acting committee may be at liberty to open the school at the former time for the present year.

"The committee appointed at a former sitting to prepare a statement of the circumstances of the secession from this meeting on the 5th inst., produced the following, which being fully united with, was directed to be attached as a postscript to our epistles to the other Yearly Meetings.

[This statement was published in our last number.]

"Essays of epistles, as directed to be prepared at a former sitting, were now read; they were approved and directed to be signed by the clerk, and placed with the correspondents, to be seasonably forwarded to the Yearly Meetings to which they are severally addressed.

"Having experienced the calming and solemnizing influence of the holy Head of the church, to be spread over us, under which, we trust, the business of this meeting has been resulted and

brought to a close; with feelings of thankfulness for the favours vouchsafed, the meeting concluded; to meet again, at the appointed time and place, next year, if the Lord permit."

SUMMARY OF EVENTS.

EUROPE.—News from England to the 23d ult. There had been some advance in breadstuffs; Baltimore and Philadelphia flour selling from 31*s.* 6*d.* to 32*s.* 6*d.* The cholera is said to be abating in London. The deaths from all causes for the week ending 16th ult., were 2836—a decline from the previous week of 577; from cholera there were 1549—a decline of 501. The total deaths from cholera this season had been 7669.

The War.—It is officially announced by the French and English governments, that 58,000 men of the Crimea expedition had been landed on the 14th, without opposition, at Eupatoria, and immediately marched upon Sebastopol. The transports then returned to Varna for 14,000 additional French troops. The Russian fleet had again run into Sebastopol, and part of the allied fleet had arrived off that port. It was reported that the batteries of Odessa had again been bombarded. Anapa and Kersch are already blockaded. The evacuation of Moldavia by the Russians, is now complete. Greece has made submission to the Porte, and offers a treaty of commerce. The reported rupture between Turkey and Persia is officially contradicted. The French fleet in the Baltic is to return to France. On the 12th ult., a powder magazine exploded at Perekop. There is said to have been great loss of life on the part of the Russians; two vessels of the allies were also damaged. English officers have been sent to the Turkish army in Asia.

SPAIN.—Affairs are unchanged. The capital is represented by private letters to be tranquil as regards the surface of things; but the government has to contend against both Republican and Carlist intrigues, and doubts are expressed of the firmness and energy of Espartero.

CHINA.—The dates from Hong Kong are to Seventh mo. 23. Numerous pirate fleets are said to be cruising all over the east coast, and one numbering 50 junks crowded with men, had lately congregated within 40 miles of Fu-chau. The accounts seem to be less favourable for the insurgents. In Shanghai, they were reported to be suffering from want and sickness, and dissensions were springing up among them. The *North China Herald* publishes extracts from the *Pekin Gazette*, up to Sixth mo. 11., from which it would appear that the insurgents had made no advance northward, nor had they gained any advantages in the few skirmishes that had taken place. New books and new revelations put forth by them, are described by the *Herald* as being "blasphemous, silly and absurd." "The eastern and western kings respectively personate the Holy Spirit and Jesus Christ, and among the chiefs generally ignorance and imposture contend for mastery."

MEXICO.—This unsettled and ill-governed country seems of late never to be without an insurrection, in some quarter. The last accounts represent the government forces as successful, against the opponents of Santa Anna, in Northern Mexico; the revolutionists had been defeated at Victoria, but were keeping up a guerilla warfare.

CUBA.—The new Captain, General Concha, has relaxed the censorship of the press; he has also issued a circular, in which he says the slave trade must and shall disappear. The walls which at present surround Havana, are to be taken down, and the boundaries of the city extended.

WEST INDIES.—The cholera has nearly disappeared at Jamaica and Barbadoes. Trinidad and St. Lucia still suffer from the disease, but the other islands are comparatively healthy. In Grenada, 3735 persons had died of cholera, in a population of about 33,000. At St. Lucia, about 1100 persons had already died.

UNITED STATES. — *Kansas.* — A newspaper, the Kansas Herald, has been established at the town of Fort Leavenworth. The editor gives a very favourable account of the soil and climate. The country is well-watered by numerous streams, the tributaries of the Missouri and Kansas. The lands in the vicinity of these streams, are covered with a heavy growth of valuable timber, and the soil of both prairie and timber land is said to be highly fertile, being a rich dark mould. About five thousand settlers had arrived in the territory, and large numbers were reported to be on their way.

New York.—The foreign imports at this port for the first nine months of the present year amount to $152,392,746, and the foreign immigration for the last month numbered 28,356. Interments last week, 516, including 41 of cholera.

Philadelphia.—The disaster to the steamship City of Philadelphia is attributed to the derangement of the ship's compasses by the attraction of the iron of which the vessel was composed. The compasses, six in number, were adjusted in Glasgow and Liverpool, but on the voyage no two of them were found to agree. The deposits of gold at the U. S. mint during the Ninth month amounted to $2,680,000. The coinage for the same period consisted of $2,654,793 in gold, $300,000 in silver, and $2,734 in copper coin. According to the record kept at the Pennsylvania Hospital, the mean temperature of the Ninth month was 69½° which is 4° above the average for the last 29 years. The highest temperature was 93½° on the 6th, and the lowest 46° on the 22d. Rain for the month, 3.80 inches, 3.40 of which fell on the 10th. Interments last week, 210, of which 8 were from cholera.

New Orleans.—The fever is abating. The total mortality for the week ending 2d inst., was 420, including 269 of yellow fever.

Miscellaneous.—A letter from the captain of the British ship of war Devastation, dated Aug. 1, 1854, states that he found three vessels, under American colours, at the uninhabited island of Aves, in lat. 15° 40′ N. and long. 63 36 W., and one day's sail from St. Croix, shipping guano, of which he reports there is about 200,000 tons on the island, the quality being but slightly inferior to the Peruvian.

There is a large emigration this season from Virginia to the Northwestern States.

The potato crop in Wisconsin is large and excellent. The California branch mint coined during the Eighth month $1,100 pieces of the value of $1,052,200.

It is asserted that the President of the Spanish Republic of Dominica has ceded or leased the exclusive occupation and use for the term of one hundred years, of the Bay of Samana and adjacent lands to the U. S. government for a naval station.

The crop of hops in Otsego county, N. Y., the present year, is valued at $450,000.

Coal of good quality has recently been discovered at Corunna, Michigan, 100 miles from Detroit. Ten thousand bushels have already been taken out, and it is now being turned at the rate of five hundred bushels per day.

The Connecticut clock-makers are, at the present time, said to be filling large orders for China and Japan.

Train crushed in a Tunnel.—A frightful accident occurred lately on a railroad near Leeds, Eng., by the falling in of a portion of a tunnel during the passage of a train with a large number of passengers. Two of the cars were buried, and it was a considerable time before they could be extricated. Notwithstanding their extreme peril, and suffering from alarm, it was found that none of the persons in the cars had been killed, and but few seriously injured.

Immense freshets have visited several of the interior counties of Mississippi. Bridges and buildings have been carried away, and the roads rendered impassable for nearly a week. Many cattle were drowned, and much damage done to the crops. The rain fell without intermission for six days.

WEST-TOWN BOARDING-SCHOOL.

The Winter Session of the School will commence on Second-day, the 6th of Eleventh month next. The pupils will be conveyed by railroad to West Chester, where conveyances will be in waiting to take them and their baggage to the School, on the arrival of the morning and afternoon cars, on Second-day, the 6th, and Third-day, the 7th of Eleventh month. The cars will leave the depot, south side of Market street, above Eighteenth street, (formerly Schuylkill Fifth,) at half past 7 o'clock, A. M., and 3 o'clock, P. M. The agent of the School will be at the railroad depot, on Second and Third-day *afternoons*, and will furnish pupils with tickets, and accompany them to West Chester. Those who go by the *morning* train, will be furnished with tickets by a person in attendance. To those who procure tickets as directed, the fare from Philadelphia to the School, including baggage, will be one dollar, which will be charged to the scholar at the School. All baggage should be distinctly marked West-town, and with the name of the owner, and should be sent directly to the railroad depot.

The West-town office is at Friends' bookstore, No. 84 Arch street, where all small packages for the pupils left before 12 o'clock on Seventh-days, will be forwarded. *All letters* for the pupils and others at the School, should be sent by *mail*, directed to *West-town Boarding School, West Chester P. O., Chester Co., Pa.* Postage should be *pre-paid*, and packages should be distinctly marked and put up in a *secure manner*, so that their contents will not be liable to be lost by handling. The stage will leave West Chester during the *Winter Session*, for the School, on Second, Fourth, and Seventh-days, on the arrival of the *morning* cars from the city, and from the School to West Chester, on the same days, to meet the morning cars to Philadelphia. The fare for each passenger to and from West Chester *by the stage*, will be 25 cents. When special conveyances at other times are provided at the School, an extra charge will be made.

West-town, Ninth mo., 1854.

INDIAN CIVILIZATION.

The committee is desirous of engaging the services of a well qualified Friend to teach the school at Tunessassah—also, one to aid in carrying on the farm, superintending the school, &c. Friends who may feel concerned to engage in either of those stations, are requested to make early application to Joseph Elkinton, No. 377 S. Second street, or Thomas Evans, No. 180 Arch street, Philadelphia, or Ebenezer Worth, Hamerton, Chester county, Pa., or Thomas Wistar, Fox Chase, Philadelphia co., Pa.

Philad., Ninth mo. 20, 1854.

FRIENDS' ASYLUM.

Committee on Admissions.—Samuel Bettle, Jr., No. 101 North Tenth street; Charles Ellis, No. 95 South Eighth street, and No. 56 Chestnut street; William Bettle, No. 14 South Third street; John C. Allen, No. 179 South Fifth street, and No. 227 North Front street; Horatio C. Wood, No. 210 Race street, and No. 37 Chestnut street; William Thomas, No. 242 North Fifth street, and No. 49 South Wharves; Townsend Sharpless, No. 187 Arch street, and No. 32 South Second street; John M. Whitall, No. 161 Filbert street, and No. 138 Race street.

Visiting Managers for the Month.—John C. Allen, No. 179 S. Fifth street; William Bettle, No. 244 N. Sixth street; John M. Whitall, No. 161 Filbert street.

Superintendent.—Dr. Joshua H. Worthington.

Matron.—Elizabeth B. Hopkins.

RECEIPTS.

Received from Japhet Leeds, N. J., $2, vol. 28; from John Sheppard, Benj. Sheppard and Margt. Miller, N. J., $2 each, vol. 27; from John King, agt., N. Y., for Francis Armistead, Job Otis, Wm. King, Jos. Chase, and Chas. Gifford, $2 each, vol. 28, for N.D. Tripp, $2, vol. 27; from St. B. Smith, agt., O., $2, vol. 28, for Robt. Holloway, $2, vol. 27.

MARRIED, on the 5th inst., at Friends' Meeting-house, on Arch street, JOHN H. STOKES and LYDIA L. JONES, both of this city.

DIED, at his residence, in East Bradford, Chester co., Pa., on the 21st of Fourth month, 1854, in the 64th year of his age, JOHN JAMES, a member of Birmingham Monthly Meeting.

——, at the residence of her father, on the 16th of Seventh month, RACHEL P., wife of Samuel C. M. Grew, and daughter of Absalom and Rachel Hoge, of Flushing, Belmont county, Ohio, in the 32d year of her age. When told by her physician, a short time before her death, that her disease, (an affection of the lungs,) precluded all hopes of recovery, she seemed much affected, and remarked to her husband, that she had not looked towards being well, but hoped she would have mended so as to have been taken to her own home, and had the oversight of the raising of her dear little boy, awhile longer, but that hope must now be given up. For some days after, she seemed under much exercise, and told her family she could hardly express what she had passed through; she had felt as if all support was withdrawn, and that she had nothing to lean upon; said she had prayed earnestly that that state might not continue; and on her sister asking if she felt more comfortable in her mind, she replied, "Yes, yes, I feel different now, and can say in sincerity, 'Not my will, but thine be done.'" In conversation with a friend, the night before her death, she spoke of her past exercises, and said she believed that her prayers had been accepted; she now felt resigned to the Divine will, and love for every body. On Seventh-day afternoon she alluded to her increased weakness, and remarked to a friend, "Oh, if I had anything more to do, I could not do it now." Her suffering was at times severe, yet she was preserved in patience, and when the time for release came, she quietly passed away; and we have the consoling trust, that He whose compassion faileth not, hath in mercy gathered her to rest.

——, on the 17th of Ninth month, 1854, ESTHER PAINTER, widow of Samuel Painter, in the 98th year of her age; a member of Birmingham Monthly Meeting, Chester co., Pa.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

OHIO YEARLY MEETING.

Remarks on the Appointment of Clerks in Ohio Yearly Meeting, 1854.

Ohio Yearly Meeting convened on Second-day, the 4th of Ninth month, 1854.

The clerks of the preceding year, Benjamin Hoyle and William S. Bates, according to custom, acted as the officers of the meeting. It was organized by calling the names of the representatives and reading the authenticated records of their appointment by the respective Quarterly Meetings. After a session of three or four hours, the meeting adjourned to Third-day morning, at 10 o'clock.

In the evening, after the close of the first sitting, the representatives met, agreeably to the direction of the Discipline, to choose a clerk and an assistant. There were forty-two of them. Twenty-eight were in favour of reporting to the Yearly Meeting the names of Benjamin Hoyle for clerk, and of William S. Bates for assistant. Twelve of them favoured the nomination of Jonathan Binns for clerk, and James B. Bruff for assistant. Neither being willing to yield their candidates, it was proposed to report to the meeting that they could not agree on any names to offer. This was advocated by the twenty-eight, and opposed by the twelve; the latter stating that such a report, under the usage of the Yearly Meeting, would be equivalent to the continuance of B. Hoyle and W. S. Bates, for another year.

On Third-day morning as soon as the meeting was opened, a Friend arose and stated that he had been desired by a part of the representatives to propose Jonathan Binns for clerk, and James B. Bruff to assist him.

Another Friend immediately arose, and stated that he had been requested by the representatives to report that they had been unable to agree on any names to offer to the meeting for clerk or assistant.

The friends of Jonathan Binns expressed their approval of his appointment.

The clerk of the meeting stated that agreeably to the usage of that meeting for several years past, they could receive no other report than that made by the latter Friend, and this was equivalent to a continuance of the present clerks; to which effect he should now make a minute, it being conformable to the settled practice of the meeting.

Several Friends stated that the attempt by a small part of the representatives to nominate a clerk without the consent of their colleagues, and to force an appointment on the meeting, was an act of separation, and must result in a secession from the Yearly Meeting. They accordingly advised that those who were favourable to proceeding in an orderly manner, agreeably to the settled custom of the Yearly Meeting, should take no part in the matter of J. Binn's nomination, but leave it to his party, it being wholly the act of a separate body, and no part of the business of Ohio Yearly Meeting. Several of those who favoured J. Binns, openly declared that it was a separation.

After a short time, Benjamin Hoyle made a minute stating the fact that the representatives had not been able to agree, and that according to the practice of that meeting, the present clerks were continued for another year. When this minute was read there was a large expression of unity with it—more than is usual on the appointment of clerks.

Jonathan Binns afterwards made a minute appointing himself clerk and James B. Bruff assistant.

Some time after this, at the suggestion of a Friend, and with the approbation of a large number, Benjamin Hoyle made and read a minute adjourning the meeting to ten o'clock next morning, and he and those who adhered to the previous usage of the meeting, withdrew, forming about two-thirds of the assembly, while Jonathan Binns and his friends remained behind.

—

There can be no doubt, that under the Discipline of Ohio Yearly Meeting, the constitutional mode of electing a clerk, is through the choice of the representatives, confirmed by the Yearly Meeting. The words of the Discipline are:—

"The representatives from the Quarterly Meetings, both men and women, are annually to *choose* a clerk and an assistant, at the close of the first sitting of the meeting for discipline, whose names are to be reported at the opening of the next sitting."

Where the representatives fail to make such choice, and the mode prescribed by the Discipline cannot be carried into effect, it is obvious that the Yearly Meeting, in which the legislative power is exclusively vested, must prescribe the course to be pursued to supply the failure.

It would be an unauthorized and unwarrantable assumption, for a part of the representatives, or any other functionaries or members of the meeting, to forestall its judgment, and strike out for themselves a mode by which they should choose to remedy the evil.

For several years past, the representatives of Ohio Yearly Meeting, have repeatedly been unable to agree in choosing a clerk and assistant. This fact being reported to the meeting, that body, in the exercise of its prerogative, has decided by common consent, that agreeably to "ancient usage," the old clerk and assistant should be continued in office; and recorded this conclusion on its minutes, as the rule in such case.

The same state of things occurred in Philadelphia Yearly Meeting in 1827, when William Jackson, one of its oldest and most valued members, stated that he had attended Yearly Meetings of the Society of Friends for about sixty years, including London and Dublin, and most of those on the American continent; and that the uniform practice had been for the old clerks to continue to serve the meeting, until new ones were appointed. Philadelphia Yearly Meeting accordingly continued the clerks of the preceding year. What amount of precedents he may have had for his assertion, is not important. Those who know his character for integrity and truthfulness, and his long and extensive acquaintance with the meetings and Discipline of the Society, will receive his testimony in its fullest latitude, and as of high authority. It is sufficient for our purpose, however, that in every known instance in the Society, where the constitutional method of choosing a clerk has failed, the Yearly Meeting so situated has uniformly directed the continuance of the incumbents in office.

Instead of adopting any change in the method prescribed for the selection of candidates, it has preferred to allow the Discipline to remain unaltered, and as the most natural and proper mode of meeting the difficulty, has continued those in office, who had been chosen when the representatives and the meeting were harmonious in the selection.

With regard to what constitutes a precedent of authority and value, it may be remarked, that, where a religious society has followed a uniform course of action in any given case, embracing as many as six or seven distinct occasions, and extending over a period of more than twenty years, and where it has deliberately recorded on its minutes, that course of action as proper to be pursued in such case, it must be received as establishing a precedent of the highest authority.

Within the last eight years the representatives of Ohio Yearly Meeting, have several times reported to it that they could not agree on any names for clerk and assistant; and as often, that meeting has recorded its decision, that the proper course to take in such circumstances, was to continue the clerks of the preceding year.* This surely may be deemed sufficient to establish an

* The first year in which the representatives of Ohio Yearly Meeting reported that they were unable to agree, was 1846. Our late friend, Benjamin W. Ladd, was the first who spoke on the occasion, and remarked: "There is no alternative; the Friends under the appointment of clerks must be continued." The meeting decided that this was correct, and it was so recorded. He advocated the same rule in the Yearly Meeting of Ministers and Elders, and, under its operation, continued to be the clerk of that meeting until his decease.

In 1847 and 1848, the reports of the representatives were similar, and the decision each time the same. In the latter year, however, the assistant clerk being prevented by sickness from acting, the meeting instructed the representatives again to confer together, and propose a name to the next sitting to fill the vacancy. They did so, and reported that it was their prevailing sense to offer the name of R. H. Smith, as assistant clerk. The meeting did not adopt the report, because the representatives were not united. The party who in 1854 nominated J. Binns, in opposition to the sense of two-thirds of the representatives, then strongly objected to the appointment of R. H. Smith, on the ground that the representatives *were not agreed* in proposing him, and therefore the meeting could not appoint a new officer.

In 1849 the representatives were agreed, and B. Hoyle and Wm. S. Bates were reappointed. In 1850 they reported "not agreed." In 1851 they agreed, and the same Friends were reappointed. In 1852–3, they were unable to agree.

authoritative precedent, and to determine what should be the action of the meeting, in any future case of similar character, until, by the same common consent, the meeting should adopt some other plan.

The representatives to the meeting in 1854 again disagreed. Nearly one-third of them were in favour of Jonathan Binns for clerk and of James B. Bruff for assistant, while the others preferred the continuance of Benjamin Hoyle and William S. Bates, and neither portion was disposed to yield to the other.

It will not be asserted by any one cognizant of the facts, that the Yearly Meeting itself was in a condition harmoniously to appoint a clerk. There was an irreconcilable difference of opinion as to the candidates, and no disposition manifested by either side to yield to the other. What then was to be the result? Was the meeting to be dissolved and broken up, because the members differed in opinion on the choice of officers? Certainly not. The obvious course, dictated by sound sense and a proper regard to the rights of all, was, for the clerks, who had been placed at the table by the consent of all parties, to continue to serve the meeting until new ones could be regularly nominated and approved by it. Such, says William Jackson, is the usage of Society, and such too it is shown to be by the minutes of Ohio Yearly Meeting in every similar instance which has occurred, since the testimony of William Jackson was delivered.

The opinion of Judge Ewing, a candid and impartial observer is of the same tenor. Alluding to Philadelphia Yearly Meeting when similarly circumstanced in 1827, he says, "Suppose the representatives had wantonly, or in neglect of their duties, omitted to propose names to the meeting. Was all further proceeding at an end? Was the meeting closed? The Book of Discipline, it is true, prescribes no guide or directory under such circumstances. But ancient custom, founded on the obvious dictates of reason, had established in this respect an operative law. The clerk and his assistant of the preceding year were to act; and, without any new appointment or induction, were authorized to continue and discharge their appropriate functions, until the names of other persons were regularly brought forward and united with, or, in other words, appointed."

Ancient custom, says the Judge, founded on the obvious dictates of reason, had established an operative law. This law is, that in such circumstances as then existed, the clerks of the preceding year are to continue and discharge the functions of their respective offices, until the names of other persons are *regularly brought* forward and united with.

It will hardly be pretended by any one that the names of Jonathan Binns and James B. Bruff were regularly brought forward, or that they were united with by the meeting. It is true, that in the meeting of the representatives, their names were proposed and considered, but they were objected to by about two-thirds of the whole number, and that objection was not withdrawn. It is obvious that they were not united with there, nor was any choice in the sense of the Discipline made; yet the twelve or fourteen who favoured their appointment, regardless of the objections of their colleagues, and in contradiction to the recorded sense of the meeting for several previous years, reported their names to the next sitting. Such a procedure is neither prescribed nor sanctioned by any rule of discipline or usage in the Society, nor does the action of any Yearly Meeting of Friends furnish a precedent to countenance or support it. The conclusion is therefore irresistible, that the nomination of J. Binns and J. B. Bruff was wholly irregular, the unauthorized act of a party, and contrary to the established and recorded practice of the Society.

It is true that the representatives only *propose*, and the meeting *appoints* the clerks. If the representatives fail to propose a clerk, that failure does not in any degree impair the authority of the meeting to make an appointment.

But the query naturally arises, did the meeting, as a body, appoint Jonathan Binns, or even entertain the irregular nomination of him and his associate?

It is apparent that it did not, because the larger portion of the members present were opposed to it; it was protested against as an act of separation, as contrary to established usage and order, and while the minority, who favoured his acting, were expressing their approbation, the majority of the meeting approved the continuance of the old clerks according to previous custom. When, in conformity with former usage, the minute continuing the clerks of the preceding year was made and read, there was a large expression of unity with it; which was further evinced by the greater part of the meeting withdrawing with B. Hoyle when he read the minute adjourning the meeting, thereby acknowledging him in the most unequivocal manner as the clerk of the Yearly Meeting. It is clear, therefore, that the meeting of the representatives did not choose J. Binns for clerk, nor did the Yearly Meeting appoint him. The whole proceedings were the unauthorized acts of a part of the members only, unsupported by discipline or usage, and in opposition to the conclusion of the meeting recorded in previous years, and can be viewed in no other light than as a separation from the Yearly Meeting.

There is another important defect in the proceeding. Benjamin Hoyle was still at the table, the acknowledged clerk of the meeting, until a successor was duly appointed. It was his province to gather the sense of the meeting, and record the conclusion it had come to, had it concurred in the appointment of Jonathan Binns. But the nominee of the minority of the representatives, invading the province of the regular officer of the meeting, made the minute, recording himself as clerk. The appointment of Jonathan Binns, therefore, is destitute of this official requisite to constitute it an act of the meeting, and must be viewed as wholly unofficial and ex parte in its character.

If the principle were once admitted, that in our meetings for discipline, an individual may thus usurp the station, and invade the duties, of the regularly appointed officer of the meeting, it must lead to scenes of anarchy and misrule wholly incompatible with the Christian character.

That any member of a Yearly Meeting has the right, of his own motion, to propose to the body the name of a Friend for clerk, is an assumption not warranted by Discipline or usage. The nomination of clerk to the Yearly Meeting has never been held to be an open one for the meeting at large. Occasional nominations may have been so made, when it was only to supply the temporary absence, for a short time, of the regular clerk. But the office of clerk being considered one involving important and responsible trusts, in order to guard against injudicious or improper nominations, the Discipline enjoins that in all meetings of record, whether inferior or superior, the selection should be made by a committee. Even if that committee, whether the representatives or others, fail to nominate, it is not competent for any member, of his own volition, to obtrude a candidate upon the meeting. It is easy to perceive that such a practice might lead to great confusion. Every member claiming an equal right to nominate, numerous candidates might be proposed, without reference to their fitness for the office, and a scene of disorder arise disgraceful to religious society. It is the prerogative of the meeting alone to direct what course shall be adopted, when the committee to whom the subject was delegated fail to accomplish the object of their appointment.

That Jonathan Binns might have been taken up and appointed by the meeting, without previous nomination, as the meeting of representatives could not agree, would not be questioned, if the meeting had harmoniously decided that this was the proper course to take in the dilemma. But it did not so decide. No proposition was considered or made to depart from the conclusion it had previously come to and recorded in similar cases. The subject of a change in its mode of procedure did not engage its attention. Both the nomination and the appointment were unauthorized by the Discipline, by the usage of the Society, and by the meeting, and therefore lack the elements which can alone give them validity.

It is alleged that the names of B. Hoyle and W. S. Bates were not proposed to the meeting as clerks. It is true that they were not directly reported as the nominees, nor had they been during several previous years, though their continuance in the stations was acquiesced in by all. The majority of the representatives in 1854 showed more deference to the objections of the minority than these did to theirs. They knew that the meeting of the representatives had not agreed in choosing a clerk, and they could not, in truth and with fidelity to the trust reposed in them by the meeting, do any other than state the fact. To the making of this statement, the friends of J. Binns strongly objected, in the meeting of the representatives, because they said it would be equivalent to proposing the continuance of the present clerks for another year. They fully understood it so, and attempted to forestall the action of the meeting by the earlier nomination of their own candidates. The Yearly Meeting at large had the same understanding, having for years acted upon that rule, and therefore there was no necessity for the formal proposition of those names. They were already the regular clerks of the meeting, chosen by general consent, and the representatives and the meeting being unable to agree upon any change, the recorded decisions of former years, as well as usage and reason, dictated that they should continue and discharge their appropriate functions.

Were the principle admitted that when a difference of sentiment as regards the candidates arises among the representatives, it is proper and valid for a minority to disregard the objections of their colleagues, and report the name of the person whom they deem suitable, it must lead to confusion and anarchy. If twelve out of forty-two may do so, the same rule would apply to six or three, or the right may be claimed even by a single one. As the advocates of each candidate would have equal rights, and each representative as strong a claim as any of his fellows to press his favourite upon the notice of the meeting, it would be distracted and perplexed by a diversity of nominees, with but little probability of a suitable selection. If, as in Ohio Yearly Meeting none were willing to yield in favour of others, but each party to urge the appointment of their own favourite, the meeting must be divided into as many fragments as there are pertinacious and unyielding contestants and self-appointed clerks.

It is easy to perceive that the principle involved in the nomination of J. Binns by the small minority of the representatives, and the attempt to

impose him upon the meeting as clerk, is one which, if adopted and carried out, must soon make a wreck of the Society.

It is alleged that very few persons in the Yearly Meeting objected to the appointment of Jonathan Binns.

Friends who were disposed to adhere to the course adopted by the Yearly Meeting on similar occasions in former years, declared the nomination of J. Binns by the minority of representatives to be contrary to the order of Society, and an act of separation, in which the Yearly Meeting could not participate; and Friends were advised to take no part in the proceedings and to give no sentiment on the nomination, it being the act of a separate body. This course was adopted, and accounts for the silence of those who could not unite with the irregular nomination. Several of those who favoured the general views of the party who nominated J. Binns, distinctly stated that it was an act of separation from the Yearly Meeting. One of them said that rather than join in it he would go home, and seclude himself from Society; and another who was conspicuous among them remarked that none need to please themselves with the idea that it was not a separation, for it was such; and proposed that before going further, they should pause and see if some arrangement for an amicable adjustment of difficulties could not be made, before the act of separation was fully consummated. Others responded in unison with the sentiment that the nomination and appointment were acts of separation, but seemed disposed to go on. It is obvious that both sides viewed it in the same light, as a separation from the Yearly Meeting.

We may briefly recapitulate some of the principal points in these remarks, as follows, viz.:—

First, That the constitutional mode of appointing its clerk, according to the Discipline of Ohio Yearly Meeting, is by the choice of the representatives, confirmed by the meeting.

Second, That when this mode fails, the Yearly Meeting is the only body which has the right to prescribe what course shall be pursued to accomplish the end.

Third, That the constitutional method, having on several occasions failed in Ohio Yearly Meeting, in consequence of the disagreement of the representatives as to the candidates, that body has exercised its prerogative, and in every such case has decided that the proper course to take was to continue the old clerks; which has accordingly been done, and sanctioned by minute duly recorded.

Fourth, That the representatives to the Yearly Meeting in 1854, forty-two in number, again disagreed, twenty-eight of them being in favour of reporting the names of the old clerks, viz., Benjamin Hoyle and William S. Bates, and twelve of them advocating the nomination of Jonathan Binns and James B. Bruff.

Fifth, That the majority of the representatives proposed to report to the Yearly Meeting that they could not agree on any names to offer to it; to which report the minority objected, because they said that under the established usage of the Yearly Meeting, in former years, it would be the same thing as continuing the old clerks for another year.

Sixth, That this minority, without the knowledge or consent of their colleagues, reported their candidates to the meeting.

Seventh, That the majority of the representatives, in conformity with the true state of the case, and former precedents, reported to the Yearly Meeting that the representatiives could not agree on any names to offer to it, for the stations of clerk and assistant.

Eighth, That the clerk of the Yearly Meeting, in obedience to its former decisions and practice for seven or eight years, and to the general usage of Society, made a minute, continuing the old clerks for another year, with which minute there was a large expression of unity by Friends present.

Ninth, That Jonathan Binns made a minute appointing himself clerk, and James B. Bruff assistant, which was approved and supported by his friends.

Tenth, That the clerk of the Yearly Meeting, and several other Friends, declared the nomination and appointment of Jonathan Binns to be an act of secession from the Yearly Meeting, in which that body could take no part, and several of J. Binns's friends admitted that it was so.

Eleventh, That his nomination and appointment are not sanctioned by any discipline, usage, or precedent in the Society, but are repugnant to all these, and subversive of the harmony, order, and integrity of our religious Society.

Twelfth, That his nomination was not united with by the meeting of the representatives, nor was his appointment approved by the Yearly Meeting, or recorded by its regular clerk, and therefore it lacks all the essentials which are necessary to give it validity.

Thirteenth, That they were in direct contradiction to the conclusion and practice of Ohio Yearly Meeting, as recorded on its minutes for some seven or eight years.

Fourteenth, That by the statements of both sides, it is clearly apparent that Ohio Yearly Meeting in 1854, was not in a condition harmoniously to appoint a clerk; and the mode of supplying it with this officer, and enabling it to go on with its business, dictated alike by sound sense, by established usage, and by a due consideration for the rights of all, was to continue the clerks who had been appointed when agreement of sentiment prevailed.

Fifteenth, That the larger part of the meeting united with and approved this course, as was manifested by their expressed sentiments in the meeting, when the regular and acknowledged clerk made a minute to this effect, and also by their withdrawing, when he adjourned the Yearly Meeting; while the adherents of Jonathan Binns, remained behind.

The only conclusion, therefore, consistent with the established order and usages of the Society, is, that Benjamin Hoyle is the regular and duly appointed clerk, and that the body continuing and acting with him as its officer, is the Yearly Meeting of Friends of Ohio.

Should the Society, or any part of it, acknowledge Jonathan Binns as the clerk, and the body acting with him as the Yearly Meeting, it would tend to break down good order and government in the proceedings of meetings for discipline, furnish a dangerous precedent to its members, on any occasion of dissatisfaction or disagreement, to bring forward, in the same irregular manner, the names of clerks to suit their own purposes, and thus encourage and multiply these sorrowful and blighting separations within its borders; than which hardly a greater or more desolating evil, or one more deeply to be deplored, can afflict our beloved Society.

A Diamond has recently been found in Manchester, Virginia, which is said to be worth three or four thousand dollars. A scientific examination shows that it refracts; and if rubbed on dry cloth or leather acquires positive electricity, and on being suddenly removed from the sun's rays into the dark, it sends forth sparks of light resembling small blazing stars.

Anecdote respecting John Crook.

We republish the following, by request. It has before appeared in the columns of "The Friend;" but may be profitably reperused.

"Our friend John Griffith informed Robert Dudley, that John Crook, one of the earliest and most distinguished ministers among the people called Quakers, was remarkable on many accounts, especially during the violent persecution in the reign of Charles II., a large participation whereof fell to this Friend. It was observable that his gift in the ministry was such, that he frequently, in those times of great affliction, whilst free from imprisonment, continued his declaration in public meetings for upwards of three hours; during the whole of which such an increasing degree of authority attended, as to convince many of his auditory, that nothing short of a Divine commission could produce the baptizing effects of his ministry. In consequence, many were joined to the Society of which he was a member, through his labours, who became ornaments thereof.

He outlived those days of dark intolerance some years, much beloved from the remembrance of his past services, and sufferings for the noble cause of religion; and he frequently appeared in the meetings of Friends, in very long testimonies of sound doctrine and pleasing expressions. But some deeply exercised minds among his friends, observed with concern, that the energy of melting virtue, which had attended his gospel labours in former times, to their great consolation, was now very little, if at all, felt to accompany his ministry.

Two of these Friends, who stood in the station of elders, feeling their minds engaged to it, from a sense of duty, waited on him; and with all the tenderness and deference due to his age, experience, and great worth, communicated their fears to him on this head, and intimated their wish, that he would look at this matter, and seek to that gracious Being in whose service he had been so successfully engaged for many years, for his blessed counsel on the subject; desiring him at a suitable time, to favour them with the result of his deliberations on what they had laid before him.

He received their communications with great meekness; and after some weeks he waited on them, in a broken, tender frame of mind, letting them know, with many tears, that their brotherly, or rather fatherly conduct towards him, was a kindness that he should never forget; and that on deep thoughtfulness respecting the matter referred to him, he found there was ample cause for their fears; and that he looked upon them as the messengers of love from his great Master, to warn him of his dangerous situation.

He next related to them how he then found that in those times of public tranquillity, he had gradually and imperceptibly slidden off from receiving his ministry through that pure, unmixed channel, by which he had formerly received it. The spring of the ministry, he said, during the fiery trials of persecution, flowed so copiously through him, that he felt but little labour to come at it; but in these latter days of the church's tranquillity, from the love he felt for the cause, he delivered words as they occurred to him in the public assemblies, which, till their kind intimations to him, he did not perceive, proceeded only from his natural powers as a man, and did not, as formerly, flow from the Divine spring and gift of gospel ministry. Of this, he said, he was now fully convinced, and returned praises for his great deliverance where first due, and gratitude to them as instruments thereof.

He continued for three years after this quite silent as a minister; and about the expiration of

that time, he again broke forth in a few words, just as at first appearing in the ministry. He was gradually enlarged in his testimonies to the comfort and edification of his friends; and was at all times very careful, ever after, not to exceed that measure of Divine opening, with which he was favoured in the exercise of his gift."

For "The Friend."

In Patience Possess ye your Souls

At times of outward or inward commotion, there is nothing more salutary to the mind, than inward wrestling for quietness of spirit, that the reasonings and strivings of carnal wisdom may be subdued, to the silencing of the flesh, which is at enmity against the Truth. To enter into the closet of the heart at such seasons, and there abide in patient waiting, and quiet exercise of spirit, is the part of true wisdom, and the only means of securing the Divine blessing, for it is not to this man, or that man, that we are to look for deliverance, but to the Lord alone, who will openly reward the secret prayer of his dependent children.

There is nothing in human policy or wisdom, that is able to still the troubled waters, when we are tossed to and fro upon the waves of temptation, so that our souls are terrified with the view of apparent danger, but our only safety is in keeping close to Him, in humble faith, who is able to rebuke the winds and the waves, and thus to save us from the threatening wreck. But oh, what humility and patience are requisite, in order to enable us to abide with the Captain of our salvation in his temptations, and not to be offended in Him, who, when he was reviled, reviled not again; and when he suffered, persecuted not them that offended against him, but meekly bore the contradiction of sinners, seeking not theirs but them, that he might bring them as a good shepherd into the heavenly fold, and not as a hireling, leave them to the ravages of their wicked enemy.

What was written aforetime was written for our learning, and it will be well for us, if this has not been done in vain—if the lessons of long suffering and patience which we have been taught by our Divine Master, be not allowed to pass unheeded, by us who profess to be his followers in the way of the cross; bearing with him the reproach of the wicked, who fain would have us put on the armour of Saul in warring against the mighty. But what will all our profession avail us, if we have not the Spirit of Christ, for without this we are none of his, however much we may outwardly appear to men as his followers. If we deny not ourselves in all that we do as his servants, our labours will not be crowned. If we tarry not at his bidding, or go forth when he does not send us, sorrow and shame will be our portion, and the end of our running will be discord and confusion. However zealous we may feel for the promotion of Truth, we must patiently tarry at Jerusalem until endued with power from on high, before any qualification can be witnessed for availing labour; and without this, all our profession, activity and zeal, will be worse than fruitless.

Unauthorized labour in the church, is a fruitful source of discord, and many for want of patience to abide the Master's time for reformation, are exercised in their own will, time, and way, to bring it about, little regarding the order of the Gospel; while those, who, from living experience, have known the salutary advantage of time and patience, in the work, are concerned to move only as they are moved therein—according as it is written, "He that believeth shall not make haste." Contention and strife cannot be healed by haste and heat, but the humble exercise of faith and patience, will work marvelously for those who are engaged therein, enabling them to remove mountains of opposition and prejudice, so that the power of Truth may have free course, and be exalted above all the heights of human passion and wisdom, to the promotion of "peace on earth, and good will to men."

It is an easy matter to contend, in our own wills, for the truths of the gospel; to make the outward appearance of simplicity, so as to find our way into the favour of the mere professors, but to know our wills slain upon the cross, and to contend for the faith, once delivered to the saints, in the spirit of Christ, is quite another thing. The difference is plain to all those, who, by abiding inward, are gifted with true discernment, and thereby qualified to testify against the wisdom and workings of the flesh, which seek to be exalted above the pure witness for Truth in the heart, and beget an impatient and untempered zeal. Those who are exercised by this zeal, are of the number whose time is always ready, who disregard the injunction, to judge nothing before the appearing of the Spirit of judgment, which shall bring to light the hidden things of darkness, and enable to renounce our fellowship therewith. But if we patiently abide the time of His coming who is Head over all things to his church, and whose works alone can praise him, he will raise up "judges as at the first, and counsellors as at the beginning," who, judging not by the seeing of the eye, nor the hearing of the ear, shall judge righteous judgment, in the fear of the Lord. It is "the Lamb and his followers who shall have the victory."

Misunderstanding.—Misunderstanding comes of a respectable family, and has a *half* sister distinguished for her good sense and solidity, but she herself, though not a little fond of reasoning, always takes the *perverse* side of any question; she is often seen with one of her intimates, *Misrepresentation*, who is a great tale-bearer, and goes about from house to house, telling people what such a one says of them behind their backs. Misrepresentation is a notable story-teller, and can so *change*, *enlarge*, and *dress up* an anecdote, that the person to whom it happened shall not know it again; how *many friendships have been broken by these two*, or turned into bitter enmities! The *latter* does a great deal of *varnish* work, which wonderfully sets off her paintings, for she pretends to use the pencil; but her productions are most miserable daubings, and it is the *varnish* alone which makes them pass to the most common eye. Though she has colours of all sorts, *black* varnish is what she uses most. As I wish you to be very much on your guard against this personage whenever you meet her in company, I tell you she is to be distinguished by a very ugly leer; it is quite out of her power to look *straight* at any object.—*Barbauld's Letters, &c.*

The Imperial Canal of China.—One of the most extraordinary works of art in the world is the Imperial Canal of China. This wonderful structure, which was built by the Mongul Emperor, Kublai Khan, extends from the vicinity of Pekin, at which city the same emperor fixed the seat of government, to the Yang-tse-Kiang river, a distance of more than six hundred miles, to the southward. The canal is in some places tunnelled through heights, and at others it is carried through lakes and over marshes and low grounds by means of stupendous embankments. Rivers feed it, and goodly ships sail on its waters. It is used not only as a great commercial highway, but as an irrigator and drain to the country through which it flows, and renders available much land that would otherwise be useless. The canal exhibits sound practical skill, and even genius, on the part of its constructors, and, as a work of labour, it is gigantic. It is one of the greatest of those great works which are to be met with in China on a larger scale than in any other country in the world.

The vanity of young men in loving fine clothes, and new fashions, and valuing themselves by them, is one of the most childish pieces of folly that can be, and the occasion of great profuseness and undoing of young men. Avoid curiousness, and too much expensiveness in your apparel; be comely, plain, cleanly, not curious or costly, it is the sign of a weak head-piece to want every new fashion.—*Hale.*

Selected.

THE BELIEVER AND HIS ECHO.

Believer. True faith producing love to God and man,
Say, Echo, is not this the gospel's plan?
Echo. The gospel's plan.
Believer. Must I my faith in Jesus constant show,
By doing good to all, both friend and foe?
Echo. Both friend and foe.
Believer. But if a brother hate and treat me ill,
Must I return him good, and love him still?
Echo. Love him still.
Believer. If he my failings watches to reveal,
Must I his faults as carefully conceal?
Echo. As carefully conceal.
Believer. But if my name and character he tears,
And cruel malice too, too plain appears;
And *when* I sorrow and affliction know,
He loves to add unto my cup of woe;
In this uncommon, this peculiar case,
Sweet Echo, say must I still love and bless?
Echo. Still love and bless.
Believer. Whatever usage ill I may receive
Must I still patient be and still forgive?
Echo. Still patient be and still forgive.
Believer. Why, Echo, how is this? thou 'rt sure a dove.
Thy voice will teach me nothing else than love.
Echo. Nothing else than love.
Believer. Amen, with all my heart; then be it so,
It 's all delightful, just and good I know,
And now to practice, I 'll directly go.
Echo. Directly go.
Believer. Things being thus; then let who will reject,
My gracious God most surely will protect.
Echo. Surely will protect.
Believer. Henceforth on Him I 'll put my every care,
And both my friend and foe embrace in prayer.
Echo. Embrace in prayer.
Believer. But after all these duties, when they are done,
Must I, in point of merit, then disown,
And rest my soul on Jesus Christ *alone?*
Echo. On Jesus Christ *alone.*
Believer. Echo, enough! thy counsel to my ear
Is sweeter than to flowers the dew drop's tear.
Thy wise instructive lessons please me well,
'Till next we meet farewell, farewell.
Echo. *Farewell, Farewell.*

Tempered by humbleness and charity, honesty of speech hath honour;
And mingled well with prudence, honesty of purpose hath its praise:
Trust payeth homage unto truth, rewarding honesty of action:
And all men love to lean on him who never failed nor fainted,
Freedom gloweth in his eyes, and nobleness of nature at his heart,
And Independence took a crown, and fixed it on his head:
So, he stood in his integrity, *just* and *firm* of purpose,
Aiding many, fearing none, a spectacle to angels and to men.—*Tupper.*

Many are the dangers and temptations compassing a bad man's presence:
The Upas hath a poisonous shade, and who would slumber there?
Wherefore *avoid them if thou canst; only* under Providence and duty,
If thy lot be cast with Kedar, patiently and silently *live to their rebuke.*—*Tupper.*

For "The Friend"

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 36.)

SARAH KIRKBRIDE.

It is always a pleasant and heart cheering, although a not uncommon thing, to find children of pious and devoted Christians, running with alacrity in the paths which their parents have trodden before them to glory and to virtue. Among such may be numbered Sarah, daughter of that valuable Friend, Mahlon Stacy, one of the early settlers of New Jersey, of whom we shall hereafter have somewhat to say. Sarah Stacy appeared to submit to the visitations of the holy Spirit in childhood, was dutiful to her parents, virtuous in her actions, and an example of early piety. The piety which marked her youth, was not lost amid the temptations of riper age, but shone brighter, and grew more settled and confirmed, as her faith was more and more tried. When she reached maturity, she was married to Joseph Kirkbride, of Bucks County, a minister of the Gospel, on whose services in his Master's cause in labouring to spread the knowledge of the Truth, and his devotedness in forwarding the interests of his fellow men, we shall hereafter dwell.

Sarah Kirkbride was taken sick in the Ninth month, 1703, and from the memorial of her, appears to have been two years in declining health.

"In the time of her sickness she uttered many living and weighty expressions, desiring to be dissolved, saying, 'I have not been afraid of death these many years; death is no terror unto me; my God hath taken away its sting.' She being under great weight of bodily affliction, and seeing her husband under trouble for her, said, 'My dear, if it please the Lord to strip thee of thy meet-help again, my God will be thy rock, he hath been thy stay hitherto, and he will never leave thee. The Lord will bring me to his holy hill, and I shall praise him upon Mount Zion, with the saints and holy angels.'

"She again said, 'I shall praise thee, O my God, and my Christ, world without end.' Soon after, her husband was moved to pray by her, that the Lord would be pleased to support and strengthen her in her distress and great affliction, and to bear up her exercised soul, and to make them truly willing to submit to his holy will, whether in life or death; at which words she said, 'Amen, Amen.' A little after, her husband asked her how she did, she said, 'I am sweetly comforted in my affliction; the Lord is exceedingly good to my soul.' Many more good expressions she uttered upon several occasions, that cannot be remembered. The evening before she departed this life, some friends being come to see her, she said, 'I am weak of body, but the Lord is very good to my soul, and hath filled me with his love; but my bodily weakness is such, that it renders me incapable of praising him as I ought to do.' To her husband she said, 'The Lord hath heard thy prayers for me this morning, and hath satisfied my soul to the full;' more she said to the same purpose, taking her husband's children by the hand, embracing them, and exhorting them to fear the Lord, and to love and obey their father; and said, 'He hath been a good father to you.' A little before she died, she said, 'My God, I come, I come;' and soon after she departed this life, and is entered into that rest that will never have an end.

"She died the 28th of the Ninth month, 1705, aged twenty-nine years."

BARBARA BEVAN.

Barbara Bevan was the daughter of John Bevan, of Trevrygg, Wales, a Friend in the ministry, who settled in Pennsylvania about the year 1683. She was educated as a Friend by her religiously concerned parents, and through the visitations of Divine grace, was remarkable for her circumspect deportment in early life. In a memorial concerning her, it is said that, "When but six years of age, [she] diligently kept to Friends' meetings, and was dutiful to her parents, loving to her relations and neighbours, and for her orderly behaviour in meetings, well beloved by the faithful who were acquainted with her." Notwithstanding the merciful visitations and preservations thus experienced, as she grew older, the enemy of all righteousness, laboured to draw her away from the stability of the truth, into a love of vain things, and at times through her weakness, he prevailed over her. These slips,—for she was mercifully kept from settling down in vanity,—were causes of great grief and exercise of mind to her, under the gracious reproofs of instruction with which the Lord visited her.

"It pleased the Lord to visit her with sickness of body when about sixteen years of age, and to show her state and condition to her, and let her see as she afterwards declared, that the form of truth, and the profession of it only, would not satisfy without possession; and that she had great need of a Saviour; and that the pleasures and delights here below were but as dross and dung in comparison to God's salvation and life-giving presence; and that there was but one way to obtain it, which is, as she said, by giving up in obedience to the Lord, that he might work and operate in her heart, who had many times begat desires and breathings in her soul after him."

About the time of this sickness, a dispensation of the ministry of the Gospel was committed to her, and she laboured faithfully, although then but in her sixteenth year. As she grew older in the Truth, she travelled through parts of East and West Jersey, zealously advocating her blessed Saviour's cause, being heartily concerned for his honour. Wherever she went, her ministry, being set off by the Christian circumspection of her conduct, was well received. She was at this time, her friends say, "An honest, sober, virtuous young woman, zealous for the holy name and truth of God, and greatly desired and travailed for the exaltation and spreading thereof, labouring that all might come to love, and live therein, and order their lives and conversations by it, which she came to know and experience in her own heart, by the divine power of God."

Early in the year 1704, she, with her father and mother, who also appears to have had a gift in the ministry, returned into her native country, bearing a certificate from the meeting of ministering Friends in Philadelphia, addressed to the meetings of England and Wales.

Of their preservation on this voyage we shall hereafter give an account in some notice of the life of her father. After reaching England, Barbara Bevan visited Friends in North and South Wales, travelling about six hundred miles whilst performing the service. Her labour of love, during this journey, is said to have been "well received, and effectual to many."

"She was sound in doctrine, and the savour of life attended her declaration, and she was a pattern and example in her conversation amongst those she conversed with; and at Monthly Meetings she exhorted Friends to be faithful in their testimony against tithes, and to keep clear of the world's spirit, and the fashions thereof. After she sickened, she had some meetings in the family where she was, and earnestly exhorted them to beware of an easy state and lukewarm condition; and admonished to wait often upon the Lord, that they might get something in store against a trying time. She was sensible her time was not to be long, and declared she was not afraid to die. Seeing some of her relations weep, she said, 'Why weep ye on such an occasion?' The day before she departed, she spoke in like manner to her father, mother, and relations then about her, 'I love you all, and have a love to the family.'

"She had an easy passage, and departed this life the Seventh-day, in the evening, being the 26th of the Eleventh month, 1705; and on the 28th of the same month, her body was accompanied by relations, friends, and neighbours, to the meeting-house at Trevrygg, where there was a good meeting, to the satisfaction and comfort of many then gathered, and after meeting she was buried. Aged about twenty-three years; a minister about seven."

Her father says of her, "She was of good service on Truth's account, the short time she remained in the body; her innocency and sweet behaviour preached truth wherever she came. It is my comfort and satisfaction, that she left a good savour, and has finished her course in peace with her Maker, and is gone to the eternal rest in the mansions of bliss and joy, to laud and magnify him forever.

Selected.

George Fox's Testimony respecting the Spirit of Separation.

"My dear Friends,—Keep your first love in the truth, power, and seed of life in Christ Jesus; for this last night, as I was lying in my bed at Amsterdam, I had a great travail in the holy seed of life and peace, and my spirit was troubled with that spirit of strife and separation. I saw it was a destroying spirit, and did seek not only to get over the seed, but to destroy it, and to eat out the minds of the people from it by strife and contention; and under pretence of standing for the ancient truth, its work is to root it out and destroy the appearance of it, to set up itself. It is a creeping spirit, seeking whom it can get into; and what it cannot do itself it stirreth up others to do, and setteth their spirits on float, with the dark wisdom to destroy the simple. This spirit is managed by the prince of the air, and leadeth some to do things they would have been ashamed to have done, as men, which doth unman them; and they would not have suffered them, if they had kept to the tender principle of God, which leadeth to peace. It is a despising, backbiting, secret-whispering spirit, a sower of dissension, and a taker of advantage of all prejudiced spirits that are disobedient to their first principle and love of truth, and begetteth into hatred; so it begetteth all into that spirit, whose work is to destroy both the good within and the good order without. Nay, it would, if it could, destroy the government of Christ and the order of the gospel, to set up its own will and spirit, which is not of God; and, under pretence of crying down man, is setting up man, and gathering into a separation of disobedient men, who float above their conditions. This spirit, which neither liveth in the truth nor its order, but opposeth them that do, I cannot express it as I see it and its work, whose end will be accordingly. Therefore, friends, I am to warn you all that have not lost your simplicity, not to touch it, nor to have any unity with it, lest you be defiled, lose your conditions of your eternal estate, and your everlasting portion; and that your inward man, which is after God, may be preserved, and Christ may reign in all your hearts. And they

that are joined with them, it will be very hard for them ever to come down to truth in themselves, and to see their own conditions, and to have that spirit of strife and contention (which eateth as a canker) brought down in them; which is carnal, and slayeth the tender babe, which was once begotten in themselves. The Philistine is got up in them, that stoppeth the wells and springs, maketh a great bustle, and is crying up men, and pleading for them instead of Christ. So, friends, strive not with them, but let those take them that cry them up. Keep you to the Lord Jesus Christ with his light, that cometh from him, that he may be your Lord, and ye in him may be all in unity, in one light, life, power, and dominion in Christ, your Head. The God of peace and power preserve you all in Christ Jesus, your Saviour, and out of and from that mischievous spirit which is idle and slothful, as to the work of the Power, Spirit, and Light of God and Christ. Its very act worketh strife and disturbance against the peace of the church of Christ. It thinks in its wilfulness, stubbornness, and unruliness to set up itself, and in that to have peace; but destruction will be the end of it: and it is sealed for the fire and eternal judgment. Therefore let Christ the Seed be the head and crown of every one of you, that nothing may be between you and the Lord God. Be not deceived with vain, feigned, or rough words; for Satan is transforming himself as an angel of light to deceive, but God's foundation standeth sure, and God knoweth who are his, and will preserve his upon the rock and foundation of life, in his peaceable truth and habitation, that in the same they may grow. Keep out of strife and contention with it, after ye have borne your testimony in the Lord's power and truth against it, then keep in the truth; for it hath a life in scribbling, strife, and jangling, because it would enlarge its hell, and bring others into its misery with the airy power, and would get power over the good, and disjoin people from it, and so commit rapes upon the simplicity by its subtilty. But I do believe the Lord will defend his people, though he may try them and exercise them with this spirit for a time, as he hath done in days past, in other vessels it hath made use of as it doth of these now, who have a more seeming fair outside, but foul, rough, and rugged enough within, against the Seed Christ, as ever were the Pharisees to destroy it. They, under a pretence of preaching Christ, are destroyers and crucifiers of him, and killers of the just, not only in themselves, but are endeavouring with all their might to destroy it in others where it is born. Pharaoh and Herod slay the young Jews in the spirit as the old did: I feel it worrying of them. That is got up to be king, which knew not suffering Joseph. But God will plague him, and the Seed will have more rest, and be better entertained in Egypt than under Herod, into whom old Pharaoh's spirit is entered. He that hath an ear to hear, let him hear, and an eye to see, let him see how this spirit hath transformed in all ages against the just and righteous; but mark what hath been its end. The Seed reigneth; glory to the Lord God over all for ever! His truth spreadeth, and Friends here are in unity and peace, and of good report, answering the good or that of God in people. My desires are, that all God's people may do the same in all places, that the Lord may be glorified in their bringing forth much fruit that is heavenly and spiritual. Amen. G. F."

"Amsterdam, the 25th of the
"Seventh month, 1677."

Affected sanctity is a blot upon the face of piety.

From the Leisure Hour.

The Blood Parasite.

It is well ascertained that the peculiar colours exhibited by lakes and other pieces of water, under certain conditions, are in general due to the presence of minute vegetable and sometimes animal productions. Such simple organisms as the lowest tribes of freshwater algæ, which represent the zero of vegetable life, are found in every situation suitable for their development; even the rain and the dust of the atmosphere are thickly impregnated with such microscopic beings. One of these minute productions,—*Protococcus nivalis*,—is developed in the snow of northern regions, to which it communicates the colour of blood, and is hence called "red" or "bloody snow." This simple plant, consisting only of a single cell, which propagates itself by division into a number of separate cells, has been long known by botanists; but another production allied to it, or at least presenting a resemblance in general appearance, and certainly not less remarkable, has just been brought into notice by M. Montagne, in a paper published in the "Annals of Natural History," for October, 1852.

M. Montagne observes:—"An extraordinary phenomenon has just passed under my eyes, to which I beg to call the attention of the academy for a moment. I had already some knowledge of it from two Memoirs which have treated of it specially, but had never witnessed it previously. Moreover, this phenomenon is so rare, that I am not aware of its having ever been mentioned in this country. I am speaking of the development of a parasite, either animal or vegetable, which, under certain circumstances, attacks alimentary substances, especially pastry, communicating to them a bright red colour, resembling that of arterial blood. According to the interpretation of several historical facts given by M. Ehrenberg, who has published a very interesting and erudite work upon this production, its appearance in the dark ages must have given rise to fatal errors, by causing the condemnation of unhappy victims to capital punishments for crimes of which they were totally innocent. It is, in fact, to this phenomenon that we must refer all those instances of blood found in bread, on consecrated wafers, etc. which the credulity of our fathers attributed to witchcraft, or regarded as prodigies of fatal presage."

M. Montagne happened to be with M. Aug. Le Prévost at the Château du Parquet in July, 1852, when the temperature had been exceedingly high for about ten successive days. It was there that the curious production was observed, and, no doubt, the continued warmth of the atmosphere was instrumental in providing the conditions suitable for its development. "The servants, much astonished at what they saw, brought us half a fowl roasted the previous evening, which was literally covered with a gelatinous layer of a very intense carmine red, and only of a bright rose colour where the layer was thinner. A cut melon also presented some traces of it. Some cooked cauliflower which had been thrown away, and which I did not see, also, according to the people of the house, presented the same appearance. Lastly, three days afterwards, the leg of a fowl was also attacked by the same production."

From a microscopic examination M. Montagne concluded it to be the same thing which had been observed by M. Ehrenberg, viz., a minute animalcule, bearing the scientific title of *Monas prodigiosa*. This was confirmed by a specimen from Dr. Rayer, which had been developed upon cooked rice, and submitted by that gentleman to M. Montagne's examination some years ago. The individuals which compose the substance are so exceedingly small as to require a magnifying power of 800 diameters to see them satisfactorily. Their diameter was measured at one-seven-hundredth of a millimeter!

M. Montagne mentions, that the "parasite" is propagated with great facility, when sown under favourable conditions, in cooked rice for example, placed between two plates, or in closed vessels. M. Sette does not agree in the opinion of it being an animalcule, but rather regards it as a fungus—Zoogalactina imetropha.

This production, though so very minute, is not entirely without its economical uses. An ingenious chemist of Padua, M. P. Col, has been successful in the application of it to the tinging of silk in the various shades of rose colour, the tint being very delicate.

The Goodness of the Deity.

It is a happy world after all. The air, the earth, the water, teem with delighted existence. In a spring noon or a summer evening, on whichever side I turn my eyes, myriads of happy beings crowd upon my view. "The insect youth are on the wing." Swarms of new-born *flies* are trying their pinions in the air. Their sportive motion, their wanton mazes, their gratuitous activity, their continual change of place without use or purpose, testify their joy and the exulation which they feel in their lately-discovered faculties. A *bee* amongst the flowers in spring is one of the most cheerful objects that can be looked upon. Its life appears to be all enjoyment, so busy and so pleased; yet it is only a specimen of insect life, with which, by reason of the animal being half-domesticated, we happen to be better acquainted than we are with that of others. The *whole winged* insect tribe, it is probable, are equally intent upon their proper employments, and, under every variety of constitution, gratified, and perhaps equally gratified, by the offices which the Author of their nature has assigned to them. But the atmosphere is not the only scene of enjoyment for the insect race. Plants are covered with aphides, greedily sucking their jhices, and constantly, as it should seem, in the act of sucking. It cannot be doubted but that this is a state of gratification. What else should fix them so close to the operation, and so long? Other species are *running about*, with an alacrity in their motions which carries with it every mark of pleasure. Large patches of ground are sometimes half-covered with these brisk and sprightly natures. If we look to what the *waters* produce, shoals of the fry of fish frequent the margins of rivers, of lakes, and of the sea itself. These are so happy that they know not what to do with themselves. Their attitudes, their vivacity, their leaps out of the water, their frolics in it (which I have noticed a thousand times with equal attention and amusement,) all conduce to show their excess of spirits, and are simply the effects of that excess. Walking by the sea-side, in a calm evening, upon a sandy shore, and with an ebbing tide, I have frequently remarked the appearance of a dark cloud, or rather very thick mist, hanging over the edge of the water, to the height, perhaps, of half a yard, and of the breadth of two or three yards, stretching along the coast as far as the eye could reach, and always retiring with the water. When this cloud came to be examined, it proved to be nothing else than so much space filled with young *shrimps*, in the act of bounding in the air from the shallow margin of the water, or from the wet sand. If any motion of a mute animal could express delight, it was this; if they had meant to make signs of their happiness, they could not have done it more intelligibly. Suppose, then, what I have no doubt of, each individual of this number to be in a state

of positive enjoyment; what a sum, collectively, of gratification and pleasure have we here before our view!

The *young* of all animals appear to me to receive pleasure simply from the exercise of their limbs and bodily faculties, without reference to any end to be attained, or any use to be answered by the exertion. The appearance of satisfaction with which most animals, as their activity subsides, seek and enjoy rest, affords reason to believe that this source of gratification is appointed to advanced life, under all or most of its various forms. In the species with which we are best acquainted, namely, our own, I am far, even as an observer of human life, from thinking that youth is its happiest season, much less the only happy one: as a Christian, I am willing to believe that there is a great deal of truth in the following representation given by a very pious writer, as well as excellent man*:—"To the intelligent and virtuous, old age presents a scene of tranquil enjoyments, of obedient appetite, of well-regulated affections, of maturity in knowledge, and of calm preparation for immortality. In this serene and dignified state, placed as it were on the confines of two worlds, the mind of a good man reviews what is passed with the complacency of an approving conscience, and looks forward, with humble confidence, in the mercy of God, and with devout aspirations, towards his eternal and ever-increasing favour."

But it will be said that the instances which we have here brought forward, whether of vivacity or repose, or of apparent enjoyment derived from either, are picked and favourable instances. We answer, first, that they are instances, nevertheless, which comprise large provinces of sensitive existence; that every case which we have described is the case of millions. At this moment, in every given moment of time, how many myriads of animals are eating their food, gratifying their appetites, ruminating in their holes, accomplishing their wishes, pursuing their pleasures, taking their pastimes! In each individual, how many things must go right for it to be at ease; yet how large a proportion out of every species is so in every assignable instant! Secondly, we contend, in the terms of our original proposition, that throughout the whole of life, as it is diffused in nature, and as far as we are acquainted with it, looking to the average of sensations, the plurality and the preponderancy is in favour of happiness by a vast excess. In our own species, in which, perhaps, the assertion may be more questionable than any other, the prepolleney of good over evil, of health, for example, and ease, over pain and distress, is evidenced by the very notice which calamities excite. What inquiries does the sickness of our friends produce; what conversation their misfortunes! This shows that the common course of things is in favour of happiness; that happiness is the rule, misery the exception. Were the order reversed, our attention would be called to examples of health and competency, instead of disease and want.

One great cause of our insensibility to the goodness of the Creator is the very *extensiveness* of his bounty. We prize but little what we share only in common with the rest, or with the generality of our species. When we hear of blessings, we think forthwith of successes, of prosperous fortunes, of honours, riches, preferments, *i. e.* of those advantages and superiorities over others, which we happen either to possess, or to be in pursuit of, or to covet. The common benefits of our nature entirely escape us. Yet these are the great things. These constitute what most properly ought to be accounted blessings of Providence; what alone, if we might so speak, are worthy of its care. Nightly rest and daily bread, the ordinary use of our limbs, and senses, and understandings, are gifts which admit of no comparison with any other. Yet, because almost every man we meet with possesses these, we leave them out of our enumeration. They raise no sentiment; they move no gratitude. Now, herein is our judgment perverted by our selfishness. A blessing ought in truth to be the *more* satisfactory —the bounty at least of the donor is rendered more conspicuous—by its very diffusion, its commonness, its cheapness; by its falling to the lot and forming the happiness of the great bulk and body of our species, as well as of ourselves. Nay, even when we do not possess it, it ought to be matter of thankfulness that others do. But we have a different way of thinking. We court distinction. That is not the worst; we *see* nothing but what has distinction to recommend it. This necessarily contracts our views of the Creator's beneficence within a narrow compass, and most unjustly. It is in those things which are so common as to be no distinction, that the amplitude of the Divine benignity is perceived.—*Paley.*

* Father's Instructions, by Dr. Percival, of Manchester, p. 317.

THE FRIEND.

TENTH MONTH 21, 1854.

In our Summary of Events will be found a notice of the total loss of the steamer Arctic, while on her way from Liverpool to New York, and the consequent destruction of very many human beings, who, with but little warning, were called from time into eternity, meeting death in one of its most dreaded forms. This event seems to have awakened a feeling of sorrowful interest in the community, deepened, and rendered more poignant among those who are called to mourn over the sudden and unexpected loss of near and dear friends, towards whose return after long absence, they may have been looking with fond anticipation of mutual delight. For many years the noble steamers plying between the American and European ports, have been passing and repassing so constantly, so rapidly, and apparently so safely, that the public has been ready to give itself up to believe, that the danger of ocean navigation has been removed, or at least so far lessened, as to render a voyage across the Atlantic a matter of such trifling importance as to require little reflection, and about which nothing more than pleasure or interest was to be consulted. But within the last year, the loss successively of six of as fine steamships as the art and skill of man has as yet been able to construct, while pursuing their accustomed track between Europe and America, has given sad and conclusive evidence, that the peril, if lessened, is by no means overcome. We are well aware that death awaits us all wherever we may be situated, and that the watchful eye of an overruling Providence is upon those who go down to the sea in great ships, as well as on those who are passing away their time on land; and dependence on his guardian care is not limited to place or time; nevertheless there are dangers peculiar to the sea,—to trusting anything of man's construction on the bosom of the boisterous and unfathomed deep,—which ought to bring the question home seriously to every one proposing to encounter them, whether while so doing, they will be in their proper place, and can rest upon the assurance, that the object and motive of their purposed voyage are such as meets the approbation of the great Preserver of men. Paul and Jonah were both in a storm at sea, but under very different circumstances. Many of the incidents related by those who have escaped from the wreck of the Arctic, are of the most thrilling character, and the escapes themselves seem almost miraculous. Many highly esteemed citizens were on board of her, few of whom there is reason to believe have been saved; but it is impossible to determine who of those not yet heard of, has or has not been rescued; and as vessels going to far off countries, may have picked up some one clinging to portions of the wreck, and carried him or her with them, the feelings of families from whom it is to be feared some endeared member has been torn, will long be kept in a state of harrowing suspense, perhaps more hard to bear, than the certainty that death had speedily released them from suffering. The intense solicitude of those who are thus suffering, cannot be appreciated by any who have not experienced a similar bereavement, and the public mind would seem freely to sympathise with them, and to mourn over the untimely exit of those who are known to be lost. But the unsanctified human heart is deceitful above all things, and a tissue of inconsistencies. While this community is sorrowing over the premature death of those who perished with the Arctic, and not a few are appalled at the thought of so many receiving the sudden summons to the bar of eternal justice, another steamer has come in, bringing intelligence that a great battle has been fought, wherein thousands upon thousands were left dead upon the field; sent out of the world in all the heat and passion of deadly conflict; and that England and France are resounding with acclamations of joy at the event, and preparing to return thanks to the Prince of Peace for their successful efforts in destroying so vast a multitude of human beings. What can more forcibly illustrate the natural depravity of the human heart, or more clearly evince its utter selfishness, than this disposition to glory over such wholesale murders, when attended by, or resulting in, some supposed advantage for ourselves. We doubt not that the intelligence of the loss of the Arctic, and the death of the many who were engulphed when she went down, will be received in England and France with feelings of sorrow for the lost, and sympathy for the bereaved relatives, left to mourn their sudden and awful death; while, at the same time, they are rejoicing at a victory that has cost the lives of thousands, and made thousands of widows and orphans to bewail the destruction of those on whom, under Providence, they were dependent for the means of existence. The spread of the light, and humanizing virtue of the religion of Christ, seems slow; and much, very much, remains to be accomplished before the simple but comprehensive rule, laid down by him, will be allowed to govern in the affairs of the world, and man everywhere learn to love his neighbour as himself. As this spirit prevails, war, with its atrocities, will be done away, and human suffering, wherever or however it may arise, will always call forth unfeigned regret and sympathy.

SUMMARY OF EVENTS.

EUROPE.—News from England to the 30th ult. The corn market was firm, with a slight advance in wheat and flour.

The War.—No battle, between the allies and the Russians, had taken place, at the latest dates from the Crimea. The Tartar population of the country are said to sympathise with the invaders, and twelve thousand Tartars had offered themselves to the allies, as volunteers, and had been accepted. An official bulletin, dated 16th ult., states that the allies had intended, the next day, to attack an intrenched camp of 10,000 Russians posted in the direction of Sebastopol; but that the camp had been raised in the night, and the Russians fell back towards the city. The health of the troops was good.

It was expected that a general engagement would take place, before Sebastopol, in the course of a few days. The actual place of landing for the main body of invaders, it appears, was twenty miles south of Eupatoria, and only thirty miles from Sebastopol.

The Russians were intrenching their winter quarters along the line of the river Pruth. The viceroy of Egypt had given orders to despatch ten thousand additional troops, to take part in the war in the east. In the Baltic the French and English fleets had separated, and the former sailed for France; it is however asserted, that Revel is to be bombarded by the English fleet before its departure from the Baltic.

Four Days later.—The Baltic brings intelligence of a series of sanguinary battles in the Crimea, on the 21st ult., and succeeding days, the result being the fall of Sebastopol, and the destruction or capture of a great part of the Russian fleet. The first battle took place at the heights of Alma, where 50,000 Russians were entrenched with a strong force of cavalry and artillery. This position was carried at the point of the bayonet, and with a loss to the allies of 2800 men, killed and wounded. The Russians, under Menschoff, rallied on the river Katcha, and were again defeated and driven to the entrenchments behind Sebastopol. Another rally took place here, and a third battle was fought on the 24th ult., in which the Russians were for the third time defeated. The Russians then fled into the city, which was beleagured by sea and land. On the 25th ult., Fort Constantine, after an obstinate defence, was carried by storm, and blown up. The city and fleet were then bombarded. Ten Russian ships of the line were burned and sunk, and the remaining forts were carried one after another, and 800 guns were silenced. Twenty-two thousand prisoners were taken on the garrison capitulating, and the Russian loss in dead and disabled is estimated at not less than 18,000 in Sebastopol alone. The latest despatch says, that Prince Menschikoff with the shattered remnant of his forces, had surrendered, and that the French and English flags wave in triumph over Sebastopol.

RUSSIA.—A new issue of paper money amounting to six millions of roubles, had been made. The discontent among the Russian people is said to be increasing, and even threatening to bring on a revolution.

DENMARK.—The dissensions between the King and the people of Jutland respecting the Constitution, were continued.

ITALY.—The Papal government has concluded a loan of four millions of crowns with the Rothschilds. The cholera was committing great ravages at Massena.

CHINA.—The overland mail brought dates from Canton to Eighth mo. 5, at which time the siege was continued, and business suspended. There were no arrivals of tea. Canton was expected in a few days to be in possession of the insurgents. Whampoa and vicinity was by them.

MARQUESAS ISLANDS.—Late intelligence represents that the islands were being rapidly depopulated by intestine wars. The missionaries had met with but little success, and were about abandoning their positions.

AUSTRALIA.—The Melbourne Argus of Fifth month 26, says, "We are enabled again to report favourably of the condition and prospects of the country. The present season hitherto has been a remarkable and pleasing contrast to that of last year. Large quantities of agricultural land have been purchased, and fencing has been going on with vigour, on most of the lines of road. Agricultural labourers and implements, and seed, wheat and oats, have been in great demand, and it is certain that a large additional breadth of land will this year be put under crop."

UNITED STATES.—*Loss of the Steamship Arctic.*—The Arctic left Liverpool on her last voyage for New York, on the 20th ult., with 233 passengers. The crew and employees of the vessel numbered about 150. On the 27th ult., at noon-day, the steamer being about 50 miles distant from Cape Race, N. F., and the fog dense, she came in collision with the French propeller Vesta, receiving injuries which caused her to go down in a few hours afterwards. The number saved is not yet fully ascertained, as some persons may have been rescued by passing vessels, and a considerable time may elapse before all are heard from. The facts, however, point to the conclusion that a large part of the crew, and nearly all the passengers, including many estimable and respected citizens, some of whom were residents of New York and our own city, have perished by this awful catastrophe. The Vesta returned to St. John, N. F.; she lost thirteen of her men in a boat, which was run down by the Arctic, after the collision.

California.—Dates to the 16th ult. The Chinese were arriving at the rate of from 500 to 1000 every week. The overland immigration was not so numerous as in former years. In San Francisco, magnificent structures were being erected in every quarter of the city. The Jewish residents had recently built two costly synagogues. The miners are said to be doing well in every section of the country. There is the usual dismal record of murders, lynching, suicides, and assaults throughout the State.

Kansas.—The Alton Courier states that the Mormons are about forming a settlement in Kansas. About 200 families from Alton and St. Louis were preparing to start. The spot selected for settlement is in the interior, about 100 miles from the town of Kansas. The object is said to be to form a stopping place for the poorer class of Mormon emigrants, that they may rest and recruit before proceeding to Salt Lake City.

New Orleans.—The fever continues to abate. The first lot of new sugar was brought in on the 3d inst., and sold at five cents. Flour had suddenly fallen $1.25 per bbl.; good Ohio selling at $6.25.

Philadelphia.—Interments last week, 216, of which 9 were from cholera. The number of admissions into the Blockley Almshouse last year was 7012; the average number in the house at one time has been 1828; the average cost of maintenance $1.43 per week for adults, and 1.02 for children.

Gas from Wood.—A series of experiments at the Northern Liberties Gas Works, are said to have demonstrated the advantages of this mode of obtaining gas, which has been latterly adopted in some of the cities of Germany. The process is a patented one, and is said to be simple, though very different from that applied to coal. The new gas burns with a clear sharp steady flame, brighter than coal gas, and produces little if any soot. It is free from the disagreeable odor of the coal gas, its smell more nearly resembling ether, or old and mellow cider. A cord of wood produces more gas than a ton of coal.

Miscellaneous.—The steamer E. K. Collins was destroyed by fire on the night of the 8th inst., whilst on her passage from Detroit to Cleveland. A large number of passengers were on board, most of whom were rescued by the propeller Finney; but twenty-three persons lost their lives either by drowning, or in the flames.

The Texas tornado was more severe at Houston, Lynchburg and San Antonio, than at Galveston, and great destruction was done at those places.

Slavery.—The conference of the Methodist church recently in session at Cincinnati adopted resolutions recommending the repeal of the Fugitive Slave law, the re-enactment of the Missouri Compromise, and "that persons holding slaves for gain, or for their own convenience in any way, with the intention of perpetuating the bondage of the slave, should not be received into the Methodist church, nor suffered to remain therein."

Popery in Ireland.—Last year's return shows a total number of 2466 priests in Ireland. From emigration and other causes they have, it is stated, diminished fully one half in the last six years.

Bears in Canada.—These animals having been driven from the woods by the scarcity of food occasioned by the drought and fires, have of late been numerous in some parts in the open fields. One farmer, it is stated, had lost 29 cattle, carried off by bears; others have suffered in like manner, though not to such an extent.

Steamship Disasters.—These have been alarmingly numerous the present year. The following are the names of those running from ports in the United States, lost within that time:—San Francisco, from New York for California; City of Glasgow, from Liverpool for Philadelphia; Humboldt and Franklin, from Havre for New York; City of Philadelphia, from Liverpool for Philadelphia; and the Arctic, from Liverpool for New York. The loss of life by three of these steamers is probably about one thousand persons. The losses of the others were mostly of property only.

RECEIPTS.

Received from Jesse Hall, agt., O., for F. Davis, Isaac Brown, W. Hall, and Parker Hall, $2 each, vol. 28, for Rachel Miller, $2 to 27, vol. 28; from Dr. W. W. Townsend, Pa., $2, vol. 27; from G. F. Read, agt., for Jos. Nichols, $2, vol. 28, for Rufus Churchill, jr., $2, vol. 28; from John Patten, O., $2 to 27, vol. 28, for Jos. Patten, $2, vol. 28; from Sl. Stephen, Io., $2, vol. 28; from J. Maule, agt., O., for B. Hoyle, jr., $4, vols. 27 and 28; from Geo. M. Eddy, agt., Mass., $2, vol. 28, for Benj. Tucker, T. K. Wilbur, Step. Swift, Job Eddy's est., Lydia Taber, Susan Smith, Mercy Gifford, and F. Taber, jr., $2 each, vol. 28, for J. & S. Tucker, and G. Wilbur, $2 each, vol. 27; from Joel Cook, Md., $2, vol. 28; from J. M. Reeve, $2, vol. 27, W. F. Reeve, $2, vol. 27, Emmor Reeve, $4, vols. 26 and 27.

WEST-TOWN BOARDING-SCHOOL.

The Winter Session of the School will commence on Second-day, the 6th of Eleventh month next. The pupils will be conveyed by railroad to West Chester, where conveyances will be in waiting to take them and their baggage to the School, on the arrival of the morning and afternoon cars, on Second-day, the 6th, and Third-day, the 7th of Eleventh month. The cars will leave the depot, south side of Market street, above Eighteenth street, (formerly Schuylkill Fifth,) at half past 7 o'clock, A. M., and 3 o'clock, P. M. The agent of the School will be at the railroad depot, on Second and Third-day *afternoons*, and will furnish pupils with tickets, and accompany them to West Chester. Those who go by the *morning* train, will be furnished with tickets by a person in attendance. To those who procure tickets as directed, the fare from Philadelphia to the School, including baggage, will be one dollar, which will be charged to the scholar at the School. All baggage should be distinctly marked West-town, and with the name of the owner, and should be sent directly to the railroad depot.

The West-town office is at Friends' bookstore, No. 84 Arch street, where all small packages for the pupils left before 12 o'clock on Seventh-days, will be forwarded. *All letters* for the pupils and others at the School, should be sent by *mail*, directed to *West-town Boarding School, West Chester P. O., Chester Co., Pa.* Postage should be *pre-paid*, and packages should be distinctly marked and put up in a *secure manner*, so that their contents will not be liable to be lost by handling. The cars will leave West Chester during the *Winter Session*, for the School, on Second, Fourth, and Seventh-days, on the arrival of the *morning* cars from the city, and from the School to West Chester, on the same days, to meet the morning cars to Philadelphia. The fare for each passenger to and from West Chester *by the stage*, will be 25 cents. When special conveyances at other times are provided at the School, an extra charge will be made.

West-town, Ninth mo., 1854.

TEACHER WANTED,

A well qualified Teacher to take charge, at the close of the present year, of the "Sheppard School" for Coloured Girls on Randolph street. Applications in writing may be addressed to Edward Richie, Clerk of the Board of Trustees, No. 173 Vine street.

A meeting of "The Female Society of Philadelphia for the Relief and Employment of the Poor," will be held at the "House of Industry," No. 70 N. Seventh street, on Seventh-day, Eleventh mo. 4th, at 3½ o'clock.

Philad., Tenth mo. 17th, 1854.

MARRIED, at Friends' Meeting (Sixth street), on Third-day, the 10th inst., EDWARD SNOWDON, to ANNA J., daughter of the late Joseph Dixon.

——, at Friends' Meeting at Fallsington, on the 12th inst., JONATHAN CHACE, of Philadelphia, to JANE C., daughter of James and Jane Moon, of Bucks co., Pa.

——, at Friends' Meeting-house, Plymouth, Montgomery county, Pa., on Fifth-day, the 12th inst., JOSIAH F. JONES, of Germantown, to HANNAH, daughter of Josiah Albertson, deceased, of the former place.

DIED, on the 3rd of Tenth month, 1854, after a few days' sickness, JOSEPH EVENS, of Cropwell, New Jersey, a beloved member and elder of Upper Evesham Monthly Meeting of Friends, in the eighty-second year of his age. This dear Friend frequently adverted to the death of his wife, which had occurred one year before, and on returning from meeting, (having remarked that day was the anniversary of her burial,) he was seized with paralysis, which deprived him of the power of articulation, and of the use of his limbs generally, though the mental powers seemed unimpaired; he appeared calm and peaceful throughout; and when enabled to speak, he said, "I long to go home." As strength was afforded, he imparted counsel to his children; and was fervent in supplication that if consistent with the Divine will, the work might be finished and cut short in righteousness. Such a holy solemnity covered those around his bed, especially as the close drew near, as afforded to their minds an evidence, that through the mercy of God in Christ Jesus, his purified spirit as it passed quietly and calmly away, was permitted to join that innumerable multitude whose robes have been washed and made white in the blood of the Lamb, in singing the song of the redeemed for ever and ever.

PRINTED BY KITE & WALTON,
No. 3 Ranstead Place, Fourth above Chestnut street.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXVIII. SEVENTH-DAY, TENTH MONTH 28, 1854. NO. 7.

PUBLISHED WEEKLY.

Price two dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 50 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

From the Leisure Hour.

A Glance at the Rise and Progress of the Potter's Art in Britain.

Before entering the manufactory of the potter, and witnessing the manifold operations which centuries of experience have brought to their present degree of perfection, it behoves us, for the better understanding and appreciation of his art and mystery, to take a brief glance at its past history. The trade of the potter is probably as old as any that has ever been practised under the sun. Some of the most ancient relics and remains of thrones and dynasties, which have long since vanished from the earth, consist of specimens of his plodding and peaceful labours; and it is a suggestive reflection, that while the ancient monarchs of the world, the mighty men of renown, who, lured by the lust of conquest, fleshed their swords in the blood of the innocent and defenceless, have been, in fulfilment of the divine threat, "dashed to pieces as the potter's vessel"—the "potter's vessel," the frail and fragile clay modelled by the hand of industry, has survived the very records of their mad ambition, and remains the sole witness of their forgotten glory. The pursuit of the potter is mentioned, and that not as a novelty, by the oldest writers, both inspired and uninspired, whose productions have come down to us. Both Moses and Homer revert to his art by way of illustration, but neither of them supplies any information as to its origin; and we are left free to speculate as we list, both as to the mode and the period in which the natural conveniences afforded by the shells of the sea-shore, the horns of animals, or the outer coverings of the gourd or the nut, were substituted or supplemented by the vessel of clay dried in the sun or baked in the fire. In all probability, the first rude invention was the combined result of necessity and accident. When man first began to subject the flesh of animals to the action of fire, he must have performed the operation upon the bare soil, and he could not have repeated the experiment many times without discovering the fitness of certain kinds of earth for the formation of what must have been so great a desideratum as a water-tight vessel. But we must abandon all such speculations as these, or our limits will be exhausted before we have got to the bottom of a single pot.

It is supposed by some writers that earthen vessels were in use before the construction of even the rudest dwellings, and the supposition seems probable; the fact, that bricks have been discovered of a more ancient date than any pots whose age can be identified, being no proof that earthen vessels were not first formed, since they are so much more perishable. Recent discoveries in America prove that a race long ago extinct and forgotten in that country practised the art of pottery. Indian vases have been dug up on the shore of the Mosquito river, and the remains of ancient potteries have been traced in the Black river; and some of the American antiquities bear witness to an excellence in the art both as to design and manufacture, hardly surpassed in the productions of the present day. Again, in Egypt, the wares of the potter are found deposited with mummies; some of them are glazed with a blue colouring, which is found upon analysis to be produced by oxide of cobalt, the same material used for that purpose at the present day. The Phœnicians, it is well known, exported earthenware and glass vessels to most parts of the then known world, twelve hundred years before the Christian era. They traded with Britain for tin at a very ancient period; and it is conjectured that many rude specimens of urns, beakers, and bowls, dug up in opening barrows in some parts of this country, are Phœnician wares, as they are incontestably not Roman, but of a date long anterior to the Roman invasion. A colony of Phœnicians migrated from Tyre a thousand years before the Christian era, and, settling at the foot of Mount Vesuvius, commenced the manufacture, among other things, of earthen vessels, which they brought to such a state of excellence and perfection as succeeding artists have rarely equalled. They subsequently assumed the name of Etruscans, and from them the Corinthians are supposed to have obtained their skill in the art at a later period.

Although there are yet existing many traces of the skill of the British in the manufacture of pottery, yet, so far as we can ascertain, the oldest pottery in England, unquestionably such, of which any vestiges yet remain, was assuredly Roman. About two leagues from the shore of the Isle of Thanet, in a part of the Margate Roads called the Queen's Channel, there is a shoal known by the characteristic name of the "Pudding-pan Sand," and doubtless so called from the fact, that there, numbers of earthenware vessels of a rude shape and rough material have been repeatedly fished up by the nets of fishermen, most of them bearing impressed upon them the Roman name *Attilianus*. It was at first thought that these wares must have constituted the freight of a Roman vessel which foundered or was wrecked upon the spot; but this conjecture was abandoned when the nets of the fishermen subsequently brought up bricks cemented together, showing plainly that a building must have existed there at a former period. Reference was then made to Ptolemy's Geography, and it was found that a small island once occupied the site, which must have been afterwards submerged by the sea. The fact, therefore, would appear to be established that a pottery stood upon the island, and was managed and owned by Attilianus. It is said that Wedgwood, the first of the Staffordshire potters who marked his goods with his own name, took the hint from the ancient Roman.

Coming down to modern times, the continental nations appear to have taken the lead in the production of first-class pottery; the Venetians, the Germans, the French, and the Hollanders having attained to a high degree of excellence before the English were in a condition to rival them. Notwithstanding the claims made by some of the local historians of Staffordshire for the antiquity of the practice of the art in their district, it appears to us that it is not satisfactorily traced to a period even so far remote as three centuries ago; that is to say, not as an art peculiar to the locality, and as affording the means of subsistence to the inhabitants. There is reason for believing that even so late as the latter part of the seventeenth century, the pottery district was confined within the immediate neighbourhood of the then small town of Burslem, which at that period was famous for the manufacture of its butter-pots, a coarse, cylindrical, unglazed vessel, used for the package of butter for the London and other markets, and made from the clay dug on the spot. Though the business carried on in the potteries at the present moment comprises every branch in the manufacture of earthenware goods, from the lowest and commonest ware of the cottager to the most exquisite and artistic productions fitted to adorn the palace of the sovereign; and though the goods there manufactured traverse the ocean in every direction, and are found for sale in almost every civilized market in the world; yet the vast improvement shown in the power of production, and the immense commerce which has resulted from it, may be considered as having sprung into existence from a comparatively insignificant germ, within little more than the last hundred years. There can be little doubt that the earliest practice of the potter's art in Staffordshire owed its rise as much to the necessities of the inhabitants as to the facilities afforded to the manufacture by the soil. The northern part of this county, consisting of a soil having chiefly a clay bottom, responded but scantily to the labours of the husbandman, and its remoteness from the seats of commerce rendered the demand for labour depressingly low. The abundance of fine clays of various hues and textures, naturally suggested to a people shut out from profitable employment the idea of turning these materials to account. The cheapness of coal, too, which some two or three centuries ago was as low as a shilling a ton, offered the means necessary to pursue the manufacture of earthenware. Further, the marl for making fire-brick and "saggers" (supposed to be a corruption of the word "safe-guards,") or cases in which earthenware is burnt in the kiln, being everywhere easily attainable, all the requisites for the manufacture of a simple kind of ware were at hand. The trade thus born of necessity was carried on in a ratio corresponding with the simple wants of the inhabitants for a long series of years. Up to nearly the close of the seventeenth century, however, though the trade had for many generations afforded the means of support to the numerous families engaged in it, the quantity of goods manufactured was so inconsiderable that they were nearly all disposed of to needy hawkers, who carried them on their backs all over the country. "At that period," says a contemporary historian, "a potter's oven was ordinarily about eight feet high, and six feet wide, of a round coped form;" this oven or kiln was shel-

tered round about with a wall of clods and broken pots, or old saggers, and roofed over with boughs and sods—very different from the kiln of the present day, as we shall see by-and-by. The Staffordshire ware was then of the coarse yellow, red, black, and mottled kinds, made from the clays found in the neighbourhood—its body being formed of the inferior sorts of clay, and afterwards coated with those of a finer colour or texture, mixed with water and blended together, producing an ornamental surface resembling some kinds of marble-paper. The common glaze was produced by lead ore finely pulverized and sprinkled on the pieces of ware before firing; sometimes with the addition of a little manganese for the sake of the brown colour it communicates; and sometimes, by way of improvement, the potters used calcined lead instead of lead ore, but sprinkled on in the same inartistical manner.

When William of Orange freed this land from the peril of impending popery, and drove the recreant James the Second for shelter to the court of France, he opened England to the enterprise of his countrymen. Among others who came over to try their fortunes, two brothers of the name of Elers found their way from Holland to the north of Staffordshire. It was about the year 1690 that they established a pottery at Bradwell in the neighbourhood of Burslem. They introduced a new kind of glaze, which they effected by casting into the kiln when the fire was at its greatest heat a quantity of common salt, which occasioned a superficial vitrification of the clay. These Hollanders astonished the natives of Staffordshire still further by the production of another species of ware in imitation of the unglazed red china from the east; and they arrived at such a degree of excellence that some of their tea-pots sold at the price of a guinea each. They introduced also a black variety obtained by the addition of manganese to their clays. Their skill in their art is attested by the specimens of their labours which yet remain. The Elers subsequently fled from the inquisitive spirit of the Staffordshire men, but not before, in spite of all their precautions—and they used many—their secret had been furtively abstracted from them, and they had been compelled unwillingly to furnish instruction to their rivals in trade. The story goes, that an unscrupulous workman feigned himself a drivelling idiot, and having thus got access to their works, took careful note of their proceedings, and having obtained the desiderated knowledge, communicated it to his employers. The Elers removed to the neighbourhood of London, but leaving behind them the secret they so much wished to guard. The new glaze with salt was speedily succeeded by most important improvements in the composition of the ware itself: the art of mixing different kinds of clays together and in combination with other materials began to be practised and understood; but it was mainly to the introduction of flint, as an element in the composition of pottery, that the advance of the art was due. This took place about the year 1720, when Mr. Astbury, a potter, of Shelton, stopping on his journey to London at an inn at Dunstable, happened to notice the close and delicate texture of some burnt flint-stone when mixed with water, which had been prepared by the ostler of the inn as a remedy for the diseased eye of his horse. He immediately conceived the idea of mixing it with clay for the purposes of his trade, and upon making the experiment it was found to succeed beyond his expectations. At first, having calcined the flint, he pounded it to powder in a mortar; but this process was found too tedious when ground flint became generally in demand. A wind-mill was erected by Brindley for the purpose of grinding it in a dry state, and he altered and adapted water-mills to the same use. The dry grinding of flint was practised for above forty years, notwithstanding that the operation was so fatal to those engaged in it, owing to the particles of flint which they inhaled, that they were seldom known to survive the second year of their engagement. It was not till 1771, when Wedgwood was in the height of his prosperity, that the practice obtained of grinding the flint with water—a suggestion originating with a plumber and glazier, named Benson, and by the adoption of which the danger and the mortality were avoided.

(To be concluded.)

Solidified Milk.

The last number of the American Medical Monthly contains an account of a visit made by a committee of medical gentlemen appointed by the New York Academy of Medicine, to the establishment of Mr. Blatchford, at Armenia, N. Y. (some thirty miles east of Poughkeepsie) where "solidified milk" is prepared. If the opinions expressed in the article referred to, respecting the value of this new description of food, are well founded, the juvenile population, at least, of this city, may indulge in hearty self-congratulations; for "swill milk" has already committed appalling ravages in their ranks. The editor describes the process of solidification as follows:—

To 112 lbs. of milk, 28 lbs. of Stuart's white sugar, were added, and a trivial proportion of bicarbonate of soda, a teaspoonful, merely enough to ensure the neutralizing of any acidity, which in the summer season is exhibited, even a few minutes after milking, although inappreciable to the organs of taste. The sweet milk was poured into evaporating pans of enamelled iron, embedded in warm water heated by steam. A thermometer was immersed in each of these water baths, that by frequent inspection, the temperature might not rise above the point which years of experience have shown advisable.

To facilitate the evaporation, by means of blowers and other ingenious apparatus, a current of air is established between the covers of the pans and the solidifying milk. Connected with the steam engine is an arrangement for stirrers, for agitating the milk slightly whilst evaporating, and so gently as not to *churn* it. In about three hours the milk and sugar assumed a pasty consistency, and delighted the palates of all present. By constant manipulating and warming, it was reduced to a rich, creamy looking powder; then exposed to the air to cool, weighed into parcels of a pound each, and by a press, with the force of a ton or two, made to assume the compact form of a tablet (the size of a small brick) in which shape, covered with tin foil, it is presented to the public.

Some of the solidified milk which had been grated and dissolved in water the evening previous, was found covered with a rich cream. This, skimmed off, was soon converted into excellent butter. Another solution was speedily converted into wine whey, by a treatment precisely similar to that employed in using ordinary milk. It fully equalled the expectations of all, so that solidified milk will hereafter rank among the necessary appendages of the sick room. In fine, this article makes paps, custards, puddings and cakes, equal to the best milk; and one may be sure it is an unadulterated article, obtained from well pastured cattle, and not the produce of distillery slops; neither can it be watered.

For our steamships, our packets, for those travelling by land or by sea, for hotel purposes, or use in private families, for young or old, we recommend it cordially, as a substitute for fresh milk.

We look with interest for the scientific report of the committee of the Academy of Medicine, in which we hope for an exposition of the domestic, culinary, and hygienic properties of solidified milk.

Wool Growing in South Carolina. — The Charleston Mercury says that the experiment of rearing fine breeds of sheep, for wool, in the upper part of South Carolina, promises to be completely successful. J. D. Wagener, R. F. Simpson, and other gentlemen in Pickens have engaged in it, and they seem to have established the facts that sheep flourish in that region remarkably well, that they can be raised at trifling cost compared with that of the wool growing regions of the North, and that the quality of the wool of the choice European breeds does not degenerate. Mr. Wagener has taken an active part in this enterprise, and has imported a stock of the famous Saxon sheep, which is found to thrive well in Pickens. Specimens of wool of his raising were transmitted to one of the largest manufacturers of New England, who pronounced a most favourable judgment on them, and rated them at the top of the market. The Mercury attaches no slight importance to the introduction of wool-growing in the upper districts, which, properly followed up, will prove a source of wealth to that part of the State.

"A man may for years engross a considerable share of public attention, and enunciate his opinions to large and gaping audiences, and with voluminous pamphlets, and iterate interminable speeches, and yet, after all this, effect slight amount of tangible good. The results of his life may bear no comparison with those achieved by an earnest-minded honest-hearted person, moving in a limited sphere, and dwelling in comparative seclusion. Apt similitudes, and flowing sentences are forgotten. Deeds remain. It is the persevering labour that adds to the comfort of the community. It is the working bee who augments the resources of the hive."

Things to think about.—Congress, at the session which has just terminated, appropriated upwards of sixty-seven millions of dollars, of the money of the people. We are at peace with all the world, yet between twenty-four and twenty-five millions of this sum has been devoted to the public defence: say—

For the army, 10,375,000; for the navy, 9,851,000; for West Point, 140,000; for fortifications, 964,000; and for building steam war vessels, 3,000,000.

While for agricultural purposes there was not appropriated *one solitary cent!* Yet, every body knows what a large number of the tax-payers, who contributed to this sixty-seven millions, are *agriculturists.*—*Germ. Tel.*

Glass Bricks.—Among the more recent inventions patented by manufacturers, we hear of one by Mr. Summerfield, of the glass works, Birmingham Heath, England, for what are termed chromatic glass, or glass-faced grooved bricks. By Mr. Summerfield's process, red or any other clay can be combined with glass, and this will secure durability, entire resistance to moisture, and give an ornamental appearance to the building. The form of the brick is, also, by means of a groove at the side and end, made so as to add greatly to the strength of the erection, the joints by this means being brought so close together, and the mortar acts as a dowell from the shape of the groove.—*Lond. Builder.*

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 45.)

ESTHER COOPER.

Of this Friend we know little, except that she was in good standing amongst the valuable ministers of her day, and one who was concerned to be found faithful in the exercise of the gift committed to her. At what time she came forth in the ministry we know not, but she had a portion of trial to fit her for the work. Her husband was one who went into the separation with George Keith, and whose estrangement from Friends must have been cause of great concern to her. But he was restored, and perhaps the testimony which he gave against himself may have sufficient historical importance to merit a place here.

"Dear Friends,—I am constrained to give forth this testimony against myself, for caution to others, desiring that none may be tossed to and fro, as I have been, sometimes holding this opinion, sometimes that opinion, and sometimes neither.

"O Friends, how have I been hurried from mountain to hill in self-conceited imaginations, and in the exaltation of that serpentine wisdom in which I strove furiously in the dark night of apostacy that has been over me, vainly endeavouring to overturn the way and work of the Lord. In this 'blackness of darkness,' I find I was a wanderer from the presence of God, and subject to all the twistings of Satan. But blessed be the Lord who hath once more extended his rod of correction in mercy, and hath not left my soul in hell, but has let me see my dangerous condition. Glory to his holy name for ever! Now, Friends, I do assure you that for a time I thought myself safe, and in that time I abused Friends and the Truth, with all the calumnies and opprobrious speeches and actions I could invent, being persuaded by the devil and his agents, that I did well. In so doing, I neither spared cost nor pains. But blessed be the Lord who found me out in the height and full career of these blind and wicked practices. That very day I read that paper* so irreverently before a great congregation there met and gathered to worship the Lord. To the grief of my heart I remember with what rigour I introduced it in the window where I stood. When I had so done, people being gathered in the streets of Burlington into many companies disputing, and I as hot as any, having some respite, I went into George Hutchinson's house, and to George Keith in a chamber there, where I found him alone. Now said I, 'George, why art thou here, and we are at war in the streets.' He answered, knocking one hand upon another, 'I have done with them, and I hope, when we die, they and I shall not both go to the same place.' These words, at that very instant, struck such amazement upon me, that I trembled, saying within myself, he hopes well for himself, but bad for them, surely this man wants charity."

"I say in the presence of God, and in the sincerity of my heart, I am truly sorrowful for my outgoing, and I do condemn, and let it be condemned, all and everything that I have been concerned in, wherein the truth of God hath suffered or his people. Particularly the late separation with all the whimseys, and notions thereof, and all the writing and printing of that kind, and all the scandalizing and laying open friends and brethren, whether true or false, as knowing it unchristian;—with all those revolution-doctrines,* and non-belief of the perpetuity of the damned in hell. I desire that the Lord may forgive me; and blessed be his eternal name, I feel in measure that he hath. He hath seen my exercises, and given ear to my cry, when no eye saw me but his alone. Blessed be his name for ever. I can say he hath once more given me an earnest of his love, otherwise I had sank under the weight of my burden. O he hath let me feel his rod which hath driven me to make this confession. I have not done it of my own will, neither am I driven (thereto) by others. Glory to his name for ever, can my soul truly say. Friends, I can say to the praise of God, and in behalf of the Truth, that I have felt the ancient arm of love to the refreshment of my soul, since I set my face homewards again, at times; but in an especial manner in this great assembly, (wherein) the Lord made me willing to take shame to myself that he might have the praise, and truth be cleared. O Friends, take it from one that speaks his experience, and can say the overshadowing love of God is *wanting* amongst those that are gone from you, notwithstanding their boasting. What shall I say, this is the truth, and there is not another, and the panting of my soul is that the Lord may bring out many more, as he hath me, many of whom I know [departed] through me, and with me fell into the pit or gulf. God forgive me, for being so forward an instrument in that wicked work, which produced such bad effects, and protect me with his holy protection from henceforth. Friends, great hath been my exercise, since the Lord drove me home again, all which I took patiently, knowing my deserts.

"Now, Friends, that you will forgive and forget as much as in you lies, all that I have acted, spoken, or done against the truth of God, or his people in general, and against any particular Friends; some of which are *gone* to their own home. O I desire when I finish my course, my soul may rest with their's, and I desire I may be received into the unity of the church. Your distressed brother, JAMES COOPER, Jr."

"Philad., 19th of Seventh mo., 1695."

This paper was presented by James Cooper to the Yearly Meeting held in Philadelphia, and the reception of it was minuted. He afterwards became a useful member of the Monthly Meeting of Philadelphia, and one in good repute.

Esther Cooper was much made use of in the discipline of our religious Society, and we can trace some of her labours in the ministry. In the Seventh month, 1701, she was set at liberty to visit the meetings of Friends in Maryland and Virginia, and a valuable minister, named Elizabeth Key, bore her company. In the Third month, 1704, she had the unity of her friends in a prospect of service about Egg Harbour, and again she had Elizabeth Key for her companion. She appears to have frequently visited the meetings near Philadelphia. We find her with another fellow labourer in the gospel, Mary Lawson, visiting the meetings at Plymouth, Byberry, Abington, and Frankford—with Martha Chalkley, at Germantown, Gwynned, and Abington. We can trace her at these meetings many times, sometimes, having the company of Hugh Durborough, sometimes of his wife Elizabeth, sometimes of George Gray, sometimes of Sarah Goodson, all of whom were ministers in good esteem. We can follow her in her labours of love until about the middle of the year 1706, after which our only trace of her is this short minute.

"Esther Cooper, wife of James Cooper, departed this life, the 13th of the Tenth mo. 1706. She was raised in testimony here."

* This paper was a challenge from George Keith to the Yearly Meeting then sitting at Burlington, to hear "an appeal" which he had printed. James Cooper, although the door of the meeting-house was open, climbed up into one of the windows, and read part of it whilst that ancient and honourable Friend, Thomas Janney, was at prayer. This act he might well call irreverent.

* George Keith's doctrine of transmigration of souls.

From the Edinburgh Review.

European Emigration to the United States.

Nations, like individuals, have their times for self-examination, when they pause, survey their positions, glance back upon the past, study the lessons of experience, and gird themselves up for the future. In the summer of 1850, about a year before the last enumeration of the population of Great Britain and Ireland, the marshals of the United States of America were occupied simultaneously throughout the Republic in ascertaining the number, colour, nativity, sex, occupation, habits, and wealth of its scattered population, and in collecting information concerning its resources. The full results of this work still rest in the official receptacles; but the Report of the Superintendent, made in December, 1852, gives an abstract of what the "Seventh Census" will be when finished. The complete work, for some unknown cause, is yet unpublished.

A large part of Mr. Kennedy's Report is occupied with the subject of the Foreign Immigration into the United States. Although incomplete and sometimes, we believe, inaccurate, it furnishes the means for arriving at conclusions as to what has been and is, and gives us grounds for speculation as to what will be.

Most readers are familiar with the chart prefixed to modern editions of "Gibbon's Decline and Fall," exhibiting the march of the barbarian tribes upon Rome. The exaggerations of the press have accustomed us to speak of the modern "exodus" from famine, want, and plethora of labour, as if it were a similar movement. As ship after ship leaves Liverpool, London, Havre, Rotterdam, Hamburg, and Bremen, crowded with emigrants for America, we picture that country yielding itself a prey to an ignorant peasantry. We see them in imagination transferred to its shores and invested, by the magic of an oath, with the attributes of citizenship; and we turn with sorrow from the contemplation of the probable annihilation of the principles of Constitutionalism in the clashing with Democracy. Nothing can be more unfounded than such fears.

The United States census of 1790, taken before any acquisition of territory, exhibited a population of 3,221,930 freemen, and 697,897 slaves. There were then thirteen states, in twelve of which, it appears, that slavery existed; its feeble life in New York, New Jersey, Pennsylvania, Connecticut, and Rhode Island, has long since been extinguished. In 1803, the French province of Louisiana, including most of the country west of the Mississippi, was added to the Union. Florida was purchased from Spain in 1819; Texas was annexed in 1844; and New Mexico and California acquired by conquest and treaty in 1848. Five slave states, two free states, and six territories, have been created out of all this country. Two new free states have also been admitted to the Union from the territory of New England since the formation of the Federation, and five free and four slave states from the country west of the Alleghanies assigned to the Republic by the treaty of 1783; thus making in all, at present, sixteen free states, with 142 representatives in Congress, and 32 senators; and fifteen slave states, with 91 representatives and 30 senators.

The total population of the United States, in 1850, was over 23,000,000; of which nearly

18,000,000 were native whites, over 2,000,000 foreign born, 39,000 were of unknown nativities, and 3,200,000 were slaves. It appears that, between 1840 and 1850, 1,569,850 foreigners arrived in the United States; from whence we should conclude, even in the absence of other evidence, that the emigration before 1840 was comparatively small. It began, on a large scale, only in 1847. From 1820 to 1830, the average number arriving was only 20,000 a-year; from 1830 to 1846, about 70,000 a-year. In 1847, the famine desolated Ireland; and the revolutions on the continent, which unsettled the channels of labour, followed the next year. The immigration increased, under the pressure, to 240,000 in 1847, and to 300,000 in 1850; and it is now estimated at the Census Office, that "the total number of immigrants into the United States since 1790, living in 1850, together with descendants, amounted to 4,304,416," which we shall assume to be the complete foreign addition to the population of the country between 1790 and 1850.

All this has, and is to have, a great effect upon the relations between slave and free labour. The free coloured population appears to have increased 10.96 per cent. during the decade just past; the slave population, 28.81 per cent; and the whites, 38.28 per cent.

The regular decrease in the augmentation of the free blacks, is one of the remarkable features of the progress of races in America. From 1790 to 1810, the Northern States, under the influence of climate and the spirit of freedom engendered by the revolution, were emancipating, or preparing to emancipate, their slaves; and the ratio of increase of the free coloured population consequently greatly exceeded that of the whites or slaves. The following decade the per centage diminished; but was increased again, from 1820 to 1830, by the entire abolition of slavery in New York, and a large emancipation in New Jersey, Maryland, and Virginia. In the succeeding decade it fell off again; and, in the last, as we see, it fails to reach 11 per cent.; and this, notwithstanding the manumission of 1,500 and the flight of 1,000 slaves a-year; if the year 1850, for which alone returns on this head are made, be an example of the general course of things. In some of the States—New York, for instance—the number has actually diminished; in others—like the New England states—it has done little more than remain stationary; while in others, on the Canada borders, and with stong abolition sympathies—Michigan and Ohio, for instance—it has decidedly increased.

There can be but one solution to this—the degraded social position into which the negro is forced by the prejudices of the whites of the North, and particularly of European immigrants. There is no physical reason why the black race should not increase as fast, and faster even, than the white. The experience of the slave States proves this, where, in spite of a degradation for which no amount of personal comfort can compensate, they faithfully fulfil the Divine command to "multiply and replenish the earth."

In Massachusetts, they would seem to have everything in their favour—freedom, plenty of work, equality of laws and rights; and yet his family has increased only 4.5 per cent. in the ten years. The truth is, the free negro in the United States, with all his freedom and political equality, has no reality of either. His colour stamps him for ever in unjust popular prejudice, which is stronger than law, with the caste of labourer; and not labourer alone, but degraded labourer, whose mother, and brother, and cousin are slaves, and who ought to be one himself; and, if the truth must be told, all this makes Sambo rather a good-for-nothing fellow. He neglects his family, is unthrifty, gets behind-hand, and before long finds himself quite at the foot of the social ladder. Meanwhile Pat has been coming in from Ireland, and has stepped over him; and, in astonishment at finding somebody underneath himself, he becomes the worst tyrant that the poor black has to endure. The inveterate dislike of an Irishman to a negro is as well known as it is remarkable.

But, while the free black of the North, in spite of his theoretically better condition, has barely held his own in some of the States, his southern cousin has been increasing his family at a great rate. Whether it be that, with plenty to eat, and, in the absence of care, his shackles sit lightly on him, or whether it be that he stifles his sorrows in domestic pleasures, we do not stop to inquire. It appears that, from some cause, the natural increase of the slaves has been as great, and greater even, than that of the whites; so that, without foreign immigration, the relative numbers of the two races, and the relative weight of the two sections of the Union, would not have been materially changed in the sixty years. We do not take into account the trifling difference in the proportion made directly by the acquisition of territory, as the total number of slaves and freemen was small in each case at the time of the annexation, and the effect upon the general result was more than balanced by the abolition of slavery in the North. Annexation has undoubtedly strengthened the "institution," by giving it new States to govern and new fields to cultivate; but not essentially by an actual addition to the number of slaves. Neither do we take into special account the larger per centage of the slave increase from 1800 to 1810, created by the prospective abolition of the slave trade in 1808; because the proportion of slaves to whites of native descent, in 1810, was almost exactly the same as in 1850. In 1800 the proportion was as 1 to 4.94; in 1810 as 1 to 4.78; and in 1850 as 1 to 4.76, deducting in each case the number of immigrants and descendants of immigrants since 1790 from the total white population. This great increase of a population held unjustly in a state of bondage, with freedom and activity all around them, is a remarkable feature in history, and suggests the possibility at some future day of an attempt at a forcible reclaimer of their rights, when they shall decidedly outnumber their masters. If such a struggle should ever come, it would be short-lived and deadly, and could terminate only in the annihilation of the weaker black.

Before 1794 it seemed that this species of labour was about to die out in the natural course of events. In three of the northern states it had perished; in five more it lived only upon sufferance; and in the South public sentiment would have abolished it if a feasible way had been proposed. Whitney then invented the cotton-gin; and the export of cotton, in 1793 less than five hundred thousand pounds, trebled in 1794, increased to six millions in 1795, reached eighteen millions in 1800, two hundred and eighty millions in 1830, and nine hundred and twenty-seven millions in 1850. African bondage became profitable. The planters of Alabama, Mississippi, Georgia, and the Carolinas, bear the sin before the world; but Liverpool, Lowell, Manchester, and New York, furnish the money which prolongs and extends the system.

In spite of these influences so favourable to slavery, the foreign immigration is gradually affecting the balance of power in the Federation. In 1800 the total population of the slave states was 48 per cent. of that of the Union, and their representation was 45 per cent. of the House. In 1830 they had 45 per cent. of the population, and 41 per cent. of the representation; and in 1850 but 41 per cent. of the former, and 39 per cent. of the latter. It requires no prophet to foresee that the same disturbing causes will continue as long as the peasants and artizans of Europe can command cheap homes, high wages, and an improved social position in the New World as easily as they now do.

(To be continued.)

The famed Mocha Coffee.

Mocha has for over fifty years been the principal seat of the coffee trade of Yemen, although Aden is now entering upon a successful rivalry for the eminence which a monopoly of this branch of eastern commerce might give to any seaport that can secure it. Coffee began to be a common beverage in Arabia about the beginning of the fifteenth century, and the Arabians have since sedulously cultivated and jealously prohibited the exportation of this native plant of Yemen. It has however been introduced from here into other countries without the anticipated injury to the wealth and property of Arabia, as Mocha coffee is still regarded the most excellent and expensive coffee cultivated.

The coffee plant grows sixteen or eighteen feet high, with an upright stem covered with a little brown bark. Its branches grow horizontally and opposite, crossing each other, and form a pyramidical appearance. The leaves grow on the opposite side of the branches, to the length of four or five inches, and to half that width in the middle. The flowers, growing in bunches at the junction of the leaves, are white, maturing first into green, then red berries, resembling bunches of cherries, each of which contain two kernels. But one crop is annually produced, which is gathered in the months of January and February. For the purpose of being dried in the sun, the gathered coffee is spread on the house-tops, or cleared spaces of ground, where it is frequently watered to open the koke, or shell, which is always separated by grinding before packing. The coffee raised at Annas and Sana, which is held in the best estimation, is generally dried upon temporary floors, covered with a compost of clay and cow ordure, which protects the coffee from vermin, and also gives it a permanent yellowish colour. How perceptibly such a compost may affect the taste of the coffee would doubtless be a matter of inquiry with the tidy, cowloving Hindu housewife, who uses a solution of it to purify her parlours, ornament her walls and door-ways, and for numerous other purposes.

Large quantities of coffee arrive at Mocha, from March to the latter part of July, from the coffee districts within twenty days' journey. Camels are employed in its transportation, each of which carries about six hundred pounds, contained in two sacks. They are driven in long trains of fifty or more, arranged one behind another, the head of each being tied to the tail of the camel immediately before him. Thus arranged but few drivers are necessary.

All coffee from the country is first taken to the custom-house, a large building 150 feet square, near the sea gate, where it is stored to be inspected by the governor, who visits the custom-house daily. Here, also, the duties are fixed, at the rate of seven per cent. On Arabian exports and imports, two and a half per cent. on English, and three per cent. on American imports. A double duty is imposed on smuggled goods. From the custom-house the coffee is taken to the gowdowns

or warehouses of the merchants, several of which are attached to the walls of the custom-house and rented by the government. There it undergoes the process of being cleared from pebbles and dirt by means of sieves. Those who do this tedious work of garbling, though expert in their calling, earn but the value of five or six cents daily, a portion of which earnings is paid to one of their number who acts as their overseer, and to whom the purchaser must complain if he has any fault to find. An active man may garble two or three bales in a day, and a smart woman half as much. Having been cleaned, the coffee is packed in bags for exportation, and if good, should be free from white and black kernels, and have an aromatic smell.

But few Arabs, and those of the wealthier class, indulge as a general habit in the luxury of coffee. It has often been disputed whether coffee does not come under the prohibition of the Koran, which forbids the use of strong and inebriating liquors, as it is a well known fact that the fumes of coffee have some effect on the imagination. Its use is, however, generally tolerated, and many Arabs say "that a dish of coffee and a pipe of tobacco are a complete entertainment." They drink it without either milk or sugar, after it has been pounded fine in a mortar and then steeped. All classes use a very palatable beverage made from the koke, or coffee shell, which goes by the name of *kawha*. It can be obtained at the numerous and much frequented coffee shops, where

Well seasoned bowls the gossip's spirits raise,

for half a cent a quart.—*George Creamer's Notes of Travels.*

OMENS.

Poict. I hope we shall have another good day to-morrow, for the clouds are red in the west.

Phys. I have no doubt of it, for the red has a tint of purple.

Hal. Do you know why this tint portends fine weather?

Phys. The air, when dry, I believe, refracts more red, or heat-making, rays; and as dry air is not perfectly transparent, they are again reflected in the horizon. I have observed generally a coppery or yellow sunset to foretel rain; but, as an indication of wet weather approaching, nothing is more certain than a halo round the moon, which is produced by the precipitated water; and the larger the circle, the nearer the clouds, and, consequently, the more ready to fall.

Hal. I have often observed that the old proverb is correct—

A rainbow in the morning is the shepherd's warning:
A rainbow at night is the shepherd's delight.

Can you explain this omen?

Phys. A rainbow can only occur when the clouds containing, or depositing the rain, are opposite to the sun,—and in the evening the rainbow is in the east, and in the morning in the west; and as our heavy rains, in this climate, [England] are usually brought by the westerly wind, a westerly wind indicates that the bad weather is on the road, by the wind, to us; whereas the rainbow in the east proves that the rain in these clouds is passing from us.

Poict. I have often observed that when the swallows fly high, fine weather is to be expected or continued; but when they fly low, and close to the ground, rain is almost surely approaching. Can you account for this?

Hal. Swallows follow the flies and gnats, and flies and gnats usually delight in warm strata of air; and, as warm air is lighter, and usually moister than cold air, when the warm strata of air are higher, there is less chance of moisture being thrown down from them by the mixture with cold air; but when the warm and moist air is close to the surface, it is almost certain that, as the cold air flows down into it, a deposition of water will take place.

Poict. I have often seen sea-gulls assemble on the land, and have almost always observed that very stormy and rainy weather was approaching. I conclude that these animals, sensible of a current of air approaching from the ocean, retire to the land to shelter themselves from the storm.

Orn. No such thing. The storm is their element; and the little petrel enjoys the heaviest gale, because, living on the smaller sea insects, he is sure to find his food in the spray of a heavy wave, and you may see him flitting above the edge of the highest surge. I believe that the reason of this migration of sea-gulls, and other sea birds to the land, is their security of finding food; and they may be observed, at this time, feeding greedily on the earth worms and larvæ, driven out of the ground by severe floods; and the fish, on which they prey in fine weather in the sea, leave the surface and go deeper in storms. The search after food, as we agreed on a former occasion, is the principal cause why animals change their places. The different tribes of the wading birds always migrate when rain is about to take place. . . . The vulture, upon the same principle, follows armies; and I have no doubt that the augury of the ancients was a good deal founded upon the observation of the instincts of birds. There are many superstitions of the vulgar owing to the same source. For anglers, in spring, it is always unlucky to see single magpies, but *two* may be always regarded as a favourable omen; and the reason is, that in cold and stormy weather one magpie alone leaves the nest in search of food, the other remaining sitting upon the eggs or the young ones; but when two go out together, it is only when the weather is warm and mild, and favourable for fishing.

Poict. The singular connections of causes and effects, to which you have just referred, make superstition less to be wondered at, particularly amongst the vulgar; and when two facts, naturally unconnected, have been accidentally coincident, it is not singular that this coincidence should have been observed and registered, and that omens of the most absurd kind should be trusted in. In the west of England half a century ago, a particular hollow noise on the sea coast was referred to a spirit or goblin, called Bucca, and was supposed to foretell a shipwreck: the philosopher knows that sound travels much faster than currents in the air, and the sound always foretold the approach of a very heavy storm, which seldom takes place on that wild and rocky coast, without a shipwreck on some part of its extensive shores, surrounded by the Atlantic.

Phys. All the instances of omens you have mentioned are founded on reason; but how can you explain such absurdities as Friday being an unlucky day, the terror of spilling salt, or meeting an old woman? I knew a man of very high dignity, who was exceedingly moved by these omens, and who never went out shooting without a bittern's claw fastened to his button-hole by a ribbon, which he thought insured him good luck.

Poict. These, as well as the omens of death-watches, dreams, &c., are for the most part founded upon some accidental coincidence; but spilling of salt, on an uncommon occasion, may, as I have known it, arise from a disposition to apoplexy, shown by an incipient numbness in the hand, and may be a fatal symptom; and persons, dispirited by bad omens, sometimes prepare the way for evil fortune; for confidence in success is a great means of insuring it. . . . .

Hal. I have in life met with a few things which I found it impossible to explain, either by chance coincidences or by natural connections; and I have known minds of a very superior class affected by them—persons in the habit of reasoning deeply and profoundly.

Phys. In my opinion, profound minds are the most likely to think lightly of the resources of human reason; and it is the pert superficial thinker who is generally strongest in every kind of unbelief. The deep philosopher sees chains of causes and effects so wonderfully and strangely linked together, that he is usually the last person to decide upon the impossibility of any two series of events being independent of each other; and in science, so many natural miracles, as it were, have been brought to light—such as the fall of stones from meteors in the atmosphere, the disarming a thunder cloud by a metallic point, the production of fire from ice by a metal white as silver, and the referring certain laws of motion of the sea to the moon—that the physical inquirer is seldom disposed to assert, confidently, on any abstruse subjects belonging to the order of natural things, and still less so on those relating to the more mysterious relations of moral events and intellectual natures.—*H. Davy.*

The Chinese Yam has been introduced in Paris, from China, which the chemists and experimentists say possesses all the requirements of the potato, and may take the place of that plant as a culinary vegetable.

Selected

GLORY TO GOD ALONE.

Oh loved! but not enough—though dearer far
Than self and its most loved enjoyments are;
None duly loves thee, but who, nobly free
From sensual objects, finds his all in thee.

Glory of God! thou stranger here below,
Whom man nor knows, nor feels a wish to know;
Our faith and reason are both shock'd to find
Man in the post of honour—Thee behind.

Reason exclaims—"Let every creature fall,
Ashamed, abased, before the Lord of all;"
And faith, o'erwhelm'd with such a dazzling blaze,
Feebly describes the beauty she surveys.

Yet man, dim-sighted man, and rash as blind,
Deaf to the dictates of his better mind,
In frantic competition dares the skies,
And claims precedence of the only wise.

Oh lost in vanity, till once self-known!
Nothing is great, or good, but God alone;
When thou shalt stand before his awful face,
Then, at the last, thy pride shall know his place.

Glorious, Almighty, First, and without end!
When wilt thou melt the mountains and descend?
When wilt thou shoot abroad thy conquering rays,
And teach these atoms, thou hast made, thy praise?

Thy glory is the sweetest heaven I feel;
And, if I seek it with too fierce a zeal,
Thy love, triumphant o'er a selfish will,
Taught me the passion, and inspires it still.

My reason, all my faculties, unite,
To make thy glory their supreme delight;
Forbid it, fountain of my brightest days,
That I should rob thee, and usurp thy praise!

My soul! rest happy in thy low estate,
Nor hope, nor wish, to be esteem'd or great;
To take the impression of a will divine,
Be that thy glory, and those riches thine.

Confess him righteous in his just decrees,
Love what he loves, and let his pleasure please;
Die daily; from the touch of sin recede;
Then thou hast crown'd him, and he reigns indeed.

Cowper.

From the British Friend.

An Epistle to my dear friends in the Truth, everywhere, who have obtained precious faith through the righteousness of God, and our Saviour Jesus Christ.

"Out of the abundance of the heart the mouth speaketh," and I am about to utter, as I can, the thoughts that arise :—Ye see the distress we are in, through degeneracy, as a religious society; we who were, in the morning of our day, as the planting of the Lord, and whom He would have made like the remnant of Jacob, spoken of by the prophet Micah, as "a dew in the midst of many people."

My spirit mourneth that those who prefer Jerusalem above their chief joy, are so few and so far separated from each other, that their voice is hardly heard amidst all the shakings that are in the earth. But thanks be unto God, this little remnant, though unknown to each other in the body, are well known by the Chief Shepherd of the sheep. To them the promises of God in Christ Jesus are yea and amen for ever! He will bring about His own gracious purposes, and will make of a little one a thousand, and of a small one a strong nation.

Strength consists in purity of heart, the result of repentance towards God, and faith towards our Lord Jesus Christ, in the full reception of Him who died for us, and operates within us, to purify us unto himself. Ye hear the Lord's voice calling unto his people to yield obedience to the power and the teachings of His Spirit; to enter into the closet of the heart, that there ye may seek for closer communion with Him; watching thus unto prayer, He will preserve your souls alive to glorify Him through the varied trials and overturnings of your day. Let none, therefore, faint who have obtained mercy, seeing "the long-suffering of God is salvation;" but rather let them draw near in humility of soul, and say unto Him, "Lord, what wilt thou have me to do?"

May we, my dear friends, continue in the faith, grounded and settled, and be not moved away from the hope of the gospel, which was preached to every creature under heaven; whereof Paul declared he was made a minister, according to the dispensation of God which was given him to fulfil the word of God, "even the mystery which hath been hid from ages and from generations, but now is made manifest to His saints: to whom God would make known what is the riches of this mystery among the Gentiles; which is, Christ in you, the hope of glory."

From one who, though blind as to the outward and nearly deaf, is yet often deeply exercised in spirit on behalf of the church, and for the enlargement of her borders. BENJAMIN BISHOP.

Strood, Ninth month, 1854.

For "The Friend."

The Victoria Bridge at Montreal,

Over the St. Lawrence will certainly be the most remarkable work of the kind in the Canadas, we might say in the whole world. It reminds us of some of the old Roman works, such as the ancient aqueducts which span the valleys of Italy, in their grand and gigantic proportions, more than of an ordinary bridge over a river.

The chain pier at Brighton, erected by Captain Brown, and stretching from the cliffs out into the sea, was, if our memory serves us rightly, one of the first of these light and beautiful structures. The Suspension Bridge at Hammersmith, on the Thames, by the same engineer, and the *Pont des Arts*, at Paris, followed, and about the same time the Menai Suspension Bridge, over the straits of that name, connecting the island of Anglesea with the Welsh main. The Hungerford Suspension Bridge over the river Thames, by the younger Brunell, for foot passengers, followed, but it remained for the genius of Robert Stephenson to devise a bridge able to bear the ponderous weight of locomotives, passenger carriages, luggage vans, and mineral and cattle trucks across an arm of the sea, or a still broader river.

Stephenson adopted the tubular form, after careful experiment, as the one best calculated to sustain the immense pressure to which the bridge would be exposed. The success of the Britannia Bridge across the Menai straits has fully justified the adoption of the same plan for the Victoria Bridge. Each of the tubes will be 19 feet in height at the end, whence they will gradually increase to 22 feet 6 inches in the centre. The width of each will be 16 feet, or 9 feet 6 inches wider than the rail track.

The bridge will consist of 25 spans or spaces for navigation between 24 piers (exclusive of the two abutments) for the support of the tubes. The centre span will be 330 feet wide, and each of the other spans will be 242 feet wide. The width of each of the piers next to the abutments will be 15 feet, and the width of those approaching the two centre piers will be gradually increased, so that these two piers will each be 18 feet wide. Each abutment is to be 242 feet long and 90 feet wide, and from the north shore of the St. Lawrence to the north abutment there will be a solid stone embankment (faced in rough masonry towards the current) 1200 feet in length. The stone embankment leading from the south shore of the river to the south abutment will be 600 feet long. The length of the bridge, from abutment to abutment, will be 8000 feet, and its total length from river bank to river bank will be 10,284 feet, or 186 feet less than two English miles.

The total weight of iron in the tubes will be 10,000 tons, and they will be bound and riveted together precisely in the same manner and with similar machinery to that employed in the Britannia bridge. A capital of $270,000 has been invested in machinery and various appliances at the quarries above Montreal, whence most of the stone used is procured, and in the construction of steamtugs and barges to convey it to the site of the bridge. The piers close to the abutments will each contain about 6000 tons of masonry. Scarcely a block used in the construction of the piers will be less than seven tons, and many of them will weigh fully ten tons each. In addition to the abundant use of the best water cement, each stone is clamped to its neighbours in several places by iron rivets, and the interstices between the rivets and the blocks are filled up with molten lead. The total amount of masonry in the piers will be 27,500,000 cubic feet, or 205,000 tons weight.

This work bids fair to be as durable as that of the Coliseum or the Appian Ways, which have stood the wear and tear of time and of traffic for more than two thousand years, and which still continue to exist as monuments of the skill and industry of man. It is a thing worthy of note, that in a new and rising country, only known to civilized man for two or three hundred years, monuments should arise to mark the progress of the age, and to compete in the world's esteem, with similar works constructed two or three thousand years ago.

Unless unforeseen difficulties arise, the first railway train will pass over the broad St. Lawrence by the summer of 1858. The commercial advantages will consist in the fact, that the Victoria Bridge will bring into direct communication, without break of guage or bulk, the products of Canada West, and of Michigan, Illinois, Iowa, Wisconsin, and all the western states of the Union. Reciprocity will have opened the door of international communication, and the requirements of traffic will be cheaply and expeditiously met by the iron road and its tubular bridge. The promoters of this undertaking allege that they will be able to convey produce and all commodities more cheaply and expeditiously than by any other existing route, whether of rail or of water; and they must be doubtless strong in the faith, as its cost is to be about seven millions of dollars, or about one-seventh of the total expense of building the 1112 miles comprising the Grand Trunk Railway of Canada, with which it is connected. A few years hence, and this very bridge probably will become one of the greatest attractions to the tourist and the traveller.

The Colossus of Rhodes, under which the pigmy shallops of former ages could pass, was esteemed one of the wonders of the Old World. But an iron bridge spanning a river two miles in width, giving safe passage to hundreds of tons of weight between its iron sides, and permitting ships of the largest tonnage to pass beneath its elevated arches, is an achievement still more remarkable for the New World, and is worthy of the young giant rising in the west.

A Great Bore.

The St. Louis Democrat of a late date has a very interesting account of the progress made by Mr. Belcher, of that city, downward toward the centre of the earth, in search of pure water for his extensive sugar refinery. His Artesian well, commenced six year ago, has now reached the depth of 2,200 feet, being, it is said, the deepest in the world, the one at Grenelle, near Paris, being sunk 1,961 feet, and another one in France reaching the depth of 2,150 feet.

The drill has thus far passed through a constant succession of the most stubborn rocks, with the exception of a stratum of soft slate of 100 feet, and it is now on its way through yellow sandstone. A steam engine of twenty-five horse power is used to work the drills, the diameter of the bore being five inches. The Democrat says :—

The kinds of drills used are various, some being adapted for pulverizing the rock, others for hooking up soft substances; and then there is an instrument called a rimmer, used for cutting the sides of the bore to make it round and smooth. Tubes are also used containing valves, which catch the loose particles of rock and carry them to the top of the well. The drilling rods are made of stout oak wood, are about two inches in diameter, and thirty-two feet long, having iron screws and fastenings at the ends by which a continued rod may be formed of any length.

The presence of one or more persons is constantly required for the purpose of turning the drill around in the bore, as its vertical motion continues. At present the operators are engaged in enlarging the cavity at the point where the soft slatestone occurs, for the purpose of introducing a copper tube to prevent the continual caving in of the soft parcels which are constantly sloughing from the sides. We were told that this falling in of the blue slatestone had left a cavity as large as a good-sized house. We believe it is the intention to introduce copper pipes from the top to the bottom of the well, as soon as it is finished, although the hard rocky sides would seem to make it unnecessary. The object to be gained by this is to shut out the various kinds of waters from the sides, so that the pure stream from the bottom may reach the top without any mixture.

At the depth of 700 feet a vein of salt-water was struck, and at 1,500 feet an immense vein of

sulphur water burst forth, which has been running ever since its discovery in a large stream from the mouth of the well. This water is the same as that of the Blue Lick Springs, in Kentucky, and possesses a purity and freshness of taste quite superior to that which reaches us in barrels and casks. It is carried off by a large sewer leading to the river. It seems too wasteful that such profuse quantities of this celebrated water should be permitted to flow away; but the refinery needs the clear unadulterated element, and it must have it and nothing else. Other medicinal waters have been discovered, we believe, but they have been of little consequence.

[As Friends in Philadelphia and other large cities are liable to be put to the same inconvenience in relation to burial-grounds, as is alluded to in the following minute of the Meeting for Sufferings in London, and as Friends here are likewise suffering great loss for some of our members resorting to cemeteries held in common with others where several of the testimonies of our religious Society are set at naught, we commend the views set forth to the consideration of our readers.—*Ed.*]

At a Meeting for Sufferings, held the 4th of Eighth Month, 1854.

The bills which have from time to time been introduced into Parliament, in reference to interments in populous places, have engaged the attention of this meeting and its committees; and efforts have been, on several occasions, assiduously made on its behalf to obtain modifications of the proposed enactments.

The legislature having now, by successive enactments relative to burials, both in the metropolis and throughout the rest of England, (15 & 16 Vic. cap. 85, and 16 & 17 Vic. cap. 134,) authorized the Queen in council, in cases in which it may be judged desirable with reference to the public health, to direct the closing of existing burial-grounds and regulate the formation of new ones; and these acts having already been put in force on several occasions, this meeting thinks it desirable that the attention of Friends generally should be turned to some of the practical bearings of the subject.

An order in council is requisite both for this authoritative closing of existing burial-grounds, and for restraining the opening of new grounds in a town or district, and in such orders a future day is named from which the order is to take effect. It is, moreover, expressly provided that the burial-grounds "of the people called Quakers used solely for the burial of the bodies of such people," shall not be included in any such general order, unless expressly mentioned therein.

As, however, the interval is often short between the issuing of the order and the time mentioned for its taking effect, and as it may occur that on the issuing of such order our members may be invited to join with their neighbours in taking prompt measures for supplying the deficiency of accommodation occasioned by the closing of existing grounds, it seems desirable that Friends should have previously well considered the circumstances in which they may be placed, and be prepared for the course which it may be most advisable to pursue.

It is not unlikely that the members of other religious bodies will, in many, if not in most instances, avail themselves of the public cemeteries already formed, or hereafter to be formed, and which will probably become much more general throughout the country.

Such a course will, however, it is apprehended, be perceived by Friends to be open to objections and difficulties as a substitute for their separate burial-grounds.

The providing of separate burial places, where interments might be conducted with due solemnity, and at the same time with perfect simplicity, formed a very important feature of the religious arrangements of our forefathers. The superstitious distinction between what is termed consecrated ground and unconsecrated ground, and the use of various ceremonial and formal observances in public parochial burials, were prominent causes of the provision of separate places of interment. But in addition to the avoidance of these serious objections, positive advantages have, we believe, in many ways, flowed from the distinct character of burials among Friends in their own grounds.

The use of distinct burial-grounds for our members and those in profession with us, is calculated to preserve simplicity in the mode of conducting interments, and it has an improper bearing on the upholding of our testimony against worldly conformity in various respects.

These occasions have often proved times of great solemnity, in which true spiritual worship has been performed and gospel ministry has been freely exercised, and in which neither restriction of time nor the distraction of surrounding objects has operated to dissipate the mind. And we believe that we should not be overstating the case, if we were to add that the possession of separate places of interment has proved in practice more consonant to the best feelings of the connexions and descendants of the deceased, as well as more satisfactory to the members of our Society at large than any other arrangement could have done.

We are aware that the difficulty as to the distinction between what is called consecrated and unconsecrated ground is obviated in a large number of the public cemeteries, and it may be thought by some that part of the other difficulties above alluded to may be guarded against by purchasing and using a distinct portion of a general cemetery. We fear, however, that with such a course of procedure many of the latter difficulties would practically be found to exist in full force, and that other disadvantages not immediately foreseen may also result from it. We would, therefore, strongly encourage our Friends, in their several meetings wherever it can be accomplished, still to provide distinct burial-grounds for their own use; and where this cannot be immediately done, we would advise them seriously to consider whether they cannot submit to some inconvenience in resorting to more distant burial-grounds not likely to be closed.

It should be borne in mind with what zeal and liberality our early Friends made provision for this object; and we believe that an adherence in this respect to the practice almost invariably pursued by them, and by those who have succeeded them down to the present time, will be found most likely to conduce to the continuance of simplicity in our mode of conducting interments, and to the avoidance of the accompaniments too commonly attached thereto by the vain customs of the world, as well as to guard against any infringement of our Christian testimonies on the subjects of worship and ministry, on such occasions.

(Copy) JAMES BOWDEN,
Recording Clerk.

Kentucky seems to have a large anti-slavery population. A Presbyterian clergyman of Lewis county, John G. Fee, states that there are now organized in that State twenty anti-slavery churches, and that there is an increasing demand in that region for anti-slavery preachers and documents. Thus, while the Kentucky slaveholders are colonizing Kansas, their own State is gradually changing ground.

Bears in St. Lawrence County, N. Y.

Either from the fires in the woods, or some other cause, the bears in various sections of the country have left the cover of the woods and taken to the fields. At Pierpont, St. Lawrence County, on Sunday week, a Mr. Claflin met one near his house, which stood his ground, notwithstanding "he tried what virtue there was in stones." Before he could get a gun it was dark, and bruin "vamosed the ranch." On Wednesday, William Irish, a man 70 years old, drove a bear across Racket river, and shot him. The bear dressed weighed 300 lbs. The same day a larger one was chased through town, going right through doors and yards that lay in his course, starting women and children, and making men belligerent, and although surrounded by thirty of them, he went his way, with a bad opinion of white folks' hospitality to strangers from the woods. The same night a bear was caught in David Randall's corn field—or, rather, he caught the trap—and to find him, a dog was sent for by a boy, who encountered another bear in the road while returning, which concluded to go back to the woods, as the dog would not, and the boy could not prevent him. The bear that undertook to carry off the trap was followed, found, and a general fight ensued. Mr. Randall shot him three times without killing, and Mr. Claflin tried to hit him with a hatchet, but found his antagonist too good a boxer. He knocked the hatchet out of his hand, and offered a fair fight empty handed. Mr. C. declined, but as the bear was determined, he had to run, when another of the party fired with better effect. The last shot was by Moses Leonard, who has killed 40 bears, 34 panthers, and 200 wolves, in his time, besides "small varmint." On Monday following, (Sept. 4,) another bear was killed with five balls, fired by Henry Hepburn and Mike Stewart, in a corn field in Pierpont. And about noon, the same day, another was trapped and dispatched by a Mr. Cook and Mr. Weller, the latter getting a bad bite in trying to secure him alive. This makes seven bears in this neighbourhood within less than a week, four of which have bit the dust, of which we have had this summer a great supply.

THE FRIEND.

TENTH MONTH 28, 1854.

By the returns from the counties throughout the State, it appears that a majority of those who voted at the last election are opposed to the enactment of a "prohibitory liquor law" in Pennsylvania. This result is attributable to various causes. No doubt unwillingness to be deprived of the means to gratify a depraved taste for ardent spirits, has influenced a large number to oppose sanctioning the passage of such a law, while others have been actuated in their opposition by what they consider their interest, desiring to continue a traffic in intoxicating drinks, by which they may accumulate money, though it is at the expense of the morals, the health, and the comfort of the great majority of those who deal with them; and others again, have either directly given their votes against prohibition, or declined lending it their aid, because they think the State has no right to interfere in the supplies of a man's table,

or prescribé by legislation what he shall or shall not eat and drink.

The evils of intemperance are so enormous, the direct connection between the use of alcoholic drinks and crime so apparent, and the vast accumulation of taxes rendered necessary, to attempt to prevent or to punish this crime, has become so burdensome to the community, that we are not without hope some way will yet be devised and adopted, by which the scourge that is now openly and unblushingly protected and cherished in its desolating course among us, may be reached, and if not completely banished, be at least so enfeebled and circumscribed, as to relieve our community from a great part of the wretchedness it has been so long inflicting on it.

We hope the advocates of temperance will not relax in their efforts, but draw encouragement from the smallness of the majority against positive prohibition, which we think makes the inference fairly deducible, that a vast majority of the people would give their support to the most stringent laws regulating the sale of intoxicating liquors, which do not absolutely prohibit their being sold among us for drink.

SUMMARY OF EVENTS.

EUROPE.—The steamship Africa brings Liverpool dates to the 7th inst., and the intelligence that the reported successes of the allies in the Crimea, which had caused such exultation in France and England, had been greatly exaggerated, and were in fact for the most part, without a shadow of truth. There are authentic accounts of the battle of the Alma, and the defeat of the Russians at that point; but all the various telegraphic despatches relating to alleged subsequent transactions, as the storming of Fort Constantine, the destruction of the Russian fleet, and the capture of Sebastopol, &c., were pure fancy sketches, so skilfully put together as to have obtained general credence.

The battle of the Alma, it would seem, was not gained without heavy sacrifices. The loss of the French is stated at 1400 men and 60 officers—the English over 2000 men and 96 officers, killed and wounded. The losses of the Turks who formed the centre of the attacking army, is not given. The Russian loss is estimated at 6000 to 10,000, the smaller number being probably nearest the truth. 3000 Russians were taken prisoners. The steamers Andes and Vulcan conveyed 620 of the wounded to Constantinople. On the 27th ult., the allied army was within ten miles of Sebastopol, and commanded the approaches to the place. Prince Menschikoff was still in the field with 30,000 men, expecting reinforcements, forty battalions of which, it is stated, have already entered the Crimea. The cholera is reported to be very severe in the garrison of Sebastopol. The allies were sending more troops into the Crimea, which is evidently destined to be the theatre of much bloodshed and human misery.

ENGLAND.—At Liverpool, American flour was in fair request, Western Canal selling at 32s. and 33s. Allen and Anderson, the largest American grain dealers in London, have failed. Their liabilities are stated to be between £300,000 and £400,000. Edward Oliver, the great Liverpool shipping merchant whose failure for an immense amount was recently announced, is likely, by the aid of his friends, to be "carried through."

The export trade of Great Britain continues prosperous and increasing. During the first eight months of the present year, the exports amounted to over sixty-seven millions pounds sterling. In the corresponding months of last year, the exports were about fifty-eight millions, and in 1852, something more than forty-seven millions. On this state of things, the "London Times" remarks, "that whatever horrors, and waste of money, war brings in its train, it leaves at least untouched the great sources of our national wealth."

A great fire occurred at New Castle on the 6th inst., attended with a terrific explosion and the loss of many lives. It broke out in a worsted manufactory, and spread to a sulphur and saltpetre establishment, giving rise to an explosion, which was heard for a distance of twenty miles. The damage to property is estimated at about one million sterling.

SICILY.—The ravages of cholera have been terrible at Messina. Of the 5000 soldiers composing the garrison, 2000 had perished, and almost all the police. Five thousand and sixty-eight persons died, from the 23d to 28th of Eighth mo., and in a short space of time the deaths numbered 13,000.

UNITED STATES.—The result of the elections lately held in Pennsylvania, Ohio, Indiana, &c., is generally regarded as indicating the popular disapprobation of the Nebraska bill, and of the course pursued by the national administration in that and other measures.

Texas.—The complaints of Indian depredations continue. There is a large immigration this fall, and great numbers of persons are settling on the fine lands within the limits of Peter's Colony. The canal at the mouth of the Colorada river, an expensive government work, is likely to prove a failure.

Pennsylvania.—At the recent election a vote of the people was taken, *for* or *against* the passage of a law prohibiting the manufacture and sale of intoxicating drinks. The returns from the whole State show a majority of about 3000 against prohibition. The city of Philadelphia and most of the counties voted for such a law, but the scale was turned by the heavy majorities on the other side given in a few counties, more especially, those in which a German population predominates.

New Orleans.—The yellow fever was rapidly abating; the deaths for the week ending 16th Inst., were 272, including 134 of the epidemic.

New York.—Nearly 6000 immigrants arrived on the 22d inst. Interments last week, 447, of which 22 were from cholera.

Philadelphia.—Interments last week, 164, of which 8 were from cholera.

Miscellaneous.—Sir John Franklin.—The Governor of the Hudson's Bay Company announces the discovery of the remains of Sir John Franklin and his party. The information was conveyed in a despatch from Dr. Rae, dated York Factory, Aug. 4th. The despatch states that Franklin and his companions perished from starvation, in the spring of 1850, to the northwest of Fox river.

Dutch Slavery.—Discussions have taken place in the Dutch parliament, respecting emancipation in the Dutch Colonies. Numerous petitions have come in for that purpose. The number of slaves in the Dutch Colonies, is about 53,000—namely, 39,000 in Surinam, 19,400 in Curacoa and other W. I. islands, and the remaining 3600 in the East India Colonies.

The Arctic Expedition.—A letter has been received from the second Grinnell Expedition, in search of Franklin, under command of Dr. Kane. The health of the expedition continued good, and a determination to perseverе in endeavouring to ascertain the fate of Franklin, animated all the party. According to the plan agreed upon before the Advance left the United States, her arrival here may be looked for early next month.

Dreadful Mortality.—A letter from an officer of the U. S. steamer Saranac, dated at Spezzia, Sept. 18th, says that when he was at Constantinople, the combined English and French forces had lost *some thirty thousand men* by cholera, and they were still dying in great numbers. One English frigate lost one hundred and seventy men during one night.

Insurance on the Arctic.—The Arctic was insured in England for £60,000 sterling, and in this country for $310,000.

A Grand Jury in Charleston, S. C., recommend that the African Slave trade be legalized by repealing all existing laws against it.

Apples.—James Upton, of Greece, N. Y., an extensive agriculturist, has shipped twenty thousand barrels of apples to New York, by canal, this season.

A Long Ship.—The American clipper ship Romance of the Seas, of Boston, from Canton, is the longest ship that has ever entered the London dock. She has just discharged a cargo of teas at the western quay.

British Authors. There are in Great Britain 1844 persons engaged as authors, editors, or writers—1738 males and 105 females; of this number 1195 are located in the metropolis.

Navigation of the Amazon.—The government of Brazil is considering a bill for the opening of the Amazon to all nations. It is thought the bill will pass the present session.

Popery.—The Cardinal Vicar of Rome has issued an edict, in which, after attributing the cholera to the sins of the Romans, he directs that the finger of St. Peter, the arm of St. Roe, the heart of St. Charles, and other relics, shall be exposed to the adoration of the faithful, in order to avert the wrath of the Almighty.

New Treaty with the Chippewas.—The Sault St. Marie Journal gives the particulars of a new and important treaty made with the Chippewa Indians. By this treaty an extensive tract of country at the northwest extremity of Lake Superior, of about 7,000,000 acres, is acquired. The land is particularly valuable for its mineral stores, being thought to be rich in copper.

RECEIPTS.

Received from Wm. A. Robinson, R. I., $2, vol. 27; from A. W. Smith, L. I., $2, vol. 29; from H. Knowles agt., S. N. Y., for B. Boss, J. J. Peckham, H. A. Knowles Alm. A. Knowles, and J. P. Carpenter, $2 each, vol. 28 from Wm. Mickle, S. C. Paul, R. Jones, James M. Saunders, N. J., $2 each, vol. 28; from Jehu Fawcett, agt. O., for Job Warren, Richd. B. Fawcett, and Hannah Boulton, $2 each, vol. 28, for Ed. Bonsall, senr., and Mary J. Fawcett, $2 each, vol. 27, for D. Whinery, $2 to 21, vol. 27; from Mead Atwater, N. Y., $2, vol. 29, for A. H. Deuel, $4, vols. 27 and 28, for Mary Brownell. Levi H. Atwater, B. Bowerman, and Eliza. Underwood $2 each, vol. 28; from Amos Battey, agt., for David Hallock, $2, vol. 27, Jarvis Hoag, $2, vol. 27, and John Dakin, $2, vol. 28; from James T. Frame, agt., Io., for J. H. Painter, $2, vol. 28; from Wm. B. Oliver, agt. Mass., for A. Keene, $2, vol. 27, for N. Breed, $2, vol. 27, for V. Meader, $2, vol. 28; from Dawsey Cope, Pa., for Benj. Gilbert, Isaac Price, Amos Cope, Mercy Cope, and Melissa Cope, $2 each, vol. 28; from John French, O., $2, vol. 28, Saml. French, $2, vol. 28, and Zadock S. French, $2, vol. 27.

Cor.—Ninth mo. 16th, Benj. Taber, $2, vol. 28.

WEST-TOWN BOARDING-SCHOOL.

The Winter Session of the School will commence on Second-day, the 6th of Eleventh month next. The pupils will be conveyed by railroad to West Chester, where conveyances will be in waiting to take them to the School, on the arrival of the morning and afternoon cars, on Second-day, the 6th, and Third-day, the 7th of Eleventh month. The children will get their baggage the day after their arrival. The cars will leave the depot, south side of Market street, above Eighteenth street, (formerly Schuylkill Fifth,) at half past 7 o'clock, A. M., and 3 o'clock, P. M. The agent of the School will be at the railroad depot, on Second and Third-day *afternoons*, and will furnish pupils with tickets, and accompany them to West Chester. Those who go by the *morning* train, will be furnished with tickets by a person in attendance. To those who procure tickets as directed, the fare from Philadelphia to the School, including baggage, will be one dollar, which will be charged to the scholar at the School. All baggage should be distinctly marked West-town, and with the name of the owner, and should be sent directly to the railroad depot.

The West-town office is at Friends' bookstore, No. 84 Arch street, where all small packages for the pupils left before 12 o'clock on Seventh-days, will be forwarded. *All letters* for the pupils and others at the School, should be sent by *mail*, directed to *West-town Boarding School, West Chester P. O., Chester Co., Pa.* Postage should be *pre-paid*, and packages should be distinctly marked and put up in a *secure manner*, so that their contents will not be liable to be lost by handling. The stage will leave West Chester during the *Winter Session*, for the School, on Second, Fourth, and Seventh-days, on the arrival of the *morning* cars from the city, and from the School to West Chester, on the same days, to meet the morning cars to Philadelphia. The fare for each passenger to and from West Chester *by the stage*, will be 25 cents. When special conveyances at other times are provided at the School, an extra charge will be made.

West-town, Ninth mo., 1854.

TEACHER WANTED,

A well qualified Teacher to take charge, at the close of the present year, of the "Sheppard School" for Coloured Girls on Randolph street. Applications in writing may be addressed to Edward Richie, Clerk of the Board of Trustees, No. 173 Vine street.

A meeting of "The Female Society of Philadelphia for the Relief and Employment of the Poor," will be held at the "House of Industry," No. 70 N. Seventh street, on Seventh-day, Eleventh mo. 4th, at 3½ o'clock.

Philad., Tenth mo. 17th, 1854.

MARRIED, on Fifth-day, the 19th inst., at Friends' Meeting-house, Parkersville, WILLIAM H. WALTER, of Kennett, to EDITH B., daughter of Alban Webb, of Pennsbury, Chester co., Pa.

DIED, in Lynn, Mass., on the 22d of Seventh month, SARAH J., wife of William B. Oliver, aged 40 years; a member of Salem Monthly Meeting of Friends.

PRINTED BY KITE & WALTON,
No. 3 Ranstead Place, Fourth above Chestnut street.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXVIII. SEVENTH-DAY, ELEVENTH MONTH 4, 1854. NO. 8.

PUBLISHED WEEKLY.

Price two dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 50 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

From the Leisure Hour.

A Glance at the Rise and Progress of the Potter's Art in Britain.

(Concluded from page 50.)

But we are anticipating. Upon the introduction of flint in combination with the clays a marked and rapid improvement began to be manifest in the productions of the English potters. A number of spirited individuals, having capital at command, now engaged in the trade, and extended its operations. In addition to the commoner articles in use for commercial and domestic purposes, they began to manufacture handsome tea-services and dinner equipages: they no longer carried on these operations in hovels and sheds, but erected substantial manufactories of brick, roofed in with tiles; they travelled abroad to collect information, and imported moulds and models from France, which they turned to good account at home. Many realized competent fortunes by their industry; and not a few failed altogether in their experiments and speculations, and finally abandoned the pursuit. Meanwhile the art continued to progress, and considerable quantities of the productions of Staffordshire began to find their way into the foreign markets, notwithstanding the increased amount required for home consumption. Unhappily, as the potters increased in prosperity they relaxed in care, and competing furiously with each other in cheapness of production, inundated the markets, about the middle of last century, with such vast quantities of inferior goods as almost to ruin their character, not only with foreigners, but also with consumers at home. The French naturally took advantage of such a state of things, and having succeeded in the manufacture of a white ware much more elegant in form and better glazed than our own, shipped it in large quantities to this country, where for a time it completely superseded the productions of Staffordshire, which at that period few persons of taste would admit to their tables. This luckless position of the English potters, which seemed to threaten the overthrow and final ruin of their trade, did not, however, endure for many years. As we have mentioned in a previous article, Josiah Wedgwood in 1763 produced his celebrated "queen's ware," which at once retrieved the character of the English manufactures, and in due course of time restored the lost trade and gave it a greater impetus than ever. In the introduction of his new ware, Wedgwood adopted the surest means of improving his trade and enriching himself: he manufactured his goods in the best possible manner, and he sold them cheap. The queen's ware was not only handsome in design, but was proof against any change of temperature, however great or sudden; it was not glazed with the salt glaze, which experience had shown to be lamentably defective, but with a fluid glaze, the use of which is said to have been first introduced by Enoch Booth, of Tunstall, much improved by William Littler, of Brownhills, but brought to its greatest perfection by Wedgwood himself.

We need not dwell upon the progress of the art of pottery from the time of Wedgwood down to the present day. In point of fact, it is questionable whether any improvements of very great importance in the composition of the material from which the common ware is made have taken place since his time. Various new applications of the potter's art to building, domestic, and commercial purposes have doubtless arisen, and are continually arising; and some of these we may have occasion to notice. Great improvements have taken place, too, in matters of general design and ornamentation, much to the advantage, it cannot be doubted, of the popular taste, which unhappily in this country has to be led, and rarely leads, to the appreciation of elegance. But the great and noticeable fact in connexion with the pottery trade is its enormous increase and extension, which have enabled a district, which little more than a hundred years ago barely maintained five thousand inhabitants, to find employment and the means of comfort for a population exceeding, it is now supposed, a hundred thousand. But before proceeding to quote a few statistics which will throw a little light on this remarkable social phenomenon, we must turn our attention briefly to the subject of porcelain, which as yet we have forborne to mention.

The origin of the manufacture of porcelain has been satisfactorily traced to the Chinese, who have excelled in the art for we know not how many centuries. We need not here recapitulate either the facts which are known, or the fables which are circulated, relative to their modes of manufacture. It imports us little to know whether they bury their materials in the ground for a hundred years before they use them; and whether, in the combination of their pe-tun-tse and kao-lin, which stand in the stead of our flint and clays, they make use of hoa-che or not. We must leave these interesting questions to philosophers who have the means of investigation at command, and unlimited space for the report of their conclusions on the subject. Father d'Entrewlles may rest in his grave, for us, and the porcelain tower of Nankin must have its praises sung by some other historian. It is enough for us that certain discoveries in the science of practical chemistry, which were made about the year 1700, established the simple facts that unmixed earths are infusible by any heat to which we can subject them, but that aluminous earths in combination with silex, when exposed to the action of a fierce fire, become chemically united; and that when alkaline earths in certain proportions are added, the result is a dense vitrified substance sufficiently resembling the porcelain of China, and adapted to the same uses. It is on this principle that the manufactures at Dresden in Saxony and at Sèvres near Paris were founded. The first porcelain ever manufactured in England was made at Bow, and simultaneously at Chelsea, near London: the body of the ware was composed of a mixture of sand from Alum Bay, of clay, and powdered flint glass; it was coated with a leaden glaze. This kind of ware, which was first made about 1744 or 1745, was much prized and sought after. In 1748, we find the manufacture removed to Derby, and flourishing under the management of a Mr. Duesbury, an artist of marked talent. In 1751, Dr. Wale established a manufactory at Worcester, which still exists: to this gentleman is attributed the invention of printing upon the ware by transferring printed patterns upon the biscuit, a process which we shall have occasion to describe in a future paper. In the same year, Messrs. Littler, Yates, and Baddeley made experiments in the same manufacture in Staffordshire, but at first without success, at least in a commercial sense, Mr. Littler being ruined by the speculation; and it was not till fourteen years after that Messrs. Baddeley and Fletcher succeeded in the manufacture at Shelton. By this time Wedgwood, having settled the question of the superiority of the English in the produce of common wares, was experimenting in the higher branches of the art, and pursuing those practical researches which led eventually to his splendid reproductions of antique vases, and the invention of the exquisite jasper wares. In 1768, Mr. Cookworthy, a chemist of Plymouth, took out a patent for the manufacture of porcelain by a process more facile in operation and more certain in result than any which had been hitherto practised. It was mainly through the introduction of Cookworthy's process that the making of porcelain was at length completely established in Staffordshire. Since the year 1772 it has been practised with more or less success by most of the potters of the district: though it is said that the first firm who turned the porcelain to good account were the Messrs. Hollins and Co., of Shelton; they having obtained by purchase an interest in the patent of Cookworthy. In 1800, Josiah Spode, of Stoke, produced a porcelain superior to any before known in England, and very nearly approaching in excellence to that made at Sèvres. He is said first to have introduced the mixture of calcined and ground bones with the paste. He realized a large fortune by the business, and retired to a noble mansion which he built at Penkhull in the neighbourhood of Stoke. His manufactory is now the property of Alderman Copeland.

When porcelain is coloured by the mixture of metallic ingredients, as in the jasper ware of Wedgwood, it is called stone-ware; when it is free from colouring matter and is transparent, it is called china. Of china there are two sorts—the hard and the tender. The hard china is that of the east and of Saxony; its glaze is of earthy materials, and in the process of glazing it is submitted to a heat of such intensity as to vitrify the entire mass; thus the glaze does not form a coating to the ware, but is in a manner incorporated with it, and the surface appears like a stone polished by a lapidary. This process is one of much hazard, as it is attended with the danger of melting the goods in the act of vitrification. The tender china is that which

is mostly made in England; its glaze is less hard, and may be scratched with a steel point, to which the hard china would be impervious: it is glazed with a mixture harder than that used for earthenware, but in a fire not sufficiently intense to endanger the integrity of the goods. Many of the foreign manufacturers are now imitating the caution of the English, and making soft or tender instead of hard china.

Among the later improvements in connexion with this department of the plastic arts is the combination of the beautiful material which forms the substance of the porcelain statuary, of which numberless exquisite specimens may be seen in the shop-windows of dealers in works of art in the metropolis, and in the collections of the curious. The Duchess of Sutherland, it is said, was the first to perceive the adaptation of this material to the purposes of statuary, and to encourage its use. She directed the attention of Gibson to it, who declared it the next best thing to marble, and had a reduced copy of his Narcissus made of it at Copeland's manufactory. It is a matter of doubt or of dispute as to whom the invention of this exquisite material is due: it is largely used by most if not all of the principal potters in Staffordshire; but it is evident that it is not, and need not be, prepared after any very rigid formula, inasmuch as it differs essentially in transparency, in texture, and in colour, in various establishments.

Having thus taken a hasty glance at the rise and progress of the pottery trade, we shall conclude this paper by quoting a little statistical information, for which we are chiefly indebted to an admirable article on the subject, which appeared in the "Times" in the autumn of 1851, and which may serve to acquaint the reader with the manufacturing status of the potteries in our days.

The following is a statement of the probable annual consumption of articles in the Staffordshire Potteries:—

	Per Ann.
Ball clay, from Devon and Dorset .	45,000 tons.
China clay (Cornish) . .	14,000 "
Cornish stone and flint . .	24,000 "
Straw (for packing) . .	16,000 "

The population in 1851 was reckoned at 90,000; but from the rapid increase by immigration it is supposed now to exceed 100,000.

The coals consumed annually in manufactures amount to no less than 468,000 tons, some of the pot-works consuming as much as 60 tons a day each; the consumption in colleries and mills is not less than 282,000 tons; making altogether 750,000 tons of coals per annum used for pottery purposes. The mills supply the smaller establishments with materials ready ground and fit for use, as only the larger manufacturers grind their own. Every potter, however, prepares his own glazes, which, if he choose, he can have ground at the public mills.

The entire value of the goods made annually in the potteries is estimated at 1,700,000*l.*; of this the large amount of 1,300,000*l.* represents the value of the exports, leaving goods to the amount of 400,000*l.* for home consumption. The value of the gold annually consumed in the ornamentation of china and earthenware is about 36,000*l.*

Of the pottery of Staffordshire which is exported, more than one-third goes to the United States; and the rest finds its way in various bottoms to the following places: Canada, British North American colonies, Brazil, East Indies, West Indies, Germany, Holland, Denmark, Russia, Italy and the Italian islands, Spain and the Balearic islands, Turkey, Foreign West Indies, West Africa, Cape of Good Hope, Sumatra and the Eastern Archipelago, Australia, etc., etc.

For "The Friend."

SUPERFLUITIES.

The kingdom of God standing "not in word, but in power," it becomes us poor dependent creatures to be in earnest, in the first place, to lay hold, through the assistance of the Holy Spirit, of the hope which is set before us;" "which hope we have as an anchor to the soul, both sure and steadfast, and which entereth into that within the veil; whither the forerunner is for us entered, even Jesus, made an high priest for ever after the order of Melchisedec." And seeing he was given not only "as a propitiation for our sins," but as "an ensample, also, that we should follow his steps," it behoves us to deny ourselves, take up the cross daily, "looking unto Him, who, for the joy which was set before Him, endured the cross, despised the shame, and is now set down on the right hand of the Father in his kingdom."

The faith which He gives is not a dead faith, but it enables to rely on him, and works in us to the purifying of the heart: even to the overcoming of the "lust of the flesh, the lust of the eye, and the pride of life, which are not of the Father, but of the world." It is through obedience to the Holy Spirit, that we are to be led into all truth, and to know by this faith, working in us, all our steps to be "ordered of the Lord."

And hereby know we that we are in him, "for the Spirit beareth witness with our spirit, that we are the children of God." It is only through the Spirit that any of our works are well pleasing to him. We are not to expect to be saved in our sins without having the legitimate fruits of faith brought forth; neither will He own such things as are contrary to what would be produced by submission to His will, who would lead all men into the knowledge of Himself, and of the truth as it is in Him. There is much profession of the truth; but we are called unto the "truth as it is in Jesus." We are taught that the path that leads to the kingdom, "is straight and narrow," that it is a way of self-denial, and of humility, and of self-renunciation in all things. But some, it would seem, in the present day, would fain believe, that it is a way of more liberty than formerly, in which we are not bound to come so strictly to the state of giving up all things that His controversy is with; but that some, (of what may seem like the good things of the enemy,) may be retained, especially if they make "an offering unto the Lord;" endeavouring to persuade themselves that the world has approached a little nearer to what is right, and that there is not now so much harm in indulging in its pleasures. Having taken this path, which at first seemed to diverge but little from the right way such have set themselves to manufacture doctrines to suit, modifying the faith of the ancients under the plea of refinement, and striving to make us believe, that their course will at last end in the one narrow path to the kingdom. Alas! how many have been charmed, and captivated by this temptation of the cruel enemy, aiding to introduce into the bosom of the church unsound principles, leading many to become weary of a life of self-denial, and betraying them into such a mixture, and conformity with the ways of the "world, which still lieth in wickedness," that they are not to be known, (only in name,) from the people thereof.

But does not the heart that is truly awakened to a sense of its own natural depravity and weakness, and to the greatness of Almighty power and goodness, feel that the joys, the honours, and the pursuits of this vain world, are still contrary to the cross of Him, "who is meek and lowly in heart?" And do not all true Christians desire that as He is, such (in their degree) they may be also? It is a day when we ought to be vigilantly on our guard, for I believe the enemy is on the alert in these trying times to captivate all he can, and if the "superficial religion" which he would introduce prevails, or wherever it prevails, (let people profess what they may,) "it introduces the spirit and maxims of the world:" but the Lord will have a tried people to show forth his praise," "and He can work by many or by few."

Such as are willing to deny themselves, take up the cross, and follow Him, cannot wilfully run into superfluities of any kind, nor enter into the amusements of the present day, (however refined,) which lead away from the fold of rest and peace, and from the footsteps of the flock of Christ's companions. When their minds are brought down and humbled, by the power of the Spirit, into a sense of their own unworthiness, they do not want any drawings, paintings, or likenesses of themselves, either to please themselves or others; nor do they desire any superfluity or ornament to set off the poor tenament of clay, which will be consigned to dust from whence it came, when the spirit, that has inhabited it, has passed away to Him who gave it. O! what excess the vanity of the world has run into. Men must now be honoured, instead of abased; a likeness of great man, (whose flesh is soon to be the prey of worms, and return to earth as it was,) must go down to generations following, his own eye while living, peradventure being dazzled with the figure. The art to pencil and portray must now be taught, so important is the purpose now supposed to be.

But the testimony formerly was, "I abhor the excellency of Jacob, and hate his palaces;" and I believe the time is hastening when we are to be brought back (all who will) to first principles, to "exalt those pure doctrines and testimonies," which "the Lord Almighty qualified primitive Friends to live up to, and to preach with holy zeal, in the pure language, which was restored unto them." And "were we unreservedly to submit to the turnings and overturnings of the Divine hand upon us, individually, and as a people, Truth would rise more and more into dominion in our religious assemblies; messengers of the everlasting gospel would, in the Lord's own time, and according to his own pleasure, be sent forth as of old: judges as at the first, and counsellors as at the beginning, would be known amongst us; our meetings for the transaction of the discipline would be increasingly weighty and edifying; forward and self-confident spirits would stand rebuked in the authority of Truth; the shout of a king would be heard in our camp; and *He* who has hitherto helped us, would still condescend to be to his *stripped* and *peeled* people, the healer of breaches, and the restorer of paths to dwell in;" and his own name would be magnified and exalted through and over all.

N. G., Tenth mo. 18th, 1854.

Completion of the Great Indian Telegraph Line.—The telegraph wires have been extended entirely across the Peninsula of Hindostan, from Calcutta, at the head of the Bay of Bengal, to Bombay on the Arabian Sea, a distance of 1200 miles. On the 18th of May the first telegraph despatch was transmitted across the lines by Lord Elphinstone, Governor of Bombay, to the Governor General at Calcutta. A reply was immediately sent back congratulating all India on the achievement. By this line Calcutta is brought nearly a week nearer England. In fact, the Calcutta Morning Chronicle of May 27th contains, by way of the Bombay telegraph, news from England to April 26th, only one month old.

Missing Ships.—The list of wrecks and casualties at sea, registered at Lloyd's during the present year, since the 1st of January, discloses a frightful catalogue of ships missing, and which are now given up as lost, having, it is supposed, foundered, with all hands on board.

In all there appear to be no fewer than forty-eight, which do not include the losses of the Madagascar, and the ill-fated City of Glasgow, screw-steamer, with which upwards of 500 passengers were lost. Of the forty-eight, a large number were vessels bound across the Atlantic, carrying many passengers. Among them were the following: The Waterloo, from Liverpool to New York; the Ann, Capt. Atkinson, from Quebec for Bristol; the Leviathan, of and from New York for Liverpool; the Joanna, from New York for Dunkirk; the American Lass, Captain Cousins, from St. John, Newfoundland, for Oporto; the Emma Field, from Bath (United States) for Liverpool; the Gipsey, Captain Stephenson, from St. John for Grennock. Also, the ships Arco, of New York; Agnes Hall, from Montevideo; Wilberforce, Syria, Urgent, Antilas, John Wickliffe, Governor Briggs, William Thompson, Sarah, (Peterson,) Ann Tift, Spectator, Red Rover, Richard Watson, and the Abbe, of Bridgeport. The remaining vessels were brigantines and schooners. Strange to say not a vestige of any of the unfortunate vessels has turned up—not a fragment has been discovered.

Facts for Farmers.

It is a fact that during the late drought, which was the most serious ever experienced in America, upon all deeply plowed land crops suffered least. On all subsoil plowed land they suffered but little. Upon land underdrained, subsoiled, deep plowed, and frequently stirred upon the surface, the growing plants kept as green and vigorous as in a wet season.

It is a fact, then, that all clay lands, or lands with a stiff subsoil, would be vastly improved by deep surface plowing, subsoil plowing, and underdraining, in drought as well as wet seasons.

It is a fact that one of the most neglected agricultural improvements in this country is irrigation. If all the running streams that might easily be used for that purpose were turned upon the cultivated fields, to add moisture and fertility to the soil, it would increase the products of this country at least five hundred millions of dollars annually.

The actual *bona fide* loss to farmers from the drought of 1854, by lessening the products of the soil, is more than two hundred millions of dollars, besides the loss of property destroyed by fire.

The corn of 1849, according to the census report, was in

Ohio	50,078,695	bushels.
Indiana	52,964,363	"
Illinois	57,646,984	"
Kentucky	58,672,591	"
Tennessee	52,276,223	"
Aggregate	271,638,856	"

Now, 20 per cent. on this amount is *fifty-six millions of bushels*, for the loss in these five States. In our opinion, the real loss was more than double, as none of the estimates make the loss per acre less than one-third, while the number of acres planted is certainly one-third more than it was in that year. If the failure of the corn crop be as large as we suppose, there will be a reduction of 1,000,000 in the number of fatted hogs in the United States, and of cattle in proportion. The number of hogs fatted in the West, according to the Cincinnati *Price Current*, is nearly, or quite, 2,500,000. In the United States 3,000,000, at least.

One effect of this reduction will be, that there will be little or no export. There cannot be any considerable export without at once raising the price beyond what meat can be exported at profitably.

The number of cattle and hogs brought to market depends so much on the corn crop, that the diminution of the crop by a partial failure is likely to produce very important results on the trade in domestic produce.

Though the scarcity of corn may not raise the price of pork correspondingly with the increased price of the grain, it will lessen the quantity sent to market.

As the manufacture of whiskey never ceases, the consumption of corn will go on, increasing the price of food, without producing one single corresponding benefit to the labourer.

Hundreds, yes, thousands of farmers, have suffered great loss for the want of water, for family use and for stock, because wells, springs, brooks, and ponds have dried up; all of which could have been avoided.

Do you wish to know how?

By building capacious cisterns. From two to three feet in depth of water falls in rain and snow all over the surface of the earth in the course of a year. From your roofs you can always fill cisterns if you have them, and there lay up a storehouse of water for a dry time.

It is estimated that a barn, thirty by forty feet, supplies annually from its roof 864 barrels, or enough for more than two barrels a day for every day in the year. Many farmers have in all, five times this amount of roof, or enough for twelve barrels a day yearly. If, however, this water was collected, and kept for the dry season only, twenty or thirty barrels daily might then be used.

A cistern, 10 ft. diameter, 9 ft. deep, will hold 168 barrels. That is a very good size to make barn cisterns. If you want more capacity, make two. A cistern, 5 ft. diameter, will hold $5\frac{3}{8}$ barrels to each foot in depth. One 6 ft. diameter $6\frac{3}{4}$ nearly of barrels to each foot. And 7 ft. diameter $9\frac{1}{8}$ barrels per foot. 8 ft. nearly 12 barrels. 9ft. $15\frac{1}{6}$ barrels. 10 ft. $18\frac{3}{4}$ barrels per foot.

How *to build* a cistern. Dig your hole about four inches larger than the determined size. If the earth is compact, you need no brick-work. If it is loose, allow a foot increase of excavation for the wall. When you are ready, mix water lime with twice its bulk of coarse, clean sand, and plaster two or three coats over bottom and sides. Use the mortar as fast as mixed. Finish the top from eighteen inches below the surface with a double row of bricks as "headers," to support a four-inch plank covering, and over that earth, to prevent freezing. Every such cistern is worth its cost every year.

Culture of Rice.—The Baltimore American says that the culture of rice in Louisiana appears to be increasing. There are immense tracts of swamp land in that State well adapted to the growth of this crop. There is land enough along the Lafeusche to grow more than all the rice plantations in South Carolina, which can be easily watered from the branch of the Mississippi. Good rice land will produce from 60 to 112 bushels of paddy (rough rice) to the acre, and a bushel will yield on an average 29 pounds of clean rice, worth one dollar, while the broken rice and meal will pay for hulling. This shows a profitable crop, but not above facts. Rice-planters on the Cape Fear river, North Carolina, we are told, average 112 bushels per acre, with pretty rough culture; and on the Cooper river, S. C., 75 bushels, is a common average.

For "The Friend."

Interesting Letter written in 1653.

"Dear Friend,—I have long professed to serve and worship the true God, and as I thought, above many sects, attained to a high pitch in religion; but now, alas! I find my work will not abide the fire. My notions were swelling vanities, *without power or life*. What it was to love enemies, to bless them that curse, to render good for evil, to use the world as using it not, to lay down life for the brethren, *I never understood;* what purity and perfection meant, I never tasted. All my religion was, *but the hearing of the ear, the believing and talking of a God and Christ* in heaven, or a place at a distance, I knew not where. Oh! how gracious was the Lord to me in carrying me to judge Fell's, to see the wonders of his power and wisdom—*a family walking in the fear of the Lord, conversing daily with Him, crucified to the world, and living only to God.* I was so confounded, all my knowledge and wisdom became folly; my mouth was stopped, my conscience convinced, and the secrets of my heart were made manifest, and that Lord was discovered to be near, whom I ignorantly worshipped. I could have talked of Christ in the saints, the hope of glory, but it was a riddle to me. And truly, dear friend, I must tell thee I have now lost all my religion, and am in such distress, I have no hope nor foundation left. My justification and assurance have forsaken me, and I am even like a poor shattered vessel, tossed to and fro, without a pilot or rudder; as blind, dead, and helpless, as thou canst imagine. I never felt corruption so strong, and temptation so prevailing, as now; *I have a proud, hard, flinty heart*, that cannot be sensible of my misery. When I deeply consider *how much precious time I have wasted, and how unprofitably I have lived*, my spirit feels a sudden fear; but I am still flying to my old refuge, and there my thoughts are diverted. What it means to wait upon God, I cannot apprehend; and the confusions in my own spirit, together with the continual temptations from without, are so great, I cannot understand or perceive the small still voice of the Lord.

"What thou told me of George Fox, I found true: when thou scest him or I. Nayler—they both know my condition better than myself,—move them, if neither of them be drawn this way, to help me with their counsel by letter. They are full of *pity and compassion*, and though I was their enemy, they are my friends, and so is Francis Howgil, from whom I received a letter full of tenderness and wholesome advice. Oh! how welcome would the faces of any of them be to me; truly I think I could scorn the world to have fellowship with them. But I find my heart is full of deceit, and I exceedingly fear to be beguiled, as I have been, and to be reduced into a form without power, into a profession before I possess the Truth; which will multiply my misery, and deprive me both of God and the world. It will much refresh me to receive any lines from thee; but be thou faithful. Thou mayest perceive by my Ashdod language, what countryman I am—even of the low world that lives in darkness. I have been at Judge Fell's, and have been informed from that precious soul, his consort, in some measure what these things mean, which before I counted the overflowings of giddy brains. Dear heart, pity and pray for me; and let all obligations of former friendship be discharged, in well wishes to the soul of thy old family friend, that he may partake with them of your heavenly possessions. A. P."

A picture, it is to be apprehended, of hundreds of worldly professors of religion at this day—having form without power,—show without sub-

stance. But he finally became a soldier of Christ, and a counsellor of others. The character he gives of Margaret Fell and her family, and the effect which their grave and weighty deportment had upon him, is worthy of our observation, and may profitably suggest the inquiry, whether the portrait applies to us, who hold the same religious faith, and whether similar fruits would not be produced upon beholders, if we walked in the Truth as they did, holding communion with our heavenly Father, and reverencing him in all our ways—not professing only the precious doctrines of the gospel of Christ, but actuated also in all things by his Spirit.

Selected.

HEAVEN.

For we know that if our earthly house of this tabernacle were dissolved, we have a building of God, a house not made with hands, eternal in the heavens.—2 Cor. v. 1.

There is a world above,
Where sorrow is unknown;
A long eternity of love,
Form'd for the good alone;
And faith beholds the dying here
Translated to that glorious sphere.
Montgomery.

Every Christian friend that goes before us from this world is a ransomed spirit, waiting to welcome us in heaven. Every gem which death rudely tears away from us here, is a glorious jewel for ever shining there.—*President Edwards.*

Few mercies call for more thankfulness than a friend safe in heaven.—*Hamilton.*

Where that innumerable throng
Of saints and angels mingle song;
Think what a Sabbath there shall be,—
The Sabbath of eternity.—*T. Grinfield.*

In my Father's house are many mansions: if it were not so, I would have told you. I go to prepare a place for you.—John xiv. 2.

Oh! sweet abode of peace and love,
Where pilgrims, freed from toil, are blest.—*Kelley.*

A man may go to heaven without health, without riches, without honours, without learning, without friends; but he can never get there without Christ.—*Dyer.*

There, like streams that feed the garden,
Pleasures without end shall flow;
For the Lord, your faith rewarding,
All his bounty shall bestow.—*Cowper.*

Fair distant land! could mortal eyes
But half its charms explore,
How would our spirits long to rise
And dwell on earth no more!—*Steel.*

Heaven is a day without a cloud to darken it, and without a night to end it.—*J. Mason.*

Endless pleasure, pain excluding,
Sickness there no more can come;
There, no fear of woe intruding
Sheds o'er heaven a moment's gloom.—*Collyer.*

Eye hath not seen, nor ear heard, neither have entered into the heart of man, the things which God hath prepared for them that love him.—1 Cor. ii. 9.—*Puritan Recorder.*

HOMINY.

In point of economy, as human food, one bushel of beans or hominy is equal to ten of potatoes. Hominy, too, is a dish almost as universally liked as potatoes, and at the South about as freely eaten, while at the North it is seldom seen. In fact, it is an unknown food, except to a few persons in cities. By hominy we do not mean a sort of coarse meal, but grains of white corn, from which the hull and chit, or eye, have been removed, by moistening and pounding in a wooden mortar, leaving the grains almost whole, and composed of little else but starch. It has often been said that not one cook in ten knows how to boil a potato. We may add another cipher when speaking of the very simple process of cooking hominy. We give the formula from our own experience and instructions received in a land where "hog and hominy" are well understood: Wash slightly in cold water, and soak twelve hours in tepid, soft water; then boil slowly from three to six hours in the same water, with plenty more added from time to time, with great care to prevent burning. Do not salt while cooking, as that or hard water will harden the corn. So it will peas or beans, green or dry, and rice also. When done, add butter and salt; or a better way is to let each season to suit the taste. It may be eaten with meat in lieu of vegetables, or with sugar or syrup. It is good hot or cold, and the more frequently it is warmed over, like the old-fashioned pot of

"Bean-porridge hot, or bean-porridge cold,
Bean-porridge best at nine days old."

So is hominy—it is good always, and very wholesome, and, like tomatoes, only requires to be eaten once or twice to fix the taste in its favour. *Journal of Health.*

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 51.)

ELIZABETH BOLTON.

This Friend, whose maiden name appears to have been Jones, came from Ross, in Herefordshire, Great Britain, to Pennsylvania. After her marriage to Everard Bolton, she resided at Abington, or in that neighbourhood, where she received a gift in the ministry. She deceased Sixth month 5th, 1707.

JOHN AUSTIN.

John Austin came from Looe, in Cornwall, among the early settlers in Pennsylvania. The minute concerning him says, he "was convinced here." His residence was in Philadelphia, and near it. Being brought forth in the ministry, he laboured at home and among neighbouring meetings, but does not appear to have travelled abroad. His ministry appears to have been acceptable to his friends, and he was a useful man among them in other respects. He seems to have been several years in declining health, and was released from the troubles of time, Tenth mo. 29th, 1707.

JOHN EVANS.

John Evans was born in Radnorshire, about the year 1625. In the year 1655 he was convinced of the truth held forth by the people called Quakers, and joining with them, soon was called on to suffer in support of his Christian belief. His goods were at times distrained for tithes, and for obedience to his Saviour's command, "Swear not at all," he was committed to prison. In a short time after his convincement, he was brought forth in the ministry, and, in the exercise of his gift, was faithful in youth, and continued green to old age. He came to Pennsylvania in the year 1683, and settled west of the river Schuylkill, where he became a member of Haverford Monthly Meeting. The minute concerning him, after showing that he was found labouring in his Master's work to the end of his days, adds, "he died in the 82d year of his age, and was buried at Radnor burying-place, the 22d of Seventh month, in the year 1707."

ELEANOR SMITH.

Eleanor Dolby was born at Harborough, in Leicestershire, England, in the year 1653. She was convinced of the Truth, when about thirteen years of age, and being found faithful, she grew therein, and received a gift in the ministry. Being married to John Smith, of Darby, she settled there. A little before her death, she desired that her husband and children should come and sit by her. She then spoke thus, "I entreat you, my children, to walk soberly, plainly, and keep to the Truth, and the Lord will provide for you every way beyond your expectation. I am clear of you, having done the part of a tender mother to you. I leave and commit you to the Lord, who is able to keep you to the end of your days." She desired them not to mourn if it should please God to remove her from amongst them, saying, "It will be my great gain." Often repeating her full assurance of future happiness, adding, "I can praise thy name, O Lord, in the midst of affliction, for surely thou art worthy of all praise, honour and glory, and that for ever more; for thou neither leavest nor forsakest those that put their trust in thee." Then said, "Dear children, be content, for I shall die in favour with God, and true love and unity with his people." She desired to be dissolved, saying, "I can freely give up husband and children and all this world, to be with the Lord, whose presence I feel flowing as a river into my soul."

In the time of her last illness, she wrote the following epistle to the Monthly Meeting of women Friends at Darby, viz.

"Dear Sisters,—Herewith I send you the last salutation of my love, with whom I have been many times refreshed and truly comforted. I say I have travelled with you through various exercises and difficulties, when the Lord has been sometimes pleased to give us (as it were) the bread of adversity to eat, and the water of affliction to drink; yet blessed be his name, he has sweetened our cups many times as with honey, and sustained us as with the oil of the cruse; and by his sweet presence caused our cups to overflow, to the praise of his great name. Wherefore, dear sisters, I entreat you to dwell in the love of God, which love is the bond of peace. Let charity be found to dwell amongst you, and then I do believe, you will be neither barren nor unfruitful, but your branches laden with good and weighty fruit, which will find acceptance with God. So no more, but my tender love to you in the blessed Truth. I take my leave and bid you farewell in the Lord. The last from your loving sister,

"ELEANOR SMITH."

Elcanor Smith deceased the 10th of the Seventh month, 1708, aged fifty-five years.

Tanning Cotton and Linen.—English and French fishermen have been long in the habit of tanning their sails, etc., in bark liquors in order to render them more durable. Milliet states that pieces of linen, treated for 72 hours with an oak bark liquor, at 150 degrees, and stretched on frames, remained unaltered in a damp cellar for ten years; while untanned linen in the same place, and for the same time, had entirely rotted. It was further shown that linen, which had begun to molder, might be preserved from further change by being tanned. It seems to be only necessary that the articles should be kept two or three days in a warm solution of tannin. Awnings may be treated in this manner with either oak bark or sumac—both will answer. This will afford a useful hint to our sail-cloth manufacturers.

From the Edinburgh Review.

European Emigration to the United States.

(Continued from page 52.)

The census enables us to follow their track across the Republic, and to see in what communities they rest. The results are curious and not altogether expected.

1. It appears that the immigration rests almost entirely in the free States. Of the 2,200,000 foreigners resident in the Union, only 305,000 are in the slave States; and of these 127,000 are in the comparatively northern corn-growing States of Maryland, Virginia, Kentucky, and Missouri, and 66,000 in the commercial State of Louisiana.

2. It travels principally due west in a belt reaching from 36 deg. or 37 deg. N. to 43 deg. or 44 deg. N., including the central and southern parts of New England, the middle and northwestern States, Maryland and Delaware, and the central and northern part of Virginia, Kentucky, and Missouri. The climate and production of this country are similar to those of Europe; the general ratio of health and average of life is higher notwithstanding the great floating European population, and the name of labourer is not degraded by a comparison with slaves.

3. Less than one-third of the total immigration has entered the Lake country and the valley of the Mississippi. The proportion of foreign population in New York and Massachusetts is greater than in any western agricultural State except in Wisconsin. It is also nearly as large as in California, a gold-seeking community from the world at large.

4. It principally consists of Irish, Germans, and English.

Of the English nearly five-eights are to be found in the Atlantic free States, about one-third in the States of the north-west, and nearly all the residue in the northern slave States.

Three-fourths of the Irish stay in New England and the middle States (principally in Massachusetts, New York, and Pennsylvania), where the commercial and manufacturing interests are seated; and they are found in the south and west only where there are great public works in construction. They change their soil and their allegiance, but keep their nature intact. Unwilling in the New, as in the Old World, to guide their own destinies, they stay where another race furnishes food for their mouths, and labour for their hands, and takes to itself the substantial fruits of their industry. One love, however, is entirely weeded from their hearts. Their experience with the impoverishing potato-patch seems to have given them a distaste for agriculture; and, in a country where there is plenty of land and a sure harvest, they avoid almost entirely the pursuits to which they cling so tenaciously in Europe. Their numbers did not in 1850 reach a million,—not two-thirds of the decrease in the Irish population during the last ten years.

The Germans are more energetic, or, rather, bring their energy to a better account. More than half their number are spread over the northwestern States, Missouri and Kentucky, and more than one-third in New York and Pennsylvania. They stay, indeed, in the towns in great numbers, devoting themselves to mechanical arts and to trades; but a large proportion, also, if the census speaks truly, are to be found in the agricultural districts, where they fell the forest and turn up the prairie for themselves. Some years ago we remember to have seen a colony of German emigrants landed on the unfinished pier of an unbuilt city in Wisconsin. The pier has doubtless since been completed, and the city has its thousands; but then, a few driven piles and a quantity of scattered lumber marked the place of the former, and rectangular streets strewn with fresh felled timber, stretching into a primeval forest, showed where the latter was to be. The emigrants were bundled out upon the pier, and their boxes, chests, willow-fans for winnowing wheat by hand, spinning-wheels and primitive spades, scythes, and ploughs were tumbled after them. The poor women sat upon the boxes in the hot sun (it was in August) and cried at the desolate appearance of this, the gate to their paradise, and the men tried in their rough way to comfort them. We leaned upon the "guard," looking at them as the boat steamed up Lake Michigan, and admired the simplicity which could bring their miserable utensils to such a country. Long before this the men have chased away the young grouse with American ploughs, and have fattened their cattle on the long grass of the prairie, and the women, putting away the spinning-wheels as relics of a by-gone existence, sit in the summer evenings under the honey-suckle and bignonia, which twist themselves over the porch, and sing to their children of the *Vaterland* without a sigh of regret.

The valley of the Mississippi and the Upper Lake country has not only gained in an unexampled manner, but has been almost created within the half century. Where, in 1800, there were less than 400,000 persons clustered around the rude forts that protected them from the Indians, with only 7 per cent. of the representation in Congress, there are now nearly ten millions cultivating 53,000,000 acres of improved land, and represented by 42 per cent. of the house. If the European immigration has remained in the Atlantic States, the inquiry naturally arises, Whence comes this western population?

The oracle of the census again responds. All the while there has been a native emigration twice as great as the foreign. Washington Irving's pleasant sketch of the Yankee seems to be literally true,—a discontented being, unwilling to stay quietly in the home of his birth, and seeking an unknown better in some new sphere. Just when he begins to grasp it,—when the "stumps" are uprooted and the corn grows plentifully,—when his finished barns are filled, and his log cabin takes to itself some look of comfort,—he sells his "improvements" at a profit, shoulders his axe, harnesses his horse to a covered cart, into which he packs his wife and a staircase of children, and marches to some spot still further west, where he may begin anew. Thus the whole country is in motion; Massachusetts removes to Maine, and Maine to Massachusetts; New York visits Pennsylvania, and Pennsylvania returns the compliment. Virginia crosses to Kentucky, and Kentucky pushes over into Illinois. Yet the whole migration appears to be governed by fixed laws, producing ascertainable results.

1. In the free States the general movement is due west,—from New York, for instance, to Michigan and Wisconsin, and from Pennsylvania to Ohio. From Maine and New Hampshire it goes principally to Massachusetts, from the other New England States more to New York than elsewhere: but natives of all are found in the free north-west States in large numbers. The middle States are also represented there by an aggregate of 758,020, in addition to which they interchange very extensively with each other; the people of the small States, particularly, going to the great cities of their neighbours. The emigration from the northern Atlantic States into the six north-western States amounts to nearly 1,200,000. And so strong is this passion for motion, that the west itself supplies a population to the still further west. Ohio sends 215,000 to the three States beyond her; Indiana retains 120,000 from Ohio, but sends on 50,000 of her own; Illinois takes 95,000 from Ohio and Indiana, and gives 7,000 to young Iowa; and that State, though not twenty years redeemed from the Indians, gains nearly 60,000 by the restlessness of the three, and, in its turn, breaks over the too feeble barriers of the Rocky Mountains to supply Utah and Oregon with 1,200 natives of Iowa.

2. The native emigration from their central slave States follows the same general law of a due westerly movement: but whether governed by the wish to escape from slavery, or by what other motive, it takes also a partial north-west direction into the free States. Maryland, Virginia, North Carolina, Tennessee, and Kentucky, furnish 360,000 of the native population of the north-west.

3. The movement in the planting States has been mostly within themselves, taking a south-westerly and westerly direction from the older lands of South Carolina and Georgia, to the uplands of Alabama and Mississippi. The emigration from South Carolina alone is nearly 68 per cent. of the white population remaining within her borders.

4. The American-born population of Texas comes principally from the slave States, that of California from the free States, and that of the territories more from the free than from the slave.

5. It appears from a study of the course of both emigrations, that they mainly benefit the belt of country above described. New England loses nearly 400,000 of native population; but the foreign elements reduce the actual loss to 92,000. The middle States lose 600,000 of native population, but have so large a foreign addition, that the balance-sheet shows a gain of nearly 414,000. The central slave States lose 600,000 natives; the foreign emigration reduces their actual loss to 400,000. The planting States and Texas gain 300,000, of which nearly 200,000 are native. The north-west gains 1,900,000, of which 1,330,000 are native.

(To be continued.)

Selected.

Warriors and statesmen have their meed of praise,
And what they do, or suffer, men record;
But the long sacrifice of *woman's* days
Passes without a thought, without a word:
And many a lofty struggle for the sake
Of duties sternly, *faithfully* fulfilled—
For which the anxious mind must watch and wake,
And the strong feelings of the heart be still'd—
Goes by unheeded as the summer wind,
And leaves no memory, and no trace behind!
Yet it must be more *holy* courage dwells
In one *meek* heart which braves an adverse state,
Than his whose ardent soul indignant swells,
Warmed by the fight, or cheer'd through high debate.

"*Thus saith the Lord*," should be and *is* the guide and warrant of all true believers: but it is not uncommon for the timid and distrustful Christian to be alarmed for consequences; the truth is, he has nothing to do with them, only duty; consequences are all safe in God's hand. If Abraham had looked only at consequences, it is not probable he would ever have been styled the 'father of the faithful.'

A Ship for Nothing.—The dullness of the freighting business is illustrated by the fact mentioned by the Tribune, that one of the New York merchants, extensively engaged in the shipping business, has had a first class ship offered to him for a twelve months' voyage gratis—nothing being required by the owner but a guarantee that the vessel should be returned to him at the expiration of that period in as good condition as when she was taken.

In prosperity prepare for a change, in adversity hope for one.—*Burgh.*

For "The Friend."

Men for the Times.—True Worship.

It will be well for ministers, elders and overseers and other Friends, who take a part in conducting the concerns of Society, and feel a lively interest in the right order of the church, always to bear in mind, that the work is the Lord's; and that the instruments to be made use of in this weighty work must be of his own preparing and choosing, influenced by the Holy Spirit, and endued by the wisdom from above, that is first pure, then gentle and easy to be entreated; filled with that holy charity, that "thinketh no evil;" and like our early Friends, "changed men and women themselves before undertaking to change others." Living in the holy fear of God, they would take heed unto themselves and to the flock over which the Holy Ghost has made them overseers; walking in all lowliness of mind, and abasedness of soul, keeping on the watch tower, with their spiritual ear open, to hear the language of the Spirit to the churches. As all wisdom that is profitable to direct comes from God, let us look to him for it; and not judge anything before the right time. Let us keep our spiritual eye to the adorable Head of the church, Christ Jesus our Lord, that we may individually realize the truth of what he said to his disciples, "the Holy Ghost shall take of mine, and shall show it unto you." Here, the instruments of the Lord, engaged in his work, are favoured with the mind and will of Christ, and enabled to co-operate with the teachings of his spirit, and to do the will of their heavenly Father, in a way that will tend to the glory and honour of Truth, and the spreading and exaltation of the peaceable kingdom of Christ. O Friends, let us lay our own honour in the dust, that we may all seek the honour that comes from God. Let us be willing to put off the old man with all his deeds, that we may put on the new and heavenly man, Christ Jesus the Lord from heaven, a quickening Spirit, the minister of the true tabernacle which the Lord hath pitched, and not man; wherein the true worshippers worship God in spirit and in truth.

One of our early Friends, speaking of this inward and spiritual worship, says, as nothing can be more opposite to the natural will and wisdom of man than this silent waiting upon God, so neither can it be obtained, nor rightly comprehended by man, but as he layeth down his own wisdom and will, so as to be content to be thoroughly subject to God, and therefore it was not preached, nor can be so practised, but by such as find no outward ceremony, no observations, no words, yea, not the best and purest words, even the words of Scripture, able to satisfy their weary and afflicted souls; because where all these may be, the life, power, and virtue, which makes such things effectual, may be wanting. Such, I say, were necessitated to cease from all externals, and to be silent before the Lord; and being directed to that inward principle of life and light in themselves, as the most excellent teacher, which "can never be removed into a corner," came thereby to be taught to wait upon God in the measure of life and grace received from him, and to cease from their own forward words and actings, in the natural willing and comprehension, and feel after this inward seed of life; that, as it moveth, they may move with it, and be actuated by its power, and influenced, whether to pray, preach, or sing. And so from this principle of man's being silent, and not acting in the things of God himself, until thus actuated by God's light and grace in the heart, did naturally spring that manner of sitting silent together, and waiting together upon the Lord. For many thus principled, meeting together in the pure fear of the Lord, did not apply themselves presently to speak, pray, sing, &c., being afraid to be found acting forwardly in their own wills; but each made it their work to retire inwardly to the measure of grace in themselves, not being only silent as to words, but even abstaining from all their own thoughts, imaginations and desires; so watching in a holy dependance upon the Lord, and meeting together not only outwardly in one place, but thus inwardly in one spirit, and in one name of Jesus, which is his power and virtue, they come thereby to enjoy and feel the arisings of this life, which, as it prevails in each particular, becomes as a flood of refreshment, and overspreads the whole meeting: for man, and man's part and wisdom, being denied and chained down in every individual, and God exalted, and his grace and dominion in the heart, thus his name comes to be one in all, and his glory breaks forth, and covers all; and there is such a holy awe and reverence upon every soul, that if the natural part should arise in any, or the wise part, or what is not one with the life, it would presently be chained down, and judged out. And when any are, through the breaking forth of this power, constrained to utter a sentence of exhortation or praise, or to breathe to the Lord in prayer, then all are sensible of it; for the same life in them answers to it, "As in water face answers to face." This is that divine and spiritual worship, which the world neither knoweth nor understandeth, which the vulture's eye seeth not into. Yet many and great are the advantages, which my soul, with many others, hath tasted of hereby, and which would be found of all such as would seriously apply themselves hereunto: for, when people are gathered thus together, not merely to hear men, nor depend upon them, but all are inwardly taught to stay their minds upon the Lord, and wait for his appearance in their hearts; thereby the forward working of the spirit of man is stayed and hindered from mixing itself with the worship of God; and the form of this worship is so naked and void of all outward and worldly splendour, that all occasion for man's wisdom to be exercised in that superstition and idolatry, hath no lodging here; and so there being also an inward quietness and retiredness of mind, the witness of God ariseth in the heart, and the light of Christ shineth, whereby the soul cometh to see its own condition. And there being many joined together in the same work, there is an inward travail and wrestling; and also, as the measure of grace is abode in, an overcoming of the power and spirit of darkness; and thus we are often greatly strengthened and renewed in the spirits of our minds without a word, and we enjoy and possess the holy fellowship and communion of the body and blood of Christ, by which our inward man is nourished and fed. Now as many thus gathered together grow up in the strength, power and virtue of truth, and as truth comes thus to have victory and dominion in their souls, then they receive an utterance, and speak steadily, to the edification of their brethren, and the pure life hath a free passage through them, and what is thus spoken edifieth the body indeed. Such is the evident certainty of that divine strength that is communicated by thus meeting together and waiting in silence upon God, that sometimes when one hath come in that hath been unwatchful and wandering in his mind, or suddenly out of the hurry of outward business, and so not inwardly gathered with the rest, so soon as he retires himself inwardly, this power being in a good measure raised in the whole meeting, will suddenly lay hold upon his spirit, and wonderfully help to raise up the good in him, and beget him into the sense of the same power, to the melting and warming of his heart; yea, if it fall out that several met together be straying in their minds, though outwardly silent, and so wandering from the measure of grace in themselves, which through the working of the enemy, and negligence of some, may fall out, if either one come in, or may be in, who is watchful, and in whom the life is raised in a great measure, as that one keeps his place, he will feel a secret travail for the rest in a sympathy with the seed which is oppressed in the other, and kept from arising by their thoughts and wanderings; and as such a faithful one waits in the light, and keeps in this divine work, God often times answers the secret travail and breathings of his own seed through such a one, so that the rest will find themselves secretly smitten without words, and that one will be very useful through the secret travail of his soul to bring forth the life in them, whereby life will come to be raised in all, and the vain imaginations brought down; and such an one is felt by the rest to minister life unto them without words.

BARCLAY.

New Jersey, 1854.

Increase of the Mormons.

The "General Epistle of the Saints, Young, Kimball, and Grant, Presidents of the Latter-day Church, to the Saints on Earth," represents the growth of that strange people as immense. They are erecting fortifications against future attacks, and cultivating large tracts of land, in Utah, and at the last conference sixty-five missionaries were commissioned. In four years their population has increased from 4,000 to 30,000. They have a perpetual emigration fund of $34,000, out of which they pay the expenses of immigrant converts. They will have 60,000 inhabitants in five years, at their present rate of increase.—They have churches in England, Scotland, Wales, Denmark, Sweden, Norway, Iceland, France, Germany, Italy, Switzerland, Malta, Gibraltar, Hindostan, Australia and the Sandwich Islands; and they have recently sent missionaries to Siam, Ceylon, China, the West Indies, Guinea and Chili. The Book of Mormon has been published in French, German, Italian, Danish, Polynesian, Welsh. Their doctrines and practices are of the most putrid character, and unless decomposed of their own corruptness, they will, ere long, be a source of trouble to our government. They daily grow more formidable, and must end in utter dissolution, or spread their vile influences to the overthrow of morality and civilization.—*Late Paper.*

Much in Little.

He who bears and forbears is always a *useful* member of a community.

If thou wilt *suspect*, let it be *thyself.*

It is wholly vain to suppose we can destroy a corrupt *tree* merely by *condemning its fruits.*

Slander, snake-like, creepeth in the dust, thinking to escape recrimination.

Well-timed silence hath more eloquence than speech.

Be not offended with any merely because they do not *honour thee.*

We cannot in *any degree* be reconciled to error, if we are *alive* in the Truth.

If we strive to do the Lord's work with our own tools, he will reject our doings, and be they ever so hidden, make them manifest to our confusion.

True charity will never *smooth down* error, for *she thinketh no evil;* neither will she attempt to shut our eyes to the distinction between him who serveth the Lord and him who serveth him not.

Let Christ's ambassadors beware of *lightness* in their speech.

George Washington.—His published correspondence is a revelation of the high virtue and great capacity for the several stations which he filled. He was in all things honest and just, truthful and dignified, liberal and modest, courteous and gentlemanly, and hence the good opinion which all true men everywhere felt for George Washington when he was alive, and which they retain now that he is no more. The following letter is a model one for the example it gives of the true mode of living at home, and we need such examples from just such high authority in these days of extravagance, folly and selfishness. The letter we copy is now for the first time published, and was written to Tobias Lear, in England, in 1794. Washington gives the following reasons why he has empowered Mr. Lear to sell a portion of his landed estate:

"I have no scruple in disclosing to you that my motives to these sales are to reduce my income, be it more or less, to specialities—that the remainder of my days may thereby be more tranquil and free from care, and that I may be enabled, knowing what my dependence is, to do as much good as my resources will admit; for although in the estimation of the world I possess a good and clear estate, yet so unproductive is it, that I am oftentimes ashamed to refuse aid which I cannot afford unless I sell part of it to answer this purpose. Besides these I have another motive which makes me earnestly wish for these things—it is indeed more powerful than all the rest—namely, to liberate a certain species of property which I possess very repugnantly to my own feelings, but which imperious necessity compels, until I can substitute some other expedient by which expenses not in my power to avoid, (however well disposed I may be to do it,) can be defrayed."

No one, after this disclosure of Washington's financial situation, can accuse him of parsimony. It evidences the same high integrity and thoughtful honesty which he displayed at the head of the army and in the presidential chair.

Scientific Novelties.

Some curious questions in the obscurer branches of science have been recently debated at the London Royal Institution. Dr. Tyndall has been examining the subject of tones emitted by masses of heated metal while cooling. He proved by repeated experiments, the incorrectness of the explanation hitherto received, but was still unable to assign the phenomena to their true cause. Another was on some most extraordinary effects of motion, which the Rev. Badin Powell, though he interested his auditors in the experiments, could not satisfactorily explain. One of the effects is this: Let a beam, free to turn in all directions, be balanced horizontally on the top of a standard; then put a small wheel on one end, cause it to rotate rapidly, and the beam will still retain its horizontal position, notwithstanding the weight of the wheel. It is as though motion nullified gravity; but as some of the most ingenious English philosophers are examining into the phenomena, it is hoped an explanation may ere long be found. Another interesting subject is that brought forward by Professor Edward Forbes, who has started an inquiry as to the depth of primeval oceans, and who believes it possible to throw light upon it by a study of the colour of fossil shells. The shallower the water the more intense the colour, is the experience gained by dredging in the seas of the present period; and, reasoning from analogy, we may infer the same law prevailed in earlier periods. Ehrenberg, too, contributes something more to our knowledge of ocean life; he has examined specimens of the mud brought up from the depth of six thousand fathoms, and finds them to contain *living* infusoria. The astronomers, also, have been somewhat excited, not by the discovery of a new planet, but by a book on the Plurality of Worlds, written to prove that there is no such plurality. The author, a learned doctor of Cambridge, contends that this globe of ours, and this only, is inhabited. All the others are lifeless.

It is of great importance to the cheap application of electricity, that the products of the battery should be economically useful. In the ordinary zinc and copper, the sulphate of zinc formed is of little use, except for the purpose of smelting to regain the metal, as its use in medicine does not lead to any great consumption of the article. Accordingly, various experiments have been made with the view of obtaining a battery product of sufficiently extensive utility. Robert's battery substituted tin for zinc, and the exciting fluid being nitric acid, produced stannic oxyd, which afterwards being united with soda, formed stannate of soda, an article largely used by calico printers for brightening their colours. The profit on this product it was thought would pay the expense of working the battery, the electricity from which, in that case, would be obtained for nothing. Great hopes were entertained that this process of manufacture would be extensively followed, but this does not seem to have been as yet realized. Dr. Watson has broached a similar idea, using prussiate of potash as one of the exciting fluids, and producing a Prussian blue, or prussiate of zinc, from the decomposition of the iron or zinc cells employed. Sometimes chromate of potash is used, which, acting on the products of decomposition of lead cells, forms the bright yellow chromate of lead. Whether these products can be obtained more advantageously or cheaply in the battery, than if the ingredients were mixed out of the cells in common vessels, is a question which an extended experience will probably soon decide.

The Sound of Bells.—The nearer bells are hung to the surface of the earth, other things being equal, the farther they can be heard. Franklin has remarked, that many years ago the inhabitants of Philadelphia had a bell imported from England. In order to judge of the sound, it was elevated on a triangle, in the great street of the city, and struck, as it happened, on a market day, when the people coming to market were surprised on hearing the sound of a bell at a greater distance from the city than they ever heard any bell before. This circumstance excited the attention of the curious, and it was discovered that the sound of the bell struck in the street reached nearly double the distance it did when raised in the air. In the air, sound travelled at the rate of from 1130 to 1140 feet per second. In water, 4708 feet per second. Sounds are distinct at twice the distance on the water that they are on the land.

Bank of England Notes.—The notes of the Bank of England, under a new process, not long since adopted, are signed by machinery. The engraving of the whole note is complete. Formerly the bank employed twenty clerks, at a salary each of £500 per annum, who did nothing else but sign their names to notes. The new mode of signing, it is supposed, will prevent counterfeiting.

Revenue of the United States.—It is estimated that the revenue of the United States, for the fiscal year terminating on July 1st, will be $75,000,000; an increase of $14,000,000 in the present year.

THE FRIEND.

ELEVENTH MONTH 4, 1854.

We have received the following information respecting the Yearly Meeting lately held in Baltimore.

The meeting convened on Second-day, the 24th ult.; the meeting of Ministers and Elders having been held on the Seventh-day preceding. Several ministers from other Yearly Meetings, with minutes, were in attendance.

Epistles from London, Dublin, New York, Philadelphia, and Indiana Yearly Meetings, and one from the larger body in New England, were read, and a committee appointed to essay replies thereto. The Clerk then informed the meeting that he had in his possession two epistles, one signed by Benjamin Hoyle, as clerk, and the other by Jonathan Binns, each purporting to come from the Yearly Meeting of Ohio: whereupon a committee of twelve was appointed, to unite with a like committee of women Friends, should they appoint one, to take the subject under consideration, and report to a future sitting, their judgment as to which of those meetings should be recognized as Ohio Yearly Meeting. The meeting proceeded in transacting its usual business until Third-day afternoon, when the above mentioned committee (which had been joined by thirteen women Friends) produced a report, signed by nineteen, stating they were agreed to recommend that the epistle signed by J. Binns should be read. The meeting was informed that six of the committee could not unite with the report, believing that the body sending the epistle recommended to be read, was a spurious meeting, set up in a wrong spirit, and out of the order of our religious Society. After a diversity of sentiment had been expressed, both in regard to the report, and the meeting proposed to be recognized, the language of the report was so altered as to make it clear that it was united with only by those of the committee who signed it. The adoption of the report was united with by a large portion of the meeting, but was decidedly opposed by several who believed that the epistle signed by B. Hoyle came from the legitimate Yearly Meeting of Ohio.

A minute was made adopting the report, and the epistle signed by J. Binns was read. This meeting then proceeded in transacting the usual business.

We are further informed, that those Friends who could not unite with acknowledging the seceding meeting in Ohio, remained together at the close of this sitting, and after considering their situation, concluded to convene the following day at the house of a Friend; at which meeting they decided as Baltimore Yearly Meeting to address the Yearly Meetings of London, Dublin, North Carolina, Philadelphia and Ohio. At a subsequent sitting, after adopting communications to those meetings, in consequence of the smallness of their number, they thought it best to invite the two last named meetings, if way should open for it, to appoint committees to aid them in deciding what further course to take. They then adjourned, to meet at Nottingham at the usual time next year.

SUMMARY OF EVENTS.

EUROPE.—News from England to the 14th ult. The stocks of breadstuffs at all the ports was light, and the farmers do not offer freely. Flour had advanced 1*s.* 6*d.* during the week.

The War.—The last accounts from the Crimea are, that the allied forces had passed around Sebastopol, and were about commencing the attack from the south side, where the defences were thought to be the weak-

est. Menschikoff maintained his position on the north side, where he was waiting the expected reinforcements. Some of these would probably arrive by the 15th ult. All the appearances indicate a desperate defence. Immediately after the battle of the Alma, Menschikoff caused five of his line of battle ships, and two frigates, to be sunk in eight or ten fathoms water, thus completely blocking up the entrance to the harbour of Sebastopol, and preventing the possibility of an attack by sea. Ten ships were sunk with all their guns and stores on board, and rigging standing. The remainder of the Russian fleet was held in readiness for sinking, and their crews numbering 10,000 men had been added to the garrison. This measure has rendered the allied fleet comparatively useless, and the marines have been landed, and were acting with the land forces. On the 2nd ult., the allies had destroyed the aqueduct, and cut off the supply of water from the city, which is now dependent upon its reservoirs. The allied trenches were within 1600 yards of the walls, and it was expected that an assault would be made soon, probably on the 8th ult. It is said that the Russians had but 35,000 men at Alma, that number being thought sufficient to defend the position.

The French commander-in-chief St. Arnaud has died of disease of the heart; he is succeeded by General Canrobert. The Russian forces in the Crimea are estimated at 85,000 men, and the allies at 90,000, including the seamen from the fleet. All the allied reserves had left Varna for the Crimea.

THE BALTIC.—The greater portion of the fleet under Admiral Napier was at anchor near Revel; it was not expected that any further operations would be attempted this season.

FRANCE.—The recent fabrication respecting the fall of Sebastopol, which so successfully imposed upon the French and English governments, has been traced to the Paris Bourse. A correspondent of the Journal in Smyrna is implicated.

PRUSSIA.—The expectation now is, that Prussia, yielding to the pressure of the Western Powers, will declare her policy identical with that of Austria.

ASIA.—The Circassians have been defeated by the Russians.

CHINA.—On the 21st of Eighth mo., the siege of Canton continued. Shanghai was still held by the insurgents.

JAPAN.—On the 16th of Sixth mo., the U. S. store ship was at Simonda. Visits had been made to sundry villages along the coast. The inhabitants generally were a friendly disposition. The U. S. ship Southampton was to sail in a few days direct for Washington, bringing the presents to this country from the Emperor of Japan.

The treaty made by Com. Perry with the authorities of the Loo Choo Islands, provides that they shall furnish American ships touching there, with whatever they want at fair prices; furnish them with pilots to and from the harbour of Napa, assist shipwrecked vessels, &c.

LIBERIA.—Late accounts from this republic, say that the culture and manufacture of sugar on the St. Paul's river was rapidly increasing. Five large cane fields were to be seen in every direction, and during the present season it was thought fifty sugar farms would be laid out. Some of the sugar already landed at Monrovia, is said to be of fine quality.

CANADA.—*Terrible Railroad Disaster.*—On the 27th ult., a collision, attended with dreadful results, occurred on the Great Western (Canada) railroad. The express train going west had been delayed and thrown out of time, by the bursting of the head of the cylinder and other hindrances. When about thirteen miles west of Chatham, and thirty miles from Detroit, in a dense fog, and the train going about twenty miles an hour, it came in collision with a gravel train. The first and second passenger cars were broken into splinters, and nearly all the persons in them either killed or wounded. Forty-eight men, women and children were killed, and forty-one persons injured—one half of the number, it is thought, fatally.

UNITED STATES.—*Prepayment of Postage.*—Nine months ago fifty-two per cent. of the letters sent in the U. S. mail were at that time prepaid. A recent investigation shows that at this time quite sixty per cent. of the letters so sent are prepaid.

Pennsylvania.—*The Vote on Prohibition.*—The official returns show that 321,852 persons voted on this question, 158,342 ballots being cast *for*, and 163,510 *against* the measure. In thirty-six counties giving prohibition majorities, the vote was 113,770 against 76,168. In the remaining twenty-seven counties, there were 44,572 votes for the law, and 87,342 against. Alleghany, Armstrong, Blair, Bradford, Erie, Fayette, Lawrence, Venango, Wayne, and Wycoming gave 31,842 votes for, and 13,641 against, whilst Berks, Lebanon, Lehigh, Northampton, Schuylkill, and York gave only 10,988 votes *for*, and 34,771 *against*. It thus appears, that some sections of the State are strongly in favour of a prohibitory enactment, and others as decidedly opposed to it.

California.—The steamers George Law and Star of the West have arrived at New York, the former with $1,090,000 and the latter with $800,000. The news by these arrivals is to Ninth mo. 30. From Oregon, information had been received of a terrible massacre of overland emigrants by the Winneras Indians, on Boise river, near Fort Boise. About twenty persons, men, women and children were murdered with circumstances of the most atrocious cruelty. A considerable force had been sent in pursuit of the Indians. In San Francisco, two new free school-houses have been opened with accommodations for 1500 pupils. The market was well supplied with fine fruit, such as grapes, peaches, and melons.

The following are some of the statistics of the port for the previous nine months: Shipments of gold, $37,216,831. Exports of quicksilver, 13,343 flasks, worth about $500,000. Freights received on cargoes from Atlantic and foreign ports, $4,368,304. Gold deposited in the mint, from Fourth mo. 1, to Ninth mo. 1, $7,167,736; coined during the same time, $2,461,207. It is reported that the Apaches, south of the Colorado, on the Gadsden trace, murdered, on the 31st of Eighth mo., a party of fifty persons emigrating from Texas to California. There is another rumor that twenty-five Americans have perished by thirst on the southern route.

Chicago.—The city authorities have authorized a contract with the American Sub-marine Tunnel Company for the construction of a cast iron roadway under Chicago river.

New York.—During the week before last, not a single barrel of flour nor a bushel of wheat was shipped from this port. For some time past, the markets have been sparingly supplied with wheat and flour, and prices have materially advanced. Mortality last week, 478, of which 34 were from cholera.

Philadelphia.—Mortality last week, 164, of which 6 were from cholera.

Cleveland, O.—On the 28th, a fire occurred in this city, by which the custom-house, two hotels, and a large number of other buildings, occupying three squares of ground, were destroyed. A great quantity of merchandize was also made, was also consumed. The loss is stated to be over one million of dollars.

Miscellaneous.—*The Usury Law repealed in England.*—The entire repeal of the usury laws in Great Britain, has been accomplished at the recent session of parliament. It is now lawful, in Great Britain, to loan money at any rate of interest, and on any description of property, either real estate or otherwise.

Silver Ore in Georgia.—The Atlantia (Geo.) Examiner says that rich silver ore in large quantities has been found on the Chattahoochee river. It was being successfully worked by a company formed for the purpose.

Telegraphic Wires have been extended entirely across the peninsula of Hindostan, from Calcutta to Bombay, a distance of twelve hundred miles.

Destruction of the Port Deposit Bridge.—On the 26th ult., this structure gave way under the weight of a large drove of cattle, about 100 of which were precipitated into the Susquehanna. Many had their legs broken by the fall.

Carrier Pigeons.—The first telegraphic accounts of the foreign news by the steamship Africa on her last trip, were sent on shore by pigeons, a distance of five miles outside of Sandy Hook, and telegraphed thence to New York, Philadelphia, and other cities, and published an hour before the arrival of the steamer at her wharf.

Prussia.—The fire which broke out at Memel on the 5th ult., destroyed nearly the whole town, and property valued at from three to six millions of thalers. An immense quantity of tallow was consumed. Thousands of people have been made houseless by the conflagration.

The Explosion at Newcastle, Eng.—A fire broke out in Dawson's steam mill, at Gateshead (near Newcastle) on the 6th ult., destroying a vast amount of property, and involving great destruction of human life. Twenty bodies have been taken out of the ruins, and nearly one hundred survivors were so badly injured that many more deaths were expected. The destruction of property is not less than £1,000,000. The explosion arose from the fire extending to a warehouse stored with sulphur, saltpetre, naphtha and gunpowder, of the latter, report says, seven tons. The two towns, (for New Castle was instantaneously involved in the calamity,) were more or less reduced, over a large area, to a wreck.

Cholera in the Crimea.—At the latest dates this dread destroyer was making awful havoc among the allied troops, though the stirring events of war throw it quieter horrors, for the present, into the shade.

WEST-TOWN BOARDING-SCHOOL.

The Winter Session of the School will commence on Second-day, the 6th of Eleventh month next. The pupils will be conveyed by railroad to West Chester where conveyances will be in waiting to take them to the School, on the arrival of the morning and afternoon cars, on Second-day, the 6th, and Third-day, the 7th of Eleventh month. The children will get their baggage the day after their arrival. The cars will leave the depot, south side of Market street, above Eighteenth street, (formerly Schuylkill Fifth,) at half past 7 o'clock, A. M. and 3 o'clock, P. M. The agent of the School will be at the railroad depot, on Second and Third-day *afternoons*, and will furnish pupils with tickets, and accompany them to West Chester. Those who go by the *morning* train, will be furnished with tickets by a person in attendance. To those who procure tickets as directed, the fare from Philadelphia to the School, including baggage, will be one dollar, which will be charged to the scholar at the School. All baggage should be distinctly marked West-town, and with the name of the owner, and should be sent directly to the railroad depot.

The West-town office is at Friends' bookstore, No. 84 Arch street, where all small packages for the pupils left before 12 o'clock on Seventh-days, will be forwarded. *All letters* for the pupils and others at the School, should be sent by *mail*, directed to *West-town Boarding School, West Chester P. O., Chester Co., Pa.* Postage should be *pre-paid*, and packages should be distinctly marked and put up in a *secure manner*, so that their contents will not be liable to be lost by handling. The stage will leave West Chester during the *Winter Session*, for the School, on Second, Fourth, and Seventh-days, on the arrival of the *morning* cars from the city, and from the School to West Chester, on the same days, to meet the morning cars to Philadelphia. The fare for each passenger to and from West Chester *by the stage*, will be 25 cents. When special conveyances at other times are provided at the School, an extra charge will be made.

West-town, Ninth mo., 1854.

RECEIPTS.

Received from Joel Evans, agt., for John Lewis, $2, vol. 27; from Wm. D. Cope, Pa., $2, vol. 27; from C. Bracken, agt., O., for John Wright, $4, vols. 27 and 28; from H. Robinson, agt., N. Y., for John Bell, Ind., $2, vol. 28; from A. Dirkin, Eng., for Jonathan Harris, jr., 10s., vol. 28, for Joseph Harvis, 10s., vol. 28; from Mary Roberts, Ind., $2, vol. 27; from Sl. Chadbourne, C. W., $2, vol. 28; from J. Cockill, Pa., $2, vol. 27; from G. C. Carpenter, 28 cts. for defi. numbers.

TEACHER WANTED,

A well qualified Teacher to take charge, at the close of the present year, of the "Sheppard School" for Coloured Girls on Randolph street. Applications in writing may be addressed to Edward Richie, Clerk of the Board of Trustees, No. 173 Vine street.

A meeting of "The Female Society of Philadelphia for the Relief and Employment of the Poor" will be held at the "House of Industry," No. 70 N. Seventh street, on Seventh-day, Eleventh mo. 4th, at 3½ o'clock.

Philad., Tenth mo. 17th, 1854.

MARRIED, at Friends' Meeting, Tecumseh, Michigan, the 21st of Ninth month, SAMUEL M. SATTERTHWAITE, of Lenawee county, to JANE, daughter of Aaron Comfort, of the former place.

DIED, on the 23rd ult., at his residence, Penn's Manor, Bucks county, CYRUS C. COMFORT, son of the late Josiah Comfort, in the 22nd year of his age; a member of Falls Monthly Meeting.

——, on the 29th ult., at his residence, in this city, JOSEPH KITE, aged about 59 years. His character was marked with great integrity, and he bore in life and conversation a testimony in favour of the simplicity the truth leads into, and against the many departures in the present day from the plainness, which characterized our forefathers. Having mercifully experienced the cleansing operations of Divine grace whilst in life and health, we doubt not but the sudden summons, "the Master is come and calleth for thee," found him ready, and as one prepared to enter the marriage chamber of the Lamb.

PRINTED BY KITE & WALTON,
No. 3 Ranstead Place, Fourth above Chestnut street.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXVIII. SEVENTH-DAY, ELEVENTH MONTH 11, 1854. NO. 9.

PUBLISHED WEEKLY.

Price two dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 50 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

From the Leisure Hour.

A Visit to the Staffordshire Potteries.

We are going this morning, by favour of the proprietor, to stroll for an hour or two through the factory of Alderman Copeland, in company with an experienced and intelligent guide, who will direct our footsteps through the devious labyrinth of some fourteen acres in extent, and explain what is unintelligible by us at a cursory glance. The interior of a pot-work does not present to the spectator many elements of the picturesque; as much of the surface of the ground as can be conveniently inclosed, so as to leave room for the passage in every direction of carts and wagons, is covered with plain brick buildings of no architectural pretensions, and of very various height; and among them, at a few paces distant from each other, rise a series of huge dome-like cones of blueish brick to the height of some forty or fifty feet, and terminating in open chimneys, from some of which lurid flames are leaping forth. The only perforation in the surface of these monstrous and grim-looking fabrics is a single door-way, through the dark openings of which here and there red fires are seen to glimmer, and the sound of rushing flame strikes upon the ear. Around some of their broad swelling basements flights of steps coil up to warehouses or counting-houses built against their sides: some are cold and empty; others are yielding up the contents of the last baking; and others again are loading with fresh wares to undergo the fiery ordeal. As we have expressed a wish to begin at the beginning, we follow our leader through various turnings and windings, through hot rooms and cold rooms, within doors and without, to the immediate neighbourhood of a steam-engine which works the machinery, by the aid of which the raw materials are prepared for the manipulations of the workmen. Here we are in presence of large reserves of the different natural products used in the manufacture of pottery, consisting of various kinds of clay brought from Devonshire and Dorsetshire, and the china clay, as it is called, a species of decomposed felspar from Cornwall, together with stores of flint from Gravesend and the neighbourhood, a light kind of granite stone, and the bones of animals, as well as the clays and marl of the district, and other things besides.

The first operation of the potter is to prepare these different materials for combination together in order to form the pure and plastic composition of which his wares are formed. To this end the clays are thrown into large vats, where they are diluted with water to the consistency known as "slip," which is not thicker than cream, or hardly so thick. The flint is first calcined in the fire, and then broken into small pieces by the action of a series of iron punches worked by steam; it is then ground with water in large circular open vats between stones of a tough texture, known as Derbyshire chertz, until it is reduced to so fine a state as to offer no perceptible grittiness to the *taste*. The granite is reduced by similar means to the same degree of fineness; and the bones, being first calcined, undergo the same ceremony, though these are only used in the composition of china ware. All these are diluted with water according to established ratios, the amount of earthy matter mixed with the fluid being ascertained by weight; thus, supposing a pint of water to weigh sixteen ounces, a pint of clay slip weighs twenty-four, of flint slip thirty-two, and of granite slip perhaps thirty; or either of them or all of them may vary from these weights, as they probably do in various manufactories, according to the scale of proportions adopted by different makers.

Supposing the materials to be ground and diluted to the required degree, and pure from extraneous matters, they are then carried to a chamber in an upper story, where they are mixed together in certain proportions in a large vat, the sides of which are perfectly vertical, and the quantity of each material to be used is marked on a rod or gauge-stick, which the workman who superintends the process dips into the vat while the different slips are poured in, until each rises to its proper mark on the gauge. In the centre of the vat revolves a pole furnished with lateral arms, by the aid of which the whole of the mixtures are set in rapid motion and thoroughly incorporated together. When these various fluids have been thus mingled and blended together into one kind of slip, it is drawn off into a cistern having an outlet into a long wooden trough, flat at the bottom, which is pierced with holes nearly an inch in diameter and two or three feet apart. Through these holes the fluid slip falls in a continuous stream perpendicularly upon a series of fine sieves made of silk, containing six hundred threads to the inch: the sieves are shaken perpetually backwards and forwards by the action of machinery, and the slip passing into a receptacle beneath, leaves the coarser grains of earthy matter from which it is freed behind, in the form of small balls of clay of various sizes and shapes, which it assumes through the regular motion of the sieve. The slip is thus purified several times, through a series of sieves, after which it is pumped into a reservoir, from whence it is drawn off into enormous shallow drying-pans or troughs, paved with tiles, and some twenty yards or more in length and seven or eight feet in width. Flues from large fires are conducted under the whole length of these pans, and the fires being lighted, the slip soon begins to boil, and in the course of a few hours steams off the superfluous water, and dries gradually to the consistence of new putty or soft clay. It would now be fit for the use of the potter were it not for the quantity of air shut up in its substance, owing to the evolution of steam in the process of drying. To get rid of this, it is cut out in masses of about a foot square from the pans, and carried to a singular sort of a mill which kneads the air out of it. This curious machine resembles a funnel-shaped barrel, much larger at the top than at the bottom; in the centre is a stout rod armed with broad steel blades, having their ends pressed downwards. The clay, in bulky lumps, is thrown in at the top; the blades, which stick out on all sides of the rod, are continually revolving; they cut and mangle, and twist and torment the clay into all manner of shapes, and by some contrivance, not at all comprehensible to a looker-on, thrust it forth from a square orifice at the bottom in the form of a four-sided mass of clear, solid, and compact substance. This, as it crawls lazily forth, is cut off in large lumps, and carried to the workshop to await the formative skill of the potter. It is not, however, yet quite fit for his purpose; severe as was the treatment of the kneading-mill, the clay yet retains a sufficient quantity of air to frustrate the efforts of the workman who would venture to use it. It is, therefore, taken in hand piecemeal by a labourer, who, by dint of blows and fisticuffs, and violent banging and beating, reduces it to good behaviour, gets rid of its air, and finally prepares it for the thrower or the modeller.

We will now follow the clay to the thrower, and see what he is doing with it. We find this formative genius comfortably seated on a bench, with a revolving flat disc about a foot in diameter between his knees. He is attended by a woman, who weighs him out the clay in portions as he needs it, and by a boy, who, as he issues the word of command, "faster" or "slower," regulates the speed of his wheel by means of a conical drum turned by the steam-engine, upon which he shifts the strap upwards or downwards, as greater or lesser speed is required. We find him upon our entrance engaged in making jugs. Taking a lump of the clay in his hand, he places it firmly upon the centre of his flat wheel, which he instantly sets in motion; at first he grasps the clay with both hands as a dairymaid does the handle of a churn, and it is pressed upwards between his fingers in the form of a column; then he inserts his thumb or finger in the centre of the top, and in two seconds the clay is a hollow vessel; then dips a small modelling tool in the cavity, and the column is gracefully swollen out into the form of a vase; in a moment he applies the same tool, or something else, to the outside, and the vase becomes a jug or ewer, wanting the handle; a few touches to the bottom of the column, and an elegant basement or footing to the vessel is modelled; another touch to the top, and the upper edge is formed; then he cuts it from the wheel by means of a thin wire, lays it on a bench at his side, and has done with it for ever.

Understanding that we are quite a griffin, and have never witnessed such strange tricks before, he politely invites us to a tea-party, and immediately sets about preparing the "tea-things," in a style which would have astonished a fashionable coterie. Down goes a lump of clay on the wheel—dab goes his fist into the middle of it—and in a "jiffy" it is a basin at our service. Down goes a second lump—whiz goes the wheel—the clay begins playing at all manner of strange games; one moment it is a flattish-looking-pan, then it is al-

most a capacious salver, then a deep basin, then it is a very corpulent-looking vase, and then, and all in less than half a minute, it is an undeniable tea-pot, lacking the spout, and big enough for a large family party. Before we have calculated how many cups it will hold, plump falls a handsome knobby cover on the top of it, fitting it to a hair. A third lump of clay is transformed to a tea-cup, and a fourth to a saucer, in less time than it would have taken to fetch them up-stairs "at our house at home." A fifth lump being dashed on the wheel, expands first like a flower, then contracts in the middle like a young lady in an exceedingly tight pair of stays—then opens its circular top as wide as the mouth of a stump-orator in for a three hours' speech—then a thin wire cuts off two sections from the yawning lip, a touch of the operator's thumb depresses the spout, and, lo! it is a capital cream-jug. By this time the thrower has taken it into his head that we are fond of pork—which, by the way, is not true in the abstract—and volunteers to garnish the tea-table with a pork-pie. No sooner said than done. Plump goes a dab of clay on the wheel—in go his five fingers in the very heart of it—up rise the thin circular walls of crust—quick as thought the upper edge converges towards the centre, and before you can say it is covered in by a dome, which it certainly is for about seven-eighths of a second, or thereabouts, the dome is depressed to a flat roof, the edges of which slanting outwards in the true gastronomic fashion, consummate the construction of an admirable pork-pie, complete in all respects, barring the pork.

The thrower, whose marvellous skill in manipulation is the result of long and careful practice upon a material beyond all others the most pliable and plastic, ensures uniformity in wares made by pattern by means of gauges fixed in front of his wheel, the points of which can be so arranged as to make impressions upon the clay in any part of the fabric under formation. Of course, his operations are confined to articles which are perfectly circular in form; if any of these, such as jugs, ewers, and water-vessels, have to be furnished with lips or spouts, such additions are made by another hand while the clay is yet soft.

Leaving the thrower at his work, with a conviction that he has got his business completely under his thumb, we may follow the ware to the drying-room. Here it is ranged on shelves in vast quantities, and exposed to a gentle heat produced by steam-pipes running through the apartment, and in the course of a few days is ready for the operations of the turner. The turner may be regarded as the special coadjutor of the thrower, who having modelled the goods to the required shape, and carefully finished their interior surface, takes little pains with the outside, leaving that to be pared down and finished by the turner's tool. The turner stands at work at a lathe, fitted with a chuck shaped for the reception of the articles he has in hand: one is turning basins, another jugs, another bowls, and another confection-pots, and so on. The articles to be turned are only partially dry, and the shavings fly off them in long ribbands; but they are dry enough to allow of being accurately turned to the required shape. The process is very rapid, a minute or less sufficing for a small-sized article. When the cup, pot, or basin has been pared down to its proper proportions, the turner reverses the action of the lathe, and the article revolving in a contrary direction is polished all over by a few touches of the polishing tool.

(To be continued.)

Be sparing of thy counsel before *unhearing* ears, but teach thy lessons by *example*.

For "The Friend."

"Is Friday an Unlucky Day?"

From time immemorial the sixth day of the week has been regarded by superstitious people as a day of ill omen; and although this silly notion is probably wearing away, it is not yet by any means extinct. A late paper, under the above heading, furnishes a list of many important events, which have occurred on that day, and which go to show that Americans at least have no special reason to consider it an "unlucky day."

Some of these are subjoined.

"On Friday, August 21, 1492, Christopher Columbus sailed on his great voyage of discovery.

On Friday, October 12, 1492, he first discovered land.

On Friday, January 4, 1493, he sailed on his return to Spain, which, if he had not reached in safety, the happy result would never have been known which led to the settlement of this vast continent.

On Friday, March 15, 1493, he arrived at Palos in safety.

On Friday, November 22d, 1493, he arrived at Hispaniola on his second voyage to America.

On Friday, June 22d, 1494, he, though unknown to himself, discovered the continent of America.

On Friday, March 5th, 1496, Henry VII., of England, gave to John Cabot his commission which led to the discovery of North America. This was the first American State paper in England.

On Friday, Sept. 7, 1565, Melendez founded St. Augustine, the oldest town in the United States by more than 40 years.

On Friday, Nov. 10, 1620, the May Flower, with the pilgrims, made the harbour of Provincetown. And on the same day they signed that august compact, the forerunner of our present glorious Constitution.

On Friday, December 22, 1620, the pilgrims made their final landing at Plymouth Rock.

On Friday, Feb. 22, George Washington, the Father of American Freedom, was born.

On Friday, October 7, 1777, the surrender of Saratoga was made, which had such power and influence in inducing France to declare for our cause.

On Friday, October 19, 1781, the surrender of Yorktown occurred.

On Friday, July 4, 1776, the motion in Congress was made by John Adams, seconded by Richard Henry Lee, that the United Colonies were, and of right ought to be, free and independent."

The following appears to be the last entry made in E. Collins's memorandum: "'If ye love me, keep my commandments,' said our blessed Lord. 'This is my commandment that ye love one another as I have loved you.' Greater love hath no man than this, that a man lay down his life for his friends. 'Ye are my friends, if ye do whatsoever I command you.' Oh, the excellency of this love; it does away all malice, hard thoughts or resentments, and brings us where we can rejoice in the comfort and happiness of each other. In a degree of this love, I have been led secretly to intercede for the whole human family, that all might come to the knowledge of the Truth, as it is in Jesus, and be saved with an everlasting salvation. How different is such a state of mind from that which is governed by a party spirit! Who would not desire to be filled with this love in the opening of an awful eternity. No one could suppose that enmity, even to an opponent, can be the spirit in which we shall enter the realms of bliss, into the presence of ineffable Purity."

For "The Friend."

We would call the attention of our agricultural readers to the value of corn husks as a substitute for curled hair in making beds or mattresses, especially for summer use. It requires very little extra labour, at corn husking, or after, to sort out the inner husks, and splitting them on a coarse hatchet into shreds, drying them thoroughly, and filling your beds with them. They are to be preferred to every other substance; they never become packed and hard, or emit a bad smell; but, for a dozen years at least, they will remain sweet, pliable and comfortable. When all these advantages are considered, and that the husks can be prepared, and the beds filled at a season when the hurried work is over, both in doors and out; and also that their preparation can be done by the female members of the family, we think those who have not introduced those beds, should do so, at least as an experiment. There will be but little time and expense involved in it.

For "The Friend."

Let us Search our own Hearts.

"One trait of zeal without knowledge is, that those who are actuated by it, are for pressing a conformity to truth upon others, before they have submitted to its mortifying restraints in themselves; thus acting without its direction, and in the *impatience* of their own spirits, charity is deserted.

"Were we as vigilant against the approaches of evil in ourselves, as we usually are against the errors of others, there would certainly be much more harmony and peace in the world.

"As in passing along we see each other more plainly than we see ourselves, it is very common for one man to be exposing the faults of another, while his own conduct is quite as much the subject of concern and disapprobation; so true is the saying of Solomon: 'He that is first in his own cause, seemeth just; but his neighbour cometh and searcheth him.'

"When we are nearest right, we are least apt to take offence at the discovery others make of our errors."

Discovery in Baking.—A correspondent of the *Scotsman*, writing from Munich, says:—"I have visited Professor Leibig, and seen his admirable lecture-room and laboratory, models for imitation in other countries. He told me that in England the bakers use a great quantity of alum in making bread. It is employed to make the bread white, moist, and soft. It acts by coagulating the gluten of the wheat, and it is delcterious in its effects. He has discovered that water saturated with lime produces the same whiteness in bread, the same softness, and the same capacity to retain moisture, while the lime removes all acidity from the dough, and supplies an element needed in the structure of the bones, which is deficient in wheat, and still more so in rye. I ate bread made of it in his house; it was excellent. He uses five pounds of water saturated with lime, to nineteen pounds of flour. No other change is necessary in the process of baking. The lime coagulates the gluten as effectually as alum does. The bread weighs well, and the bakers consequently approve of it. He allowed me to report the discovery at discretion."

There is a resting place for us in this wearisome world, even the holy bosom of Him, who "hath borne our griefs, and carried our sorrows." What a mercy! It seems to me that the Scripture is in some measure verified, even to me, "Ye shall go out with joy, and be led forth with peace. The mountains and the hills shall break forth be

fore you into singing, and all the trees of the field shall clap their hands." I have had deep baptisms, but there is occasion to adopt the precious language, "Thanks be to God, which giveth us the victory, through our Lord Jesus Christ." 1841.—*S. L. Grubb.*

From the Edinburgh Review.

European Emigration to the United States.

(Continued from page 61.)

It is apparent that the political influence of the emigrant is greatly exaggerated. If three or four hundred thousand uneducated peasants, unused to govern their own affairs, and much less acquainted with affairs of state, were annually transferred to the United States, placed in communities by themselves, apart from the influence of more intelligent minds, left without schools, cultivation, or capital, to raise themselves as best they could, and admitted nevertheless to the dignity of citizenship, and to a share in administration, it would be irrational not to fear the result.—But we see a process quite the reverse going on. These ignorant beings—ignorant, indeed, some of them are, and thick-headed and obstinate—are taken by the hand on arrival, and sent, not into the forest, but into a more thickly populated country than the one they left, with towns as large as any in Europe, except the two capitals, with schools better than any of the same grade here, maintained at the public expense, with work enough for everybody, skilful and unskilful, and with better educated persons than themselves to tell them what to do. They labour constantly with Americans, their children sit daily side by side with American children, reading from the same books, playing the same games, and learning to think the same thoughts. Mr. Tremenheere, in his excellent work, complains that all history in the public shools is ignored except that of the Republic, and gives us a list of twenty-one questions prepared for the examination of candidates for admission to the high school of Lowell, all of which refer only to events connected with the American continent. We are not sure that the honest clergymen of the land of the Puritans have not been found guilty of a profound policy in this. The child of the English or Scotch machinist in Massachusetts, of the German or Irish labourer, of the French or Italian artisan, in New York or Philadelphia, learns with the language and the institutions, the history which tells him the greatness of his new country; and, forgetting that he ever had another, he feels with a pride, that even Lord Palmerston might envy, "*civis Romanus sum.*" If the first generation is never quite denationalized, the second is transformed by this process into very good Yankees. The fathers, too, soon get a little property (for there is plenty of labour and little pauperism), and thenceforth are identified with the stability of their new country; and by the time they become citizens, they have some just sense of the dignity they acquire, and of the responsibility it entails.

The same fact removes all apprehension of a disproportionate increase of Papal power in America. The Roman Catholic population being so completely identified with the older States, and impregnated with the spirit of their institutions, any pernicious influence from that quarter will be impossible. We hear often of the power of Jesuitism in America, and of the spread of Catholicism in the valley of the Mississippi; but the facts in the census indicate no such thing. We are assured by those best able to judge, that so far from fearing the undue influence of the Romish church, its conservative influence over the emigrants within its pale is regarded with favour. The Americans have a sufficient protection against the inroads of any sacerdotal despotism in their healthy English-born institutions, in the spirit of free inquiry which they have inherited from this country, and, above all, in their free schools, at which four millions are educated—one-fifth of the free population.

The schools of the States have been made patent to English eyes during the contest concerning the various educational systems proposed for adoption here, and they certainly seem to answer the demands of a state of society bearing little resemblance to this. Indeed, in all the comparisons between the two countries, the fact of the great social difference is lost sight of. The similarity of political institutions, from the municipal parishes to the national legislatures,—the community of language, literature, and of ancestry, so far as the Americans can get a tombstone and parish register acquaintance with their ancestors in England,—the common elements of wealth, —the resemblance, and, in the main, identity of pursuits, are pictured glowingly by after-dinner orators, when the wine has mellowed the heart. Long may both nations remember these things! And far distant may the day be when the difficulties arise which philosophy teaches us they engender. But there is another side of the picture, less dwelt upon, and equally true,—the vast social gap between an old country, with a cultivated artificial society, founded on great landed possessions, and a new country with no aristocracy, unless we give that name to the feeble remnant of colonial families overshadowed by recent wealth, or to the expiring gentility of the "Southern chivalry." The British merchant labours, accumulates, buys land, is made a peer in the second generation, and is identified thenceforth less with the town than with the country. The American merchant accumulates, invests in stocks and city lots, perhaps becomes a member of Congress, dies, and leaves his property to his children in even portions. In a generation or two it is scattered, and his poor descendants begin to climb the ladder anew. The inhabitant of no neat rural village point with pride to his well-stocked parks and wooded drives. He may have a cottage on Staten Island, the banks of the Hudson, the Delaware, or the Schuylkill, or he may amuse himself with dilettante farming in Dorchester. But the non-producing landed proprietor, identified for generations with the soil, is unknown in America. The "people," owning each his little farm, or his house and garden, take the management of their own affairs into their own hands.

The public schools are the legitimate offspring of the social status, and return to it no small share of the stability which it enjoys. They were established in New England, at the settlement of the country, for the education of the children, and the conversion of the Indians. About the time that the wearers of black doublets and steeple-crowned hats, who fled from oppression here to establish a Calvanistic despotism, whose influence still draws down the chins of their descendants,—about the time they re-enacted the Mosaic code, penalties and all, with marginal references to chapter and verse, they partitioned the public land into parishes, on the English system, and assigned a part to the commonage, a part to the church, and a part to the schools. In process of time the common land has generally ceased to be pasturage, and is, in many places, planted with trees, and made into public walks; the church fields have disappeared with the State organization; and the portion assigned to the schools has been absorbed in the settlement of the country, and exchanged for the right of general taxation, —which right, as the sum to be raised is determined each year by each town for itself, and as suffrage is nearly universal, means the right of the poor to educate their children as they see fit at the expense of the tax-payers. The system has been extended from New England more or less through the free States, and works to the satisfaction even of the property-holders, who must be sometimes heavily mulcted by it. Mr. Tremenheere, for instance, tells us, that in a town near Boston, "the whole real property of which is valued at only 500,000 dollars, not less than 17,000 dollars were expended last year in the erection of five new school-houses, besides the ordinary expenses of maintaining their three grammar and two primary schools." Boston pays $15 42 per head for the children educated in her schools (free for all without charge); New York, $10 62; St. Louis on the Mississippi, $9 50; and Cincinnati on the Ohio, $6 37. These taxes are cheerfully submitted to by the property-holders, who require no argument to be convinced that, without education universal suffrage would be destructive to political liberty, to social virtue, and to property on which both must lean. They feel that the schools are essential even for the native children with American homes, and doubly so for the foreigners, sometimes with worse than no home at all.

Thus the moment the emigrant arrives and is settled, he and his children are cared for. He finds persons on the pier waiting to employ him, and he pockets at once his four shillings a-day; or if he be ill, there is a hospital to receive him, where skilful surgeons and kind nurses minister to his wants. Schools say to his children, "Come to us and be taught;" and they go. It was found some years since, in a manufacturing town of Massachusetts, with a population, nearly one-third of which was Irish, that of about 3000 children between the ages of three and sixteen, only nineteen were not attending school somewhere, and that sixteen of the nineteen stayed away because they had no good clothes; clothes were given, and the non-attendants reduced to three. The proportion throughout the Union is not as large as this; but yet large enough to change the character of the whole foreign population. There is no greater mistake than that the characters of nations and races are unchangeable: leading minds mould the popular will to their pleasure. Catholic England under Henry VII. became Protestant England under Henry VIII. The freedom of Arragon died under the heel of the Inquisition. Louis XIV. was troubled but once in his reign by the spirit of a free parliament. Can there be a greater contrast than between the ages of Elizabeth and Cromwell? or of Milton and Congreve? William III. made the English noblemen Dutchmen; George IV. beau-Brumelized society; and the present Court of England has set an example of purer and more refined manners. In the same way the character and purposes of the immigrants are changed. They are fashioned by the influences which surround them, and in the second generation become completely identified with the country of their adoption.

(To be continued.)

An infidel meeting with a devout man, observed to him, that one objection he had to religion was, it made people unhappy; for all the Christians he had met with were melancholy. To which his companion replied, he did not marvel at that, for as he was an infidel, it was quite enough to make any true Christian *feel* melancholy to be in *his* company.

For "The Friend."

WISE SAYINGS.

Be not disheartened, because the eye of the world is constantly and earnestly fixed upon you, to detect your errors, and to rejoice in your halting. But rather regard this state of things, trying though it may be, as one of the safeguards which a kind father has placed around you, to keep alive in your bosom a spirit of watchfulness, and to prevent those very mistakes and transgressions which your enemies eagerly anticipate.

In the agitations of the present life, beset and perplexed as we are with troubles, how natural it is to seek earnestly some place of rest! and hence it is that we so often reveal our cares and perplexities to our fellow creatures, and seek comfort and support from that source. But the sanctified soul, having experienced the uncertainties of all human aids, turns instinctively to the Lord, and hiding itself in the presence and protection of His divine kindness and power, it reposes there, as in a strong tower, which no enemies can conquer; and, as on an everlasting rock, which no floods can wash away. It knows the instructive import of the Psalmist's exclamation, (Ps. lxii. 5,) "My soul, wait thou *only* upon God; for my expectation is from him."

It is one among the pious and valuable maxims which are ascribed to Francis de Sales: "A judicious silence is always better than truth spoken without charity." The very undertaking to instruct or censure others, implies an assumption of intellectual or moral superiority. It cannot be expected, therefore, that the attempt will be well received, unless it is tempered with a heavenly spirit. "Though I speak with the tongues of men and angels, and have not charity, I am become as sounding brass, or a tinkling cymbal."

The Holy Spirit has no congeniality with, and no pleasure in the soul, where strife and clamour have taken possession. If, therefore, we would have the Holy Spirit with us always, we must avoid and flee, with all the intensity of our being, all inordinate coveting, all envying, malice, and evil speaking, all impatience, jealousy, and anger. Of such a heart, and such only, which is calm as well as pure, partaking something of the self-collected and sublime tranquillity of the divine mind, can it be said, that it is a *temple fitted for the indwelling of the Holy Ghost.*"

He that is wholly in Christ, has a oneness and purity of purpose, altogether inconsistent with those tricks and subterfuges which are so common among men. He walks in broad day. He goes forth in the light of conscious honesty. He is willing that men and angels should read the very bottom of his heart. He has but one rule. His language is, in the ordinary affairs of life, as well as in the duties of religion, "My Father, what wilt *thou* have me to do?" This is Christian simplicity, and happy, thrice happy is he who possesses it.

It is not by the mere number of our words and actions, that we can most effectually serve the cause of God, and glorify His name. It is the temper in which they are done, rather than the mere multiplication of them, which gives them power. It was the remark of a good man, who had much experience as a minister of the gospel, that "*we mar the work of God, by doing it in our own spirit.*"

I once heard of a Friend saying of a person obliged to use great industry, that there was, through all, sweet incense ascending to the throne of glory, from the heart of that individual.—*S. L. Grubb.*

Selected.

THE WAITING SOUL.

Breathe from the gentle south, O Lord,
And cheer me from the north;
Blow on the treasures of thy word,
And call the spices forth.

Thou knowest, I wish to be resigned,
And wait with patient hope;
But hope delayed fatigues the mind,
And drinks the spirits up.

Help me to reach the distant goal;
Confirm my feeble knee;
Pity the sickness of a soul
That faints for love of thee.

Cold as I feel this heart of mine,
Yet since I *feel* it so,
It yields some hope of love divine
Within, however low.

I seem forsaken and alone,
I hear the lion roar;
And every door is shut but one,
And that is mercy's door.

There, till the dear Deliverer come,
I'll wait in humble prayer;
And when He calls his exiles home,
The Lord shall find me there.

Cowper.

STRENGTH FOR EACH DAY.

Afflicted saint, to Christ draw near,
Thy Saviour's gracious promise hear:
His faithful word declares to thee,
That, as thy days, thy strength shall be.

Let not thy heart despond, and say,
How shall I stand the trying day?
He has engaged by firm decree,
That, as thy days, thy strength shall be.

Thy faith is weak, thy foes are strong;
And, if the conflicts should be long,
Thy Lord will make the tempter flee,
For, as thy days, thy strength shall be.

Should persecution rage and flame,
Still trust in thy Redeemer's name:
In fiery trials thou shalt see,
That, as thy days, thy strength shall be.

When call'd to bear the weighty cross,
Or sore affliction, pain, or loss,
Or deep distress or poverty,
Still, as thy days, thy strength shall be.

At last, when death appears in view,
Christ's presence shall thy fears subdue,
He comes to set thy spirit free,
And as thy days, thy strength shall be.

Fawcett.

Rats.—A gentleman residing in a neighbouring town, has related to us the following story about rats. He owned a pair of horses which he valued, and of which he took the care himself. Every day he supplied them plentifully with grain, but to his surprise, instead of thriving on this treatment, they grew perceptibly poorer. He was at a loss to account for this, as they evidently had good appetites—they always waited impatiently for their feed, and when it was poured into the manger, they would thrust their noses into it and eat with the greatest eagerness. But they soon became so lean and bony that it was evident that there was something wrong, either in the animals themselves, or the manner of their feeding. The owner at length resolved to stay in the barn and watch them while eating. He accordingly stationed himself near the horses, after having filled the manger with oats, but so contrived to screen his person as not to be easily seen. The horses dropped their noses into the grain, as usual, with avidity, and began to eat with a will. As soon, however, as quiet was restored in the barn, broken only by the monstrous "craunching" sounds of hungry horses, busy at their feed, the gentleman observed the latter to cease suddenly from feeding, and start back suddenly from the manger, with a snort of pain or affright. Peeping cautiously over into the manger, he saw five or six enormous rats, who were ravenously devouring the grain—and as soon as the horses ventured, with the evident hesitation and misgiving inspired by a little experience, to approach the manger and again insert their noses in the grain, these ferocious creatures would spring at them and bite their lips. In this way the game went on—the horses, prompted by hunger, occasionally making an effort to get a mouthful of the grain, and the rats as regularly driving them back, until, in a very short time, the oats were entirely devoured by these pi-*rat*-ical savages, and the poor horses left empty!—*Hartford Times.*

On the 22d of the Twelfth month, 1752, we came to Oakhampton, and having a day to spare, myself and companion visited the young women, sisters, who had been members of our Society, but were unhappily led away by the Ranters; whose self-righteousness and delusions cause much uneasiness to the truly concerned, showing how dangerous that spirit is, when given way to. Satan, the accuser of the brethren, tries all ways to disunite from the body, and cause a separation, —rents and divisions being the strength of his kingdom. And as his insinuations are adapted to all people in their different states, finding out the weak side, there he plants his battery, trying one temptation after another; sometimes as an angel of light, and sometimes, as he really is, an angel of darkness. But let a faithful examination be entered into, and a query raised,—Am I influenced by that spirit which governs by love in the believers? Is there no root of self-love or self-sufficiency? Is there no zeal kindled by the accuser of the brethren, that would introduce contention and discord, pride and high-mindedness? This cannot be [from] that spirit that baptizes into the one body, and makes us one in Christ. No, there would be bearing and forbearing, a forgetting and forgiving, a persuading and travailing in soul to be of one heart, to love as brethren. This will manifest whose disciples we are, and who is our Master. We visited those young women in love, and they took it well; my companion showed them what true discipline was, and their errors, when they acted contrary thereto. On the whole it was a satisfactory conference, and if they are dealt with in love, I believe they will again join with Friends.—*S. Neale.*

A Penny Microscope.—There is a man who sometimes stands in Leicester Square, London, who sells microscopes at a penny each. They are made of a common pill-box; the bottom taken out and a piece of window-glass substituted. A small eye-hole is bored in the lid, and thereon is placed the lens, the whole apparatus being painted black. Upon looking through one of these microscopes, I was surprised to find hundreds of creatures, apparently the size of earth-worms, swimming about in all directions; yet on the object-glass nothing could be seen but a small speck of flour and water, conveyed there on the end of a lucifer match from a common inkstand, which was nearly full of this vivified paste. I bought several of these microscopes, determined to find out how all this could be done for a penny. An eminent microscopist examined them, and found that the magnifying power was twenty diameters. The cost of a lens made of glass, of such a power, would be from three to four shillings. How, then, could the whole apparatus be made for a single penny? A penknife revealed the mystery. The pill-box was

ut in two, and then it appeared that the lens was ade of Canada balsam, a transparent gum. The alsam had been heated, and carefully dropped nto the eye-hole of the pill-box. It then assumed he proper size, shape, transparency, and polish f a very well-ground glass lens. Our ingenious ens-maker informed me that he had been selling hese microscopes for fifteen years, and that he nd his family conjointly make them. One child ut out the pill-boxes, another the cap, another ut them together, his wife painted them black, nd he made the lenses.—*Dickens's Household Words.*

For "The Friend."

"First month 27th, 1838. I have often felt hankful for the instruction received from my lear parents in early life. I had much to endear hem to me, and believe I may say without boasting, that by the help of my heavenly Father, their ounsel was in a good degree kept to. *I did not eel myself at liberty to put on apparel or to make hoice of associates, without their entire approbation;* and I had sometimes to say to my young riends, that in so doing, they also would find afety and peace.

"As I advanced in years, the obligation to onsult them in all my pursuits, seemed as impeative as ever, being careful not to make up my wn mind, until I had heard their's; which I believe, was a means of preserving me from many ollies, and affords me consolation to the present lay.

"I have been induced to make this short note, oping it may serve as a watchword to others, eeing our grand enemy is continually spreading is snares to bring into captivity, and would, if ossible, deceive the very elect. But thanks to Him who opened the blind eyes and unstopped he deaf ears, he furnishes with sight, whereby ve are enabled to discover and escape them."

The foregoing extract from the memorandums f a valuable Friend, I have thought might be rofitably perused by some of our dear young Friends, and by walking in the same path, "they lso would find safety and peace." It has seemed o me, that the desire for imitating the vain fashons of this world,—of decking and adorning these abernacles of clay with one little ornament after nother, with something that will look well and e admired by others, and also gratify the vain nind in themselves,—has so much place in the earts of many of our dear young Friends, that he work of those who are concerned to keep their hildren in plainness and simplicity, is made very rying and difficult; and the dear children themelves lose that peace and satisfaction they would xperience in *cheerfully* yielding to the views of heir concerned parents and friends.

How important for those in the early walks of ife, to consider the object and end of that journey n which they have just entered, and the advanage of setting out aright,—of choosing the right ath,—which is ever the pleasantest,—wherein hey will meet with the purest pleasures this world can afford; and by walking in which to the nd, they will become prepared to join the comany of angels and archangels and the spirits of he just made perfect, in those glorious mansions where nothing that is impure or unholy can ever nter, and where all is joy and peace.

And what are these tabernacles but the dwelng place of the spirit while on its pilgrimage ourney? And of how much more importance is t that our ornament should be that of a meek and uiet spirit, than the outward adorning of the body. What is there more beautiful and engagng in youth than humility and a cheerful submission to the wishes of those who have the care of them, and who feel it their duty to watch over them with diligence, to warn and persuade, or, when necessary, to reprove and restrain them. And how many sorrows would this ready acquiescence save both parents and children? Would that these could be persuaded that giving up their own wills and obeying the convictions of Truth, would greatly increase their happiness here, as well as promote the work of preparation for a state of never-ending and perfect felicity. An unwillingness to have our wills brought into subjection to the views of rightly concerned parents and Friends, and to the Divine will, is the cause of great unhappiness and many sorrows.

Let us then, both older and younger, crave of our heavenly Father, that He would work a willingness in us to yield all unto him, that thus his gracious designs concerning us may not be frustrated, but we be prepared, by faithfully following him in the way he may lead, for whatever use he may design to make of us in this world, and for an admission into the realms of never-ending joy, when time to us here shall be no more.

Tenth month 30th, 1854.

Selected for "The Friend."

"Our heavenly Father has compassion on all the workmanship of his holy hand, helping us out of our distresses, when in faith and patience his time is waited for, which is always the best time. We must expect to have tribulation and sorrow in this world, but we ought not to neglect numbering our blessings; for what are these light afflictions which are to be endured for a short season, compared with the joy of an endless life, where the wicked cease from troubling, and the weary, way-worn traveller, is for ever at rest. Blessed rest; never to be broken."

Destruction of the Town of Daroca, in Spain, by a Waterspout.

A letter in the Madrid Tribune of September 17th, gives an account of a terrible and extraordinary catastrophe that had occurred at Daroca, a small town in Arragon, situate in a rich and fertile valley, abounding in corn and wine. From its situation, in a deep hollow, completely surrounded by mountains, this place is peculiarly liable to inundation; and, as a remedy, a tunnel was cut in 1560, by a Frenchman, named Pierre Bedell. This tunnel is a magnificent work—2340 feet long, 24 feet wide, and 24 feet high. The enterprise was patronized by the Pope, and assisted by alms from all Christendom. Previous to its achievement, the waters that flowed at wet seasons from two leagues of mountain, rushed through the streets of the town on their way to the river. It appears that on the 11th September, at 3 in the afternoon, an immense waterspout, rising from the lake of Gallocanta, remained for a considerable time hovering over the shore, about a league from Daroca. When it burst, the whole district was converted into a lake.

The waters poured down in the direction of the tunnel in a stream much larger, it is said, than the Ebro or Tortosa, and, seen from an elevation, appeared like moving mountains of liquid. The dimensions of the tunnel, which has a very decided slope, were insufficient to allow the passage of the vast mass, which then moved past, forming a spacious sea. This extended itself towards the town, at 200 yards from which it was arrested by the causeway that has frequently saved Daroca when menaced by perils of a similar nature, but less magnitude. Above this causeway the waters rose, heaping themselves up on it, and then plunging down on the unfortunate town. The gateway, although an unusually large one, was not large enough to allow their entrance, and another great lake was formed against the walls, which presently began to crumble under its pressure.

"What then occurred," says the letter, "is an inexplicable thing. The waters fought with and overthrew those houses whose position opposed their current. They carried away the fountain of San Pedro, and opening great trenches, and bursting open the doors of the Pocado and of several shops, they spread through squares and streets, inundating wine cellars, warehouses, and the first floors of the houses; in some reaching up to the very roof. Throwing down all, and abandoning everything, the inhabitants fled to the mountains, whence they looked on at the horrible catastrophe.

"The loss has been incalculable; in the vaults water has replaced wine, the contents of the shops are spoiled, and many houses are crumbling away. In the plain around the town the inundation has destroyed everything. A young woman of twenty was carried away by the torrent, and many children and adults are missing. In the first moments the anxiety was horrible. None thought of anything but of counting their families, and seeing if any were absent. The animals that have perished are innumerable; among them many of the farm horses of the unfortunate peasants. It is horrible. 'God have mercy upon us!'"—*Ledger.*

In the year 1674, two Friends passing through a town in the island of Barbadoes, upon their lawful business, many rude people came upon them, and told them they should go and drink wine with them, which when they refused, the people abused them grossly, punching them with their elbows, and bending their canes, let them spring into their faces. Then they whipt them with horse-whips through the town, threw them under their horses' feet, and whipt the horses to make them tread upon them. One, they drove into the sea, and then stoned him to drive him out again, and took him to a heap of coals, to make him, as they said, look like a devil. After this, they put him into a butt, and scoffingly bid him preach, and then threw down the butt, and said they would roll him into the sea. Thus they continued abusing those Friends until evening, and then left them; who, in return for all this barbarity, only exhorted them to the practice of godliness; seeming more concerned for the wickedness of their persecutors, than for their own sufferings.

How would we at this day, patiently and with a Christian spirit, endure such treatment inflicted in our streets, and in the highways, by unprincipled men. Was the new commandment of the Prince of Peace lived up to, what patience and forbearance should we be able to exercise under persecutions. "A new commandment," said he, "I give unto you, that ye love one another; as I have loved you, that ye also love one another." May we not forget the love that formerly characterized Friends, when they offered body for body, to release one another from filthy pestilential dungeons! It is an essential part of Christian duty, to keep this commandment of our blessed Saviour, and if we love each other as he has loved us, we shall be as kindred drops mingling into one!

I had a fresh confirmation, that acting contrar to present outward interest, from a motive of divine love, and in regard to truth and righteousness, and thereby incurring the resentments of people, opens the way to a treasure better than silver, and to a friendship exceeding the friendship of men.—*J. Woolman.*

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 60.)

SAMUEL JENNINGS.

Samuel Jennings, prior to his removal to New Jersey, resided at Coleshill, in Buckinghamshire. He was convinced of the Truth, and received a gift in the ministry of the Gospel whilst in England, and was useful in the exercise thereof. He was one who signed the epistle from London Yearly Meeting, in the year 1677, and in 1679 we find him visiting the prisoners at Jodchester, in company with Lawrence Steel. In the year 1680, he emigrated to New Jersey, where his natural and acquired abilities soon made him extensively useful in civil society. He was soon made governor of the province, and was much employed in other public services. These appointments were not permitted to interfere with his religious duties. Soon after his landing, we find him one of the signers of an epistle from the "Men's Monthly Meeting, in Burlington, West Jersey," held Twelfth month 7th, 1680, addressed to the brethren at the Yearly Meeting in London. This epistle gives excellent counsel relative to those members who should transport themselves to the American provinces. It is recorded that he laboured with the Indian natives "to inculcate the benefit of a Christian life to them,—directing them, without doubt, to the light of Christ Jesus manifested within them, which would, if faithfully followed, lead out of all spiritual darkness.

In the year 1686, in company with George Hutchinson, Samuel Jennings appears to have visited Friends in Maryland; and again, in 1687, with John Hayton. This last was to visit Friends in Maryland at the time of the Yearly Meeting. John and Samuel held "several good and large meetings," but Samuel was taken ill, and the visit was thereby shortened. Early in 1688, with his valued Friend Thomas Ellis, Samuel visited "New England and the places adjacent." In giving an account of this service, they reported that they found "great readiness and openness in many people to receive Truth's testimony, especially several professors in New England." They added, that "the blessing and presence of the Lord was with them in their travels, to their great encouragement, comfort and reward."

Samuel Jennings was much made use of on the most important appointments in our religious Society. In the year 1687, he was one of a small committee of the Yearly Meeting which prepared the following epistle:—

"From our Yearly Meeting held at Philadelphia the Seventh-day of the Seventh month, 1687, to the respective Quarterly Meetings thereunto belonging.

"Dear Friends and Brethren,—The salutation of our love is unto you in the love of the glorious Truth, in which we have a durable and blessed fellowship, which is the peculiar portion of God's redeemed,—in which, the Lord defend and preserve his people, forever.

"We have had a large and good meeting together at this time, and the Lord was the glory of it, whose affecting and melting power was blessedly with us to the gathering us into a living and sweet communion with himself and one with another, where our consolation was strong and our unity great, which is our growth and prosperity.

"Dear Friends, we beseech of all that they hold fast their blessed unity of the Spirit, in the bond of peace, and be tender and very careful of breaking it, lest it be an occasion of mourning to Sion, and of rejoicing to her enemies. Avoid all tokens of open division amongst us, particularly that of keeping on the hat in the time of public prayer in our meetings, if the person so praying hath ever been owned and received by us, until they have been duly and orderly proceeded against, and disowned, by the Monthly and Quarterly Meetings they belong unto. We do earnestly desire, that not only this, but all other things that tend to division and breach of this precious unity may be warned against and avoided,—as evil speaking and backbiting one of another upon any offence conceived one against another. If any be offended, according to the wholesome order of the Gospel, declare it first to the person or persons concerned, that so the ground of the offence may be removed, —or they proceeded against in the way of Truth established amongst us, to the honour of the great God, and the joy and mutual comfort one of another.

"And lastly, we recommend unto you that a diligent and Christian care be continued to keep up your respective meetings, that no slackness or coldness may enter any, but that all may be kept fresh and thriving in the glorious Truth, wherein we rest and remain your friends and brethren."

In the year 1692, it is said that Samuel Jennings removed to Philadelphia, but it would seem that it must have been in the previous year, for we find him appointed in Philadelphia Monthly Meeting in 1691. He came to a troubled meeting. George Keith was actively engaged in his disorganizing course, and quite a number of the members of that meeting had been taken with his deceitful spirit, and were contending against sound Friends, and abusing the most valuable amongst them. Samuel entered into the field of conflict against them, and soon was accounted by them one of the very worst of their enemies. He had no unity with unsound sentiments, nor unrighteous actions. He fearlessly opposed both, and being blessed with the wisdom from above sanctifying and directing great natural parts, he was of singular service in the church at that time.

He was one of those on whom the labour of preparing the various testimonies issued against George Keith fell, and also the various letters and epistles to Friends in England, explanatory of the condition of things in Pennsylvania, showing the necessity of the testimonies issued.

When Keith appealed to London Yearly Meeting [1694] against the judgment of Philadelphia Friends, Samuel Jennings and Thomas Duchett, who were each under religious concerns to visit England in the exercise of their gifts as ministers of the Gospel, were appointed to act as respondents in the case, on behalf of their brethren at home. Samuel Jennings appears to have had the chief labour of replying to the statements of Keith, and performed the service with his usual clearness and discretion. Six days were occupied by the Yearly Meeting in listening to George's written and oral defence, and the replication of Samuel Jennings; and on the seventh the meeting proceeded to show its judgment on the merits of the case. In the afternoon George was again heard, and then the meeting appointed a committee to prepare a condemnation of his actions. This paper manifested that the Yearly Meeting did not approve of the proceedings of the magistrates of Philadelphia, who were Friends, in bringing George Keith to a public trial, for his printed abuse of themselves, and particularly of Samuel Jennings. To understand this case, it will be necessary to go into some further particulars.

(To be continued.)

The pious man and the atheist always talk of religion: the one speaks of what he loves, and the other of what he fears.—*Montesquieu.*

For "The Friend."

From the memorandums published of Sarah L. Grubb, it is evident she was a firm advocate of the Christian doctrines held by the religious Society of Friends, and an uncompromising opponent of the anti-Quaker sentiments attempted of latter years to be spread among its members. In a letter which she wrote to "a Friend in Ireland, who took a conspicuous part in a secession from Friends in that country," about the year 1839, she reminds the individual that the way to be restored to the unity of Friends, is by an acknowledgment of "having unguardedly given way to that Spirit which is seeking to sever instead of cement." She also says, "that which would interrupt our wholesome discipline is out of the life of Christ, who is Head over all to his church, and who loves his church as his own body;" thus showing her belief that the discipline has been set up in the life and authority of the Head of the church, and a breach of it is a violation of that life.

In the other letter she further says, that "without maintaining the good order of Society, there must be confusion, and instead of church government, anarchy."

Should the editor of The Friend think the letters alluded to suitable for its columns at the present time, it would be agreeable to the writer to see them inserted.

Dublin, Fifth Month 7th, 1839.

Dear ———, How is it that we have not (as heretofore) enjoyed each other's company during this Yearly Meeting? We used to "take sweet counsel together," and could rejoice in the all-preserving power of Truth, while yet we were in trouble.

Thou didst admit that I was the same still. I sent to thy lodging yesterday morning, to ask thee to come and take leave, but thou hadst left town. Ah! I think thou dost not feel towards me as formerly, and my views are just those that I have always had in my religious profession, and in which we have been so strongly, and so long, sweetly united. Day and night do I travail for thee, that thou mayest see how it is with thyself and others. There is at present a cloud over thine understanding, and until it be removed, thou canst not admit of having fallen into error. Oh! wait, deeply wait upon Him who is both able and willing to enlighten thee again: then would all those who are tenderly united to thee in the truth, receive thee with joy; I for one. It would be like healing balm to be able to feel thee in the same precious nearness again; thou who stood so long as an upright pillar. What has warped thee? There is a remedy. There may be restoration, if, without delay, all is yielded up into the hand of Infinite Wisdom and Strength; and if there be an acknowledgment of having unguardedly given way to that spirit which is seeking to sever instead of cement. This noble confession will do much good, and may be instrumental to bring back wanderers, and to keep others from going out.

Once more let me say, my loved friend, that which would interrupt our wholesome discipline, is out of the life of Christ, who is Head over all to his church, and who loves his church as his own body. Beware how thou lends thyself to anything out of the holy harmony, out of the blessed life, out of the true light, out of the inseparable love of God. Oh! may he make manifest to thee that this breach of unity in this nation is all done, and doing in the dark.

I thought of poor James Naylor, and the women's deceitful cry with him, when he was getting under that grievous delusion, concerning

hich he owned he felt unable to come out; but e see the hand of the Lord brought him out, as e came to lean upon it; his eyes being anointed o see himself in bondage and in error, and his eart bleeding with sorrow. He did not intend o do wrong wilfully, but giving way a little to an nrighteous zeal, was led on until he came under dense cloud.

Ah! dear ———, consider these awful things, nd be timely warned. Take not thyself away rom us as a Society, but retrace those steps hat have caused thee to turn thy back on the old. So dearly farewell.—I remain, with love nfeigned, thy sincere friend.

SARAH GRUBB.

To the Same.

London, Fifth Month, 1839.

Ah! my dear ———, thou art indeed mistaken. did the very reverse of lending my ear to reorts calculated to impress me unfavourably, as egards thee or others. It was my care to be preerved from judging anything, until the Lord hould be pleased to come.

I can say that, before seeing for myself how hings were, my mind was much disposed to hope hat thou wast as free from undue bias, as thou rt from insincerity; but I became convinced, in he opportunity R. B. and myself had with thee nd the other Friends, who so kindly gave us your ompany, that there was a dimness, and a disposiion given way to, which, if not checked, would ead from true meekness, and submitting ourselves ne unto another in love; maintaining the good rder of society, without which there must be onfusion, and, instead of church government, narchy. So then, is it not better to bear our burden patiently, even if we see that, in some repects, acts of monthly or other meetings, are not n accordance with our individual views of what s right? waiting thus to know what interposition nay come from the great Head of the church, to atisfy our exercised minds.

I am persuaded it is our place, as members of he body, to be subject to the body. Who ever prospered, in the best sense, by either going out, r acting in a way to be disunited? Especially, when did such as have once shown themselves deeply concerned for the upholding our principles, in their native character of simplicity and purity?

There is, in *this* Yearly Meeting, much remaining to be done away, before we are prepared to assume the lustre which attracted the minds of many in our early times, and induced men to glorify Him, whose workmanship we were in our beginnings.

I believe the Divine hand is upon us in this day, for the great end of again refining the gold that has become dim, and the most fine gold that is changed, that He may be honoured, and his own dear people made glad in Him, and one with another.

May we be willing to bear our allotted portion of exercise and suffering; keeping our habitations in the truth, and "committing ourselves to the Lord in well-doing, as unto a faithful Creator." So farewell, my long-loved friend, and believe me to be sincerely thine.

SARAH GRUBB.

Earthquakes in Central America.

The city of Guatemala has been afflicted with a series of earthquakes, which have done some damage and caused general alarm. The first shock was a slight one; and occurred on the 14th of July. Next day three more took place, and on the 16th three more, still slight in character, and no shock exceeding one or one-and-a-half seconds in duration, the direction being from south to north, unaccompanied by noise. On the 17th, about 5½ o'clock, A. M., a smart shock of about two seconds in duration occurred, with a hollow, rumbling noise and a subsequent vibration of the earth. The same day, about twelve minutes before two o'clock, P. M., came two shocks of great violence, with loud noise, doing considerable damage to public and private buildings throughout the city, throwing down several small ones, and re-opening the old cracks made by the earthquake of 1830, besides making many new ones. All the churches had large cracks in them, and that of St. Augustine was badly damaged. The streets were immediately filled with affrighted people, the cry of *Dios fuerte* resounded on every side, some knelt in the streets to pray, and others hurried to the churches. The duration of the shocks were about four seconds each, the course the same as before, and the motion of the undulatory or horizontal kind. At three o'clock another severe shock occurred, followed by others throughout the afternoon and night, accompanied with a vibratory motion and a rumbling noise, the entire number of shocks throughout the day and night being thirteen. Advices from San Salvador state that occasional shocks of earthquakes are still felt there. Many families have returned to the ruined city, from the fact that they are unable to find shelter elsewhere. Nothing has yet been done towards commencing the building of the new capital, owing to the general distress and want of money that exist. Information has also been received, through the Gazette of the State of Chiapas, that in the last week of the month of May, the large Indian puebla of Jamiltepeque, in the State of Oaxes, distant ten leagues from the city, was entirely destroyed by a succession of shocks of earthquakes. The loss of life is said to have been great.—*Late paper.*

Selected.

HUMILITY.

The first lesson in the school of Jesus Christ is *humility:* he who has learned *this*, will soon attain to higher degrees. In the ways of God the proud stumble at every step; while from the path of the humble, *every obstruction is removed*, and his way is made plain before his face. He who is destitute of *this* grace of the Holy Spirit, may be *ever* learning, and yet never come to a knowledge of the Truth. From the doubting, labouring, and purturbed spirit of the proud and sensual, all religious joy and *true* spiritual peace are excluded; while he who sits in lowliness of heart, at the feet of Jesus, will find rest to his soul—*rest* from the perplexities of doubt, the horrors of guilt, and the torments of gloomy anticipation. He shall rest in peace, in hope, in safety, and in full reliance on Him whose disciple he is, till the truth to which he has now attained, and the consolations he is now permitted to enjoy, shall be succeeded by more ample discoveries, and by a more calm repose, and by an enjoyment in the world of spirits, and in the immediate presence of his God and Saviour, unutterable, unbroken, and eternal.

Malice.—Malice is a settled or deliberate determination to revenge or do hurt to another; it denotes the disposition of *inferior* minds to execute every purpose of mischief within the more limited circle of their abilities. It is a most hateful temper in the sight of God, strictly forbidden in the Scriptures of Truth, disgraceful to rational creatures, and every way inimical to the spirit of Christianity.

THE FRIEND.

ELEVENTH MONTH 11, 1854.

There have been so many contradictory accounts of the extent and character of the immigration into the Kansas and Nebraska Territories, that it has been impossible to arrive at any certain conclusion, as to the rapidity with which that distant section of our country is settling with permanent residents, or what are the prevailing sentiments there, in regard to the important subject of slavery. Within the last week we have received a large and handsomely printed weekly newspaper, called "The Herald of Freedom," printed at Wakarusa, in Kansas Territory, which, by its appearance, and the manner in which it is got up, would do credit to any one of our eastern cities.

We of course know not exactly how far its statements may be relied on. The editor appears to have entered on his duties with a good deal of enthusiasm, and may sometimes be led away by his hopes and wishes beyond what actual facts would warrant. Knowing that many of our readers are much interested in this matter, we give the following extracts, the first of which is editorial, and the other given in the Herald as being "worthy" of its columns:—

"In December last, the Superintendant of Indian affairs for the Indian territory, in his annual report, said, in substance, 'Aside from the government agents, troops and missionaries, there are not at this time, three *white* inhabitants in all that region lying west of the Missouri, and embraced in the limits of Kansas and Nebraska.'—But ten months have passed since then, and now, instead of a population enumerated by a monosyllable, there are many thousands settled all over the country, and hundreds are pouring in daily, selecting and staking out farms, on which they purpose locating with their families.

"We confidently predict that in less than a year from this time, we shall number fully one hundred thousand souls.—The times indicate it."

"We, who are in the disputed territory, and are eagerly watching the changing phases of the battle for freedom, see constantly incidents which arouse alternately hope and fear. For the last fortnight the indications have been rather of a cheering character. First among them I may name the arrival of the pioneer party of thirty men sent out by the Massachusetts Emigrant Aid Company. Their appearance and bearing, as they passed through Missouri, did much to conciliate favour and sympathy. They were seen to be men of a quite different character from what have been, unreasonably enough anticipated, neither 'paupers, thieves, nor incendiaries,' as the western Missouri papers had given out. This company passed immediately up the Kansas river through the Shawnee reservation, and have located themselves near the Wakarusa river. This section of country had already been previously known as a free soil district, so much so, that at least one slaveholder, after locating himself with his property there, becoming acquainted with the sentiments of his neighbours, precipitately returned to Missouri. The valley of the Kansas with its recent infusion of New England emigration, and the moral influence of the prospective accessions of the same sort, may now be said to be entirely anti-slavery. A recent journey through the settlements of that region convinces me that the free soil sentiment is now, at least twice as strong as the opposite. If one may judge by the tone of the hotel and bar-room talk in the neighbouring frontier

towns of Kansas, Independence and Westport, discouragement has taken hold of the pro-slavery party, and the opinion is freely expressed that Kansas will be free.

"But while the southern half of the territory will be the New England portion, and will contain a very large majority of northern settlers, the part north of the Kansas river presents less favourable indications. The country around Fort Leavenworth lying contiguous to the comparatively well peopled Platte, Clay and Buchanan counties of Missouri, which contain the pugnacious towns of Weston and St. Joseph, has received swarms of Missouri settlers, who two months back passed at Salt Creek some flaming resolutions, threatening "non-protection to abolitionists," &c. Lately some Indiana and Illinois settlers have established themselves in the vicinity, and at the meeting of the squatters held on the 29th of July, E. C. Andrews, recently of the Boston bar, who has fixed himself at Fort Leavenworth, and who has been threatened with '*routing out*' from thence, simply on account of his northern extraction, came forward, and in an eloquent speech avowed himself warmly in favour of freedom in Kansas, from reasons drawn from interest and prudence, as well as humanity. His speech was listened to with attention, and received much applause, although in truth the majority of the meeting was composed of pro-slavery men. One thing is sure, that the slavery propagandists no longer have it their own way at Fort Leavenworth. Northerners will receive as effectual 'protection,' if the thing is at all needed, as the men of the south."

SUMMARY OF EVENTS.

EUROPE.—News from England to the 21st ult.—*The War.*—The bombardment of Sebastopol commenced on the 13th ult. from two hundred pieces of heavy artillery. The Russian forces under Menschikoff have been partially reinforced. Omar Pacha has gone to the Crimea, to take part in a council of war. Seven thousand more troops have left Constantinople for the Crimea. The positions of the allied armies near Sebastopol are said to be impregnable.

ENGLAND.—The Liverpool price of flour was from 39s. to 42s. per bbl. The markets were not well supplied with breadstuffs, and both wheat and corn have advanced. The cholera was rapidly abating in London, there were only 249 deaths of that disease in the last week reported. Parliament had been prorogued to the 16th ult.

IRELAND.—The cholera was spreading in Dublin. A number of commercial houses had failed or suspended payment.

FRANCE.—Active preparations are making in Paris for the great exhibition of 1855, which the Parisians intend to make as striking a display as possible. Stone bridges are to take the place of the suspension bridges of Arsole and the Invalides.

TURKEY.—The Porte has issued a firman to suppress the trade in Georgian and Circassian slaves.

SPAIN.—The ministry has abandoned the project of drawing up a Constitution to be submitted to the Cortes.

AUSTRIA.—A Vienna despatch says, the German press everywhere gives indications of an approaching rupture between Austria and Prussia, and there is much anxiety manifested at Berlin.

PRUSSIA.—The population of Prussia, at the end of the year 1853, was 17,057,004. In the course of the year 1853, there were 659,122 births, and 521,196 deaths; or one in 32.7. This is a larger ratio of mortality than obtains in Great Britain or the United States.

DENMARK.—The House of Representatives has voted by a majority of 80 to 6, for the appointment of a committee to draw up articles of impeachment against the ministry for promulgating the royal "decree of July," by wich the Constitution was subverted.

AUSTRALIA.—The gold mania caused great derangement of the ordinary industrial pursuits of the country, but the latest accounts représent the colony in a favourable and improving condition as respects agricultural and commercial affairs. Silver had been discovered at the Strath Albyn gold diggings, the average product being over two hundred ounces of pure silver per ton of lead, &c. The supply of ore is apparently inexhaustible.

MEXICO.—According to the census published in the last Mexican papers, the population of the twenty-eight States composing the republic, numbers 7,853,395. More than twenty persons have recently died in a single parish, in the district of Jamiltepec, of starvation. The district has suffered from cholera, earthquakes and locusts.

CANADA.—An extensive movement is now on foot in Canada, to procure the passage of a bill by Parliament, now in session, similar to that proposed for the United States, by the Homestead bill.

UNITED STATES.—*Large Sales of Public Lands.*—The sales this year will exceed 6,000,000 acres; a larger quantity than has been sold any one year for fifteen or eighteen years.

The Design upon Cuba.—The Washington Union says, it has been the "*unfaltering purpose*" of President Pierce to acquire that island honorably, and he believes this duty to be binding upon him still, no matter whether the question is considered in its relations to humanity, to commerce, or to freedom.

The Growth of Pennsylvania.—At the election for Governor in the year 1799, the votes given for McKean and Ross, numbered 68,886; in 1823, for Schultz and Gregg, 154,269, and in 1854, the two principal candidates received more than 371,000 votes.

New York.—The foreign arrivals at this port, in the Tenth month, were 350, bringing 39,630 passengers, 20,247 of whom were Germans. There are 120,000 school children in N. York, one half of whom attend the public schools. Interments last week, 399, of which 17 were from cholera.

Philadelphia.—The mortality for the three months ending Ninth mo. 30, was 4531; this is an increase of 34 per cent. over the same quarter in 1853. The average temperature for the Tenth month, according to the register kept at the Pennsylvania Hospital, was 58.77°. The amount of rain, 1.54 inch. Interments last week, 195, of which 4 were from cholera.

New Orleans.—Mortality for the week ending 30th ult., 293, of which 107 were from yellow fever.

Lockport, N. Y.—On the 2nd inst., a very destructive fire occurred here, by which a great number of buildings and much property was consumed. It originated from a camphene lamp.

Miscellaneous.—All the vessels sent out in search of the Steamer Arctic's boats, have returned unsuccessful. In the N. York Journal of Commerce says, that when the accident to the Arctic was discovered, had the boilers been blown clear of steam, and filled with air, which could easily have been done, their bulk would have sustained the entire fabric in which they rested. The builders of the engine confirm this opinion.

Maine Law in Canada.—A prohibitory law has passed the Legislative Assembly by a vote of 85 to 5. It is expected to pass the Council, and become a law.

The Railroad from Chicago to Galena has been finished, completing the connection between Lake Michigan and the Mississippi.

Shocking Explosion.—On the 26th ult., a steam boiler in a flour mill, at Waukegan, Wisconsin, blew up, demolishing the whole structure, killing four persons, and wounding five others, some mortally.

The Fire in Cleveland.—The first accounts exaggerated the loss sustained; it does not exceed 300,000 dollars.

A New Corn Sheller.—John J. Rollow, of Fredericksburg, Va., has invented a machine, which will husk and shell corn at one operation. The ear with husk is placed in one end, and in the twinkling of an eye the corn falls at one point, the clean cob coming out at the other end. Its capacity is about four hundred barrels per day.

Submarine Operations.—Men have been sent from England, for the purpose of removing the ships of war, sunk by the Russians at the mouth of the harbour of Sebastopol. They took with them diving apparatus, galvanic batteries and all other necessary implements. The charges to be used will be from one ton and a half to two tons of gunpowder, and will be fired at a distance of about two miles.

Railroad Disaster.—The passenger train for Rock Island, which left Chicago at 11 o'clock at night, on the 1st inst., met with a terrible accident, from the breaking of an axle-tree of the engine, the result, it is said, of running over a horse upon the track. The engine and a portion or all of the cars were thrown off with great violence, the two forward passenger cars being hurled on top of the engine. The steam escaping was driven through the dense mass of human beings packed closely amongst the wrecks of the cars, scalding many in a shocking manner. About 40 persons are reported to be injured, many of them fatally.

Cholera at Massim.—This city has been ravaged by cholera in the most fearful manner. According to what appears reliable information, no less than sixteen thousand persons have fallen victims out of a population of forty thousand.

RECEIPTS.

Received from Thos. Lee, Pa., $2, vol. 28; from C. Bracken, agt., O., for Jacob Branson, $2, vol. 28, for P. Wood, $2, vol. 28, for Jos. Hobson, $2, vol. 27; from H. Knowles, agt., Smy., N. Y., for James Cooper, Rob. Knowles, and Chester A. Weaver, $2 each, vol. 28; from R. L. Roberts, M.D., O., $4, vols. 26 and 27; from Phebe Tomlinson, Pa., $4, vols. 26 and 27; from Smith Upton, agt., N. Y., $2, and for A. M. Underhill, Paul Upton, and M. Wing, $2 each, vol. 28, for Dl. Griffen, $5 to 52, vol. 28, for Judith Haviland, $2 to 27, vol. 27; from Lloyd Balderston, M.D., $2, vol. 27.

WEST-TOWN SCHOOL.

At a meeting of the committee to superintend the boarding-school at West-town, held Tenth mo. 6th, 1854.

"It has long been the desire of those charged with the oversight of this Institution, that parents and others should avoid visiting there on the first day of the week, as far as they can conveniently do, so as such visits tend to unsettle the children, and interrupt the quiet and order of the family, and are sometimes burdensome to the Friends who have the care of the farm-house, and to their domestics—obliging them to provide for the entertainment of visitors when it seems right they should have the privilege of retirement and rest from the labours of the week.

"From the apprehension that the visits alluded to have become rather more frequent of latter times, the committee have been induced thus to call the attention of Friends again to the subject, with the hope that they will kindly co-operate in sustaining the wholesome regulations of the Institution in this respect." Extract from the minutes.

THOMAS KIMBER, Clerk.

TEACHER WANTED,

A well qualified Teacher to take charge, at the close of the present year, of the "Sheppard School" for Coloured Girls on Randolph street. Applications in writing may be addressed to Edward Richie, Clerk of the Board of Trustees, No. 173 Vine street.

DIED, on the 28th of Seventh month, 1854, at the residence of Mark Collins, near Mossford, N. J., GRACE CRAFT; an esteemed member of Chesterfield Monthly Meeting of Friends, New Jersey, in the eighty-first year of her age. We believe exchanging this for a better inheritance.

——, on the 15th of the Eighth month, 1854, after a short and severe illness, ELIZABETH T. WRIGHT, wife of Charles Wright, in the 41st year of her age; a member of Upper Springfield Monthly Meeting, held at Mansfield, Burlington county, N. J.

——, after a short illness, on the 12th of Ninth mo., 1854, in the 81st year of her age, PHEBE, wife of William Leech; an esteemed member of Carmel Monthly Meeting, Columbiana county, Ohio. She was mercifully favoured to bear her suffering, which was at times very severe, with full resignation to the Divine will; craving that her patience might hold out to the end; affording her friends the consoling hope, that her end was peace.

——, at the residence of her father, near Middleton, Columbiana county, Ohio, on the 21st of Ninth month, 1854, SARAH, daughter of Samuel and Margaret Jellingsworth, in the 22d year of her age. This dear young Friend was concerned, whilst in health, to live a consistent life; but during the fore part of her illness, she appeared to pass through deep exercise of mind to be prepared for her final change, and was mercifully favoured to become fully resigned. Several times she requested her parents not to hold her, but to give her up freely, and not to grieve, as there did not appear to be anything in her way, and she was willing to go. She inquired for both her sisters, and when they came, she said, "My dear sisters, give up to serve the Lord more than I have done, that you may not have to endure what I have passed through at a time like this; obey your parents, and do all you can to make them happy." She was frequently engaged in supplication, desiring to be released, and that her patience might hold out to the end. Thus affording her friends the consoling hope, that their loss is her great gain.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXVIII. SEVENTH-DAY, ELEVENTH MONTH 18, 1854. NO. 10.

PUBLISHED WEEKLY.

Price two dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 50 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

From the Leisure Hour.

A Visit to the Staffordshire Potteries.

(Continued from page 66.)

At a former era in the art of pottery, the operations of the thrower and the turner were comparatively much more in demand than they now are. By late improvements in manufacture, much of their industry has been superseded by that of other operatives. The use of moulds, which was always indispensable in the case of articles not perfectly circular, has of late years supplanted the thrower's wheel: thus dinner-plates and dishes, although circular, are now no longer thrown or turned, but are fashioned to the right form at a single process. Observe yon young fellow who is spattered with clay from head to foot: he stands at a bench, upon which the mould of the inside of a dinner-plate is mounted upon a small flat disc, not unlike the thrower's wheel, and which he can set a-going with his hand at his convenience. An assistant at his side has rolled out a lump of clay into a uniform thickness of some quarter of an inch: he spreads this flat sheet of clay upon the raised surface of the mould which forms the inner surface of the plate; he then takes in his hand an instrument called a profile, which is a piece of hard wood shaped to a section of the outer or convex side of the plate, and pressing this firmly against the clay on one side, a few revolutions of the model bring the whole circumference repeatedly beneath the pressure of the profile, and the plate is finished at once, as accurately as though it had passed through the ceremonies of throwing and turning.

In the formation of many articles, and some of them are of great beauty, the operations of the thrower are combined with the use of the mould. Ponder is a young girl who, if you saw her in your own kitchen employed as she is now, you might suppose was laying the under-crust for a beef-steak pudding; she is merely lining with clay the mould of a basin, ornamented on the outside with raised designs; she hands it to the thrower, who in a few seconds finishes off the interior by the action of his wheel and fingers, and in so doing unavoidably drives the clay into every part of the mould, so as to produce a perfect impression. Vessels which are not circular in form, either within or without, or which have raised figures in relief upon their surfaces, have to be pressed in moulds of plaster-of-Paris. These moulds are in two or more pieces, and the several parts having been lined with clay, carefully dabbed into the hollows by blows from a wet sponge, and squeezed if necessary into the smaller interstices with the fingers, are then joined together and the seams stopped with long strips of clay worked smoothly down. Articles thus moulded, either by "flat-ware pressing" or "hollow-ware pressing," the technical designations of the above modes of working, have to remain a considerable time on or in the moulds, as they cannot be removed until by the heat of the stove-house in which they are placed they are hardened sufficiently to bear handling. "Handling," by the way, happens to be the process which a good many of them have to undergo so soon as they are hard enough for the purpose. The handles are pressed in plaster-of-Paris moulds, and clay of a stiffer consistency is used than that of the thrower or pressers; they are pressed very rapidly by boys, and are fastened on by means of a little fluid slip supplemented by a few particles of moist clay. Those wares which have been pressed in several pieces present unsightly seams upon being released from the mould, and these have to be cautiously scraped away and smoothed until the joints are no longer visible. Besides throwing, and flat and hollow-ware pressing, casting is sometimes resorted to in cases where the design is too elaborate or intricate to be done by pressure: for casting, the clay is used in the fluid state of "slip," which is drawn off by a syringe when a thin coating is deposited, upon which a lining of clay is then pressed firmly down.

Supposing the wares to be modelled from the clay into their desired forms by any or all of the processes above briefly described, and dried sufficiently to undergo the first firing in the kiln, the next operation is that of packing them in the saggers in such a way as to ensure their suffering no injury in the fire. But before packing the pots in the saggers, we may as well ascertain what they are. Entering a roomy workshop on the ground-floor, we come upon a party of men engaged in constructing them: one is rolling out the thick clay batter, composed of the marl of the district mingled with the ground remnants of old saggers; another is cutting it into strips something less than a foot broad; and a third is lapping one of the strips round a wooden model of the requisite size; while a fourth prepares the oval-shaped piece which is to form the bottom. A sagger, we find, is a rudely-shaped vessel something like a milliner's bandbox without the cover, but oval in form, and fashioned of clay nearly an inch thick; it comes into the world with the almost certain fate of being burnt out again at no very distant time; its whole existence is one course of trial by fire, and to fire it succumbs at last. Saggers are of various sizes, regulated by the nature of their contents, and some are much deeper than others; and their sole use is to protect the wares from the action of the flame in the kiln, which would else discolour and otherwise injure them. The filling of these saggers preparatory to firing is a work of considerable care and responsibility. If the cups, saucers, plates, basins, etc., were suffered to lie upon one another indiscriminately, the probability is that half of them would adhere together, or be otherwise spoiled. To prevent such a result, minute three-legged, angular, circular, and oddly-shaped pieces of burnt ware, so formed as that only their projecting points, or sharp edges, can touch anything with which they come in contact, are laid between the separate articles as they are placed in the saggers, the bottoms of which are first covered with a stratum of sand. It is a point of economy to load the saggers as full as possible, as the expenditure of fuel in firing the kiln will be the same whether the quantity of goods in the saggers be great or small, and of course the larger the amount burnt at once, the less is the cost per cent. of burning the whole.

Let us now enter one of the enormous cones of brick before alluded to, and see what is going on. Passing through the only door-way, we find that this massive and monster erection is lighted by the broad orifice of the chimney in which it terminates at the top, and which is six or seven feet in diameter. We find, too, that it incloses a round brick tower, the walls of which are perfectly vertical and of some twenty feet in height, and the interior of which is about sixteen feet in diameter. The outside of this inner tower is pierced with ten or a dozen large fire-places at equal distances, the flues of which open into the oven, while other flues run along beneath the raised floor and converge together at an orifice in the centre, through which their united flames ascend. This is the biscuit-oven; entering it through a breach in the wall, such as might have been made by a cannon-shot, we observe that the flooring of fire-brick is highest in the centre, descending at a slight inclination towards the circumference: this plan is evidently adopted as a convenience in packing the saggers, which, as they are piled one upon another in rows reaching to the top of the kiln, have a tendency to lean against the surrounding wall. The men are busy in piling the loaded saggers one upon another; and ever as a fresh one is laid on, it is cemented to the one beneath with soft clay, to prevent the searching flame from visiting their contents. The men have to mount ladders in order to complete the stacks. As they proceed in their work, the oven becomes filled by degrees; and by the time that two thousand five hundred of these clay bandboxes, all filled with pottery wares of every description, have been carefully stowed in their places, there is barely room enough left for the last workman to crawl out. The rugged breach by which we entered has now to be built up with solid masonry, and then the fires are lighted—cautiously and temperately at first, in order that the inclosed goods may be dried and hardened by degrees, without which precaution they would not stand the full heat of the oven; the fire must also be as gradually slackened after the wares are sufficiently burnt, as a sudden reduction of temperature would destroy them. Altogether, this operation of first firing, by which the goods are converted into what is called biscuit-ware, occupies in the whole about sixty hours, during the greater portion of which time the wares, saggers and all, are kept in a state of incandescence at a white heat. It is important to know the degrees of heat attained in the oven at different periods of the firing, and for this purpose Wedgwood invented a pyrometer, which, however, in practice is not much used, the masters preferring a species of pyrometer of their own,

consisting of small thimble-shaped clay vessels planted in certain parts of the oven, and withdrawn for examination at certain periods of the firing. The men can tell, by the appearance these small pieces present, the degree of heat and the probable state of the wares subjected to it, and can regulate their fires accordingly.

When the goods within the kiln are sufficiently burnt, the fires are first slackened, and then extinguished; and so soon as the oven is cool, crowbar and pickaxe go to work, and a forcible entrance is effected. The saggers are now taken out, and their contents rigidly examined; and as the hands employed in the previous processes generally work "good from the oven," as it is called, that is, contract to be paid only for such work as stands the biscuit-firing without injury, the scrutiny which now takes place is interesting to all parties concerned. The bad, cracked, crooked, or ill-shaped pieces are rejected and thrown away as good for nothing, the master losing his materials and the workman his labour—good workmanship only being paid for. The wares, in this state known as "biscuit," are now ready for the subsequent processes of printing, painting, and various kinds of ornamentation, regulated by the demand of the market or the caprice of fashion. Vast quantities of them are stored away in this condition in long galleries and ware-rooms, where hundreds of thousands of them may be seen piled in stacks and heaped on shelves, ready to receive the impression of any new device for which a sudden demand may arise: it is the possession of a good store of biscuit which enables a manufacturer to execute large orders for new patterns at a very short notice.

The next operation which the potter's wares have to undergo may be considered to be that of printing; for though all ware, as the reader knows perfectly well, is not printed, and a great deal is not ornamented in any way, yet all that is printed, is printed at this stage of the manufacture. To witness this process we must resort to the printing-room, where the *rationale* of the whole ceremony is visible at a glance. The patterns to be printed on the china or earthenware are first engraved upon copper plates, at a cost, by the way, which must form no small item in a manufacturer's expenses. They are worked at a copper-plate press, differing slightly in construction from that in general use; but the plate itself undergoes a course of treatment which it would astound a good engraver to witness—the face of it being actually shaved clean at each impression by the blade of a large knife. The impressions are taken upon a thin greasy-looking kind of tissue-paper; and as fast as they are worked off, they are taken in hand by girls who, first cutting off the surplus paper with a pair of scissors, spread the pattern, its inky side downwards, upon the plate, dish, or whatever vessel it is, upon which it is to be transferred. Ware in the biscuit state is exceedingly dry and thirsty, and the moist oily ink of the pattern readily adheres to its surface. So soon as it is laid on in the proper position, the girl rubs the back of the paper rapidly with the end of a cylinder of rolled flannel, moistened with some soapy mixture, until the thin paper adheres so closely to the ware as to be scarcely distinguishable from it. It is allowed to stand thus for some time, until a complete set—a tea-service, or a dinner-equipage, it may be—is thus covered with the printed patterns: it is then taken to a tub of water, and by simply rubbing with a wet sponge the thin paper is removed, the pattern remaining on the ware, perfect and complete to the faintest line and the smallest dot. Now it happens, unfortunately, that the ware, though before it was printed it was ready for the process of glazing, yet after it is printed it is not: the ink or rather colour used for printing is of a very oily consistence, and until this oil has been evaporated from the colouring matter the wares cannot be glazed. In order to get rid of the oil, the printed wares are piled upon shelves in "muffles or small kilns, in which no saggers are used, as the flame of the fires is not allowed to enter the muffle, but only to circulate in flues around it. Here they have to remain for a period of ten or twelve hours; and here, for the present, we shall leave them to griddle at their leisure.

(To be continued.)

For "The Friend."

Renunciation of the World.

"Labour to show thyself approved unto God, a workman that needeth not to be ashamed, rightly dividing the word of Truth," was an exhortation of an eminent apostle, when writing to one of his fellow-servants; which shows the great object and concern in view of the immediate followers of our Lord and Saviour to have been, to stand approved in the Divine sight, rather than in the sight of men. They courted not the approbation of the world, nor the praise of unregenerated nature, neither was it their portion to receive it; but as our Saviour was himself "despised and rejected of men," so also were they. The apostle Paul declares, when writing to those who felt that they were rich and full, and had need of nothing, "Now are ye rich, now are ye full, ye have *reigned* as princes without us, and I would to God that ye did reign that we might also reign with you, for I think that God hath set forth us, the apostles, last as it were appointed, to death; for we are made a spectacle to the world, to angels, and to men. We are fools for Christ's sake, but ye are wise in Christ; we are weak, but ye are strong; ye are honourable, but we are despised;" yet these were the Lord's own chosen servants, sent forth into the world, to gather souls to Christ. These were they to whom a kingdom had been appointed, but not of this world, that must come to naught; and these though they were reproached for the name of Christ, yet in this they rejoiced, "esteeming the reproaches of Christ greater riches than the treasures of Egypt." But, how is it with many of the professed followers of the same blessed Jesus, in these dark and trying times? Are there not too many under our name, who are watching with anxious eye, to see what the world is thinking and saying of us, and one of whose great concerns is, that we may so order our movements, as not to lessen ourselves in the esteem or approbation of the world? Yea, and who would sooner cease contending for "the faith that was once delivered to the saints," than in anywise become despised in the eyes of men. Is it not evident that the hearts of such are not right in the sight of God? We read in the Scriptures of Truth, that many of the chief rulers believed on the Son, and sent of God, but because of the Pharisees they did not confess him, lest they should be put out of the synagogue, for they loved the praise of men more than the praise of God. But the language of our blessed Lord to his disciples, was, "If ye were of the world, the world would love its own; but because ye are not of the world, but I have chosen you out of the world, therefore the world hateth you."

I believe that if we as a people were more earnestly concerned to know what the Lord's will concerning us is, and more faithful to *do* it, *not leaning to our own understanding*, nor attempting to order the affairs of the church according to human policy, but allowing the government to be upon His shoulder, of the increase of whose government it was declared, "There should be no end," the Lord would be near to prosper us as a people as in days of old, and as in former years.

It was not the great popularity of Quakerism in the first rise of our Society, that drew so many to embrace its principles, as I doubt not we are all well aware. It was viewed with scorn and contempt by the great mass of the community; but as those who were drawn to embrace the Truth, kept near to that which had gathered them, they were enabled to "hold their meetings in the power and authority of Truth," whereby many, whose panting souls were asking the way to Zion as they were *led* to look toward this despised and downtrodden people, and attend their meetings, though at times no words might be spoken, were convinced that these were a people that *the Lord did condescend to own*, though the world did not, and as the witness for Truth in their own hearts came to be fully reached, they became prepared to subscribe to the spirituality of the Gospel dispensation, and to embrace those precious doctrines and testimonies, given to our Society to uphold.

Thus it was that truth spread, and genuine Quakerism flourished in the rise of the society, and thus only can it ever flourish. No art or contrivance of man, or policy or wisdom of the creature will ever insure to us a Divine blessing, or cause Zion to prosper, or her borders to enlarge; nothing short of individual and perfect obedience to the will of God, *inwardly revealed*, and made manifest in man, can ever perform this, so desirable, an object.

Falls, Eleventh mo., 1854.

A Tame Whale.

An eastern traveller, in a newly published work, entitled "Notes of Travel," relates the following singular fact which came under his observation at Muscat:—

"No visitor to the harbour is better welcomed by the natives than 'Muscat Tom.' This name has been given by sailors to a male fin-back whale which has made an habitual practice for over forty years to enter, feed, and frolic about the cove several hours in each day, always leaving before night. Sometimes a smaller member of his tribe, supposed to be a female, accompanies him. His length may not be less than seventy feet, and that of his companion fifty feet. Since his arrival signalizes the departure of the sharks, which infest the harbour, to the prevention of sea bathing by the natives, the most strenuous caution is observed not to interfere with his pursuits and diversions. He shows no fear of such vessels as trespass upon his watery field. One day as he came rolling leisurely and jollily alongside of a vessel at anchor in the harbour, and on board of which I was, one of the crew threw with considerable impetus a stick of wood into his open mouth, as he raised his head out of the water. This breach of the good treatment which he had been wont to receive did not draw any signs of displeasure from his whaleship, although more than one malediction was bestowed upon the imprudent tar by the exasperated natives who had observed his censurable conduct."

The famous oriental philosopher, Tolsman, while a slave, being presented by his master with a bitter melon, immediately ate it all. "How was it possible," said his master, "for you to eat so nauseous a fruit?" Tolsman replied, "I have received so many favours from you, it is no wonder I should, for once in my life, eat a bitter melon from your hand." This generous answer of the slave struck the master so forcibly, that he immediately gave him his liberty. With such sentiments should man receive his portion of sufferings at the hand of God.—*Horne.*

Strength in Weakness.

For "The Friend."

It is doubtless a source of great comfort to the truly exercised and burden bearing travellers Zionward amongst us, to be able to believe that there remains up and down in our once and indeed still highly favoured religious Society, even in these times of wide spread desolation, (caused by the insidious attempts of the enemy of all righteousness to lay waste her fair borders, by introducing unsoundness of principle,) a remnant, though it be in some places only comparable to the two legs or the piece of an ear, taken out of the lion's mouth, who yet prefer Jerusalem above their chief joy. Assuredly we hazard nothing in saying, that as these keep their ranks in righteousness, they will have joyfully to witness Satan's kingdom to become more and more weak in them, and the house of David will wax stronger and stronger, until they become comparable to those spoken of by the Lord's prophet formerly: "And Saviours shall come up on Mount Zion to judge the Mount of Esau, and the kingdom shall be the Lord's."

Wherefore, in the language of the Apostle, "Gird up the loins of your mind, be sober, and hope to the end, for the grace that is to be brought unto you at the revelation of Jesus Christ." Let us then press toward the mark for the prize of our high calling, for as sure as there is a king in Zion, so sure the Lamb and his followers will have the victory. But may we ever bear in mind, that though a Paul may plant, and an Apollos water, (if ability is afforded so to do,) yet the Lord alone can give the increase. That there is but one leader of his people,—but one Captain to look to for guidance and support, and he is invincible,—even the Lion of the tribe of Judah: and all that trust in Him will know their bow to abide in strength. He will cover the heads of these in the day of battle, and be strength to them that turn the battle to the gate.

These are, indeed, trying times that have come upon us—times that try men's souls; and all the true cross-bearing disciples of the Lord Jesus, doubtless feel it to be so. Yet, to these or to any of the faithful, there is no cause for discouragement: "the foundation of God standeth sure, having this seal the Lord knoweth them that are his;" and he can save by few as well as by many. May we not then take courage, putting on strength in the name of the Lord, and go forth conquering and to conquer all our spiritual enemies, and whatever opposes itself against the Truth. But mark! it must be in the name of the Lord, which is his power, that this strength is to be put on. No other kind of strength will do.

Let us remember, it was the sword of the Lord and of Gideon, after his little army had been again and again reduced, that was found sufficient to put to flight the enemies of the Lord formerly. And the same sword will be found sufficient at this day to put to flight our spiritual enemies, and the enemies of the Truth.

Maryland, Eleventh mo. 9th, 1854.

Would it not be derogatory from the character of the Creator, to conclude that *he made man sinful?* He who pronounced all his works "good," "very good;" He who is goodness itself; He who is perfection itself! Yes, it would. But seeing that our first parents fell from that happy and dignified state, in which they were formed by the Divine hand, they entailed upon their offspring, *not sin*, but *the propensity to sin*; this propensity, as yet, is not wholly overcome, for "all have sinned, and come short of the glory of God;" and thus "in Adam all die." But it is as unsound to assert that we are born into this world in a condition polluted with iniquity, as to say, that He who *so pitied* and *so loved mankind after the fall*, as to send his beloved and only begotten Son into the world, to propitiate for the sins of the world, created man for destruction. We may be assured that, "as in Adam all die, even so in Christ shall all be made alive;" by which I understand, that all are visited by the quickening virtue of the Holy Spirit. Now, as this is the Spirit that giveth life, so we may all come from sin and death, to holiness and life, into the holy image and blessed likeness, in which man was originally created.—*S. L. Grubb.*

From the Plough, the Loom and the Anvil.

Mines and Minerals, and Manufacturing in East Tennessee.

Much has been said of the copper-mines of Polk county, and from what we hear as daily occurring in that region, we are constrained to believe that their value has not been as yet half developed. But recently, we are told, the miners have reached the yellow sulphuret of copper, which we understand is an infallible indication of the inexhaustible extent of the mines, and also their incomparable richness. The fever which has hitherto prevailed in that quarter of East Tennessee, seems not yet to have attained its highest pitch, as new discoveries are being made, new mines opened, and large transactions transpiring. But last week, we are informed, there were sales of two or three quarter sections of land, at about $1,250,000.

About five thousand tons of ore are now being taken from the mines monthly, and this of such richness as to be worth net one hundred dollars per ton, thus making the products of the mines even now half a million of dollars per month. What it will be when the shafts that are being sunk all penetrate the rich sulphuret, no one can conjecture, and what discoveries are yet to be made in the intervening spaces between the Polk county mines and those recently discovered in Carroll county, Virginia, "no man can know." That the two developments are but the out-cropping of the same continuous vein, which extends along our eastern border, we think there cannot be the shadow of a doubt, as the Virginia and Polk county veins have the same direction, north-east and south-west, have the same dip, the same surface-indications, and are in the same chain of mountains. Beside this, the formation of the intervening country indicates as certainly the presence of copper beneath the surface, as do the masses of once molten matter which are to be seen where the copper has been found.

But these copper developments are not the one-tenth part of the indications of the unprecedented value which is some day, and that now not very far distant, to be attached to mineral lands in East Tennessee. To say nothing of our zinc, lead, marble, etc., etc., and the immense amount of capital which we have no doubt will be some day employed in bringing these treasures out of the earth, we can point to our *mountains of iron and coal* as being of more value, ultimately, than all the copper-mines of the world, no matter how productive they may be.

It is strange, indeed, that all the capital which is now being invested in the mineral lands in East Tennessee, should be controlled by this copper mania. There are immense fields of coal, unsurpassed in their extent, or in the quality of the coal, by any that has ever been discovered, in immediate proximity to the best iron-ore in the world, and that, too, so abundant, that we verily believe, with the fuel so near, and other facilities which may be had, together with the modern improvements in the art of making iron, the pig-iron may be made at a cost of little more than five dollars per ton. And yet thousands of acres of land in East Tennessee, where this coal and iron so much abound, might now be purchased for less than fifty cents per acre; and that, too, in view of the fact that there are so soon to be radiating from Knoxville, railways to the north, south, east, and west, over which the iron may be transported with profit to any market in the United States.

To Charleston, for instance, the time will soon be when it may be transported for eight dollars per ton, thence to New York for two and a half dollars; to Cincinnati and Louisville for from four to five dollars, making the actual cost of the iron in New York less than $20 per ton, in Charleston less than $15, and in Cincinnati less than $10! To our distant readers, who are familiar with the prices for pig-iron, ranging from $20 to $50, these suggestions may seem to be visionary, but they will not so think when we tell them that iron is now made in East Tennessee after the fashion in which "our fathers" made it, and that, too, with charcoal, at $10 per ton, and that the iron men of East Tennessee have always realized good profits in the Ohio river markets, though their only access to them heretofore has been by a transportation of near three thousand miles, (*via* the Tennessee and Ohio rivers.) Here, then, is the place to "put money"—in the coal and iron lands; not that there are not large profits to be realized from a more complete development of our marble quarries, zinc and lead-mines; but iron has ever been, and must continue to be, an article absolutely indispensable, in some form or other, to every family in this and every other land.

One Voice and the Pure Language.

All dear Friends everywhere, who have tasted of the everlasting power, and are made partakers of the Divine nature, be faithful, and dwell in that which is pure. Take heed of the world's evil ways, words, worships, customs and fashions; neither let *fair speeches* draw you out, nor *hard speeches* trouble you and make you afraid. But fear the Lord God of heaven and earth, who by his mighty power upholds all things. Be bold in the power of Truth, and valiant for it upon the earth; triumphing over and trampling *all deceit* under foot, inward and outward; having done it in yourselves in particular, ye have power over the world in general. Meet together everywhere, and *keep the unity of the Spirit*, which is the bond of peace, which circumciseth inwardly, and puts off the body of sin, and baptiseth *all into one body*, with one Spirit. And being written in one another's hearts, *have all one voice*, and the *pure language* of Truth, where, in all plainness of speech, *things may be spoken in meekness of heart one unto another*, in the eternal unity in one Spirit, which draws off and weans you from all things that are created and external, which fade and pass away, up to God the fountain of life, and Head of all things; to whom be glory, wisdom, riches and honour, God blessed forever; who hath blessed us and given to us eternal life, and this life is in his Son; and he that hath the Son, hath the Father also. That which the world doth profess and make a trade withal, the saints do enjoy and possess, which the world doth not know but in the letter.

And all Friends and brethren, in what ye know, be faithful; rejoicing and praising the Lord with all thankfulness that the wise God should call you, and elect you. O, *dwell in love* in your hearts *to God*, and *one to another!* And the God of love and life keep you all in his power, and love, and Spirit, to himself, that ye may all be kept pure,

and stand pure and clean *before him*. The work and harvest of the Lord is great; my prayers to God are for you, that ye may be faithful, and kept faithful in the work.—*G. F.*

Selected.

MY TIMES ARE IN THY HAND.

Father, I know that all my life,
Is portioned out for me,
And the changes that will surely come,
I do not fear to see!—
But I ask Thee for a present mind,
Intent on pleasing Thee.

I ask Thee for a thankful love,
Through constant watchings wise;
To meet the glad with cheerful smile,
And to wipe the weeping eyes,
And a heart at leisure from itself,
To soothe and sympathise.

I would not have the restless will
That hurries to and fro,
Seeking for some great thing to do,
Or secret thing to know.
I would be dealt with as a child,
And *guided* where to go.

Wherever in the world I am,
In whatso'er estate,
I have a *fellowship* with hearts,
To keep and cultivate,
And a work of holy love to do,
For the Lord on whom I wait.

I ask Thee for the *daily* strength,
To none that ask, denied;
And a mind to blend with outward life,
While keeping at Thy side,
Content to fill a little space,
So Thou be glorified.

And if some things I do not ask
In thy cup of blessings be,
I would have my spirit filled the more,
With gratitude to Thee,—
More careful than to serve Thee much,
To serve Thee *perfectly*.

There are briars besetting every path,
That call for patient care;
There is a crook in every lot,
And a need for earnest prayer,
But a lowly heart that leans on Thee,
Is happy everywhere.

In a service that Thy love appoints,
There are no bonds for me,
For my secret heart is taught the truth,
That makes Thy children free,
And a life of self-renouncing love
Is a life of liberty.

ENCOURAGEMENT.

Brethren, while we sojourn here,
Fight we must, but should not fear;
Foes we have, but we've a Friend,
One that loves us to the end;
Forward then, with courage go,
Long we shall not dwell below;
Soon the joyful news will come,
"Child, our Father calls, come home."

In our way, a thousand snares
Lie to take us unawares;
Satan, with malicious art,
Watches each unguarded heart;
But from Satan's malice free,
Saints shall soon in glory be;
Then the joyful news shall come,
"Child, our Father calls, come home."

But of all the foes we meet,
None so oft mislead our feet,—
None betray us into sin,
Like the foes that dwell within;
Yet, let nothing mar your peace,
Christ shall also conquer these;
Then the joyful news will come,
"Now our Father brings us home." *Swain.*

Grafting Pears on the Mountain Ash.—The Maine Farmer speaks of a five years' trial of Bartlett pears grafted on the mountain ash, as very successful, the trees bearing well, and the pears excellent.

For "The Friend."

WISE SAYINGS.—No. 2.

In proportion as the heart becomes sanctified, there is a diminished tendency to enthusiasm and fanaticism; and this is undoubtedly one of the leading tests of sanctification. One of the marks of an enthusiastic and fanatical state of mind, is a fiery and unrestrained impetuosity of feeling; a rushing on, sometimes very blindly, as if the world were in danger, or as if the great Creator were not at the helm. It is not only feeling without a good degree of judgment, but, what is the corrupting and fatal trait, it is feeling without a due degree of confidence in God. True holiness reflects the image of God in this respect as well as in others, that it is calm, thoughtful, deliberate, immutable; and how can it be otherwise, since rejecting its own wisdom and strength, it incorporates itself into the wisdom and strength of the Almighty.

Where there is true Christian perfection, there is always great humility; a Christian grace which it is difficult to define, but which implies at least a quiet and subdued, a meek and forbearing spirit. Whatever may be our supposed gifts and graces, whatever may be our internal pleasures and raptures, they are far from furnishing evidence of completeness of Christian character without humility. It is this grace, which, perhaps more than any other, imparts a beauty and attractiveness to the religious life; and which, while it is blessed with the favour and approbation of God, has the additional efficacy of disarming, in a considerable degree, even the hostility of unholy men. It has the appearance of a contradiction in terms, but is nevertheless true, that he who walks in humility walks in power.

One of the surest marks of sanctification is an increased sensitiveness to sin in all its degrees. The slightest sin is a source of unspeakable misery to the sanctified heart; and gives the soul no rest till it is washed out in overflowing tears of penitence.

The height and sum of religion is to bear the image of Christ. But can those flatter themselves that they bear the Saviour's image, who are overcome and are rendered impatient by every trifling incident of an adverse nature? O, remember that the life of Christ was from beginning to end, a life of trouble. He was often misunderstood and ill-treated by all classes; he was persecuted by the Pharisees; sold by the traitor whom he had chosen as one of the disciples; reviled by the thief on the cross; put to death. But he was far more desirous of the salvation and good of his enemies, than he was of personal exemption from their persecutions." "Father, forgive them, they know not what they do."

Ingenious Clock.

In our recent visits to many of our large manufacturing and other establishments where watchmen are employed during the night as security against fire, we have been reminded of an ingenious clock which we once saw in a large cotton factory in Cincinnati, which performed the remarkable feat of reporting in the morning every half hour the watchman may have devoted to sleep during the night previous, instead of looking after the interests of his employer. It was new to us, and perhaps may be so to some of our readers.

The building was five stories high, and the clock was in the lower story. Around its face, just outside the figures, is a circle of pins, jutting out from the dial, and capable, by means of machinery, of being drawn in, even with the dial. Outside of these is an index, which points to each of these pins consecutively every half hour. At the expiration of each half hour, the index, owing to the broadness of the head of the pin, requires five minutes to pass over, thus allowing the watchman that amount of time to remove the pin, which duty is made obligatory upon him. To effect this, so ingenious and complicated is the machinery, he has first to ascend to the fifth story, there pull a wire, which prepares the machinery for the next move, and then descend to the third story, and there pull another wire, connected likewise with the machinery below, which removes the pin from the face of the clock, in the first story! This must be done at the time pointed out by the index before alluded to, or else the pin cannot be pushed in until the index has traversed the whole circle, and returned to the same point again—which would be some time during the next day. Consequently, if the watchman is neglectful, the dial in the morning will point out each half hour of his delinquency during the night! It will be perceived also, if we have made ourselves intelligible, that he will be compelled to go over the whole building once every half hour.

Such a time-piece in every establishment where watchmen are employed, it strikes us, would serve as an admirable check over a predisposition to sleep, on the part of those to whose vigilance much of value is oftentimes entrusted.—*St. Louis Republican.*

Selected.

CANDOUR.

Candour is a disposition to form a *fair* and *impartial* judgment on the opinions and actions of others, or a temper of mind unsoured by envy, unruffled by malice, and unseduced by prejudice; sweet without weakness, and impartial without rigour. Candour is a word which, in the present day, is found exceedingly convenient. To the infidel it is a shelter for his scepticism, to the ignorant for his ignorance, to the lukewarm for his indifference, and to the irreligious for his error. *True* candour is different from that guarded inoffensive language, and that studied openness of behaviour, which we so frequently meet with in men of the world. It consists not in fairness *of speech* only, but in fairness *of heart*. It is not *blind* attachment, external courtesy, or a time-serving principle. Exempted on the one hand from the dark jealousy of a suspicious mind, it is no less removed on the other, from that easy credulity which is imposed upon by every specious pretence; its manners are unaffected, and *its professions sincere*. "It conceals faults but it does not *invent* virtues."

Subterranean Waters.

We recently noticed a very deep Artesian well which has been bored at the sugar works of Belcher & Brothers, St. Louis, Mo., to the depth of twenty-two hundred feet without reaching pure water. This is the greatest depth ever attained, and as the operation of boring is still continued, in the confident hope of ultimately securing the long sought water, the question is undergoing a scientific discussion as to whether this expectation is not fallacious. A writer in the St. Louis Democrat, who has conversed with the operators, makes the following representation of the probable ultimate result. He takes it for granted that water will be reached.

"Suppose that the vein may have its fountain head (and there is no extravagance in the hypothesis) somewhere in the peaks of the Rocky Mountains at the altitude of one thousand feet, and by a dip of the strata of rocks between which it is contained, it lies twenty-five hundred feet below the surface of the ground at this point of the

arth's surface—then on the principle that water ust find its level, or that the stream will rise as igh as the fountain, the water will burst forth vith a force sufficient to carry it to the height of thousand feet, excepting, of course, the dimiished force that would be induced by the friction f the stream against the sides of the bore—though till the great pressure of the earth at the depth f twenty-five hundred feet would equal, or, perhaps, more than counterbalance the impediment f friction."

The Washington Globe, commenting upon this, eems to augur a failure, and says:—

"The reason of the failures is, in general, the doption of an erroneous theory, which is the popular one, but is not the correct one, notwithstanding—that water can be had anywhere, invariably, by boring deep enough. We believe his is a fallacy, and that, were it possible to bore o the centre of the earth, it might be done in some ocalities, without obtaining the desired element."

A similar conclusion has been arrived at by Mr. Robert Mills, the architect and engineer, who, in a communication to the National Intelligencer, remarks:—

"The *sulphur water* is probably the only *running stream* that will be met with; as it flows from the caverns of the mountains, formed by the action of internal fires, evidence of which is observable in these mountains."

In 1849, Mr. Mills published some papers in the Intelligencer, in the course of which he asserted that the Artesian well at Charleston would not reach a permanent supply of pure water, as that city is located on an alluvial region, where no primitive springs can be reached or tapped; and this has been verified, as thus far no water has been reached.

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 70.)

SAMUEL JENNINGS.

George Keith and Thomas Budd issued early in 1692 a book called "The Plea of the Innocent," in which they, in the language of the presentment of the grand jury, "defamingly accuse Samuel Jennings, he being a judge and a magistrate of this province, of being too high and imperious in worldly courts, calling him an impudent, presumptuous and insolent man." On this charge they were tried, found guilty, and fined each five pounds. The magistrates undertook to separate themselves from their office; so as freely to forgive what was spoken against them as Quakers or as men, and yet to punish the offenders, because that in their persons the magistracy was abused and contemned, and lawful authority set at naught. The fines were never exacted, and although George Keith earnestly desired imprisonment, and actually went to the prison door that he might sign one of his papers there, yet as the magistrates let the whole affair remain a dead letter, he was not able to get up a reputable cause for the outcry of persecution, which he spread widely through the whole country.

To meet the clamours made by George, the magistrates published their reasons, showing that it was proven before them that he had called the Deputy Governor, Thomas Lloyd, "an impudent man,"—telling him that "he was not fit to be a governor, and that his name would stink." Also, that he had called members of the council and magistrates "impudent rascals," and had charged those of the magistrates who were ministers of the Gospel, with "having obtained the legal office that they might usurp authority over him," adding, "he hoped in God he should shortly see their power taken from them." They also say that he had in a printed sheet called "'An Appeal,' &c., traduced and vilely misrepresented the industry, care, readiness and vigilance of some magistrates and others here, in their late proceedings against the privateers, Babbit and his crew, in order to bring them to condign punishment whereby to discourage such attempts in future." They add, "Now, for as much as we, as well as others, have borne, and still do patiently endure, the said George Keith and his adherents, in their many gross revilings of our religious Society, yet we cannot (without the violation of our trust to the king and governor, as also to the inhabitants of this government,) pass by, or connive at, such part of the said pamphlet and speeches, that have a tendency to sedition and disturbance of the peace, as also to the subversion of the present government, or to the aspersing of the magistrates thereof."

It is possible that Samuel Jennings and his fellow magistrates were more or less influenced by a sense of private wrongs and injuries received at the hands of George Keith and companions, when they undertook to punish them for words spoken against the peace of the province. In short, it is almost impossible for any man to be altogether impartial towards another, where a sense of personal injury or abuse is keenly felt by the judge. In all cases where we think personal attacks have been made on us by any one, it is the part of true wisdom to keep silence when that person's character is spoken of, and to let others rebuke them, even in cases where we think they need rebuke. Unkind feelings, engendered by words of reproof unnecessarily harsh, are often kept up and increased by public expressions showing suspicion of the motives, or manifesting a more severe judgment on the actions of the objects of our prejudice, than we would feel warranted in meting out to others for a similar conduct. It is a sad thing to see individuals, whilst contending for the Truth, attacking through prejudice Truth's most honest advocates. This last was not the case of Samuel Jennings, and if he did overstep his place as a minister of the Gospel, in acting as a magistrate, it was against one neither sound in the faith, nor disposed to let Truth govern his tongue in speaking respecting religious or civil affairs.

The Friends of London Yearly Meeting who heard the fierce charges of George Keith against Samuel and his fellow magistrates, expressed this opinion relative to their trying him: "It had been better they had not meddled with it, but quietly have borne it and passed it by." "There appears to have been too much height of spirit on both sides, and both had need to be deeply humbled; both provokers and provoked." It is admitted by the intimate friends and acquaintances of Samuel Jennings, that although of an affectionate and kind disposition, he had naturally a hasty temper, which, whilst generally kept under due subjection, did occasionally manifest itself. His walk through life was, however, remarkably circumspect, and self-possessed. His Friends in Philadelphia felt full unity with him in his opposition to George Keith, and when he went over as related in our last number to visit the churches in England, and to meet that apostate at the Yearly Meeting in London, they gave him a satisfactory certificate. Griffith Owen, John Goodson, and Robert Ewer, three Friends in good repute, prepared it. It thus runs: "We have thought fit, and also our duty to certify unto you that we have good unity with him in the Spirit and life of Jesus, whose labour and travail in the Gospel of peace and salvation the Lord hath been pleased to make successful, so that his living and savoury testimony has a seal on the hearts of the true Israelites of God, in these American parts; who has stood firm in the building of the Lord, against that spirit in George Keith and his adherents, that would divide, rend and scatter; and many have been the malicious arrows that have been shot at him, endeavouring, with all the arts and parts that spirit could prompt them to, to vilify and wickedly to calumniate him both with tongue and press; therefore the love of God, and the regard we have to his truth, constrains us to certify unto you, that as far as we understand, he is clear from the false aspersions and defamations that have been spread abroad in many countries, by the said George Keith and his adherents, having been cleared in the face of the country of many of them, with shame to the false accusers."

Among the various charges made against Friends of Philadelphia Monthly Meeting by George Keith, one was their refusing to acknowledge the action of what he called an adjourned meeting of the said Monthly Meeting, held Twelfth mo. 27th, 1691. The case was this. At the Monthly Meeting held Twelfth mo. 26th, 1691, much discussion took place relative to George Keith's charges against William Stockdale, and the regular business being concluded, the meeting adjourned,—the clerk, with Thomas Lloyd and many others leaving the house. As George Keith continued his clamour, his party and a considerable number of Friends remained behind, either to defend the Truth or to hear what he had to urge against it. This company,—not the Monthly Meeting,—but some of its members, agreed to meet the next morning, at the school-house, to continue their discussion and to come to a judgment between George Keith and his accusers. At this next meeting a considerable number of persons, not in membership with Friends, were present, and the few sound persons who met with them, generally withdrew in a short time. The meeting then being almost all favourable to George, sent for William Stockdale to come and defend himself before it, which he declined to do. The company then gave forth a condemnation against William Stockdale and Thomas Fitzwater. George and his company demanded that the action of this body should be entered on the Monthly Meeting books as a part of its proceedings, and brought the subject to the Quarterly Meeting in the First month, which of course refused to take any notice of it. Thus his opponents, George says, separated from them. Some left them when the Monthly Meeting ended; some left the gathering the next day when they saw what kind of company had assembled, and then the body of them in the Quarterly Meeting refused to receive the judgment of the company, who met at the school-house, or acknowledge it as the action of the Monthly Meeting. These things George enumerates as causes of the separation.

Samuel Jennings not only answered these assertions of George in the Yearly Meeting at London, but afterwards in print, and manifested in his replies, not only much sound argument, but many characteristic strokes of wit.

(To be continued.)

Such as live the nearest to our great Master, are not distinguished by exemption from suffering, or from being subject to humiliating dispensations, but by Divine support, and in due time, there comes deliverance, that the *life of Jesus* may be made manifest in their mortal flesh, *more and more*, and that all things appertaining to these, his followers, may redound to the glory of his own excellent name.—*S. L. Grubb.*

From the Edinburgh Review.

European Emigration to the United States.

(Continued from page 67.)

The "Modern Exodus" ceases to be a wonder in view of these things; we are only astonished that, like the Exodus of old, famine and pestilence were necessary to it. The Irish peasantry fled before the scourge of 1847, not singly, nor by families, nor by villages even, but by whole districts; and yet two must have fallen where one escaped to a foreign shore. The priests in some places say that they ceased almost to minister, except to the dying, and that their services have been little wanted since by the bride. Liverpool was crowded with emigrants, and ships could not be found to do the work. The poor creatures were packed in dense masses, in ill-ventilated and unseaworthy vessels, under charge of improper masters, and the natural result followed. Pestilence chased the fugitive to complete the work of famine. Fifteen thousand out of ninety thousand emigrants to Canada in British bottoms, in 1847, died on the passage or soon after arrival. The American vessels, owing to a stringent passenger law, were better managed; but the hospitals of New York and Boston were nevertheless crowded with patients from Irish estates. The attention of parliament was called to these things, and an act somewhat similar to that of the United States was passed, which has done much to prevent the recurrence of misery. The number of passengers is restricted, the space to be allowed to each, the size of the berths, the character of the decks, the quantity of provisions and water per passenger, are all prescribed by the various acts; and it is made the duty of the emigration commissioners to enforce the law.

Under these acts the Irish emigration has grown into a systematic and well-conducted business in the hands of persons who receive the wanderers at Liverpool from all parts of Ireland, even from Sligo. The main movement, however, is from Cork, where they arrive by car or rail from the southern and western counties, and are thence transported to Liverpool in steamers, to await at their own expense, the sailing of the vessel. When a number are about to leave, the whole village—the old (above sixty) against whose free emigration the passenger laws of some of the States interpose impediments; the well-to-do, who have no need to depart; the beggar whose filthy shreds cannot be called a covering; the youngest children even—gather in a tumultuous group about the car holding the smiling faces whose happy lot it is to leave forever their native land. With the wildest signs of grief for the departing as if for the dead, with waving of hands, beating of the air, unearthly howls, tears, sobs, and hysterics, they press confusedly around the carriage, each one struggling for the last shake of the hand, the last kiss, the last glance, the last adieu. The only calm persons in this strange scene are the subjects of it all, to whom this moment is the consummation of long hopes and many dreams, who have talked of it and sang of it (for the songs of the peasantry now dwell upon it), till it has become a reality.

Before going on board the ship at Liverpool, they are subjected to a strict inspection by the medical authorities, and the same persons examine the medicine chests to see that the vessel is properly secured against maladies. They are then put on board the first vessel of the line sailing after their arrival; and we have the authority of Mr. Hale for saying that they sometimes cross and land without knowing her name. When on board they are assigned to certain berths, their chests are hauled into the little compartments, opening on the deck, in which their berths are situated; they are furnished with cooking-places for the preparation of the stores which they take in addition to the ship's rations, the messes are made up for the voyage, the pilot takes the ship below the bar, search is made for *stowaways*, the pilot leaves, taking with him all secreted persons whom the search exposes, and the waters of the Irish Channel are breaking against the bows. There is even less sentiment in this parting than in the former; little of the regret so natural in leaving forever the land of nativity. That comes later, when, in full employment, with plenty of money, a clean comfortable home, a tidy wife, children at school, and the old folk and the brothers and sisters brought out, Pat tells the Yankees of the jewel of a land he left behind, and wishes (the rogue) that he may just lay his old bones once more there before he dies. There is no such feeling when the ship sails—not a wet eye, not a sigh, not a regret—all is buoyant hope and happiness.

The German emigration has also been greatly stimulated by the same system. It comes from all parts of Germany (possibly at present more from the Rhine, Wurtemberg, and Prussia, than from Bavaria, where obstacles are now thrown in the way of it,) and from Switzerland even, and is managed by commercial houses in the North Sea ports, in Havre, in London, in Liverpool, and in New York. * * * * "I have known," writes one well-informed gentleman, "hundreds of German families who have taken out with them to the United States sums of money varying from ten to forty thousand florins each family. It may be admitted as a fact that out of twenty German emigrants, nineteen take out with them to the United States money enough to enable them to establish themselves in the inland States." We confess we had supposed that the pauper emigration bore a larger relative proportion to the voluntary. The latter moves generally in families, and often by villages. Accompanied thus by their clergyman and their doctor, and loaded with quantities of useless farming and household utensils, which they bring with them at a great expense and discard on arrival, these simple agriculturists leave the dreary stone houses which served as a home for their cattle, their horses, and themselves, and as a storehouse for their produce; bid good-bye to the heavy tower and bright bulbous dome of the venerable church; take a last look at the fields which have so long borne linseed, and wheat and maize to them and their fathers; and set out joyfully on their voyage. Or, if they be mechanics and tradesmen (and the Hamburg statistics return 71 per cent. of the emigration of 1852, and 48 per cent. of that of 1851, as of these classes), they are still more content to go to a country, where they anticipate ready employment and high wages. And if they be paupers, they certainly have nothing to lose by the change. Many are doubtless doomed to disappointment; for some of the town labour is overdone and ill-paid—the ever oppressed needlewoman, for instance—even in energetic America. But we are credibly informed that they are gradually taking possession of many of the branches of industry in the large towns, as they can work and live for less than the Americans. They take leave of their country with a little more sentiment than the Irish, but yet without sorrow.

* * * * * *

At Mannheim, or Hamburg, or Bremen, or wherever it may be, the emigrants surrender themselves and their fates to the shippers who contract to take them to New York; but not before a careful government has seen that their comfort and health have been reasonably provided for. And in truth, they require some looking after, for they and their luggage are generally in too filthy a state for a sea-voyage. They are then brought to the sea-shore, from whence they are either shipped directly to America, or to Havre, to London, or to Liverpool, by way of Hull. Twice as many sail from Bremen as from any other continental port. Next in rank is Havre, which they reach under charge of agents, either by rail from Cologne, or by steam from the northern ports. Hamburg, Antwerp, and the English ports, all take large numbers. Fifteen or twenty thousand came to London last year to take passage hence for New York. Whoever crossed from Rotterdam within the year probably saw from one to three hundred of these people in the forward cabin, principally young men and women in the vigour of life with their children. After passing the Brielle or the Helvoetsluys, he lost sight of them during the day. The women were below ill, from the unaccustomed motion of the vessel, and the men were either ministering to them, or were lazily stretched on the piles of Dutch produce which lumbered the deck to the tops of the paddle-boxes. When the sun had sunk behind the purple horizon, and the tranquil waters of the usually turbulent ocean began to reflect the rays of the moon breaking through the clouds, he probably saw these not very tidy men and women creeping up from below to breathe the fresh air; and before long the harmony of a trained chorus, singing the songs of the Danube, the Rhine, or the Elbe, struck his ear. If he were curious to know more of them, he would have found, on inquiry, that they were peasants from Bavaria, or Baden, or Nassau, or Westphalia, or Saxony; or artizans from the towns of the Rhine and the central states. He would have observed that though untidy even to filthiness, they were by no means poor, rude, or absolutely unlettered. Their music alone would have told him of a certain amount of cultivation; the gold upon their persons would have satisfied him that they were not without means to take care of themselves; and the Bibles distributed in the various families would have shown him their sense of the importance of those treasures which neither moth nor rust can corrupt, and which thieves cannot break through and steal. If he felt disposed still to follow their fortunes, he would have seen them landed in London; and after going through the necessary formalities at the Custom House, transferred to a boarding-house at Wapping, under charge of the agent, to await, at the contractor's expense, the sailing of the vessel. He would have seen them subjected the next day to the examination of the health officer; and then going on board the vessel, he would have found that they were comfortably provided for in the manner which we have already described. Thus cared for without trouble to themselves, surrounded with friends and old neighbours, and provided with plenty of tobacco, he must have left them convinced that they would make the voyage with little risk of serious illness or death by the way, and with as much comfort as the unusual comfort of keeping clean would permit. Or if, to follow their fortunes still further, he had taken passage with them, he would have witnessed himself the comfort and harmony of the little community on the voyage, and would have seen its members on arrival taken in charge by the commissioners of emigration, and either supplied with work in some part of the country needing their services, or sent to colonize the West. And he would probably have admired the wisdom of the machinery which quietly, humanely, and profitably transports nations from regions

there want makes them anarchists, to a country where, if demagogues would let them alone, plenty would soon turn them into conservatives.

(To be concluded.)

For "The Friend."

Review of the Weather for Tenth Month, 1854.

The Tenth month of this year has been rather dry, there having been but a few little showers of rain—little more than an inch in all. The weather has, with but little exception, been mild and pleasant, thus facilitating the farmers' operations in gathering in the corn, potatoes, apples, &c., though, as was said in a former report, the crop of the latter was almost a failure.

We frequently have a little fall of snow during this month; but this year there has been none here, though snow fell to the depth of two or three inches in Worcester county, Mass., at Montreal, and on some of the hills of Vermont, as early as the 15th.

The average temperature for the month was 53¾—about 3° higher than last year. Amount of rain, 1.324 inches. Last year, 3.8 inches fell during the Tenth month.

West-town B. S., Eleventh mo. 8th, 1854.

Days of month.	Temperature. Minimum.	Maximum.	Mean.	Direction of the wind.	Circumstances of the weather for Tenth month, 1854.

THE FRIEND.

ELEVENTH MONTH 18, 1854.

We have received from a Friend a copy of the minutes of the late Indiana Yearly Meeting, from which we make the following extracts. We omit the report of the Committee appointed to take into consideration the two epistles from Ohio until next week, when we hope to be able to give the reports of the committees appointed on the same subject in the Yearly Meetings of Baltimore and N. Carolina. It will be more convenient for reference to have them together.

"Reports are received from all the Quarterly Meetings."

"The printed General Epistle from the Yearly Meeting of Friends in London, and a special one in writing, addressed by that meeting to this, have been received and read at this time, to our satisfaction and edification.

"An epistle has also been received and read from each of the following named Yearly Meetings of Friends, viz: that held in Dublin, New England, New York, Philadelphia, and Baltimore. These testimonials of brotherly fellowship and regard, of our brethren in other parts, have been cordial and refreshing to us. We have received no epistle this year from the Yearly Meeting of North Carolina.

"Two communications in writing, addressed to this meeting, from two distinct bodies, each claiming to be Ohio Yearly Meeting of Friends, held at the usual time and place this year, are now received and laid before this meeting. By this, and other evidence, the meeting has come to the knowledge, (affecting our hearts with much sorrow) that a separation in that Yearly Meeting has taken place, and that two meetings, assuming that name and character, have been held; whereupon this meeting, in view of the painful importance of the case, unites in referring the consideration of the papers before us to the following named Friends,* who are desired to peruse them, and obtain such other evidence in the case as may be had, and make written report to next sitting, of their judgment, as to which of the said bodies should be recognized by this meeting, as Ohio Yearly Meeting of Friends, and the communications thereof read accordingly."

"The following Friends are appointed to prepare an essay of an epistle to each of the Yearly Meetings of Friends, and produce the essays to a future sitting:"— * * * *

"George Carter, on behalf of the Representatives, proposed Elijah Coffin for clerk, and Levi Jessup and Charles F. Coffin for assistants, with which the meeting unites, and they are appointed accordingly."

"The consideration of the state of Society was entered into by reading the Queries and the Answers to them from the several Quarterly Meetings."

"By the reports from Blue River, White Lick, Western, Union, and Concord Quarterly Meetings, it appears that those meetings have united in forwarding a request to this meeting, for the establishment of a Yearly Meeting, to be composed of the said Quarterly Meetings, and be settled and held at or near Plainfield, in the State of Indiana, on the Second-day after the third First-day in the Ninth month, at 11 A. M.; the meeting of Ministers and Elders, on Seventh-day preceding, at 11 A. M.; and be known by the name of Western Yearly Meeting of Friends. Whereupon this meeting having taken the request into consideration, unites in appointing a joint committee of men and women Friends to visit those Quarterly Meetings, and deliberate weightily upon their request, and report their judgment thereon, as to the propriety of granting it, to our next Yearly Meeting."

"The meeting directs that the documents received from Ohio, signed by Benjamin Hoyle as Clerk, be returned to him, together with an extract of the proceedings of this meeting in the case.

"The Friends appointed last year to take under consideration our present discipline, and propose such emendations and alterations as may appear to them proper to be made, now make report as below, and lay before the meeting the book therein referred to."

"The committee of men and women Friends appointed last year to take under consideration our present discipline, and propose such emendations and alterations as might appear proper to make, now report, that we have attended to the appointment, and after much labour and care have united in laying before the Yearly Meeting herewith, the Book of Discipline, with such emendations and alterations therein as we have agreed upon."

"The Boarding School Committee now make the following report, which has been read."

"The committee to have charge and oversight of the Boarding School, have continued to give attention to the object of their appointment.

"The winter session commenced on the 11th of Tenth month, under the superintendence of the officers and teachers having charge at the time of our last report, and who are still employed for the ensuing winter session. The average attendance of the session, was about eighty-five scholars.

"The summer session which has just closed, averaged about sixty-one scholars, and their orderly deportment has been satisfactory and encouraging to those who have been connected with the management of the school; and their progress in the different branches in which they have been engaged, has been satisfactory.

"On an examination of the accounts, it appears that the school has, the past year, sustained itself, and paid a considerable amount for repairs, and new furniture, which was indispensable to the carrying on of the school."

"Balance in favour of the school, $316.98."

"Owing to a further advance in the price of provisions, &c., since last Yearly Meeting, we have thought it right again to raise the price of board and tuition, and have fixed it at $50 per scholar for the ensuing session."

"The Friends appointed at last Yearly Meeting to attend the opening of Pleasant Plain Quarterly Meeting, make the following report:—

"We, the committee appointed to attend the opening of Pleasant Plain Quarterly Meeting, have attended thereto. The meeting was satisfactorily opened and held at the time and place appointed."

"The consideration of the discipline, as reported to this meeting at last sitting, was resumed and proceeded with to the end, all the emendations and alterations, proposed by the committee, being brought to view; and the meeting having considered the same, now unites in adopting the book (as reported, with the emendations, alterations, and additions) as our Book of Discipline, and directs the printing of the same for the use of Friends of this Yearly Meeting; to take effect from and after the time of the reception thereof by the Monthly Meetings respectively."

"The General Committee on Education now report as below, which has been read."

"Whole number of children under twenty years in the Yearly Meeting, 8,901.

"Number attending schools under the supervision of Friends, during the whole or part of the year, 3,908.

"Number of Friends' schools kept open during part of the year, 119.

"Number of Friends' children taught in schools not under the supervision of Friends, 3,861."

"The Friends appointed at last Yearly Meeting to visit, in the love of the Truth, the Quarterly Meetings, and as way might open for it, the Monthly Meetings, now report as follows, which is satisfactory to the meeting:—

"To the Yearly Meeting:—We, the committee, continued at last Yearly Meeting, to visit Quarterly and Monthly Meetings, &c., unite in reporting that we have attended thereto as way has opened. Most of the Quarterly Meetings, and many of the Monthly Meetings have been visited by a part of

* Names of committees are omitted as unimportant.

the committee, to a good degree of satisfaction, and we apprehend that further labour would be profitable, particularly in Salem Quarterly, and the Monthly Meetings thereunto belonging; and we would propose to the Yearly Meeting the appointment of a special committee of men and women Friends to attend thereto.

"Tenth month 2d, 1854.

"The proposition in the foregoing report, to appoint a committee to visit Salem Quarterly Meeting, and the Monthly Meetings thereunto belonging, and render such advice and assistance as they may be enabled to render, being considered, is united with by the meeting."

"The Friends appointed to propose Friends for a joint committee to visit Salem Quarterly Meeting, and the Monthly Meetings thereunto belonging, also other Quarterly and Monthly Meetings, and individual Friends, as way may open for it, and to render such advice and assistance as they may be enabled to render, now offer the following, who being united with by the meeting, are appointed accordingly, the men Friends by this meeting, and the women Friends by their meeting; and they are directed to report to next Yearly Meeting." * * * *

"The Friends appointed to prepare essays of epistles to other Yearly Meetings of Friends, have produced an essay to each, and they have all been read and adopted, and directed to be recorded. The clerk is directed to sign them on behalf of the Yearly Meeting, and place them in the hands of the proper Yearly Meeting's correspondents, to be forwarded; and those correspondents are authorized to make verbal corrections, and see that the quotations are properly cited."

SUMMARY OF EVENTS.

EUROPE.—News from England to the 28th ult.—*The War.*—Up to the 21st ult., the operations against Sebastopol continued, and the fire of the allies was effectively returned from the fortifications, which were but little damaged. The garrison had made several sorties, and succeeded in destroying some small works; in one of these attacks they appear to have inflicted considerable injury upon the besiegers. Five steamers had arrived at Constantinople with men, who had been wounded in repelling the sortie referred to. The Russians are said to have lost 500 men, killed and wounded by the bombardment, on the 17th ult. Admiral Kornileff was killed. Lord Raglan and General Canrobert had formally summoned the garrison to surrender, and required the women, children and sick to be sent away, and flags raised upon the hospitals.

The allied forces in the Crimea now number 110,000 men; they are divided into a siege army, and an army of observation. Eight thousand additional French troops were ready to embark from Marseilles on the 21st ult., and the same number of Turks were awaiting transports at Varna. A reinforcement of 4000 Russians had effected an entrance into Sebastopol. An allied force had been sent to Perecop, to endeavour to prevent the advance of the Russians.

The British fleet is to leave the Baltic about the end of this month, returning in squadrons to Portsmouth, Sheerness, Plymouth and Cork.

ENGLAND.—The Liverpool prices for Philadelphia and Baltimore flour were 42*s.* 6*d.* and 43*s.* per bbl. A national subscription was going on for the benefit of the wounded soldiers and their families.

AUSTRIA.—Open hostilities between Russia and Austria are apprehended at an early day. The whole Austrian army was to be put on a war footing immediately.

SPAIN.—The return of the American minister, Soule, has caused an excitement at Madrid, and a clamor was being made to induce the Spanish government to solicit his recall.

ASIA.—Further collisions between the Russians and Turks on the eastern shores of the Black Sea, resulted in the success of the latter.

CHINA.—The overland mail has been telegraphed with Canton dates of Ninth mo. 9. The city was still besieged, and the distress of the inhabitants was great.

Four days later.—The Atlantic arrived on the 12th inst. with Liverpool dates to the 1st. Flour had fallen 15*d.* Up to the 21st ult., the siege of Sebastopol progressed slowly. A small breach had been made by the fire of the allies, and two of the outworks silenced. On the other hand the Russians, during a sortie, spiked sixteen guns in a French battery, and took prisoner Lord Dunkellen. Not a single shell had yet fallen in the town itself. Menschikoff writes under date of the night of the 20th,—"We return the fire of the enemy with success. The damage caused to the fortifications, is trifling. The fire from the enemy's ships has not been renewed. A part of our reserve has arrived, and the remainder is expected." The refusal of the French government to allow Soule to pass through France, is justified by the London Times. That paper says that our ministers Buchanan and Mason regard this insult as a national matter.

KAMSCHATKA.—By way of California, we learn that the town of Petropoloski was attacked and bombarded by six English and French men of war, on the 1st of Ninth mo., and succeeding days. The object of the assailants was to take the town, and capture two Russian frigates lying in the port. They lost more than two hundred men in the attempt, and were obliged to leave without accomplishing their object, their vessels being much crippled, and one baring lost its foremast.

UNITED STATES.—*The Indians.*—There are frequent reports of outrages on the part of the savage tribes in the west, from the Sioux on the north, to the Camanches on the south, evidencing a growing feeling of hostility. Provocations and injuries by white men have not been wanting, and the Indians are also probably jealous, and alarmed at the rapid spread westward of our population, and vainly suppose they can check it by force. The aspect of affairs has become so threatening, as to call for the exercise of much forbearance and wisdom on the part of the United States government, in order to avert a state of open warfare with these injured yet infatuated people.

Intoxicating Drinks.—According to the census returns, the liquor manufacture in this country requires the use of fourteen millions of dollars worth of grain, hops and apples, and produces about twenty millions of dollars worth of distilled liquors and ale. The quantities are of whiskey 42,133,955 gallons, rum 6,500,000 gallons, and ale 1,777,924 barrels.

California.—The North Star at New York brought the California mails of the 16th ult., and $1,800,000 in gold. The steamship Yankee Blade which left San Francisco on the 30th of Ninth mo., for Panama, was wrecked on the following day, in consequence of running on a reef of rocks near the shore, in a fog. She had on board upwards of 800 passengers, beside the crew, and a large number of "stowaways," or intruders. The vessel was totally lost, together with $153,000 in specie on freight. The horrors of the calamity were aggravated by the inhuman conduct of the intruders and part of the crew, who attempted the plunder of the wrecked vessel and passengers. From thirty to fifty persons were drowned. The survivors were rescued the day after the disaster by the steamer Goliah. The passengers lost in money and gold dust about $300,000.

In San Francisco, a fraud rivalling in its magnitude the greatest modern "financial operations," has been perpetrated by Henry Meiggs, a man in high social and business standing. He committed forgeries and contracted debts to the amount of a million six hundred thousand dollars, and managed to escape with his family in a vessel, which he had bought and fitted up for the purpose. It is supposed that he took with him a great quantity of gold. A large number of persons have been ruined by this wholesale swindler.

Texas.—The Austin State Gazette says, that the Governor has refused to receive the stock offered by Walker and King as a deposit to secure the Pacific railroad contract. It is therefore considered a failure.

New Mexico.—The Gum Mesquet recently discovered on the Big Washita, by Major Marcy's expedition, is said to be an excellent substitute for gum arabic, which it closely resembles. It is expected to be in time a great source of revenue for New Mexico, Texas, and the adjacent Indian territory.

Florida.—It is understood in Tampa, that the federal authorities are about commencing the construction of roads into the Indian country.

New York.—Mortality last week, 404.

Philadelphia.—Mortality last week, 151.

Miscellaneous.—Aiding Slaves to Escape.—In the U. S. District Court at Columbus, Ohio, R. A. Sloan, a lawyer, residing at Sandusky, has been convicted under the Fugitive Slave law of 1850, of aiding in the escape of three slaves. Judgment was awarded for the penalty $3000, or $1000 in each case, with costs.

A Costly Slave.—The proceedings under the Fugitive Slave law at Boston, in the case of Anthony Burns, not long since reclaimed by his master, cost the United States nearly $27,000 for extra police and military force alone, besides a variety of other charges.

Cheap Land.—The late act of Congress reducing the prices of lands that have been over a certain time in the market, has occasioned a rush of purchasers to some of the land offices in the west. At Fayette, in Missouri, there were recently 806 purchasers present. At Palmyra, the town was crowded by the thousands seeking lands and homes.

Gas from Wood.—The Scientific American expresses the opinion, based, it says, upon a thorough investigation of the subject, that wood will never be employed for making gas on a large scale in any part of the country, where coal, oil, lard or rosin can be obtained.

A Relic of Barbarism.—The whipping-post is still in use in Covington, Kentucky. Lawrence Hunt was publicly whipped in that place last week, for stealing.

Good Farming.—Austin Benham, of Waterford, New London county, N. Y., has raised this year on fourteen acres of land, twelve hundred and fifty bushels of shelled corn. The corn was of the variety called the Rhode Island white.

Bear Power.—At Oshkosh, Wisconsin, there is a floating pottery with a lathe turned by bears. They are said to be contented animals, and do not seem to dislike the occupation.

Convicted of Piracy.—Captain Smith, of the brig Julia Moulton, has been found guilty, in the New York District Court, of being engaged in the African slave trade.

Correction.—In last week's summary, the last item should read "Cholera at Messina."

RECEIPTS.

Received from Dl. Williams, Flu., O., $2, vol. 28; from P. Boyce, Vt., $2, vol. 28; from E. Bundy, agt., O., for himself and for J. Bundy, G. Tatum, R. H. Smith, Wm. Green, K. Doudna, H. Stanton, and J. Stanton, $2 each, vol. 28, and for Joel Doudna, B. Hoyle, and R. Plummer, $2 each, vol. 27, and for Jesse Bailey, jr., $4, vols. 27 and 28; from H. Harrison, Ill., $2, vol. 28.

FRIENDS' ASYLUM.

Committee on Admissions.—Samuel Bettle, Jr., No. 101 North Tenth street; Charles Ellis, No. 95 South Eighth street, and No. 56 Chestnut street; William Bettle, No. 14 South Third street; John C. Allen, No. 179 South Fifth street, and No. 227 North Front street; Horatio C. Wood, No. 210 Race street, and No. 37 Chestnut street; William Thomas, No. 242 North Fifth street, and No. 49 South Wharves; Townsend Sharpless, No. 187 Arch street, and No. 32 South Second street; John M. Whitall, No. 161 Filbert street, and No. 138 Race street.

Visiting Managers for the Month.—William Bettle, No. 244 N. Sixth street; John M. Whitall, No. 161 Filbert street; Townsend Sharpless, No. 187 Arch street.

Superintendent.—Dr. Joshua H. Worthington.

Matron.—Elizabeth B. Hopkins.

TEACHER WANTED.

A well qualified Teacher to take charge, at the close of the present year, of the "Sheppard School" for Coloured Girls on Randolph street. Applications in writing may be addressed to Edward Richie, Clerk of the Board of Trustees, No. 173 Vine street.

MARRIED, at Friends' Meeting, West Grove, Chester county, Pa., Tenth month 5th, 1854, DANIEL WILLIAMS, of Flushing, Belmont county, Ohio, to HANNAH FRANCENA COOK, daughter of Thomas and Hannah Cook, of the former place.

——, on the 7th inst., at Friends' Meeting-house, Germantown, THOMAS STEWARDSON, Jr., of this city, to MARGARET, daughter of the late Reuben Haines, of the former place.

——, on the 8th inst., at Friends' Meeting-house on Orange street, in this city, JAMES KITE, Jr., to MARY ANNA BOSWELL.

DIED, on the 4th of Tenth mo., 1854, in the 54th year of her age, ELIZABETH LAWRENCE; a member of Springfield Meeting, Delaware county, Pa.

——, on the 31st of Tenth mo., 1854, SARAH WALKER, widow of ISAAC WALKER, in the 84th year of her age; a member of Radnor Monthly Meeting, Pa.

PRINTED BY KITE & WALTON,
No. 3 Ranstead Place, Fourth above Chestnut street.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXVIII. SEVENTH-DAY, ELEVENTH MONTH 25, 1854. NO. 11.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 50 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, f paid in advance, three and a quarter cents; to any art of the United States, for three months, if paid in dvance, six and a-half cents.

For "The Friend."

The Valley of the Amazon.

The vast regions drained by the Amazon and ts tributaries, have probably no parallel on the urface of the globe, in respect to fertility and he capacity to afford sustenance to the human ace; and yet so little has man done towards vailing himself of the riches of Nature's store-ouse in this part of the world, that nearly the whole of this immense area may be called a wilder-ess. Considerable interest has latterly been wakened in the United States respecting the uture occupation and development of the country n question, and the keen and covetous eyes of lavery have already, in anticipation, appropriated his paradise of the new world to its own dark lomain. In the year 1851, Lieut. William L. Herndon, was directed by the U. S. Navy depart-nent, to obtain information, and, as far as prac-icable, make an exploration of the country, in-luding the entire basin or water-shed drained by he great river and its branches. The arduous luty assigned him was executed with much cou-age and ability, and his report embodies a large mount of valuable information. Embarking on he Huallaga river, in Peru, he descended it for hundreds of miles, to its termination in the Ama-on, down which he proceeded to the Ucayali. This river he ascended until insuperable obstacles nterposed; then returning to the Amazon, he ollowed the mighty stream to its outlet in the Atlantic ocean. With the slender means and imited time at Herndon's command, nothing like general exploration could be attempted, but a ear diligently employed enabled him to acquire nuch knowledge in reference to the character and esources of the region. Some extracts from his report, in which he gives a general summary, and condensed view of the whole subject, we have hought might interest our readers. After stat-ng that Brazil and the Spanish American repub-ics own in the valley of the Amazon more than *wo millions of square miles of land*, intersected n every direction by many thousand miles of what may be called canal navigation, he continues: 'As a general rule, large ships may sail thou-sands of miles to the foot of the falls of the gigan-ic rivers of this country; and in Brazil particu-arly, a few hundred miles of artificial canal would pen to the steamboat, and render available thou-sands of miles more. This land is of unrivalled ertility; on account of its geographical situation, nd topographical and geological formation, it pro-luces nearly everything essential to the comfort nd well-being of man. On the top and eastern slope of the Andes lie hid unimaginable quantities of silver, iron, coal, copper and quicksilver, wait-ing but the application of science and the hand of industry for their development. The successful working of the quicksilver mines of Huancavilica would add several millions of silver to the annual product of Cerro Pasco alone. Many of the streams that dash from the summits of the Cordilleras wash gold from the mountain side, and deposit it in the hollows and gulches as they pass. Barley, quinia, and potatoes, best grown in a cold, with wheat, rye, maize, clover and tobacco, products of a temperate region, deck the mountain side, and beautify the valley; while immense herds of sheep, llamas, alpacas and vicungas, feed upon those elevated plains, and yield wool of the finest and longest staple.

"Decending towards the plain, and only for a few miles, the eye of the traveller from the tem-perate zone is held with wonder and delight by the beautiful and strange productions of the tor-rid. He sees for the first time the symmetrical coffee-bush, rich with its dark green leaves, its pure white blossoms, and its gay red fruit. The prolific plantain, with its great waving fan-like leaf, and immense pendant branches of golden-looking fruit, enchains his attention. The sugar-cane waves in rank luxuriance before him, and if he be familiar with Southern plantations, his heart swells with emotion as the gay yellow blossom and white boll of the *cotton*, sets before his mind's eye the familiar scenes of home. Fruits, too, of the finest quality and most luscious flavour, grow here; oranges, lemons, bananas, pine-apples, melons, chirimoyas, granadillas, and many others, which, unpleasant to the taste at first, become with use exceedingly grateful to the accustomed palate. The Indian gets here his indispensable cocoa, and the forests at certain seasons are redo-lent with the perfume of the vanilla. It is sad to recollect, that in this beautiful country (I have before me the valley of the Chancamayo) men should have offered me title deeds in gratuity to as much of this rich land as I wanted. Many of the inhabitants of Tarma hold grants of land in the Chancamayo country from the government, but are so distrustful of its ability to protect them in their labours, from the encroachments of the savages, that they do not cultivate them.

"The climate of this country is pleasant and healthy, it is entirely free from the annoyance of sand-flies and mosquitoes, which infest the lower part of the tributaries, and nearly the whole course of the Amazon. There is too much rain to be agreeable from August to March; but nothing could be more pleasant than the weather when I was there in June.

"The country everywhere in Peru, at the east-ern foot of the Andes, is such as I have described above. Further down, we find the soil, the pecu-liar condition, the productions of a country which is occasionally overflowed, and then subjected, with still occasional showers, to the influence of a tropical sun. From these causes we see a fecun-dity of soil and a rapidity of vegetation that is marvellous, and to which even Egypt, the ancient granary of Europe, affords no parallel, because, similar in some other respects, this country has the advantage of Egypt in that there is here no drought. Here trees, evidently young, shoot up to such a height that no fowling piece will reach the game seated on their topmost branches, and with such rapidity, that the roots have not strength or sufficient hold upon the soil to support their weight, and they are continually falling, borne down by the slightest breeze, or by the mass of parasites and creepers that envelop them from root to top. This is the country of rice, of sarsa-parilla, of India rubber, balsam copaiba, gum copal, animal and vegetable wax, cocoa, Brazilian nutmeg, Tonka beans, ginger, black pepper, arrow-root, tapioca, annatto, indigo, sapucaia, and Brazil nuts; dyes of the gayest colours, drugs of rare virtue, variegated cabinet woods of the finest grain, and susceptible of the highest polish. The forests are filled with game, and the rivers stocked with turtle and fish. Here dwell the anta or wild cow, the peixi-boi or fish-ox, the sloth, the ant-eater, the beautiful black tiger, the mysterious electric eel, the boa constrictor, the anaconda, the deadly coral snake, the voracious alligator, monkeys in endless variety, birds of the most brilliant plum-age, and insects of the strangest forms and gayest colours."

(To be concluded.)

For "The Friend."

REFLECTIONS.

"The general lapse of mankind has scattered them away from the fold of unity, into such a thick and wild wilderness of disparity and confu-sion, that even those who are sensible of it, and intent on a remedy, are continually taking offence at the contrary direction in which they see each other moving. Whereas, if each of these well-meaning travellers would but keep his eye to his *own proper foot-path*, and go quietly forward, they would all gradually approximate the point of unity.

"One objection to controversy is, that those who are most forward to engage in it, discover such a propensity to usurp the seat of judgment, and pronounce sentence upon each other's notions and opinions; as though a traveller could not miss his way without an intention to go wrong. It is evident that men are more apt to be earnest in dis-pute on uncertain, than on certain grounds, for the same reason that we are more uneasy with a doubt-ful than a clear title to our estates.

"Perturbation of mind would be oftener pro-ductive of benefit to us than it is, if, instead of looking outwardly for the cause, we sought it nowhere, but at the bottom of our own hearts.

"The blessing denied to impatience, may be granted to resignation, and the delay we are so apt to murmur at, be the means of chastening our desire, and deepening our submission to the Divine will, so as finally to make the boon we aspire after, more safe, more acceptable, and more permanently enriching.

"Love and hatred are the *two* powers, which are contending for the ascendency in us, and one or the other will finally prevail. What avails the idea of Christ's dying on the cross for our sins, if we are, nevertheless, the willing and wilful slaves of the same tormenting spirit of malevolence which drove the nails? If He who suffered to

save us had been in the smallest degree actuated by a vindictive spirit, it is difficult to conceive how He could have wrung out the dregs of the cup of trembling for our sakes, or, in the hour of extremity, have pleaded, as he did, for the forgiveness of his crucifiers."

From the Leisure Hour.

A Visit to the Staffordshire Potteries.

(Continued from page 74.)

We left the printed wares in the muffle, evaporating the oil from their colouring matter under the action of heat. After remaining there ten or twelve hours this is thoroughly accomplished, when they are withdrawn, and being first allowed to cool, are ready for the glazing process. While they are cooling we may as well walk into a neighbouring chamber, and glance for a moment at the operations of the biscuit-painters. Here we find a row of women and girls seated at long benches, and engaged in painting upon wares of a comparatively cheap description, for domestic use, simple floral and botanical designs in various colours; the figures they paint are not too much like nature, and we question whether their prototypes are to be found in any horticultural collection; but they answer the purposes of the market, and, being executed with remarkable rapidity, can be sold at a small price. The women lay on the colours with a camel-hair brush, using gum-water as a vehicle; but they are limited in the choice of colours, confining themselves to the use of such only as will stand the heat of the glazing-oven. No firing in the muffle is required for wares thus coloured under glaze.

In connection with this simple mode of painting the biscuit, we may as well notice another still more rapid method of colouring wares in this state, and which is done in the following manner:—The article to be coloured, be it jug, mug, or basin, is put by the operator into a lathe and set in motion. As it turns round, the artist—if such he is to be called—who is provided with a queer contrivance, shaped something like an old Roman lamp or a modern butter-boat, divided into several compartments containing different colours, puts this machine to his mouth, and blows any colour he chooses upon the revolving ware. The predominating tint is a reddish kind of brown, splashed with blue. The reader must often have met with these wares; they are rarely wanting in the travelling hawker's basket, and in country wayside inns appear very much to have supplanted the old-fashioned "brown jug" of lyrical notoriety.

Now comes the important ceremony of glazing, upon which not only the beauty but the perpetuity of the wares is in a great degree dependent. The potter is indebted to a knowledge of chemistry for the composition of his glazes; and upon this subject no small amount of capital has been expended and no end of experiments made. Every manufacturer has his own prejudices on the subject of glazes, and, as a general rule, each prefers his individual method of compounding them. The object, of course, which all have in view is to coat their wares, at the cheapest possible outlay, with a hard, glossy, translucent and impenetrable surface, which shall not "craze" with time, nor if possible scratch with use. Were it necessary, we might give a score of different receipts, each warranted to compound a good glaze, having at least that number lying upon our desk; it is enough, however, to say, that the principal materials used are white lead, Cornish granite, flint, flint glass, red lead, borax, litharge, with various oxides and protoxides, etc., etc. These materials, or rather certain selections from them, may be prepared either as a raw glaze or a fritted glaze, the differences between the two being very important. In raw glazes the materials are merely ground together; but in a fritted glaze they are first, or at least the major portion of them, calcined and vitrified in a furnace previous to grinding, by which means they are much more effectually combined together, and yield a much more durable as well as a thinner and consequently handsomer coating to the wares. Further, glazes differing in composition are required for different species of goods; thus wares printed blue require a glaze which will furnish oxygen to bring the cobalt to the state of peroxide; while green, on the other hand, must be dipped in a glaze as free from oxygen as possible, and rather carbonaceous, in order to bring the chrome to a state of peroxide.

The glaze, whatever it may be, being ground to the greatest degree of fineness, is diluted with water in the same way as the clay slip, and apparently to the same consistency. The biscuit ware, either plain for white ware, or printed or painted in the manner above described, is next carried to the glazing-room, where we find the dipper and his assistants supplied with the fluid glaze in large tubs. The dipper, a pale, sallow, and rather jaundiced-looking individual, is immersing the several pieces of ware, one at a time, in the white milky-looking fluid; as he withdraws each piece from the flood he gives it a knowing professional jerk, which has the effect of throwing off the superfluous moisture and settling what remains equally upon the entire surface. In a very few minutes the thirsty biscuit absorbs the whole of the moisture, and appears covered all over with a thin layer of the finely pulverized ingredients compounding the glaze, and which, when vitrified in the fire, becomes incorporated with the substance of the goods, and at the same time as transparent and polished as glass. This process of glazing, or rather dipping, is the only melancholy part of the potter's industrial operations: owing to the quantity of finely levigated white lead mixed with the glaze, enough is absorbed through the pores of the skin to poison his whole system, to embitter his existence, and materially to shorten his life. In the various potteries which we visited we saw evidence of its effects sufficient to assure us that such is the case; and we met with more than one instance, during our short stay, of dippers invalided and unable to work, through the poisonous effects of the lead. This disastrous result might be altogether avoided by the use of a pair of water-proof caoutchouc gloves and sleeves; but such a preventive, if suggested, would probably be looked upon as an insult by the workmen themselves, and is not likely to be adopted unless by the philanthropic compulsion of the employer.

The goods having been dipped in the glaze and allowed to dry, in which condition they will bear handling very well without parting with the coating of glazing matter, are now again packed in saggers, especial care being taken, by the aid of the numberless little spurs and triangular stilts before alluded to, that they do not touch one another in the sagger, since if they did they would be inevitably vitrified together by the melting of the glaze in the fire. The saggers, being properly loaded, are now carried to the kiln or "glost-oven" for a second firing. The gloss-oven is not so large as the biscuit-oven, nor do the goods remain in it so long, nor is the fire so fierce; all that is wanted being heat enough to fuse the glaze upon the surface. When this is satisfactorily accomplished the fires are slacked, the oven allowed to cool, and the goods drawn forth and removed in baskets to the glossed warehouse, where they undergo a rigid examination, and some little necessary dressing with steel implements, to remove any trifling projections of the glaze occasioned by the use of the small spurs and stilts. The separate pieces are now sounded, and, the defective ones being rejected, are ready for sale.

In the above description of the potter's operations, so far as it goes, we have had reference to earthenware articles alone; but the reader will naturally be expecting some observations on the subject of porcelain or china wares, for which a few words, however, will suffice. Theoretically there is a considerable difference in the materials which compose the substance of china, from those used for earthenware; in practice, however, the chief difference seems to consist in the addition of a large per-centage of calcined and ground bones to the earthenware material, in some manufactories amounting to as much as nearly, if not quite, half of the entire substance. The bones are used thus largely for the sake of the phosphoric acid they contain, the effect of which is to render the aluminous and silicious earths with which they are combined translucent. The glaze for china should be harder than that used for earthenware, but its application and the mode of firing differ in nothing from the modes above described. Though it is undoubtedly true that the finest and most beautiful wares produced in the potteries are made of china, it by no means follows that all china wares are necessarily superior to earthenware of good quality. Some of the first-class potters produce a species of earthenware which is as much superior to the rough, ill-shaped china wares of the cheap makers as good silver is to base coin. It is with the productions of the potter as it is with those of the artist; if people *will* have Raphaels and Corregios at seven and sixpence a piece, they can be manufactured at a corresponding cost; and if people *will* set a china tea-service on their tables at a cost of a few shillings, the makers are to be found who will minister to their pride and their economy in the same contract, and get a profit out of it too.

We must glance now at the ornamental and artistic departments of the potter's art. As a general rule, both the artist and the modeller may be said to work upon the finest material, porcelain or china forming usually the body of the wares and the substance of the figures which the one adorns and the other moulds. This rule is however not universal, as specimens of earthenware are to be found, at Etruria at least, and perhaps in other places, as rich in ornamentation as are the choicest specimens in china. We have already seen women and girls at work painting in colours upon the biscuit, previous to glazing; and we have seen that they are limited in choice of tints, in consequence of the trying ordeal their work undergoes after it leaves their hands. There are no such limits, however, affecting the artist who paints *upon* the glaze; he can spread a rich palette and make use of colours of the greatest brilliancy, and he may produce pictures upon any subject in any branch of art in which he may happen to excel. He has one great disadvantage to contend with, but he soon becomes familiarized with it, and probably is hardly aware of it after the practice of years: we allude, of course, to the fact that he has to paint in disguised colours, which only manifest their real hues when they come out of the fire. In this establishment we find a group of artists in an upper room by themselves, quietly pursuing their fascinating art. Flower-pieces, landscapes, sporting-pieces, fruit-pieces, are gradually growing into form and brilliancy under their hands. Rich and elaborate designs, fanciful ornaments, arabesque patterns, and heraldic or civic blazonries displayed in minute interlacings of scarlet and

gold—such are some of the glittering evidences of their taste and industry which greet the eye at every turn. The colours used, which look rather dull upon the palette, here represented by a square Dutch tile, are one and all prepared from metallic oxides, and they are ground up on the premises with certain fusible transparent materials suited for the several colours of which they are made the vehicle, and which, melting in the kiln, actually become so many coloured glasses incorporated with the body of the ware. A great deal of gold is used for ornamental purposes, and this is applied to china in the state of an amalgam with a metallic flux, ground fine with turpentine; it is mostly prepared in London for the potter's use. When the artist has finished his picture, it has to be placed in the enamel-kiln, where the flux used as the vehicle of the colours vitrifies, and the tints assume their proper hues and brilliancy: this, however, is not the case with the gold, which still retains a dull brownish hue, and has to be burnished by hand before the finishing is complete. On entering the burnishing-room our ears are assailed by a rapid clattering noise, such as might be made by a score or two of pairs of castanets all in exercise at once: this proceeds from the enthusiastic operations of the polishers, a band of a dozen or two young women each armed with a blood-stone burnisher, and all rattling away together upon such parts of the surfaces of a variety of costly wares of every description as are ornamented with gold. The process they perform appears to be the last which the wares undergo, after which they are ready to be packed for consignment to the retail trader, or for removal to the show-room.

(To be concluded.)

For "The Friend."

The Prayers of the Primitive Church.

The religious worship of the primitive Christians was conducted with the same simplicity and freedom which characterized all their ecclesiastical polity. They came together for the worship of God, in the confidence of mutual love, and prayed and sung, and spoke in the fulness of their hearts. A liturgy and a prescribed form of prayer, were alike unknown and inconsistent with the spirit of their worship.

It is particularly worthy of remark, that in all the examples of prayer in the New Testament, several of which are recorded apparently entire, there is no similarity of form or expression, or any *repetition of a form*, with the single exception of the response, Amen, Peace be with you, &c. Even our Lord's prayer is never repeated on such occasions, nor is there in all the New Testament the slightest indication of its use, either by the apostles, or by the churches which were founded by them. The apostles, then, prayed extemporaneously, and their example is in favour of this mode of offering unto God the desires of our soul.

The Lord's prayer appears not to have been given to the disciples as a form of public prayer; but as a specimen of that spirituality and simplicity which should appear in their devotions, in opposition to the vain repetitions of the heathens, and the heartless formalities of the Pharisees. It merely enforces a holy importunity, sincerity and simplicity in private prayer. Our Lord expressly enjoined upon his disciples to offer other petitions, of the highest importance, for which no form is given. The gifts of the Holy Spirit are offered to those who shall ask, while yet no form is prescribed, in which to make known our requests for this blessing.

A strict adherence to such a form, is incompatible with a suitable recognition of Christ as our mediator and intercessor with the Father. "Hitherto," said our Lord in his last interview with his disciples before he suffered, "ye have asked nothing in my name." But now a new and peculiar dispensation was opening to them, by which they might have boldness to enter into the holiest, by the blood of Jesus. We are left then to the conclusion, that neither did the apostolical churches use any form of prayers, nor is such use authorized by Divine authority.

No such thing is to be found in the Scriptures, as a catechism, or regular *elementary introduction* to the Christian religion; neither do they furnish us with anything of the nature of a systematic creed or set of articles, or by whatever other name we may designate it. Constantine took special care to have fifty copies of the Bible prepared for the use of the churches, and by a royal commission entrusted Eusebius, the historian, with the duty of procuring them. (Euseb. *Vit. Constant.* lib. iv. 36.) How is it that the service book was entirely forgotten in the provision for the worship of God? Plainly because none was used for the purpose.

The Lord's prayer appears to have been used by the primitive churches, about the close of the second and beginning of the third century; and in the fifth and sixth centuries was a part of the public liturgies of the churches.

The *attitude* of the primitive Christians in prayer, is against the supposition that they used a prayer book. What according to Tertullian (Tertul. *Apol.* c. 30,) was this attitude? It was with arms and eyes raised towards heaven, and hands outspread, or it was kneeling and prostrate with the eyes closed, to shut out from view every object that might divert the mind from its devotions; or, as Origen expresses it, *closing the eyes of his senses, but opening those of his mind.* Few facts in ancient history are better attested than this. The coins that were struck in honour of Constantine, represent him in the attitude of prayer. But how? Not with a prayer book in his hand, but *with hands extended and eyes upturned, as if looking towards heaven.* (Euseb. *Vit. Const.*) First, stereotype the mind and heart of man, and then is he prepared to express his devotions in the unvarying letter of a liturgy. (Coleman's *Church Without a Bishop,* chap. 11, pp. 319–352.)

It is evident, from what we learn of the primitive Christians, that they appreciated the injunction of our Lord, "*Men ought always to pray.*" They practised this important duty, and experienced its efficacy. Prayer is the language of the soul, through which, by the aid of His Spirit, our inmost wants are made known to God. Whether in secret aspirations, or clothed in words, the Spirit helps our infirmities, and through the mediation of our living Advocate with the Father, our prayers ascend as incense, and find access at his throne of mercy. Our various sorrows and necessities, ever changing like the vicissitudes of night and day, are too mingled and too mighty to be enumerated, and can only be expressed in the ejaculation, "Lord, thou knowest all things." When thus pressed in spirit, and pouring forth the unrestrained effusions of a full heart, in the name of Jesus, aided by his Spirit, how vain is the idea that such warm petitions can be breathed to heaven, through the cold formality of any prescribed rule. In every individual there is some particular hidden want, which the words of others, however beautifully and pathetically arranged, can never reach; some peculiarly susceptible string in every heart, that can vibrate only to the immediate touch of the Holy Spirit.—*Philos.*

From the Plough, the Loom and the Anvil.

Weaving by Electricity.

While other nations are preparing their various novelties for the Paris Exhibition of 1855, we are assured (say a correspondent of the London Times) that Sardinia will not be behind hand in the scientific machinery department, by a recent experiment made here of the invention of Cavaliere Bonelli, for the application of electricity to weaving, which is more simple, less embarrassing, and, what is of far greater importance, more economical than the invention of Jacquard, which, amidst the general progress of the age in mechanical and technical matters, has undergone but slight modifications in the material construction, and no one has dared to make a change in its principle.

By the present invention, instead of the numberless and expensive cartoons, either full or hollow, you see small iron bars magnetized only when invested with the voltaic current, so that while at every passage of the shuttle it was necessary to change a cartoon, it now suffices to vary the ways which give passage to the electric fluid, and the lodestones change their action every moment, according as the teeth of the comb under which the design passes, and with which they correspond, rest upon the conducting or insulating substance. As the point of the pantograph reproduces a design diminished or enlarged, and as the point of Bain's telegraph exactly copies a signature at the distance of hundreds of miles, so the loom of Bonelli reproduces woven the designs which pass under the comb, and all this without rendering necessary a change in the thousands of Jacquard looms now existing, which, if desired, may be worked alternately with electricity and with cartoons.

Turin first, then Genoa, Lyons, and Paris, saw in operation this prodigious innovation, and unanimously admired the simplicity and reliability of the means with which it is carried into effect. In these cities a loom on a small scale has been shown, but the inventor intends shortly to exhibit in Paris and London a loom on a scale worthy of the places and the invention. After having secured the property in his discovery throughout Europe, he has just sold his patents to three eminent banking houses, two of them in Turin and one in Lyons, and very soon several looms, which are now being constructed, will be sent abroad to serve as models for the system of electric weaving in most of the manufacturing countries of Europe, and for its introduction into the United States of America an agent is now on the point of starting. It is difficult to foresee the changes which may spring from the application of this new agent to the business of weaving, as not only the economy consequent on it must induce a decline of prices, but the new means afforded by this invention will render easily attainable results such as are now only reached with difficulty or with great expense, as Gobelin tapestry, etc., and others utterly unattainable by any means hitherto known. Even in the present age, so rich in useful and important inventions, no doubt this will rank among the first.

I have sat upon the seashore, and waited for its gradual approaches, and have seen its dancing waves and white surf, and admired that He who measured it with His hand, had given to it such life and motion; and I have lingered till its gentle waters grew into mighty billows, and had well nigh swept me from my firmest footing. So have I seen a heedless youth gazing with a too curious spirit upon the sweet motions and gentle approaches of an inviting pleasure, till it has detained his eye, and imprisoned his feet, and swelled upon his soul, and swept him to a swift destruction.—*Montague.*

From the Edinburgh Review.

European Emigration to the United States.

(Continued from page 79.)

It would be interesting to inquire the probable effect of this shifting of population upon the Old World. If the movement had been confined to redundant labour, the result could be nothing but beneficial. But in Germany we see agriculturists of property and artisans of skill emigrating by tens of thousands; and in England the pioneer pauper-migration is dragging a better class after it, by an annual remittance of a million and a half sterling. The movement to America has not yet made any material impression upon the manufacturing districts. That it will, cannot reasonably be doubted. Nearly one-fifth of the population of the manufacturing State of Massachusetts, is of foreign birth. The gold-fields of Australia also tempt from a life of unceasing toil the men who, by industry and foresight, have accumulated enough for the passage. Whether this efflux will equalize the rates of wages on the two sides of the Atlantic, remains to be seen.

It cannot be denied that Ireland has been purified by the purging. But what a picture the story presents: a fertile country, with a healthy climate, but with a deficient stock of capital, renovated only by the loss of young and strong labourers, whose work was valueless at home. They find occupation enough in America; and become, in time, industrious, peaceable, and comparatively temperate and money-saving citizens. Their old habit of abusing England sticks to them; but, fortunately, wind is plentiful in their adopted land, with no law to forbid it blowing where and as loud as it listeth; and the ill temper finds vent in expletives, not always in the best taste, but which wise people set down at their real value.

Whatever the effect in Europe, the great emigration must benefit the United States. We have already said that we do not share the fears of those who see destruction to the Republic in this increase to its numbers. No country was ever made worse by an addition of healthy labourers, while there was work for them to do, and heads to direct them. The United States are emphatically in this condition. The native population is shrewd and intelligent, and has shown itself abundantly capable to direct the foreign element. That element, in return, proves one of the greatest resources of the State, furnishing it with the thing it most needs—labour—to develop its resources, to put down its fixtures, to open its ways for transportation, to subvert its virgin soil, to uncover the hidden wealth of its mines, to run its spindles, to hammer its iron, even to trim the sails of its ships, and to work the engines of its steamers: 400,000 creators of its wealth now arrive annually in the United States, the men generally in the prime of life, the females even more so. Out of 245,000 persons arriving at four ports in 1850, 32,000 only were under ten years of age, and 22,000 only over forty; being less than one-half the proportion of native inhabitants under and over those respective ages. They are consequently strong, capable of much work, less liable to mortality than the natives, and with a greater proportionate power of reproduction. It would be absurd to doubt that, in the course of time, they will affect the so-called Anglo-Saxon race in America. But it is yet too soon to measure the character or extent of their influence. We do not think they will essentially modify the constitutional institutions and educational systems it has established, which they learn, in a single generation, to respect as their own.

So, too, it would be idle to suppose that this supply will never be greater than the demand. In the natural course of events, the United States will become thickly populated, great fortunes will accumulate, capital will become more plentiful than now, and labour will be less sought for, and consequently less paid. Doubtless also the European emigration hastens that time. But it is yet far distant, and will continue so while land is as abundant and as cheap as now. Notwithstanding the rapidity of the settlement of the West; notwithstanding the amount of land taken up by speculators; notwithstanding the profuseness with which the public domain has been granted by Congress, 1,387,000,000 of acres remain unsold and unappropriated—six times the whole amount alienated by the Federal government during the present century; and probably two-thirds, at least, of the amount alienated is in the market at a price not much above the government rate. With such a quantity of land, at five shillings an acre, capable of being brought into production the first year, there is no necessity for an unhealthy overplus of labour; for it not only attracts population to the West, but also keeps down the price of farming-lands in the East, where the principal markets are. With the exception of tracts close to the large towns, farms in New England sell now at about the same rate at which they did in the beginning of the century. In Massachusetts even, the average value is £6 10s. per acre for the freehold; and in Maine, New Hampshire, and Vermont, it is less than in Ohio. It is greater in Michigan and Indiana than in any southern state except Louisiana. While the present state of things can be maintained, no probable annual addition to the country by emigration will affect the labouring classes unfavourably.

It is plain, also, that if the emigration continues as at present, it will soon give the North a greater preponderance in the nation; but we do not regard that as a source of future weakness, rather of strength. There is no sympathy between the foreign labour and the slave labour to make the North and South immediately antagonistic. On the contrary, the emigrant seems to have an inherent antipathy to the black, and allies himself, as soon as he becomes a citizen, to the political party supposed to have Southern tendencies. The past shows that the dangers to the American Union have come, and are to come, not from Northern but from Southern increase. The Missouri contest grew out of Southern annexation, and the supposed dangers in 1850 had their origin in the desire of the South to impose slavery upon the free soil of California. The North has never required political stimulus to aid its growth, nor has its advance been marked by accession of territory. It is the slave power which took to itself Florida, Louisiana, and Texas, which grasped after California and New Mexico, and which now wants Cuba. A gradual and peaceable increase in the industry, wealth, and population of the North, which shall give to it at length, without annexation or war, an incontestible preponderance in the Union, will be submitted to by the South, with scarcely a consciousness that it has taken place, and will perhaps check the thirst for acquisition, which, if unrestrained at home and unopposed abroad, may sow serious dissensions, and threaten the existence of the Republic.

Under the stimulating influence of this cause, the industry and resources of the United States have made an almost fabulous advancement. We had purposed to show its effect upon the principal branches of the national wealth, but are prevented by the unexpected length to which the subject has carried us. The tonnage of the country increased, in the ten years ending in 1852, from 2,000,000 to over 4,000,000; the imports, from $100,000,000 to $213,000,000; the customs, from $18,000,000 to $45,000,000, (yielding the Federal treasury an annual surplus of fifteen or twenty millions.) The cotton crop increased, in the ten years ending in 1850, from 800 to 1000 million pounds; the rice crop, from 80 to 215 millions; and the sugar, from 155 to 281 millions; the wheat, from 77 to 100 million bushels; and the maize, from 400 to 600 millions. The potato alone, blasted by disease, sank in production. Thirteen thousand miles of constructed railway, and as much more in progress, all built by emigrants' hands, are opening up the rich, but before unsaleable, lands of the West, bringing their cheaply produced breadstuffs and choked-up mineral wealth to Eastern markets.

(To be concluded.)

A Home.

If we were to tell a number of our friends that they don't know what a "home" is, they would grow somewhat indignant—perhaps use hard words. And yet it may be remarked that the number of persons who know what a genuine home is, by experience, is surprising few. One man in good circumstances will tell us that he has a fine house of his own, in which every comfort and convenience are provided. He has a wife and children there, also, and they give life to the place. Very true. But does he prefer that home, thus furnished and thus enlivened, to every other place in the world? Does he sigh when the hour for leaving comes, and smile when he is permitted to return? Does he love to sit by the cheerful fire and fondle the children, entering into all their little disputes with a curious interest? Does he take particular note of the bird in the cage, and the cat near the fire? If not, he has no home, in the dearest sense of that dearest of words. If his mind is altogether absorbed in the dusty ways of business—if he hurries from the house in the morning, and is loth to return at night—if, while he is at home, he continues to think of the journal and ledger, and repulses the advances of the prattling children, he has no home; he only has a place where he lodges and takes his meals.

Ah! happy is he who knows and appreciates the full bliss of home; whose heart is warmed and humanized by its cheerful influences, and who feels how superior in purity of pleasure are all its enjoyments to the turmoil delights of out-door life. Thrice happy is such a man. He has discovered the only paradise this world can now afford. It is only such a man who can have a deep and sincere pity for the unfortunate creatures who are homeless. He regards them as being cut off from the best influences of the earth, and exposed to the action of all the darker waves of life. He feels keenly for him who has no fireside—no dear ones to welcome him with smiles, and prattle over the little history of the day—no tongue to soothe when heavy cares have troubled the mind and rendered the heart sore; and the sympathy of such a man is not slow to overflow in acts of benevolence. A good home is the source of the fountain of charity in the heart.

Our advice to those who have no homes, such as we have described above, is, to get them as soon as possible. They can never be contented and substantial citizens, nor thoroughly happy men, until they follow this counsel. Get homes! Fill them with the objects of love and endearment, and seek there for the pure delights which the world beside cannot afford.—*Late paper.*

Moderation is commonly firm; and firmness is commonly successful.—*Johnson.*

For "The Friend."

Labours and Sufferings of Friends.

The employment of Edward Burrough and his fellow-labourers was to spread the truth, and gather souls to Christ. They counted nothing too dear to surrender,—liberty, property or life,—for their Master's cause, and the building up of those who were convinced by their ministry, in the most holy faith. Their thorough devotion, their consistent lives, and their living, saving religion, gave credit to their profession, and gradually made way into the hearts of many, so that the church at that time increased daily, even under the iron hand of persecution. Writing from Newgate, in 1662, he says, "Friends here are generally well in the inward and outward man; and the presence of the Lord is manifest with us, through great trials and sore afflictions, and grievous persecutions, which we have met with this last half-year. It would be too large to relate, and piercing of your hearts to hear, the violence and cruelty which Friends have suffered in this city, in their meetings, and in prisons. It hath been my hard lot to bear the persecution inflicted every way; though the Lord hath given strength and boldness, and *his power hath carried through*, else many would have fainted, and not been able to stand. Many have given up their lives in faithfulness, in this place; and their faithfulness in keeping meetings, and in patiently enduring many tribulations and cruel exercises, is a crown upon Friends, in this city. Here are now near 250 of us, prisoners in Newgate, Bridewell, Southwark, and the new prison. In Newgate we are extremely thronged, that if the mercy of the Lord had not preserved us, we could not have endured; there is near an hundred in one room on the common side among the felons, and their sufferings are great; but the Lord supports. For about six weeks' time the meetings were generally quiet in the city; but these last three weeks they were fallen on more violently than ever, and many Friends were imprisoned. But through all this, *Truth is of good report*, and *the nobility of it gains place in many hearts*, which are opened in pity and compassion towards the innocent sufferers; and *Truth is increased through all trials. Our trust is in the Lord*, and *not in man*; and we desire the same spirit may dwell and abide in you, also, that ye may be like-minded with us, and be *all of the mind of Christ*, who seeks men's salvation, *not their destruction*."

With those labourers who were of one heart and one mind, the truth prospered, and was of good repute. The love and harmony subsisting among them, added to their strength, and was a beautiful illustration of the nature of the Christian religion, showing that its spirit drew them nearer to one another in the heavenly fellowship, and made them exceedingly sensitive to anything that would divide and scatter. Their love was proverbial; and when any, by giving way to a jealous spirit, stood off or went into any kind of separation from their friends, this love led them to seek to gather the wanderers back again into the fold. Living and acting under the power and Spirit of Christ, they were very diligent in the work of the ministry. Though they were often kept out of their meeting-houses, they assembled at the door, which attracted persons passing by; and there in the open air they preached the gospel boldly, and when one minister was pulled down and carried to prison, another took his place, and thus often four or five preachers would be forcibly carried off. Friends were persuaded that the exercise of their public worship was a duty no man could discharge them from, believing that the Lord required it at their hands, and while persecution lasted, keeping meetings in the street became a customary thing. Friends found that their numbers increased under suffering, many being induced by sympathy and curiosity to stop to hear the gospel declared by such ministers; amongst these, eminent men sometimes riding by would direct their coachman to stop that they might hear. What a blessing it would be to their professed successors in doctrine, if the love of God flowed freely from member to member, binding them together universally in the same fervent labour for each other's good, and exhibiting the same fruits of the meekness and gentleness of Christ, and the undaunted perseverance in maintaining and spreading the truth as it is Jesus, and the testimonies of his gospel.

Can any man be faithful in much, that is faithless in a little?—*Jeremy Taylor.*

Selected.

THE CONFLICT OF LIFE.

"Onward Christian! though the region
Where thou art be drear and lone;
God hath set a guardian legion
Very near thee—press thou on!

Listen, Christian! their hosanna
Rolleth o'er thee, 'God is love,'
Write upon thy red cross banner,
Upward ever—heaven 's above!

By the thorn road, and no other,
Is the mount of vision won!
Tread it without shrinking brother,
Jesus trod it—press thou on!

Be thy trustful, calm endeavour,
Guiding, cheerful, like the sun;
Earth-bound hearts thou shalt deliver,
Oh! for their sakes—press thou on!

Be this world the wiser, stronger,
For thy life of pain and peace,
While it needs thee—oh, no longer—
Pray thou for thy swift release.

Pray thou, Christian—daily rather—
That thou be a faithful son;
By the prayer of Jesus—'Father,
Not my will—but thine be done.'"

Selected.

DEATH.

Vain man, thy fond pursuits forbear,
Repent, thy end is nigh!
Death at the furthest can't be far,—
Oh think before thou die!

Reflect—thou hast a soul to save;
Thy sins how high they mount!
What are thy hopes beyond the grave?
How stands that dread account?

Death enters, and there's no defence;
His time there's none can tell;
He'll in a moment call thee hence,
To Heaven, or to Hell.

To-day, the Gospel calls; to-day,
Sinners, it speaks to you;
Let every one forsake his way,
And mercy will ensue. *Hart.*

Selected.

WATCH.

Ye servants of the Lord,
Each in your office wait;
With joy obey His heavenly word,
And watch before His gate.

Let all your lamps be bright,
And trim the golden flame;
Gird up your loins as in His sight,
For awful is His name.

Watch! 'tis your Lord's command;
And while we speak, He's near,
Mark every signal of His hand,
And ready all appear.

Oh! happy servant he,
In such a posture found!
He shall his Lord with rapture see,
And be with honour crowned.

The Straits of Magellan.

The spirit of activity infused into our Pacific commerce by the discovery of gold in California, has served to bring into notice many places with which old navigators were familiar, but which were for years unvisited, except by exploring expeditions, or adventurous whalers and sealers. Since the discovery of the passage from the Atlantic to the Pacific, by doubling Cape Horn, the Straits of Magellan have been considered out of the ordinary track of commerce; yet, for nearly one hundred years, this was the only highway from ocean to ocean. I doubt whether any portion of salt water, once so important to the world, is so little known to the generality of readers as these straits, which separate the continent of America from the South American Archipelago, commonly called Terra del Fuego. It is true that, amid a mountain of rubbish in "Cordova's Voyage of Discovery," "Anson's Voyages," and in reports to geographical societies, a great deal of matter may be found by hard digging, but we have searched in vain for any concise recent account of the Straits. Even that modern "*omnium gatherum*," the *Encyclopedia Britannica*, disposes of the whole subject (at least, the edition that I saw,) in a few short lines. It was no wonder that I entered these celebrated narrows with the feelings of a discoverer.

The whole passage was one of a character so new and interesting, that I fain would commit to paper a tithe of my impressions, for I am totally incapable of reproducing *all*. I should want the pen of him who rhymed the "Ancient Mariner," or that which gave forth the sublime numbers of the "Morning Hymn before Sunrise in the Vale of Chamouni," to describe with justice the silence of that distant region, or to sketch in vivid language the dark forests, the rich flowers, the jagged peaks, the snow-covered mountains and the crystal glaciers, which are hurled together in such strange and picturesque confusion, upon the southern extremity of this western continent. I shall, however, content myself with giving you as much information as I can, knowing that the freshness of the subject-matter will, at least, constitute an intrinsic worth. I am also sure that I shall not be amiss in calling to mind the adventurous man who first penetrated this far off region.

At Rio de Janeiro I found the name *Magalhaens* to be borne by many a good subject of Don Pedro II., the present Emperor of Brazil, and this Portuguese name rendered into good English becomes *Magaellan*. An ancestor of this family was born twenty-two years before the great Genoese discovery of the western world. He was christened Fernando, and when quite young, entered the Portuguese navy—at that time probably the best in the world—and served for five years in the East Indies, distinguishing himself in the conquest of Malacca, in 1511. He afterwards returned to Europe, and being desirous to give vent to his spirit of adventure, and thereby to make his name famous, he proposed a voyage of discovery to the shores of that new continent which had just been given to Castile and Leon by the genius of Columbus. Finding that the numerous voyages to America had made it evident that this continent extended to a great distance towards the south, and being at the same time aware that the Moluccas or Spice Islands, discovered a few years before, were situated much further towards the west, he conceived the idea of sailing to Asia by a westerly course. So Magellan applied for encouragement to the court of Spain. Now the Cardinal Ximines was agent of that then mighty kingdom, and he favoured the Portuguese adventurer. And all this was approved by Charles the Fifth. A squadron of five vessels, with 236 men

on board, was fitted out for the new voyage of discovery. These vessels were not clipper ships, nor well appointed vessels, such as sail forth on our modern exploring expeditions. They were small craft, such as now ply between the little villages on the shores of Connecticut and New York. Indeed, the sloops which are now used merely to carry onions and potatoes to market, are, without doubt, as a general thing, fully equal, if not superior, in sea-going qualities, to the vessels in which the bold adventurers of the 15th and 16th centuries launched upon unknown seas, and which often were battling without experience amid craunching icebergs, or were driven before the sudden and unlooked for hurricanes of the tropics. One of Columbus's vessels, in the first glorious voyage which revealed the western world, was only of forty tons burden; and Bancroft gives an account of one of the old intrepids who crossed the North Atlantic in a mere boat of sixteen tons! So that the boast of modern navigators, that they have taken around Cape Horn to San Francisco a New York pilot boat of 60 or 80 tons, with all the improvements of the age for steering, taking the sun, examining charts, &c., is shorn of its glory, when we reflect what was done in little crafts, before charts were made, and before the compass was fully understood.

On the 29th of September, 1519, Magalhaens sailed from the Old World, and bore away for the New. His object being to discover a strait or an open sea which would give him a route to the Moluccas, he directed his course to the southern shores of Brazil, which then extended as far as the present territory of the Oriental Republic of Uruguay. He entered the river Platte, but was soon convinced that it was not a strait. He then pushed southward along the coast. Winter coming on, he was compelled to lay to in the harbour of St. Julian, on the southern border of the yet unexplored country of Patagonia. Here a conspiracy was formed against him; but his sagacity, prudence and resolution put down all opposition, and he stood forth not only a man bold to sail out upon unknown seas, but as one daring and determined among his fellow-men, and born to command and to lead.

In the end of October, 1520, just one year and one month after his little squadron sailed from San Lucas de Barameda, he discovered and entered the straits which bear his name. He thus realized the life-dream of Columbus, and found that commercial highway to the Indies which for nearly a century was the only known naval track from the Atlantic to the Pacific. In thirty days he conducted his vessels through the straits (which is one of the most picturesque passages which exists) and led them into that ocean to which, on account of its continuous fair weather, he gave the name *Pacific*. For three months and twenty days he navigated that smooth sea, without finding an island. The length of the voyage brought the greatest distress upon the whole expedition, and the suffering on account of want of food, and from the scurvy, was terrible. So great were their hardships that poor Pigafetta, who was the historian of this famous voyage, was "firmly persuaded (so he recorded it) that an expedition round the world would never be undertaken again." And, indeed, more than half a century elapsed between the voyage of Magalhaen and that of Drake, (1577.)

At length our *voyageur*, on the 6th of March, 1521, (eighteen months after he had lost sight of old Europe,) arrived at a group of islands, to which from the thievish propensities of the inhabitants, he gave the delightful appellation of Los Ladrones. After refreshing his crew, he continued his course westward, and discovered the extensive group of the Phillippines. He induced the chief of the island of Zeba to acknowledge the sovereignty of the king of Spain. For this acknowledgment, Magellan promised to assist the new made viceroy, for Spain, of the island of Zeba, in subduing his personal enemy, the chieftain of the small island of Matan. The expedition was undertaken by Magellan, but he was courageously resisted by the inhabitants, and in that contest he was slain. Thus perished the hero of Molucca, the discoverer of the first direct passage from the Atlantic to the Pacific, and the donor (by right of discovery) to Spain, of a vast island empire, which, with the exception of Cuba and a few of the small West India Islands, alone remains of the once extended colonial domains of Spain. Magellan was one of the most distinguished sea-officers of his time, and as an intrepid navigator and discoverer, only second to Columbus; and, far happier than his great superior, his fame is forever linked with those wonderful straits which he discovered, and also kept before the world by those three mysterious nebulous bodies which revolve around the southern pole.—*Late Paper.*

For "The Friend."

Mercantile Integrity and its Securities.

The following extracts from a discourse delivered by F. T. Huntington, at Boston, on the occasion of some recent stupendous financial frauds, contain some remarks, sound and worthy of consideration.

"Now the just shall live by faith."

"I apprehend that the sentence I have just quoted often falls vaguely upon the ears of an audience, with a dreamy sound, as if it related to a world with which they have nothing to do, and touched no interests except such as are a great way off. I shall endeavour to bring the truth it states out of that nebulous mist in which it hangs before the eye like a star seen through a cloud, and, clearing it of the hazy medium which alienates a practical concern, let it stand at once in sharper outline, and nearer to our common life.

"1st. The main position is, that the only valid security for mercantile integrity is religious faith. The honour that is faithful to contracts must be rooted in reverence for God. That is the basis of all the character that is really sound. The groundwork of a steadfast justice is a sincere spirituality. The uprightness that is equally scrupulous in executing the terms of a good bargain or a bad one, must rest on foundations of absolute right—and these are laid nowhere else than in a Divine revelation. No financial purity is immaculate that is not refined by an habitual intercourse with heaven. Among all the shocks incident to our high-wrought commercial pressure, there is one kind of strain or another that will prove too much for any manhood not seasoned in the climate of devotion. Prizes are offered to fraud, vast enough and tempting enough to unsettle that artificial virtue manufactured of the policies, the fashions, the decencies of a society obeying no loftier law than the most exquisite self-consideration. If you would guard against embezzlement in unexpected quarters, you must balance the inner life on a centre not subject to mortal fluctuations, and beyond any human mark. Business men, to be utterly safe, must be unequivocally Christian men. It is not enough that equity in dealing be conventionally tolerable,—up with current customs, and equal to the test of maxims of expediency; it must abide by the sanctions of the sermon on the mount. Your thoroughly trustworthy traders are men that believe in Christ, and pray in the spirit of that searching conviction. Habitually and by voluntary indictment, their conduct is brought to the bar of a Gospel decision. Underneath all their outward activity and their energetic enterprise, there lives a heart that is no stranger to secret communion with the Father, the Almighty author of righteous weights. With these men, the house of merchandize and the marts of traffic are touched with the sanctities of Olivet and Gethsemane. Their morality draws its sweet, strong nourishment, from their piety. They go into the counting-room, the shop, the office, the brokers' board, out of the closet. We hear much of the securities of investments, notes, and contracts; but the grand security of all these securities is an incorruptible conscience, and the only security of that is the thought of God. It is profoundly true, 'The just shall live by faith.' Even of honesty, the inmost life is from beyond the world.

"2nd. Give this doctrine fair play, and it will correct the worst effects of such frightful violations of credit as have lately agitated our whole American community, sickening not only every sensitive soul, but even appetites the most selfish.

"One of the most noticeable of these effects is, a popular discrediting of human goodness itself. The prevailing disgust shapes itself into expressions which imply that nobody can be trusted. By these sweeping condemnations, so hasty that they can come only from very superficial minds, an infidelity towards the honour of God's providence to his children is engendered, which is only second to infidelity towards himself. For, when we have once cheated ourselves into the corrupt notion that everybody about us is bad, it will be but a short step that will lead us to cheat one another every way, yield passively to all manner of corruption, and so make the world as bad as our disordered fancy had pictured it. Undoubtedly, these instances of depravity are flagrant enough to create a momentary discouragement; they upset those sentimental theories of human nature that represent it as composed of unmixed good, and, by a false adulation of its exaggerated dignity, install a most complacent and perilous idolatry: it is necessary these theories should be removed. Undoubtedly, in proportion to the largeness of the place these defaulters held in the general confidence, is the breadth of the chasm that gapes where they sank; in proportion to the height from which their honour falls, must the senses be stunned by the crash; and, as with a line of structures leaning one upon another, when one large trader or banker goes bankrupt, a lengthening row tumbles in his train. But, nevertheless, hold fast your faith in God's Spirit among men, as well as in his heavenly sway. Humanity is not all hollow. Honest men are left, after all the vulgar criminals have been arraigned, and the genteel defalcators have been suffered to abscond.

"I observed in a respectable journal a remark, probably only half in earnest, to the effect that the wholesale dealers in wickedness and fraud seem at present to be in a majority. And yet the whole of these swindlers, the story of whose peculations has lately filled the world's mouth, might be introduced at once into a single ordinary cell of a prison with as much ease as propriety. If you propagate an estimate of mankind that is too low, all history and philosophy show that you will presently bring down the average quality to that inferior level. Even when the worst outrages are fresh in the nostrils, when we are ready to take up the vivid metaphors of the Hebrew denunciation, and say that 'truth is fallen in the streets,' and 'judgment is turned away backward,' and our unclean State street and Wall street deserve, like Jerusalem, to be wiped 'as a man wipeth a dish,

viping it, and turning it upside down!' yet to a nore comprehensive vision, there remain high-minded officers, reliable agents, incorruptible merchants. Recognize them. Believe in them. Multiply them. An irreligious conscience might ndeed despair. But here is the victory of faith; or faith knows that over all, and sublimely ruling ll, there is a God, and in that faith the just shall till live.

"Another tendency in our estimation of signal niquities is to self-righteousness. It seems, at rst, quite distinct from that just now mentioned; nd yet a closer analysis discloses many traces of lliance. For it is one of the subtlest of our uman deceptions to disparage the species, only he more effectually to establish a base tone of pinion before which we ourselves shall appear to dvantage as exceptions; and, on the other hand, here are always some miserable intellects ready o ascribe a wonderful merit to the man that holds is fellows in contempt. But, in reality, just as t is the despiser that is despicable, so it is the anctimonious bewailer of a degenerate race that s commonly conceited and suspicious. Who shall nvy the poverty of that fallen nature which boasts f standing erect while others falter—looks round n wrecked fortunes with arrogant disdain—for-ets the universal frailty that enfeebles every mor-al will—and hugs its own security while others' air reputations go down? In such a nature neanness competes with dishonesty. There is in hat man a small ruin, only because there was othing but littleness to be ruined. In the reli-ious view of life, all rectitude is seen to be of race; merits cease to be reckoned; and it is felt hat the just are not justified by their performances vhich at best look wretched beside the perfect aw; but that they live by faith.

"Looking in another direction, we find attempts o palliate these commercial enormities. The par-ality of friendship, or a secret consciousness of artaking, undetected yet, in a similar turpitude, rings forward apologies. It is suggested that ese defaulters lapsed into special disgrace only ecause they were specially tempted; that a ma-ority of men would do the same thing if oppor-unity were equally seductive; and thus, to come o once to the logical conclusion, that virtue is the reature, and the sinner the victim of circum-tances. It is perniciously false. Virtue is the uit of a divine principle. The sinner is a volun-ary transgressor. Doubtless there are among ach malversations, degrees of villany, as there are f dignity. The ambition of power, yearning to utride a financial storm; to bring a triumphant uccess out of perplexed affairs and conflicting ills; to command the resources of the field to the oint of peril with Napoleonic precision, thus lending the renown of the pilot, the diplomatist, nd the general—this passion contains an intel-ectual element, and ought not to be confounded ith the greedy lust of the shuffling impostor, hat dodges around every corner to count the shil-ngs filched by the last cheat. And we can asily distinguish between the sudden crime that evolutionizes a fine nature, and the habitual obli-uities by which a crafty wretch wriggles his way o last into unequivocal infamy. But we must ever forget that righteousness is differenced from n by quality, not by quantity. Real virtue is respective of situations or solicitations.

"These fallen men, in all likelihood, were *not* pecially tempted. Thousands of men, in our reat seats of traffic, are probably as boldly beset, r as cunningly way-laid, by the blandishments of oney every day. And if otherwise, what is the robity good for, that will not stand a surprise? Nor is it anything less than a denial that virtue has an independent essence, and an immovable quality, to allow that there is any moral distinc-tion between the plundering of a corporation's treasury, and the robbery of a passenger on the highway.

"Charity to fallen brethren must not involve us in excuses for sordid outrages, nor in com-pounding with felony. When some piece of rapacious villany bites innocent and confiding per-sons, with an aggravation of deliberate audacities, then it will never satisfy intrinsic justice, nor console the sufferers, to intimate that it could not be helped. The just are permitted to live by faith, and if their principles are planted in the immovable Rock, they shall be kept in the hour that 'tries every man's work of what sort it is.' No man is authorized to fix his fellow's deserv-ings; and censoriousness is of itself a sin. But to make knavery venial is not to forbear from detraction.

"In some unconsidered comments on these recent rogueries, I have noticed bitter imputations against the offenders as having woven a cloak to cover their treacheries out of devout professions. So far as these are meant to deprecate hypocrisy, to rebuke the subtile sanctimony that would make a parade of piety in order to divert suspicion, it is well. But if they were so made,—and in one or two instances this interpretation was suggested,—as to cast a misgiving over the demonstrations of an active religious zeal, then it is a mischievous wrong, and the wound falls on religion itself. When you undertake to exalt morals at the ex-pense of reverence, or to strengthen the sentiments of honour by sneering at all professions of piety, you violate the method of nature, the philosophy of the soul, the truth of God. Every stroke aimed at godliness glances against magnanimity. These two cardinal forces in all true righteousness, arrayed against each other, wage a worse than civil war. It is the fruit on the branches saying to the moisture of the root, 'I have no need of thee.'"

(To be concluded.)

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

SAMUEL JENNINGS.

(Continued from page 77.)

All the injurious charges made by the enemies of Samuel Jennings, whether as respects his ac-tions in civil or religious society, met with a tri-umphant refutation. Those who left Friends with Keith in America, still continued their at-tacks on Samuel, even when Keith had left them and gone over to the Episcopalians. Having no longer any disputes with him on religious sub-jects, they made his political life the occasion of animadversion and malignant scrutiny. How well he succeeded in justifying his course, and in laying open the false statements made against him, may be seen by those who will read his answers to the publications of his adversaries. Our plan will not allow us to follow him in his public life. He was a bold champion of the liberty of the subject against arbitrary power, and whilst ever prompt to support proper legal authority, by pre-cept and example, his resistance to all infringe-ment of chartered rights, was firm and undaunted.

After his return to America, he continued to reside for a time in Philadelphia. Samuel Smith says of him: "Alive to the more generous emo-tions of a mind formed to acts of benevolence and acts of humanity, he was a friend to the widow, the fatherless, and the unhappy; tender, compas-sionate, disinterested; and with great opportunities, left but a small estate; abhorring oppression in every shape, his whole conduct discovered a will to relieve and befriend mankind, far above the littleness of party or sinister views." In respect to his small estate, it may be interesting to some to know, that whilst he was filling important offices in the Commonwealth, his wife kept a small shop to assist in maintaining their family. This we find set forth in a complaining letter written by Robert Turner, who says, that he went to her shop to obtain a copy of one of her husband's publications, but she would not sell it to him.

After removing back to Burlington, Samuel Jennings was soon employed again in public affairs in the Province of New Jersey, wherein his opposition to Lord Cornbury's arbitrary conduct has been the theme of much eulogy from his-torians. His public engagements did not, how-ever, prevent his attention to his religious duties. He was much employed by his brethren on im-portant appointments in the Society of Friends, and he continued to travel, visiting the meetings on this continent, in the service of the Gospel. Of his visit to the meetings in New England in 1699, many interesting items are recorded by Thomas Story. He attended the Select Yearly Meeting in Burlington, First mo. 1708, in which a memorial, prepared by him on behalf of Mary Newcomb, was read and approved. Soon after this he appears to have become very weak and feeble. Of his latter days, only the account we find is in a memorial written by his friend Richard Townsend, of which a few extracts are subjoined.

"I have a testimony to bear for my ancient friend Samuel Jennings, having had acquaintance with him more than thirty years. In this time I have often been with him, when the Lord did give him a mouth and wisdom to divide the word of consolation to the honest-hearted, and of reproof to the evil-doers of what kind soever, according to the service of the time. He has borne a faithful testimony for God ever since I knew him, and against all backsliders and apostates of divers kinds, wherever he met with them. He was very tender-hearted. I have many times seen tears of tenderness on his cheek, when he was bearing a living testimony in a meeting, to the great com-fort and refreshment of many, being full of con-solation to the meek and lowly, unfolding many great mysteries to the help and comfort of the true travellers towards Zion, with their faces thitherward. He was zealous for good discipline and good order in the church of Christ, that the camp might be kept clean. Against all disorderly walking he stood firm, and in a testimony against separations from *Truth*, both in England and here in America, namely, that of John Story and his company, and that of George Keith and his en-vious company,—for which they [the apostate separatists] hated him, according to the saying, 'reprove a fool and he will hate thee.'

"God gave him much wisdom, by which he was very useful till a good old age, when much weakness of body seized on him, so that strength of body failed.

"I went to visit him near his latter end. He was so weak in body, that he had a man to hold him in his chair. He could speak but little, yet seemed to have a sense of inward comfort, and spoke a little to that purpose to our satisfaction."

"I, with some Friends, going through Burlington to the Yearly Meeting at Shrewsbury, understood he desired to have a meeting in his chamber, which we well approved of, and went and sat down by him, waiting on the Lord. In that frame a Friend knelt down to prayer in a tender supplicating frame of spirit, in which the rest of us did sincerely join,—so that our prayers were

offered up to the Lord in the behalf of our afflicted Friend, that it might please him according to his wonted loving kindness, to comfort our friend and brother. After a little time of retirement, in a sense of the overflowing of God's love, something was spoken concerning how serviceable the Lord had made this his servant."

Samuel then, alluding to the days of his strength and health, said, "he had done what he could," but then referring to his present weakness, added, "our God is a just God, and requires no more than I am able to do." He then, addressing the Friends, said, "I would not hinder you long,—but the Lord bless you,—especially you of the ministry." Richard adds, "so we left him in a sweet frame of spirit, being well satisfied the Lord was with him. So that I do believe he hath laid down his head in peace with the Lord." He died shortly after, in 1708.

(To be continued.)

THE FRIEND.

ELEVENTH MONTH 25, 1854.

We have not yet received any other information from the Yearly Meeting lately held in North Carolina, than that it has identified itself with the Separatists in Ohio.

When the minute of that meeting is obtained, we shall, as mentioned in our last number, publish it with the similar minutes of Indiana and Baltimore.

SUMMARY OF EVENTS.

EUROPE.—News from England to the 4th inst., and from the Crimea to the 26th ult. The Russians have received considerable reinforcements at Sebastopol, and more were expected to arrive soon. On the 25th, a force of 30,000 Russians attacked the posts held by the English and Turks in the vicinity of Balaklava. The attack was unexpected, and although the allies eventually made good their ground, they sustained serious losses, especially the British cavalry, 500 of whom fell, according to the report by way of Constantinople. The Russians also took and retained two forts, from which they fired upon the allies. Menschikoff's despatch on the 26th, states the English loss at 600 horse and 11 guns. He admits that Fort Constantine had been greatly injured by the bombardment; the other fortifications generally not seriously. So far as can be gathered from the various statements, it would seem that the siege and bombardment had so far made no great impression on Sebastopol, and that about equal injury had been sustained by both parties. There are certainly no indications of an early termination of the contest.

ENGLAND.—In Liverpool a decline of 1s. per bbl. in flour is noted. The money market easy. Consols 94¾. According to the calculation of the Liverpool Times, of the thirty thousand men who left England for the seat of war in the Black Sea, fourteen thousand have already been lost by cholera and the casualties of war. Applying the same ratio to the Turkish and French troops, who formed the greater part of the allied forces, what a starting view is presented of the waste of life in this iniquitous war, between *Christian* nations.

RUSSIA.—At St. Petersburg, warlike preparations were proceeding on the most extensive scale. Guns of long calibre are casting for Cronstadt. The Aland Islands have been reoccupied. The sinking of five of the largest ships of the line at Sebastopol, is referred to as an example of the spirit in which the war will be carried on by Russia.

AUSTRIA, is said to be unwilling to come to an open rupture with Russia, until confident of the support of Prussia and the Germanic governments.

FRANCE.—The U. S. minister at Paris has had an interview with the minister of foreign affairs. He was assured there were good reasons for the conduct of the French authorities in the Soule case, which should be forthcoming when necessary.

SPAIN.—All was quiet. The cholera was raging frightfully at Corunna.

SICILY.—The ravages of cholera in this island are almost without a parallel. At Messina there were from 800 to 1100 deaths daily. On the 16th of Ninth mo., it was reported that about one half the population had been carried off. On the 13th, 1000 soldiers or convicts had been sent from Palermo to Messina, to clean the streets, and bury the dead. At Palermo, on the 26th, there were about 350 deaths daily. The whole number of deaths at Palermo was estimated at 15,000, and at Messina, 45,000.

CUBA.—Two American schooners, the Charles Smith and J. C. White, loaded with arms, &c., have been seized off Baracoa at the east end of the island. The captains, crews and passengers have, it is said, been imprisoned.

UNITED STATES.—*Shipwrecks.*—On the morning of the 13th inst., the New Era, an emigrant ship of 1328 tons, on her first voyage from Bremen for New York, went ashore on the New Jersey coast, between Deal and Long Branch. She left Bremen with 425 persons on board, mostly Germans, of whom 40 died of cholera on the passage. Only 163 persons were saved, the number of lives lost with the vessel being 222. Ship and cargo were a total loss.

On the 11th inst., the U. S mail steamer Jewess from Havanna, was wrecked on Brigantine Beach, N. J. Vessel and cargo a total loss, but crew and passengers all saved.

Patents.—A recent change in the rules of the Patent-office requires inventors who send models to the office, to construct them so that their size shall not exceed twelve inches in any direction. It is probable that the Patent-office will ultimately have to abandon the plan of having models, for want of accommodations for keeping them, and rely generally upon good drawings of the machines, with full descriptions.

Extension of the Telegraph Eastward.—Works now in progress are expected ere long to shorten the time required for the transmission of European intelligence, by four or five days. About 300 miles of the land telegraph, between St. John's, N. F., and Cape Ray, is already finished, and a month's labour will complete it. The sub-marine cable, 130 miles long, is nearly completed, and will be laid across the Gulf of St. Lawrence, as soon as the ice will permit. St. John's, N. F., and New York will then be in connection.

The Minister to Spain.—The Secretary of State at Washington, has been informed that the interdict upon Soule's passage through France has been withdrawn.

California.—On the 14th inst., the steamship Northern Light from San Juan arrived at New York with the California mails of Tenth mo. 24. She brought 450 passengers and $564,405 in gold. Her passengers were only twenty days and twelve hours on the trip from San Francisco, which is the shortest transit yet made. The late city clerk and treasurer had been arrested on the charge of retaining in their hands the property of the corporation to a large amount. The efforts to recover the treasure lost in the Yankee Blade, had been unsuccessful. The amount of gold bullion and specie shipped from California, during the third quarter of 1854, is $13,794,960, of which $12,609,407 were destined for the Atlantic States. A mass of gold weighing 85 ounces, was recently taken out of Scott bar. The wheat crop of California is estimated to yield 600,000 barrels of flour. The notorious Walker, ex-president of Sonora, had been tried and *acquitted*.

New York.—A great decline in the value of real estate, which had become excessively high in this city, seems to have taken place. New stores in Chambers street, and the neighbourhood, (says the Post,) which could only be rented on the first of May at $8000 per year, are now offered at a yearly rent of $4000, with no takers. Mortality last week, 356, only 2 of cholera.

Philadelphia.—The Liverpool and Philadelphia Steamship Company have made arrangements whereby the regular sailings of their fleet of late have been interrupted by the loss of the City of Glasgow and City of Philadelphia steamships, will soon be resumed. They have purchased the steamship Kangaroo, of 1874 tons burden, which is expected to be on the line in about six weeks. Their new steamship City of Baltimore, of 2500 tons burden and 500 horse power, is to be launched next month. They have also contracted for a new steamer, to be called the City of Washington, of 2700 tons, to be ready in the Sixth mo. next. These vessels are all of iron, and from the works of the celebrated builders, Tod & McGregor, of Glasgow.

Pennsylvania Railroad.—The receipts on the road this year, have amounted to $3,058,720; for the same period last year they were $2,149,964.

Mortality in Philadelphia the last week, 154, of which 5 were from cholera.

Miscellaneous.—Negro suffrage.—There are said to be about 3000 persons entitled to vote in the State of New York, under the provision of the Constitution, which requires a coloured man to have been three years a citizen, and possessed of freehold estate of the value of $250; over and above all debts.

Progress in the Sandwich Islands.—The first application for a bank charter has been recently made; the first steam flour mill has been built, and the first flour manufactured.

Blind People in Great Britain.—There are 11,273 blind males in Great Britain, and 10,214 females.

English Methodists.—At the late Methodist conference in England, a decrease in the membership was reported, to the extent of 6737 members; the decrease is attributed to the war, and to emigration.

A Wealthy Bishop.—The Bishop of London is said to be the owner of an estate, producing the enormous sum of one hundred thousand pounds sterling a year.

Chilian Silver Mines.—The yield of 1853 was about twelve millions of dollars.

The Czar's Idea of Russia's Duty.—The Russian Court organ, in its number of 20th ult., contains the following paragraphs:—"It is Russia's holy duty to establish and consolidate the dominion of Christianity on the Bosphorus. Finally, the Emperor, *as the strong rock and defender of Europe*, has to fulfil the lofty mission of consolidating European conservatism." "To obtain this object, Russia must carry on an obstinate war, which will break down England's avarice, and unconditionally terminate Turkish misrule."

WEST-TOWN SCHOOL.

The committee to superintend the boarding-school at West-Town, will meet there, on Fourth-day the 6th of next month, at 10 o'clock, A.M.

The committee on admissions to meet at 8 o'clock the same morning, and the committee on instruction at 7½ o'clock the preceding evening.

The visiting committee to assemble there on Seventh-day the 2nd of the month, and to spend Second and Third days of the following week in examination of the schools.

THOMAS KIMBER, Clerk.

Phila., Eleventh mo. 25th, 1854.

RECEIPTS.

Received from C. Bracken, agt., O., for Ruth Conrow, $2, vol. 27; from A. Battey, agt., Vt., for P. Gove, $2, vol. 27, for D. F. Knowles, $2.25, vol. 28; from W. Foulke, agt., O., for Marvin Gifford, $2, vol. 26, for Mahlon Patton, $2; from J. Churchill, Ill., for Ed. Prichard, $2, vol. 26; from John F. Hull, agt., N. Y., for Geo. Robinson, $2, vol. 27; from Mark Willits, agt., O., for himself, John Hoyle, sen'r, James McGrew, John Hoyle, jr., and A. McGrail, $2 each, vol. 28; from Isaac Cowgill, O., $4, vols. 27 and 28; from Wilmon Bacon, per H. C. W., $4, vols. 27 and 28; from Thomas W. Miller, Pa., $5, to 43, vol. 26; from James Austin, agt., Nant., $36, for M. Gardner, P. Mitchell, M. S. Paddock, F. Arthur, J. Paddock, E. A. Easton, J. B. Swain, D. Ray, J. Boadle, Ann Barney, Ed. Mitchell, Fras. B. House, Benj. Gardner, Jem. Austin, C. C. Hussey, J. Monroe, D. G. Hussy, and Goram Hussy, $2 each, vol. 28.

TEACHER WANTED.

A well qualified Teacher to take charge, at the close of the present year, of the "Sheppard School" for Coloured Girls on Randolph street. Applications in writing may be addressed to Edward Richie, Clerk of the Board of Trustees, No. 173 Vine street.

DIED, at the residence of his parents at Pennsville, Morgan county, Ohio, on the 1st day of Eleventh mo. 1854, LEWIS W. FOULKE, in the 25th year of his age; a member of Pennsville Monthly Meeting. Although he was taken suddenly away, yet he appeared to be ready when the undeniable messenger came, and the large circle of friends who mourn his loss, are comforted in the belief, that he has exchanged a world of sorrow and affliction for an enduring inheritance of peace or joy.

——, on First-day, the 12th inst., JANE, eldest daughter of Ezra and Phebe Haines, of Rancocas, N. J., in the 21st year of her age. It may be said truly of this dear child, that according to her measure, she had been enabled to bear the cross, and despise the shame—having from very early life evidenced a desire, that her appearance and deportment might be consistent with the testimonies of our religious society, of which she considered it a great privilege to be a member, and often expressed her concern at the departure of her young friends in these respects; it is our solacing belief, that her merciful Saviour has permitted her to enter one of those mansions which He has prepared.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

For "The Friend."

The Valley of the Amazon.

(Concluded from page 81.)

"The climate of this country is salubrious, and the temperature agreeable. The direct rays of the sun are tempered by an almost constant east wind, laden with moisture from the ocean, so that one never suffers either from heat or cold. The man accustomed to this climate is soon unwilling to give it up for a more bracing one, and will generally refuse to exchange the *abandon* and freedom from restraint that characterize his life there, for the labour and struggle necessary even to maintain existence in a more rigorous climate or barren soil. The active, the industrious, and the enterprising, will be here, as elsewhere, in advance of his fellows; but this is the very paradise of the lazy and the careless. Here, and here only, such an one may maintain life almost without labour.

"I met with no epidemics in my route; except at Pará; the country seemed a stranger to yellow fever, small-pox or cholera. There seemed to be a narrow belt of country on each side of the Amazon, where bilious fevers were particularly prevalent. These fevers are of malignant type, and often terminate in fatal jaundice. I was told that six or eight days' navigation on each tributary, from the mouth upwards, would bring me to this country, and three or four more would pass me through it; and that I ran little risk of taking the fever if I passed directly through. It appeared, also, to be confined to a particular region of country with regard to longitude. I heard nothing of it on the Huallaga, the Ucayali, or the Tapajos, while it was spoken of with dread on the Trombitas, the Madeira, the Negro and the Purus.

"I have been describing the country bordering on the Amazon. Up the tributaries, midway between their mouth and source, on each side are wide savannahs, where feed herds of cattle, furnishing a trade in hides; and at the sources of the southern tributaries are ranges of mountains, which yield immense treasures of diamonds and other precious stones.

"It is again (as in the case of the country at the foot of the Andes,) sad to think that, excluding the savage tribes, who for any present purposes of good may be ranked with the beasts that perish, this country has not more than one inhabitant for every ten square miles of land; that it is almost a wilderness; that being capable, as it is, of yielding support, comfort and luxury to many millions of civilized people who have superfluous wants, it should be but the dwelling-place of the savage and the wild beast. Such is the country whose destiny, and the development of whose resources, is in the hands of Brazil. It seems a pity that she should undertake the work alone; she is not strong enough; she should do what we are not too proud to do, stretch out her hands to the world at large, and say, 'Come and help us to subdue the wilderness; here are homes, and broad lands, and protection for all who choose to come.' The citizens of the United States are, of all foreign people, most interested in the free navigation of the Amazon. We, as in comparison with other foreigners, would reap the lion's share of the advantages to be derived from it. We would fear no competition. Our geographical position, the winds of heaven, and the currents of the ocean, are our potential auxiliaries. Thanks to Maury's investigations of the winds and currents, we know that a chip flung into the sea at the mouth of the Amazon will float close by Cape Hatteras. We know that ships sailing from the mouth of the Amazon, for whatever part of the world, are forced to our very doors by the S. E. and N. E. trade-winds; that New York is the half-way house between Pará and Europe.

"We are now Brazil's best customer and most natural ally. President Aranha knew this. At a dinner party given by him at Barra, his first toast was, 'To the nation of America most closely allied with Brazil—the United States.' And he frequently expressed to me his strong desire to have a thousand of my active countrymen to help him to subdue the wilderness, and show the natives how to work. I would that all Brazilians were influenced by similar sentiments. Then would the mighty river, now endeared to me by association, no longer roll its sullen waters through miles of unbroken solitude,—no longer would the deep forests that line its banks afford but a shelter for the serpent, the tiger and the Indian; but furrowed by a thousand keels, and bearing upon its waters the wealth, that civilization and science could call from the depths of those dark forests, the Amazon would 'rejoice as a strong man to run a race;' and in a few years we might, without great hyperbole, or doing much violence to fancy, apply to this river Byron's beautiful lines:

> 'The castelled crag of Drachenfels,
> Frowns o'er the wide and winding Rhine,
> Whose breast of waters broadly swells
> Between the banks that bear the vine;
> And hills all rich with blossomed trees,
> And fields that promise corn and wine,
> With scattered cities crowning these,
> Whose far white walls along them shine.'

Then might Brazil, pointing to the blossoming wilderness, the well cultivated farm, the busy city, the glancing steamboat, and listening to the hum of the voices of thousands of active and prosperous men, say, with pride and truth, 'Thus much have we done for the advancement of civilization and the happiness of the human race.'"

I was led into a careful searching out the secret workings of the mystery of iniquity, which *under a cover of religion*, exalts itself against that pure spirit, which leads in the *way of meekness* and self-denial.

From "Friends Library," Vol. V., page 411.

"A principal cause of desolation and waste in the house and heritage of God, is the want of more prepared stones for the building, hewn and polished in the mountain; but great inconveniency arises, when some are made use of as stones for the building, in their natural state, which renders them unfit materials to erect a house for the glory of God to abide in; so that what such build, is nothing but a habitation for anti-christ; for he will content himself in any form of religion, whilst he can keep the power out of it. His first subtle working in the mystery of iniquity, is to persuade the mind that there is no need of any more power and wisdom than they have as men; that if they will exert their endeavour, they may be useful members; thus withdrawing gradually from the fountain of living water; to hew out cisterns to themselves, which will hold no water. Oh, how dry and insipid are all the religious performances of such! and what they do, is only to beget in their own image, carnal, lifeless professors like themselves. These are very apt to be doing, being always furnished; but the true labourers must, in every meeting, and upon all occasions that offer for service, receive supernatural aid and the renewed understanding, by the immediate descendings of heavenly wisdom and power, or they dare not meddle. Where there are but two or three in each Monthly Meeting, carefully abiding in a holy dependence upon God to be furnished for his work, great things may be done by his mighty power, in and through them. This is evident, by observing the state of meetings where such dwell, though all is not done which they ardently desire; but praised be the Lord, there are many yet up and down, who know and experimentally feel their sufficiency for every service in the church to be of God."—*John Griffith.*

Interesting Discovery.—A very interesting historical discovery has just been made in the Museum of Arms, in the Palace of Hohenzollern-Sigmaringen. The Marshal of the Court, M. de Mayenfisch, remarked in the Museum what appeared to be a door covered with plaster. He had the plaster removed, and found a wooden door; and behind that door was one of iron, fastened with four enormous locks. M. de Mayenfisch had the locks opened, an operation of great difficulty. The door being then flung open, a subterrancan passage was discovered. This passage, between three and four hundred yards in length, was blocked up at the end with rubbish. The rubbish was removed, and a large chamber was exposed.

On the walls, at certain intervals, were crucifixes, and figures of the Virgin and St. John the Baptist, all in wood, clumsily executed; also iron caps with spikes in the interior, heavy chains, pincers, and other instruments of torture. In the centre of the room was a huge stone table and ten seats surrounding it. On the table were a hammer, a plate with (in bas relief at the bottom) figures of the Virgin and St. John the Baptist; five wooden balls, quite black with age; and an iron seal of the famous Vehmic tribunals. This seal, with the other things, makes it clear that the cavern was employed for the sittings of one

of these secret courts of justice whose mysterious and terrible proceedings created profound terror in the middle ages, but served to keep in check the brutality of the oppressors of the people. Singular to relate, no other actual remains of any Vehmic tribunal have yet been discovered in Germany, though *savans* have spent many weary years in making all manner of researches respecting them.—*Late Paper.*

From the Leisure Hour.

A Visit to the Staffordshire Potteries.

(Concluded from page 83.)

Besides the printing, the biscuit-painting, and the enamel-painting, there is a style of ornamentation which has lately sprung up, and which, being susceptible of indefinite improvement, and at the same time not necessarily expensive, bids fair to become exceedingly popular. We allude to the practice, of which we saw many successful specimens in the various show-rooms of the first-class potters, of transferring engraved landscapes and views in the same way as the common printed patterns are transferred, and afterwards colouring them artistically with enamel colours upon the glaze. There is no reason why engravings of the first excellence should not be thus transferred and coloured; and it appears to us more than probable that a manufacturer, who should bring taste and judgment along with a little spare capital to bear upon this comparatively new branch of the art, would succeed in creating a demand for articles which might be rendered eminently beautiful and supplied at no very extravagant cost.

Passing from one imitative art to another, we are next introduced to the makers of the exquisite statuettes in porcelain, or, as it is here called, parian ware, and to which we have already alluded. The mode of manufacturing these charming figures is as follows: the separate parts of the figure are cast in separate moulds by pouring in the fluid slip, and allowing it to remain in the mould until the plaster-of-Paris, of which the mould is formed, has absorbed a certain quantity of the water; the remaining liquid is then poured or drawn off, leaving that portion of the composition from which the moisture has been absorbed adhering in the form of a hollow cast to the inside of the mould. This is allowed to harden for a certain time, and is then released from the matrix. For a single figure, it may happen that as many as twelve or fifteen moulds are required; and some of the groups of two or three figures, we were informed, are cast in the first instance in as many as fifty different pieces. The putting the pieces together, so as to preserve the most perfect proportion, is of course the difficult part of the business; heads, arms, trunks, legs, hands, feet, lumps of drapery, military boots and naked toes, etc., etc., lie jumbled together before the workman, who gradually builds up from them the perfect statue, or the sculptured group, to the semblance almost of life. The several parts are cemented together with the fluid material in the state of a thin paste, and the numerous joinings are so artfully filled up, and so perfectly surfaced, as to defy the most scrutinizing examination to detect them. There are many difficulties to contend with, however, in perfecting these figures. The material of which they are formed is of such a nature as to shrink in the firing, to which it must be subjected, to such a degree that it comes out of the furnace three-fourths only of the size of the original model. It happens moreover that, until burnt, the ware is not sufficiently strong to retain the form into which it is sometimes cast; thus Apollo with his outstretched arm must have a support beneath it, or the limb would bend downwards with the weight of the material: some figures and some groups especially require numerous supports, and these must necessarily be all made of the same substance, in order that they may shrink as the statue shrinks in the fire; otherwise the result would be some intolerable absurdity or deformity, rendering it of no value. It is fortunate that the shrinking of this fine composition is always uniform in every part, and that the minutest points of resemblance, even in a small bust, are never injured by it. Perhaps there is no invention of the present era which has done more to popularize the love and appreciation of fine art than that which has given us the parian statuettes. It has multiplied innumerable copies of the classic productions of both native and foreign sculptors, and has made the people better acquainted with what constitutes excellence, by setting before them examples of it which constrain the admiration even of the most rigid connoisseur.

On leaving the manufactory, having witnessed the gradual progress of the ware from the native clay up to the costly equipage from which a monarch might be pleased to dine, we are led into the show-rooms, where we are made aware of the extent of the potter's resources, and the numberless purposes to which his art is applied in the present day. He not only employs the services of the artist and supplements those of the sculptor, but he supersedes the labours of the marble-mason, and enables his patrons in some degree to dispense with those of the cabinet-maker. He casts slabs of porcelain or earthenware whiter than alabaster, and adorns them with wreaths and bouquets of flowers on which the butterflies rest and the dew-drops glisten; and these are to blossom by the winter fire-sides of the wealthy, in place of the veined marble of Italy or the home-dug porphyry of Cornwall. He paints many landscapes upon panels of porcelain for the virtuoso's cabinet or the lady's boudoir. He vies with the jeweller in the costliness of his dessert services, and excels him altogether in appropriateness of design. He has perfect confidence in the virtues of clay, and fashions it into any form he chooses, from a child's drinking-cup not worth a penny to my lord's inkstand worth twenty guineas, or a pair of vases cheap at a hundred. He will make you a goblet no thicker than a bank note, the weight of which shall hardly turn the scale, or a bouncing pickle-pot: in short, he does what he likes with it, always supposing that he makes a profit out of it.

Thus much for a glance at the operations of the potter. Were we to chronicle the results of our visits to other establishments, we should in the main be going again over the same ground, such differences as exist in the modes of manufacture at different potteries being scarcely perceptible by a casual visitor, and of no interest, if they were, to the general reader. The stranger who perambulates the large factories and the splendid show-rooms of the district will come to the conclusion, that though some of them affect and excel in peculiar branches of manufacture more than others, yet the modes of production are necessarily similar, and that having witnessed them once he need not recur to them. At Ridway's, delightfully situated on a rising ground upon the skirts of Shelton, he will find that particular attention has been bestowed upon the sanitary branch of the art, and he may witness some admirable, simple, and effective contrivances adapted for the preservation of domestic cleanliness and atmospheric purity in dwellings. Here, too, he may chance to see in operation a machine for making conserve and toilet-pots, for which a prodigious and increasing demand has arisen within these few years; and in the show-room he may perhaps imbibe the conviction, that though the specimens of art in painting on china are neither so large nor so numerous as he has seen elsewhere, some of them are executed with a vigour and at the same time with a delicacy and feeling rarely if at all equalled in other places. At Etruria he will be struck with the extraordinary perfection of finish, even in the commonest articles there produced, with the general chasteness of design and harmony of colour that characterizes the whole—the absence of gaudy hues and tawdry contrasts, and the judicious use of gold in combination with mixed tints, evidencing the influence of a true taste in the management. He will mark the marvellous marble-like surface of the specimens of finished earthenware, and the elegant equipages composed of that material, the sharp impression it brings from the mould, and the rigid integrity of form which every article retains in spite of the fiery ordeal of the kilns. He will not fail, either, to admire the exquisite jasper wares in body of purest blue, overlaid with floral designs modelled in a material pure as snow, and delicate and transparent as the finest cameos. At Alcocks-hill pottery, at Burslem, he may, if he have time, spend hours in the long galleries filled with triumphs of the potter's art in all their endless variety, from the most elaborate modellings which, being wrought by hand, must have taken months to execute—one specimen of which is a bird of paradise, finished in every film-like feather to the perfection of life—down to the commonest domestic wares. He will doubtless find other distinguishing excellences among other potters, but we must decline attending him further on his journey, being compelled to return to Stoke, where we must devote an hour to the tile-works of Messrs. Minton, which present some very remarkable subjects for observation.

It may be in the recollection of our readers that the Messrs. Minton carried off the council medal, in consequence of the artistic merit of their great dessert service, which attracted universal notice at the Great Exhibition. They have two large establishments at Stoke, and they have carried out the practice of the potter's art with the greatest success in all its branches. Their imitations of ancient vases are unrivalled in beauty of design: their parian figures, of which they manufacture large quantities, are not to be surpassed either as to purity of material or quality of workmanship; while, in all the decorative branches of the business, they have obtained a character for high mechanical skill combined with excellent taste. They have further succeeded in the making of hard porcelain vessels for chemical purposes, for which the chemists of this country were formerly indebted to the manufacturers of Germany; their crucibles are found to be equal in all respects to those of Dresden, and have the advantage of being much cheaper. It is in the manufacture of tiles, however, for mosaic pavements and inlaid floorings, and for the walls or courts of public edifices, that they stand almost alone and altogether unrivalled. The demand for these naturally arose with the revival (in many respects to be regretted,) of mediæval art in this country, and the attention of architects and designers was directed to the means of producing them in accordance with principles of sound taste. They are of various sorts: some of a single colour, such as black, buff, or red, and some with ornamental designs of various colours; some are reproductions of the antique, and others from devices by Pugin, Wyatt, and other artists. They are of all sizes, from those near a foot square to those not a quarter of an inch; and of various polygonal shapes, from octa-

gons to triangular sections of a square. They are applicable to numerous building and decorative purposes; any pattern, however intricate and elaborate, may be wrought with them in mosaic; and being hard almost as flint, they are likely to endure as long as the building in which they are laid down. On entering Stoke from the railway station, the first thing upon which the traveller acts his foot is a handsome sample of this mosaic tile-work, the gift of the Messrs. Minton; which serves to remind him that he ought to witness the process of their manufacture before he leaves.

The tile-works of the Messrs. Minton are in the same street with the pottery of Alderman Copeland, and but a few minutes walk from it. We shall describe, as briefly as possible, their mode of manufacture as we happened to witness it, being obliged, however, from want of space, to condense it. The clay, after having been carefully prepared, is dried in pans only to the consistency of glaziers' putty. While yet soft, it is impressed in moulds fixed in small hand-presses, which imprint the design or pattern in intaglio upon the surface of the tile. In order to form the different colours, the colouring matter is ground up with some fusible material to the consistence of thickish cream, and the tints required are poured in a fluid state into the hollows which a die has depressed for their reception. The moist tiles are then removed to a chamber heated with flues to a temperature of eighty or ninety degrees, where they dry gradually; and while they yet retain a certain amount of moisture, being in about the same condition as earthenware in the hands of the turner, their surfaces are scraped perfectly level, and they are pressed to shape with the greatest care and precision. After this, when sufficiently dried, they are placed in saggers, piled in prodigious quantities in the kiln, and fired at a high degree of heat for a period of eighty or ninety hours. When taken from the kiln, the colours are fast and unchangeable, and the tiles, hard as flint, are ready for use. Looking to the immense number of dies necessary to complete the pattern of a single floor, where that is formed of one design, a small and trifling portion of which can only be impressed on each tile, the expense of getting a manufactory of this description into working order must be something terrific. We saw a flooring thus designed, of three pieces of which appeared to be perfectly like, laid out on the floor of the warehouse ready to be packed, and thought it would be difficult to conceive anything more beautifully appropriate to the purpose for which it was designed. The most chaste application of tile-work, however, in Stoke, and perhaps in England, is a lofty staircase opening into the magnificent show-rooms of the Messrs. Minton. The walls are a complete mosaic of sober greenish grey, figured with a half-invisible pattern, which agreeably breaks without disturbing that quiet and retiring hue which forms the best background for the human figure.

We must now bid farewell to the potteries; thanking all parties for the courtesy which we experienced in the course of our inquiries.

Where people are sincerely devoted to follow Christ, and *dwell under the influence of his Holy Spirit*, their stability and firmness, through a divine blessing, is at times *like dew upon the tender plants* round about them; and the *weightiness of their spirits* secretly works on the minds of others. In this condition, *through the spreading influence of Divine love*, they feel a care over the flock, and way is opened for *maintaining good order in the Society*. And though we meet with *opposition from another spirit*, yet, as there is a dwelling in meekness, feeling *our spirits subject*, and moving only in the gentle peaceable wisdom [not a spirit that scatters and alienates from one another, and produces separation,] the inward *reward of quietness*, will be greater than *all our difficulties.—J. Woolman.*

For "The Friend"

WISE SAYINGS.—No. 3.

Some persons seem to be able to trust God in everything, excepting in one particular, viz., *they feel that they must do their own fighting*. But what is the language of Scripture? Dearly beloved, avenge not yourselves. Vengeance is mine, I will repay, saith the Lord. It was said of Christ himself, "He shall not strive nor cry."

When I witness the erroneous estimate which men often place on certain kinds of human knowledge, I am reminded of one of the remarkable sayings of Augustine,—"Unhappy is he who knows everything else, and does not know God. Happy is he who knows God, though he should be ignorant in almost everything else."

It is a sure sign, that our heart is not right before God, and does not entirely rest in Him, when, like the unconverted Atheuians of old, we are anxious to hear or tell some new thing; when we are exceedingly troubled about our own reputation among men, and when in regard to anything of a worldly nature, we exhibit an eager and precipitate state of mind.

He who keeps his ear open to calumny and backbiting, may reasonably expect to have it filled. The best way, both for our own sakes and that of others, is to keep it shut; to hear but little, and to pray more.

It is one of the surest signs, that the natural life still exists and flourishes in us, if we have what may be called an *outward eye;* and, instead of looking inwardly upon our own failings, are prone closely to watch and to judge others. "Judge not that ye be not judged." One of the first inquiries arising in the mind of a truly humbled and sanctified person, is, "Who maketh me to differ?" And one of the first supplications which he offers is, "Lord, have compassion upon my offending brother."

He, whose life is "hid with Christ in God," may suffer injustice from the conduct or words of another, but he can *never suffer loss.* He sees the hand of God in everything. He knows that everything which takes place has either a direct or indirect relation to his present state, and is designed or permitted for his benefit. "All things shall work together for good."

When friends depart, and hopes are riven,
And gathering storms I see,
My soul is but the sooner driven,
Oh, "living God," to thee!

A short epistle by way of exhortation to Friends, written in the year 1705, by William Penn.

"My dear Friends,—Hold all your meetings in that which set them up,—the heavenly power of God,—both ministers and hearers; and live under it, and not above it, and the Lord will give you dominion over that which seeks to draw you again into captivity to the spirit of this world, under divers appearances; that the Truth may shine through you, in righteousness and holiness, in self-denial, long-suffering, patience, and brotherly kindness; so shall you approve yourselves the redeemed of the Lord, and his living witnesses in and to an evil generation. So prays your friend and brother, through the many tribulations that lead to the rest and kingdom of God."

Sir John Franklin and his Party.

We copy the following extract, which includes all that relates to the discovery of the remains of Sir John Franklin's expedition, and all that is or probably will be known respecting them:—[The letter is from Dr. Rae to the Governor of Hudson's Bay Territory, and is dated "York Factory, Eighth mo. 4th, 1854.]

"I arrived here on the 31st ult. with my small party in excellent health, but I am sorry to say without having effected our object. At the same time, information has been obtained and articles purchased from the natives which place the fate of a portion if not all of the then survivors of Sir John Franklin's miserable party beyond a doubt—a fate the most deplorable—death from starvation, after having recourse to cannibalism as a means of prolonging life.

"I reached my old quarters at Repulse Bay on the 15th of August, and preparations were immediately commenced for wintering. On the first of September I explained to the men our position, the stock of provisions we had on hand, (not more than three months' rations,) and the prospects we had of getting more, &c., pointing out all the danger and difficulty of our position. All readily volunteered to remain, and our exertions to collect food and fuel went on with unabated energy. By the end of September, 109 deer, 1 musk ox, 53 brace ptarmigan, and 1 seal had been shot, and the nets produced 190 salmon.

"Of the large animals above enumerated, 49 deer and the musk ox were shot by myself, 21 deer by Mistegan, (the deer hunter,) 14 by one of the men, 9 by Ouligbuck, and 16 by the other four men. The migration of the deer terminated about the middle of October, and twenty-five more animals were added to our stock.

"On the 28th of October, the snow being sufficiently hard for building, we were happy to exchange our cold tents for the more comfortable shelter of the snow-house. The winter was very severe, but the temperature in our snow-huts was never so low as in my winter-quarters of 1846–7. Up to the 12th of January we had nets set under the ice in the lakes; the nets were taken up on that date, as they produced nothing.

"On the 31st of March my journey commenced, but in consequence of gales of wind, deep and soft snow, and foggy weather, we made but very little progress. We did not enter Pelly Bay until the 17th. At this place we met with Esquimaux, one of whom, on being asked if he ever saw white people, replied in the negative, but said that a large party (at least forty persons) had perished from want of food, some ten or twelve days' journey to the westward. The substance of the information obtained at various times and from various sources was as follows:—

"In the spring, four winters past, (spring of 1850,) a party of white men, amounting to about forty, were seen travelling southward over the ice, and dragging a boat with them, by some Esquimaux who were killing seals on the north shore of King William's Land, which is a large island named Kei-ik-tak by the Esquimaux. None of the party could speak the native language intelligibly, but by signs the natives were made to understand that their ships or ship had been crushed by ice, and that the "whites" were now going to where they expected to find deer to shoot. From the appearance of the men, all of whom, except one officer, (chief,) looked thin, they were then supposed to be getting short of provisions, and they purchased a small seal from the natives.

"At a later date the same season, but previous to the disruption of the ice, the bodies of about thirty white persons were discovered on the con-

tinent, and five on an island near it, about a long day's journey (say 35 or 40 miles) to the N. W. of a large stream which can be no other than Back's Great Fish River, (named by the Esquimaux, Oout-koo-hi-ca-lik,) as its description and that of the low shore in the neighbourhood of Point Ogle and Montreal Island agree exactly with that of Sir George Back. Some of the bodies had been buried, (probably those of the first victims of famine,) some were in a tent, or tents, others under a boat that had been turned over to form a shelter, and several lay scattered about in different directions. Of those found on the island, one was supposed to have been an officer, as he had a telescope strapped over his shoulder, and his double-barelled gun lay underneath him.

"From the mutilated state of many of the corpses, and the contents of the kettles, it is evident that our miserable countrymen had been driven to the last resource—cannibalism—as a means of prolonging life.

"There appears to have been an abundant stock of ammunition, as the powder was emptied in a heap on the ground by the natives, out of the kegs or cases containing it, and a quantity of ball and shot was found below high-water mark, having been left on the ice close to the beach. There must have been a number of watches, telescopes, compasses, guns, (several double-barrelled,) &c., all of which appear to have been broken up, as I saw pieces of these different articles with the Esquimaux, and, together with some silver spoons and forks, purchased as many as I could obtain. A list of the most important of these I enclose, with a rough pen-and-ink sketch of the events and initials on the forks and spoons. The articles themselves shall be handed over to the secretary of the Hon. H. B. Co., on my arrival in London.

"None of the Esquimaux with whom I conversed had seen the 'whites,' nor had they ever been at the place where the dead were found, but had their information from those who had been there, and those who had seen the party when alive."

Dr. Rae gives a list of the silver spoons and forks, with a description of the crests engraved on them. One article—a small silver plate—had engraved on it, "Sir John Franklin, K. C. B."

From the Edinburgh Review.

European Emigration to the United States.

(Concluded from page 84.)

Of cottons, the Americans now manufacture three times more in value than they import, and the export of their own manufactures is two-fifths of the foreign importation; and their woollen manufactures exceed the imports of similar articles as three to one. In all articles of clothing, in carriages, furniture, materials for house-decoration, books, paper, iron utensils, agricultural implements, hand-tools, they are substantially independent of all other countries; and, in the coarser cottons, they are not only independent, but have become exporters to compete with British fabrics in South America, Africa, and Central Asia. There can be little doubt that they will advance to the manufacture of more delicate fabrics. The country is full of skilful designers from the continent, who will not fail to impress their taste upon the national productions, and give them a currency throughout the world. Side by side with this, the mineral wealth of the country will be developed. California has yielded 50 millions sterling by the close of 1852. Other mining interests had been less prosperous. But the high prices of iron and coal are opening the Pennsylvania furnaces; and emigration, favoured by joint-stock companies in New York and London, is finding its way to Lake Superior, where the pure copper lies in masses, six feet in thickness, and weighing from sixty to seventy tons. These important results merit a more extended notice, and are full of suggestions for the future.

With such an unexampled growth in material prosperity, we are not surprised to see the conceit natural to the English race swell into a sometimes undue proportion in the Transatlantic branch of the family, and make Jonathan foolishly long to thrust his fingers into all kinds of political pies. Within the half century he has removed nearly all the Indians from the east to the west of the Mississippi, planted them on the sources of the Arkansas and the southern branches of the Missouri, and provided them with schools, missionaries, fields, and money; marching beyond them, he has invaded the territories of the Sacs and Foxes, and pitched his camp in the hunting lands of the Sioux; the scouts of his forces have penetrated the fields of the Pottawotomies and the Kansas, and his army of emigrants, following in their track, has crossed to the Pacific, established itself there, and opened a constant communication between it and the Atlantic. He has brought his commercial marine to the second, and nearly to the first rank in the world; he has made his country the principal cotton and permanent corn growing state; he has covered it with a net-work of railways; he has founded a manufacturing power, which begins to compete with the wealthy and skilful establishments of Europe; he has discovered boundless fields of coal and iron, of lead and copper, and has possessed himself of rich tracts of gold, which enable him to open and use them all; he has increased his family sixfold, and his annual income fifteenfold, and finds few paupers on his estates except those sent in by less fortunate landlords; he has built houses and barns, and planted fat orchards and rich corn-fields for his family, and has founded schools and educated teachers for his children. What wonder that he feels a little pride and more conceit!

Those fruits, however, though great, are entirely material; and if the energy of a free and vigorous people is to end in money-getting and the worship of Mammon,—if a fevered struggle in a business city is to be the object of the young men's life, and the reputation of wealth their ambition,—if arts are not to gild, letters soften, and the love of country pursuits chasten social life,—better would it be for them, when there are no more fields to be subdued, and when unemployed hands shall be stretched out for bread, that they had never risen from the cradle of their political infancy. In the rapidity of their "development" the Americans have had little time for the elegant idleness of European society. Every man's shoulder has been wanted at the wheel of the social car. But now wealth, cultivation, travel, and the leisure afforded by emigrant labour, are producing higher results than mere material prosperity. The possessors of money are learning to love the country and its healthy pursuits. Literature has become a profession, and authors are well paid. Transatlantic sculptors have attained a European reputation, and efforts in the kindred branch of the fine arts are favourably known. Architects flourish among them, and have plenty to do. The national government gives a liberal though not always judicious aid to scientific research, and publishes the results of expeditions undertaken by its directions. In this way the labours of Fremont, Stansbury, Wilkes, Owen, Maury, Foster, Andrews, and Sabine have been given to the world. The Smithsonian Institution, founded at Washington on the liberal bequest of an Englishman, is laying a broad foundation for future usefulness. The generosity of the late Mr. Astor gave to New York the most liberally endowed public library in the world, which in the course of half a dozen years has collected together nearly a hundred thousand volumes. An eminent American gentleman, connected with the first commercial house of Europe and the world, and universally respected for his intelligence and worth, has founded a similar institution in Boston. Another well-known American merchant in London has been equally liberal to his native town in Massachusetts. In all the markets of Europe the Americans are the great buyers of scarce books, by means of an agency maintained in London by the Smithsonian Institution and by private collectors, and directed by a gentleman who is always on the look-out to secure "rarities" for his countrymen.

It cannot be doubted that, versatile as they are, they will soon give the same attention to art which they now give to more solid but less graceful matters. The incorporation into the community of so large an amount of emigration from continental cities, educated in the arts of design, and contributing by the pencil and the chisel to the national love of show, will hasten such a result. When, in no very distant day, the prairies of the Lake country and the valley of the Mississippi shall be peopled with fifty millions, gathered from all nations, but guided by the English race and governed by English traditions; when the slopes of the Alleghanies and the Green Mountains shall be covered with sheep, and their valleys filled with the best bred stock; when the plains of the south shall be entirely devoted to the production of cotton (let us hope without the curse of slavery); when the higher and more delicate branches of manufactures shall have taken root in Massachusetts, and the mechanical arts found a firmer stay in Pennsylvania; when the white man shall have driven the buffalo from the fields which each setting sun shadows with the peaks of the Rocky Mountains; when cities shall fringe the Pacific, towns line the banks of the Oregon, and farms dot the surface of California and the valley of the Willamette; when skill shall have subdued the mineral wealth of Lake Superior; when commerce shall whiten every lake and ascend every river of the country, and shall carry its production to every clime; when railroads shall unite the Atlantic with the Pacific, and bring every part of this vast nation into close contact with every other; when opulence shall have given a home to art in their cities, and literature shall have created the traditions which they lack; what a spectacle may they not present to the world if, despising the allurements of ambition, and disregarding the erroneous advice of interested leaders, they are content to reap the rewards of their peaceful industry, and to enjoy the blessings which Providence places within their reach!

In vindicating the cause which he believed was right, John Huss said before the council of Constance, "This I most humbly require and desire of you all, even for His sake who is the God of us all, that I be not compelled to the thing which my conscience doth repugn or strike against." To the emperor he said, "I refuse nothing, most noble emperor, whatsover the council shall decree or determine upon me, only this one thing I except, that I do not offend God and my conscience." True charity is an excellent virtue; and sincerely to labour for their good, *whose belief* in all points *doth not agree with ours*, is a happy state.—*Woolman.*

No character is more praiseworthy, than that of helping those who are unable to help themselves.

For "The Friend."

"COULDST THOU NOT WATCH ONE HOUR?"

Thy night is dark—behold the shade was deeper
In the old garden of Gethsamane,
When that calm voice awoke the weary sleeper,—
Couldst thou not watch one hour alone with me?

Yet, thou so weary of thy self-denials,
And so impatient of thy little cross,
Is it so hard to bear thy daily trials,
So count all earthly things a gainful loss?

What if thou always suffer tribulation,
And if thy christian warfare never cease;
The gaining of the quiet habitation,
Shall gather thee to everlasting peace.

But here we all must suffer, walking lonely
The path that Jesus once himself hath gone;
Watch thou in patience through this hour only,
This one dark hour, before the eternal dawn.

The captive's oar may pause upon the galley,
The soldier sleep beneath his plumed crest,
And peace may fold her wing o'er hill and valley,
But thou, O Christian, must not take thy rest.

Thou must walk on, however man upbraid thee
With Him who trod the wine-press all alone;
Thou wilt not find one human hand to aid thee,—
One human soul, to comprehend thine own.

Heed not the images forever thronging
From out the foregone life thou livest no more;
Faint-hearted mariner, still art thou longing
For the dim line of the receding shore.

Wilt thou find rest of soul in thy returning
To that old path thou hast so vainly trod?
Hast thou forgotten all thy weary yearning
To walk among the children of thy God?

Faithful and steadfast in their consecration,
Living by that high faith, to thee so dim,
Declaring before God their dedication,
So far from thee, because so near to Him.

Canst thou forget thy christian superscription,—
Behold we count them happy which endure?"
What treasure wouldst thou in the land, Egyptian,
Repass the stormy water to secure?

And wilt thou yield thy sure and glorious promise
For the poor fleeting joys earth can afford?
No hand can take away the treasure from us
That rests within the keeping of the Lord.

Poor wandering soul—I know that thou art seeking
Some easier way, as all have sought before
To silence the reproachful inward speaking,—
Some landward path unto an island shore!

The cross is heavy in thy human measure,
The way too narrow for thine inward pride,
Thou canst not lay thine intellectual treasure
At the low footstool of the Crucified.

O, that thy faithless soul, one hour only
Would comprehend the Christian's perfect life,—
Despised with Jesus, sorrowful and lonely,
Yet calmly looking upward in its strife.

For poverty and self-renunciation,
Their Father yieldeth back a thousand fold;
In the calm stillness of regeneration,
Cometh a joy they never knew of old.

In meek obedience to the heavenly Teacher,
Thy weary soul can only find its peace,
Seeking no aid from any human creature;
Looking to God alone for His release.

And He will come in His own time and power,
To set his earnest-hearted children free;
Watch only through this dark and painful hour,
And the bright morning yet will break for thee.

Travelling up and down of late, I have had renewed evidences, that to be *faithful to the Lord*, and content with his will concerning me, is a most necessary and useful lesson for me to be learning; looking less at the effects of my labours, than at the *pure motion* and *reality* of the concern, as it arises from *heavenly love*. In the Lord Jehovah is everlasting strength; and as the mind, by a humble resignation, is united to Him, and we utter words from an *inward knowledge* that they arise from the *heavenly spring*; though our way may be difficult, and require close attention to keep in it, and though the manner in which we may be led may tend to our abasement, yet if we continue in patience and meekness, heavenly peace is the reward of our labours.—*J. Woolman.*

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 88.)

NAOMI GRAY.

Naomi Gray was the daughter of John and Alice Walley, of Cheshire, England. She was one who submitted to the power of Truth in early life, and was brought forth in the ministry, when about twenty years old. She came over to America, in the year 1684, and being married to —— Berry, of Choptank, Maryland, she laboured in her heavenly Father's work, with acceptance to her friends in those parts. She was left a widow with one child, and sometime after, about the beginning of the year 1706, she removed to Philadelphia.

The certificate of membership she brought with her, is so different from those of the present day, that it may prove interesting to the reader.

"From our Monthly Meeting at the house of Sarah Stevens on Choptank, the 28th day of the First month, 1706.

"To Friends of the Monthly Meeting in Philadelphia,—The tender salutation of our dear love in the Truth is unto you, desiring that grace, mercie and peace may be multiplied among you, and the Israel of God everywhere. These come to certifie on the behalf of our friend Naomi Berry, who for a considerable time has lived among us, and behaved herself as becomes the Truth which she has made profession of, and has been instrumental many times in the hand of the Lord, to reach the seed of God in the hearts of his people; with whose service and testimony we have good unity, and desire her growth and preservation to the end. Now our friend above named, having laid her intention before this meeting of removing herself out of this province into Pennsylvania, there to settle for some time, and heretofore reported unto us her said intention, we found a concern upon us according to the good order of Truth, to inquire into her clearness as in relation to marriage, and upon inquiry, find nothing but that she is clear—so must commit her to the Lord, who is always ready to preserve them that fear him; subscribing ourselves your sincere friends and well wishers in the Truth that endures for ever."

Soon after her removal to Philadelphia, Naomi was married to George Gray, of that place, a valuable minister of the Gospel. Naomi, although she does not appear to have travelled extensively after her second marriage, was very diligent in attending her own and neighbouring meetings, labouring therein in the ability received of her blessed Lord and Saviour, who calls and anoints his own ministers, qualifying them for the work of their day. We find the record of her frequent visits to the meetings of Byberry, Abington, Plymouth, Germantown, Haverford, Frankford, North Wales, Radnor, Schuylkill, and Fairhill, being at times accompanied by her esteemed friend and fellow-labourer in the Gospel, Jane Breintnall. She appears also to have been of good service in the discipline of the church, being much used in appointments, in her own Monthly Meeting.

She continued to be diligent in her Master's service until near her close. The last trace of her religious labours we find any account of, was in the Eleventh month, 1708, and in the following First month, she was removed to her everlasting reward.

JANE BILES.

The maiden name of this Friend I have not found. Her early residence was in Yorkshire, where, in the year 1678, she married Thomas Atkinson, a minister of the Gospel of Christ Jesus, in the Society of Friends. She also appears to have been an acknowledged minister, before they removed to New Jersey to settle, which was in the year 1682. They came recommended from Beamsley meeting in Yorkshire.

In the summer of 1687, Jane Atkinson was taken very ill, and fully expected to receive a release from her earthly labours, in which expectation her husband and friends participated. But after a time her husband told her he did believe that she would be raised up again, and that he should be taken instead. This intimation proved true; that very day he became unwell, and gradually declined, lingering for eight or ten weeks when he quietly and happily departed. In the meanwhile his wife, by whom much labour in the militant church was yet to be performed, grew stronger and stronger.

Sometime before the close of the next year, (1688,) Jane Atkinson was married to William Biles, a Friend who was also in the ministry. William Biles came to New Jersey, before William Penn had obtained the grant of the country, since called Pennsylvania, and took up land, under authority of Governor Andros, of New York, within the limits of what is now called Bucks county, where he settled. Jane was soon called to leave her new home and domestic comforts, to travel in the work of the ministry. With the unity of her friends at the Falls, and the approbation of the General Meeting of Ministers, held First mo. 2, 1689, she visited Friends in East Jersey, and on Long Island. On giving in an account of her labours in the Seventh mo. following, it appears from the minute made on the occasion, that she could say she "had found great openness" in "several places."

When George Keith began his quarrel with Friends in Philadelphia, he worked insidiously amongst country Friends, who had not an opportunity of immediately testing the truth of his assertions, and in some instances got up a prejudice against the friends of truth and sound doctrine in those who were themselves sound in the faith, and who were endeavouring to live near their divine Master. So it was with Jane Biles. She thought for a *short* time, that George Keith was a sound Friend, and an injured man, and that some of his opposers were out of the true faith, and others out of the true charity. She was not long suffered to remain in that delusion. She took to the Select Yearly Meeting, held in the First month, 1693, a testimony against George Keith, which 'was read and approved.' It does not appear that her husband had been in anywise captivated by the sophistries, or operated on by the false statements of George, as he signed the testimony issued against that apostate by the meeting of ministering Friends, held Fourth mo. 17, 1692.

With the unity of their friends, Jane Biles accompanied by her husband, in the summer of 1696, visited the meetings of Friends in New England, to their satisfaction. A concern had been for a long time resting on the mind of Jane, to pay a religious visit to the land of her birth, and the subject having been mentioned by her to her husband, he discouraged it as far as he could. He thought, the affectionate part being too much

in dominion, that he could not spare her for such a length of time, and her health being delicate, seemed as an additional reason why he should take on himself the responsibility of detaining her from her Master's work and service. He perhaps deemed that her Master would hold her guiltless, if in her feeble condition she did not take any steps towards an immediate answer to the requiring of duty. In writing, towards the close of 1699, to William Ellis who had just returned from a religious visit to Friends in America, he says, "My wife talks of coming to see you, but how it may be upon that account I shall at present leave unto the ordering hand of the Lord; the voyage is great, and she but weakly in body." At the General Meeting of ministering Friends, held in the Tenth month, 1699, she had thought it right to lay before them the condition in which she found herself,—a sense of religious duty pressing upon her, and also that her husband did not feel willing to give her up. In the First month, 1700, she informed the ministering Friends, that the concern still lay upon her. Her husband, saying he was not yet satisfied, "they were both exhorted further to wait in patience and humility for a further assurance of the mind of the Lord in it." In the Seventh month, "the meeting having duly weighed her exercise concerning her going, and her husband's opposition, left her at liberty so far as related to the meeting's consent therein, not being satisfied with the opposition her husband made." The subject was again opened on the following day, and in the afternoon, William Biles said, "he was satisfied that he ought to give his wife up to go for Europe," and added he had thought of accompanying her. It is probable that the feeling that it would be his duty to accompany his wife when the time for performing the visit came, had been for some time preying on his mind. The meeting, however, was not prepared to unite with the concern at that time, so it was laid over. Jane being most easy to remain to have his prospect further tried by Friends, it was brought up again for consideration, in the First month, 1701, and was then approved.

(To be continued.)

For "The Friend."

GUM MESQUITE.

The following letter from Dr. Shumard, the discoverer of the article, furnishes some interesting information respecting it. It appears to bear a close resemblance to the well known gum Arabic.

"Fort Smith, Oct. 18, 1854.

Sir,—I cheerfully comply with your request to furnish, for the use of the Indian department, a short description of the Gum Mesquite, discovered during our recent expedition to the head waters of the Big Wachita and Brazos rivers.

This gum, for which I propose the name of gum mesquite, is believed to occur in inexhaustible quantities, and will no doubt prove a valuable source of revenue to the State of Texas, New Mexico, and the adjacent Indian territory, besides affording employment to the different tribes of Indians now roving upon the plains, many of whom would no doubt be glad to gather and deliver it to the different frontier posts for a very small compensation.

The mesquite tree, from which this gum is obtained, is by far the most abundant tree of the plains, covering thousands of miles of the surface, and always flourishes most luxuriantly in elevated and dry regions. The gum exudes spontaneously in a semi-fluid state from the bark of the trunk and branches, and soon hardens by exposure to the atmosphere, forming more or less rounded and variously-coloured masses, weighing, each, from a few grains to several ounces. These soon bleach, and whiten upon exposure to the light of the sun, finally becoming nearly colourless, semi-transparent, and often filled with minute fissures. Specimens collected from the trunks of the trees, were generally found to be less pure and more highly coloured than when obtained from the branches.

The gum may be collected during the months of July, August and September; but the most favourable period for that purpose is in the latter part of August, when it may be obtained in the greatest abundance, and with but little trouble. The quantity yielded by each tree I found to vary from an ounce to three pounds; but incisions in the bark not only greatly facilitated its exudation, but causes the tree to yield a much greater amount. As it is, a good hand will be able to collect from ten to twenty pounds in a day. Were incisions resorted to, probably double the amount may be obtained.

I have thus presented a few of the leading facts connected with this interesting discovery. Should you desire still further information upon the subject, it will give me great pleasure to furnish it.

I am, with much respect, your obed't serv't,
GEO. G. SHUMARD.

To Thos. S. Drew,
Superintendent Indian Agency."

For "The Friend."

Mercantile Integrity and its Securities.

(Concluded from page 87.)

"Such a crisis in the public credit will be greatly misused, if it does not prompt 'you to a careful re-examination of your every-day mercantile and industrial customs. Consider what tendencies in them are vicious, deceptive, oppressive, and unjust. Inquire anew how far your implication in them pledges you personally to a conspiracy with sin. Probe them fearlessly with the blade of the spirit. Ask not what the toleration of the marketplace approves, or what passes unchallenged the popular ordeal. Ask what the Everlasting Judge will approve, and what will pass the ordeal of the soul's truest, unclouded, most inspired, her final moments, when the Lord and the disciple 'see face to face.' The only hope for any moral advance in our civilization is, by often taking up afresh the practices of our social life, weighing them in the balance of individual accountability, applying to them with independent vigor, that inexhaustible 'commandment' which is 'exceeding broad.'

"It is much to be desired, also, that constituencies should be convinced of their responsibility, as well as officials. If embezzlement meets its just condemnation, shall nothing be said of a company that is so careless as to commit its funds to hands, of which nothing but embezzlement could be expected? Responsibility is spread along the whole line of posts, from the chief to the subordinate. If large interests must be betrayed, let the sufferers at least have the satisfaction of knowing that the deed is not perpetrated by agents, with whom treachery is a salient characteristic. Who is to protect the fiscal reputation, when stockholders and directors vote the ticket that chicanery has contrived, or bribery has bought?

"But a graver misapprehension of these mortifying disclosures yet, is to stop in our contemplation of them, with the mere financial embarrassments. No doubt, it is a serious damage when the regular processes of trade are forcibly interrupted, confidence is disturbed, and men are compelled to look out into each other's faces with doubt and alarm. There can be no serious pecuniary disorganization without moral calamities attending. And it is these breaches affecting that, we have most anxiously to watch, most soberly to dread. If you come to conceive of the monetary sacrifices as the primary, then concealment will often cancel crime, and the reparation of gold heal the canker-spots of the heart. It is the disease of our times to rate the most precious interests of humanity by outward success, to adore prosperity, to let the splendor of a sin dazzle the eyes of justice. But we are spirits, and cannot abdicate our immortality. We are under law, and cannot, with all our gold, bribe the retributions of God. We are taught of Christ, and when we go down into the deep places of our own being, we see that we are poor, and weak, and hungry, save as we seek spiritual wealth of him; save as his power strengthens us, and his bread from heaven feeds us. What shall it profit us though we gain the world, and lose the soul? What shall it not profit us, if we lose the world's reward, and gain the soul's redemption.

"The positive lesson of prevention then is, that we pursue all our enterprise and labour for spiritual, not for material ends—in a generous and devout, not in a sordid and selfish temper. Industry must not be our master but our servant, and for the honour of Christ. These formidable forces in the vast mechanism of our commercial system, must be consecrated to the church. 'Holiness to the Lord' must be stamped on your bales of merchandise. Ships must sail under the orders of the heavenly Master. A peace that the world cannot give, must keep your minds superior to the agitations and panics of changing fortunes. If we persist in going to the very outside borders of right, we shall be pretty sure to transgress the line, and do expressly wrong. If we will walk on the verge of the precipice, what wonder if a giddy brain plunges over? Guard against the first deviations from immaculate honour; the faintest flatteries of the tempter.

"A wise and christian moderation, then, both in the appetite for profits and the style of life, must set limits to acquisition and expenditure. Woman must come with encouragement and economy to the help of man. Every member of the social family has a character to contribute to the common stability, and all they who are truly just, shall live by the same undying faith.

"It is amazing with what penetration the insight of the Hebrew prophets reads the dangers and duties of all time. My text is quoted in the epistle, from Habakkuk. Turning back to the pages of that sorrowful and patient seer, we find phrases that startle us with their strange fitness to the signs of our own day, with its reckless expansion and unscrupulous speculation. 'Wo to him that increaseth that which is not his, and to him that ladeth himself with goods, not his own! Wo to him that coveteth unjust gain for his house, that he may set his name on high! Wo to him that buildeth a town by blood, and establisheth a city by iniquity! The proud man remaineth not at rest; he enlargeth his desire as the grave, he is as death, and cannot be satisfied. Shall not they rise up suddenly that shall bite thee, and awake that shall vex thee? The Lord said, Write the vision, and make it plain, that he may run that readeth it. Though it tarry, wait for it, because it will surely come. Behold, his soul which is lifted up, is not upright in him; but the just shall live by faith.'

"My friends, anything that throws us back on the Eternal Spirit, is a blessing, and never more so than now, when we are so prone to forget the Spirit's promises, and when so many behave themselves as if, like the Ephesians, they had 'not so much as heard whether there be any Holy Ghost.' These failures will not be dead losses, but infinite gains, if they serve to show the people that a man

candeth and walketh, not in his own strength, but in the strength of the Lord of Hosts; if they abate the self-confidence and self-glorification of which our age is so full; if they enforce more impressively the old lesson of Scripture, that they are fools who say, 'Go to, to-day or to-morrow, by our own shrewdness, our own tact, our own enterprise, we will go into such a city, and buy, and sell, and get gain.' Whereas we ought to feel that God is the God of all our works,—that we build nothing fair or strong without Him,—that we shall work and labour in vain till we begin and end, plan and toil, in humble, childlike trust, entreating always that His will be done! For by faith the just shall live!"

Bird's Egging in the Pacific.

A friend in San Francisco, who is somewhat given to the study of ornithology, writes us some very interesting and surprising facts in regard to an important trade carried on in the markets of that city in the eggs of sea birds. He states that the Farallones de los Frayles, a group of rocky islets, lying a little more than twenty miles west of the entrance to the Bay of San Francisco, are the resort of innumerable sea-fowl, known by the fishermen as "murres." These islands are almost inaccessible, and, with a single exception, are uninhabited. They, therefore, very naturally afford a resort for great multitudes of birds. Some time since a company was organized in San Francisco, for the purpose of bringing the eggs of the murres to market. An imperfect idea of the number of these birds may be formed from the fact that this company sold in that city the last season, (a period of less than two months, July and parts of June and August,) *more than five hundred thousand eggs!* All these were gathered on a single one of these islands, and in the opinion of the diggers, not more than one egg in six of those deposited on that island was gathered. Our correspondent informs us that he was told by those familiar with the islands, that all the eggs brought in were laid by birds of a single kind. Yet they exhibit astonishing variations in size, in form and in colouring. There is no reason to suppose that he was misinformed in regard to those eggs being deposited by a single species. The men could have had no motive for deception, and similar facts are observable on the Labrador coast, and in the islands north of Scotland. Besides, the writer ascertained from other sources, that all the eggs brought to the market were obtained from a limited portion of the island, known as the Great Farallon —called the Rookery, where a single species swarm in myriads, and where no other kind of bird is found. Naturalists, in our eastern cities, who have received specimens of these birds, pronounce them to be the Thick-billed or Brunnich's Guillemôt, and a distinct species from the Guillemôt, or Murres of Labrador and Northern Europe. The eggs are three and a half inches in length, and are esteemed a great delicacy.—*Boston Atlas.*

He who swims securely down the stream of self-confidence, is in danger of being drowned in the whirlpool of presumption.

If we had no faults ourselves, we should not take pleasure in observing those of others.

THE FRIEND.

TWELFTH MONTH 2, 1854.

From all parts of our country we hear complaints of the scarcity of money, and the difficulties experienced by many to meet the engagements they have made. Men who have been immersed in large business, whose extensive operations as merchants, or manufacturers, have occupied their whole time and energies, and who have been looked on as rich, and perhaps envied by many as possessing the means for procuring everything their hearts could desire, are confessing themselves unable to pay their just debts, and bringing hundreds into sudden and unexpected embarrassment, who were connected with or dependent upon them. Many occupying less conspicuous positions in trade or the mechanic arts, find the channels through which they have been deriving their supplies of money, either altogether dried up, or so much diminished that they do not yield sufficient for the demands necessarily made upon them; they, too, are unable to pay what they owe, or to extricate themselves from the ruin that appears to await them. The common cry is, "the scarcity of money," or "the tightness of the money market," as though that was a thing that had suddenly sprung up spontaneously in the community, and in itself explained the deplorable condition in which so large a portion of the citizens are involved.

We do not pretend to understand the intricate laws of political economy, or the causes which regulate the course, or the ebb and flow of trade and currency; but so far as the statistics of imports and exports are given, there is no reason to believe that more money has gone out of our country within the last year, than there has for many successive years previously. True, what is raised or manufactured in our own, and sent to other countries, falls short of paying for what we bring from other countries here, by some fifty millions of dollars, and this deficiency we have to make up from the gold mines of California, or with promises to pay, backed by bonds and certificates of stock. But this has been equally the case for many years back, and politicians and speculatists tell us it is the natural result of low duties, which allow us to purchase the goods wanted wherever they can be had cheapest, and secures a profitable market for our superabundant produce.

It is not, however, necessary to be deeply versed in the effects necessarily resulting from overtrading, or the scheming of joint stock companies, in order to discover one of the most potent causes of the present crippled and distressed state of our country. That cause is luxury. Extravagance in living has grown in this community with almost unexampled rapidity, and spread its blighting influence throughout all classes of citizens. Splendid mansions, costly furniture, sumptuous living, have marked the career of large numbers, who have aimed to be considered men of mark in society, and whose example has tainted the manners, if not the morals, of all who could be influenced by them. Some possessed wealth inherited from their fathers, who had hoarded it up, until its rust eat into their very souls, and which was squandered by their children to gratify their lusts; others, by successful trade, or well-timed speculation, finding themselves possessed of gold in abundance, have appeared to vie with the former, and with each other, in the expensiveness of their style of living; while multitudes who shared in the pride that prompted it, but really possessed not the means to meet the demands it makes upon the pocket, have rushed into the competition, and sacrificed whatever they could command of property and credit, so as not to be left behind in the race of folly. It would not be difficult to trace the natural sequences of such reckless extravagance; and we believe that the greater part of the overtrading, of trading on fictitious capital, and of other deceptive schemes for obtaining money, might be brought home to it. Men, whose tastes have been corrupted by luxurious habits of living, or whose pride has stimulated them to make great show in their houses, their dress, and furniture, are not easily prevailed on to alter their manner of life, when they find their outlays exceeding their incomes. They are much more likely to plunge deeper into the uncertain ventures of speculative trade, or to multiply schemes in which they may induce others to embark, from whose credulity they hope to reap the funds necessary for their own extravagance. Where those schemes seem likely to fail, or their authors are goaded by the demands of importunate creditors, how many are found without the strength which sterling justice supplies, who yield to the force of temptation, and resort to cheating and robbery, with a hope of sustaining themselves in the position they occupy. Instances of this kind have multiplied of late, until in many places confidence has been almost destroyed, and the honest and upright are obliged to suffer on account of the villany of their neighbours.

> "Profusion, deluging the State with lusts
> Of grossest nature, and of worst effects,
> Prepares it for its ruin: hardens, blinds,
> And warps the consciences of public men,
> Till they can laugh at virtue, mock the fools
> That trust them; and in the end disclose a face
> That would have shock'd Credulity herself,
> Unmasked, vouchsafing this their sole excuse—
> Since all alike are selfish, why not they?
> This does Profusion."

Trouble seems to have opened the eyes of many to the evils of the dissolute career which the country has been pursuing, and the public papers are calling for retrenchment and reform; but whether this arises from a sincere, though late conviction of the sinfulness of the extravagance and vain show indulged in, which will lead to a general reformation of manners, is yet to be proved.

Our object in alluding to the subject, is to awaken in our readers, considerations of how far they, as well as other members of our religious Society, have been and still are influenced by the prevailing taste for, or propensity to luxurious living; and whether there is not at the present time a renewed call upon us to return to the plain and simple modes of life, which characterized Friends in the beginning. We do not mean that we should give up the many real improvements, which have been introduced into the domestic economy, or sacrifice those advantages, which a more refined civilization have diffused through social intercourse, but that we should discard the richness of dress, the magnificence of furniture, the spaciousness of houses, and the sumptuousness of living, which minister solely to pride and luxurious ease, and whose intrinsic value is in the money they cost and the show they make, and not in any real comfort administered by them to either body or mind. The habits of our fathers, and the education they gave their children, tended to industry, plainness and frugality, which in a country like ours, naturally produced wealth. The accumulation of wealth, had it been accompanied by a practical belief in the profession we make, would have only augmented the power for doing good; but when the restraints of the Cross are thrown off, a mere profession of a self-denying religion, proves altogether too weak to withstand the force of popular example, and the promptings of carnal appetites; hence the stern resistance to the spirit and the manners of the world, which those who have gone before us maintained, has been abandoned by very many among us, and the rushing stream of luxury once let within the enclosure of our

Society, has swept away so many of its original defences, that in many places it is difficult to find any landmarks to distinguish it from the votaries of the world. The temptations accompanying riches, have proved too powerful for a religion merely educational and traditionary, and as one after another has yielded to them, weakness and blindness have prevailed, preparing the way for the introduction of sentiments more congenial with the unregenerate heart, because sanctioning a nearer approximation with the manners and maxims of the multitude. Our forefathers are admitted to have been very good people in their way, but wanting in the knowledge of the doctrines of Christ, which modern research has unfolded, and hence the straight and truly narrow path in which they felt themselves obliged to walk, is supposed to admit of being widened, and relieved of some of its asperities. The result we need not now depict. There is no true lover of our once favoured and united Society that must not mourn over it, but unless it is a godly sorrow that worketh repentence, mourning will be of little avail.

SUMMARY OF EVENTS.

EUROPE.—News from Liverpool to the 11th ult.—*The War.*—The latest intelligence from the Crimea is given in a report from Menschikoff, via St. Petersburg. He states that to the evening of the 3d Nov., the siege continued without a result. The fire from the English side had become weaker. The Russian works had not been greatly damaged, and were immediately repaired. Nothing can be attempted against the northern side of Sebastopol; the communications remain open.

A telegraphic despatch from Marseilles says, "It is certain that, in the action at Balaklava on the 25th ult., consequent on the Russian surprise of the Turkish and English position, 400 British infantry and 600 British cavalry were annihilated; 1000 men and 800 horses being killed in three hours."

On the 26th, the left wing of the allies was attacked by a large body of Russians from Sebastopol; in this sortie, which was repulsed, the Russians sustained heavy losses. On the whole, it is clear, that the allied forces have met with greater losses and difficulties than had been anticipated, and the commanders have called urgently for further reinforcements, which were being sent them as rapidly as possible.

ENGLAND.—The price of flour in Liverpool was from 43*s.* to 46*s.* per bbl. Consols had fallen to 93¼. Thirty-five ships belonging to Edward Oliver, of Liverpool, were advertised for sale at that port, on the 23d ult. The accounts from Manchester represent trade as having largely declined.

SPAIN.—On the 8th ult., the Queen opened the Cortes. In her speech she declared that she adheres to the principles expressed, Seventh mo. 25th, and that she would continue to respect liberty and the rights of the nation, and she hoped that by the administration of proper constitutional law, all the wounds of the State would be healed.

BELGIUM.—The King, in his speech at the opening of the Legislature, on the 10th, says, that Belgium feels more strongly than ever, the value of neutrality. He also adverts to the fact, that industry and art are flourishing, and adds that a commercial treaty has been concluded with Mexico.

Four days later.—The Baltic arrived at New York, on the 26th ult., with Liverpool dates of the 15th, and intelligence from Sebastopol to the 6th. On the 5th, a great battle, attended with horrible destruction of life, had taken place, both parties claiming the victory. The official report of General Canrobert says, "The Russian army, swollen by reinforcements from the Danube, as well as by the combined reserves of all the southern provinces, and animated by the presence of the Grand Dukes, Michael and Nicholas, attacked, yesterday, Nov. 5th, the right of the English position before Sebastopol." "The struggle lasted the whole day." "The enemy who far outnumbered our force, beat a retreat, with a loss estimated at from 8000 to 9000 men." "At the same time General Forey was forced to repulse a sortie made by the garrison, and under his energetic command, the enemy were driven back into the place, with the loss of 1000 killed and wounded." Menschikoff's despatch claims the advantage for the Russian arms, but says there was great loss on both sides. The London Times correspondent, calls the allied loss 5000, English, French and Turks. It appeared to be well understood in England and France, that the allied forces were placed in a situation of imminent peril, and great efforts were being made to afford them speedy succour. "It is now admitted that the defences of Sebastopol were under-rated, the bravery of the enemy under-rated, and the force of Menschikoff in the field altogether unexpected."

SAN JUAN or GREYTOWN, which was laid in ruins by an U. S. armed vessel some time since, is being rebuilt by the inhabitants. A letter, dated Eleventh mo. 4, says, that 103 houses are in various stages of progress. The wanton destruction of the town caused much distress to the people, who were exposed to the burning sun and heavy rains for a considerable time before they could secure any shelter, in consequence of which there had been much sickness, and many deaths among them.

TURKS ISLAND.—There is a great scarcity of salt at the Island, and no prospect of any more being gathered this season.

UNITED STATES.—It appears by the statistics furnished to the Secretary of the Treasury, that the imports of foreign merchandize, during the fiscal year ending Sixth mo. 30, 1854, were a little over $300,000,000. The exports of domestic produce were between $250,000,000 and $260,000,000. The exports of breadstuffs and provisions were about $50,000,000. The difference between the imports and exports is made up in California gold, stocks and mercantile obligations. The U. S. revenue from customs was about $65,000,000, and from all other sources, $3,000,000.

Arkansas.—The taxable property of the State has increased $43,000,000, during the last two years. The Governor, in his late message, gives a favourable view of the financial condition of the State.

Texas.—There is a great emigration going forward to this State the present season. The Port Gibson Herald, of a late date, says, that upon a single route that lies between Port Gibson and Rodney, there passed within the previous twenty days, between four and five thousand persons, principally from Lower Tennessee and the upper part of Alabama.

New York.—Some of the emigrant passenger vessels lately arrived, lost many of their passengers on the voyage by cholera. An Antwerp ship with 280 passengers, had 66 cases on board, 36 of which terminated fatally.

Philadelphia.—Mortality last week, 147.

California.—On the 24th, the steamship George Law arrived at New York, with California dates to Eleventh mo. 1, and $1,568,000 in gold. Mining was said to be generally profitable. Business was brisk in San Francisco. The price of flour was from $11.50 to $12.50 per bbl. The taxable property in San Francisco is estimated at $38,000,000, being an increase of $8,000,000 since last year.

Railroads.—The Ohio and Indiana Railroad has been completed to Fort Wayne, Ind., adding one hundred and thirty-three miles to the great western line, which commences at Philadelphia.

Tunnelling the Ohio.—The Fort Wayne and Southern Railroad Company has accepted the charter granted by the Kentucky Legislature, for the construction of a tunnel under the Ohio river at Louisville. The tunnel is estimated to cost $1,200,000, and is to be exclusively for railway purposes.

Collision of Steamships.—As the steamship Canada from Liverpool, was entering Boston harbour on the evening of the 24th ult., she came in collision with the steamer Ocean, from thence to Hallowell, Maine, striking her near midships. The Ocean immediately took fire, and her boiler soon after exploded, causing the loss of a number of lives. The Ocean was a large and valuable boat, and heavily freighted. She and her freight were lost.

Miscellaneous.—A free Negro, not a citizen.—The United States Circuit Court of Illinois, has decided that a free negro is not a citizen of the United States within the meaning of the Constitution, entitling him to sustain a suit before the U. States Court.

Prohibition.—A hotel keeper at Cambridge, Mass., has been convicted of selling liquor on eighteen indictments, and sentenced to pay a fine of $350, and be imprisoned four years.

Cashmere Goats.—A pair of pure bred Cashmere goats were recently sold in Richmond, Va., for $1500. The hair or wool is of silky fineness, such as is employed for making the celebrated Cashmere shawls.

Snow.—Since the first of last month, there has been fine sleighing in the vicinity of Quebec. Near Buffalo, N. Y., the snow was lately a foot deep, and at Kalamazoo, Mich., it was about the same depth.

WEST-TOWN SCHOOL.

The committee to superintend the boarding-school at West-Town, will meet there, on Fourth-day the 6th of next month, at 10 o'clock, A. M.

The committee on admissions to meet at 8 o'clock the same morning, and the committee on instruction at 7½ o'clock the preceding evening.

The visiting committee to assemble there on Seventh-day the 2nd of the month, and to spend Second and Third days of the following week in examination of the schools.

THOMAS KIMBER, Clerk.

Philа., Eleventh mo. 25th, 1854.

A carriage will be at West Chester, on the arrival of the afternoon cars, on Seventh-day afternoon, the 2d of Twelfth mo.; also on Third-day afternoon, the 5th, to take such of the committee to the school as may go by railroad.

RECEIPTS.

Received from Benj. Hazard, R. I., $2, vol. 28; from H. Knowles, agt., Smy., N. Y., for David Peckham, Jos. Collins, and Pardon Wood, $2 each, vol. 28, for G. W. Brown, $2, to 11, vol. 29; from Israel Buffington, agt., Mass., for himself, Mary Gould, S. Lincoln, P. Tripp, Thos. Wilbur, Miller Chace, N. Buffington, M. B. Buffington, W. F. Wood, and Patience Chace, $2 each, vol. 28, for L. P. Chace, $1, to 26, vol. 28, for J. F., 20 cts. for Nos.; from Joel Evans, agt., Pa., for Nathan S. Yarnall, $2, vol. 28.

MARRIED, at Friends' Meeting, Downingtown, Chester county, Pa., on Fourth-day, Eleventh mo. 22d, 1854, TOWNSEND HOOPES to SALLIE T., daughter of Charles Downing.

——, at Friends' Meeting-house, at Fallsington, on Fifth-day, the 16th ult., ALBERT COMFORT, of Bucks county, to LYDIA W., daughter of Charles Beans, of the same place.

DIED, at her residence, in Fall River, Mass., on the 3d of Fourth month, 1854, MARY BUFFINGTON, aged 70 years; a much esteemed member and minister of Swanzey Monthly Meeting. She was firm and uncompromising in her adherence to the ancient principles and testimonies of our religious Society, diligent in the attendance of meetings, serviceable and skilful in those for discipline; and although, in the latter part of her life, she was not frequently engaged in the exercise of her gift in the ministry, yet her solid deportment and the inwardness and weight of her spirit often ministered instruction to those who were assembled in our meetings for Divine worship. Her last illness, which was of several weeks duration, she endured with Christian resignation to the Divine will; expressing a short time before the close, that she believed the time was not far distant when she would be called home; that she had not been able to see anything in her way, and that she would be well in the end. Her friends have the consoling belief that their loss is her eternal gain.

——, in Freetown, Mass., at the residence of his son-in-law Philip Tripp, on the 9th of Seventh month 1854, EBENEZER BAKER; a much esteemed member of Dartmouth Monthly Meeting, in the 92d year of his age. From his youth he was of a remarkably innocent and exemplary life and conversation, diligent in the attendance of meetings, until very near the close of his life, though under much bodily weakness and many discouragements. Having early received gifts for usefulness in the church, he was enabled to occupy therewith to the honour of the Head, having preserved in greenness and fruitfulness, even in old age, and enabled to maintain his testimony to the Truth, in the meekness and gentleness of Christ, and with unwavering fidelity and godly zeal to the end. We believe the language was applicable to him, "Behold an Israelite indeed in whom there is no guile;" and "mark the perfect man, and behold the upright, for the end of that man is peace."

——, on the 22d ult., at his residence, in Byberry, Philadelphia, ASA WALMSLEY, in the 81st year of his age. Of this dear Friend it may be said, that from youth to old age, his chief concern was, to do justly, to love mercy, and walk humbly with his God. Through many deep trials and bereavements, he was favoured to feel that the chastening was in love. His friends have the consoling belief that he has joined the company that John saw, which came out of great tribulation, and had washed their robes, and made them white in the blood of the Lamb.

Postage to any part of Pennsylvania, for three months, paid in advance, three and a quarter cents; to any rt of the United States, for three months, if paid in vance, six and a-half cents.

From the Leisure Hour.

HOW WE GET ON.

Every age has its mission in the great scheme Providence, and ought to be suffered without alousy to enjoy its rightful heritage of distinc- on and glory. Without instituting, therefore, ıy invidious or disparaging comparisons with gone times, it is our intention, in the present per, to set before our readers a few out of the anifold signs of social progress that mark the resent era. As this paper is not designed for e learned or the scientific, but for such persons desire information in the simplest form, we shall t aim at giving an elaborate dissertation, but all content ourselves with the humbler office of llecting and weaving together some of the more rious inventions, discoveries, and scientific inci- nts of the past year. Our labours, in this spect, will be materially aided by a valuable ientific annual which has been for some years blished in this country.

We commence with that mysterious and subtle ency which—whether employed as a medium of nverse with distant individuals, or (if such a eory be admitted) as the means of producing ose table revolutions which are creating so wide sensation in society—seems destined ere long to ecessitate radical changes in our systems of phi- sophy. Neither Englishmen nor Americans, with eir utilitarian notions, feel that they can afford keep electricity—for to that agent it will be en we allude—as a recondite luxury or as a mere ientific plaything. We find, consequently, that ey are continually devising for it new spheres and odes of usefulness. One of the last and most rious instances of this thrifty habit of the Anglo- xon that has come to our knowledge, is the ap- ication of electricity to the capture of whales. journal of the United States gives an account of me interesting experiments lately made for this rpose. The most prominent features of this new ethod may be thus described. Every whale, at e moment of being struck by the harpoon— hich is charged with electricity—is rendered owerless as by a stroke of lightning; whereby s subsequent escape or loss, except by sinking, comes wholly impracticable, while, at the same me, the process of lancing and securing him is tirely unattended with danger. Besides these ivantages, the arduous labour involved in a long ase for the capture of a whale is superseded; nd, consequently, the inconvenience and danger the boats losing sight of or becoming separated om the ship is avoided. One or two boats only e required to be lowered at a time, and therefore a less number, both of officers and seamen, than heretofore employed, suffice for the purpose of the voyage. The electricity is conveyed to the body of the whale from an electro-galvanic battery in the boat, by means of a metallic wire attached to the harpoon, and is so arranged as to reconduct the electric current from the whale through the sea to the machine. The machine itself is simple and compact in construction, inclosed in a strong chest weighing 360 lbs., and occupying a space in the boat of about 3½ feet long by 2 feet in width, and the same in height. It is capable of throwing into the body of the whale eight tremendous strokes of electricity in a second, or 480 strokes in a minute, paralyzing in an instant the muscles of the whale, and depriving it of all power of motion, if not actually of life.

Having been cured most effectually of all incredulity, as regards any further application of electrical agency, by means of the submarine telegraphs that have successively crossed our island channels, any new scheme, however astounding and wildly improbable it might have seemed ten years ago, will now scarcely disturb the equilibrium of the public mind. The apparently impossible has so insensibly melted into the merely improbable, while the unlikely has been so repeatedly actualized before our bewildered eyes, that wonder has at length grown weary of the unnatural strain upon its faculties, and fallen into a state of philosophical repose. So frequently have men's prophesyings of failure been confuted by the results of scientific enterprises, that few persons, with any reputation at stake, would now dare to hazard a dogmatic declaration of the improbability of our realizing before long the beautiful fairy notion of our great poet, when he makes one of his characters speak of putting a "girdle round the earth." Several sections of this magic zone already clasp the surface of the dry land and the depths of the sea, and another instalment of the vast work may soon be expected; for we learn that steps are already being taken for the formation of a submarine line of telegraphic wires between the old and new worlds. This magnetic medium of communication is to commence at the most northwardly point of Scotland, run thence to the Orkney islands, and again, by short water lines, to the Shetland and the Ferroe islands. From the latter, the water line of 200 to 300 miles conducts the telegraph lines to Iceland; from the western coast of Iceland another submarine line conveys it to Kioge Bay, on the eastern coast of Greenland; it then crosses Greenland to Juliana's Hope, on the western side of the continent, in latitude 60° 42′, and is conducted next, by a water line of about 500 miles, across Davis's Straits to Byron's Bay, on the coast of Labrador. From this point the line is to be extended to Quebec. Its entire length is approximately estimated at 2500 miles, and the submarine portions of it at about 1500 miles. The peculiar advantage of the line being divided into several submarine portions is, that if a fracture should at any time occur, the defective part could be very readily discovered, and repaired promptly and at comparatively trifling expense. But lest any of our readers should imagine that this promised marriage of the old and new worlds is a mere day-dream of scientific match-makers, we beg to assure them that the works are already in successful progress. Some months ago, the cable of the first line sunk in the transatlantic waters was laid, by means of which Cape Lormentine, in the province of New Brunswick, and Carlton Head, on Prince Edward's Island, were joined in the electrical bonds; so that thus the network of wires, which extends on one side to the great lakes and on the other touches the Gulf of Mexico, is advanced so many leagues nearer to the British Isles.

In carrying out the telegraphic system in different countries, great ingenuity is sometimes demanded in overcoming the characteristic difficulties of their respective localities. Nothing shows the indomitable energy of modern science more than the boldness and novelty of many of the expedients resorted to in order to avoid disaster and defeat. What answers so admirably in England, for instance, will not, it appears, suit India. Thus, on constructing an experimental line for a distance of eighty miles from Calcutta, after the European fashion (except that bamboo poles were used instead of the ordinary material), it was soon made apparent than the thin iron wire employed for the purpose in England would be totally inadequate to the Indian telegraph. No sooner were the rods mounted on their bamboo supports, than flocks of that largest of all birds, the adjutant, converted them into perches, while groups of monkeys also congregated upon them; thus showing clearly enough that the ordinary wire would be insufficient to bear the strains to which the telegraphic lines would be subjected. It was found also, that not only must the wire be stronger, but that it must be elevated higher, to allow loaded elephants, which march about regardless of roads or telegraphic lines, to pass underneath.

It is not only in India, however, that difficulties of this kind have arisen. Great natural obstacles, too, have had to be overcome in spreading a network of telegraphic wires over the Piedmontese territory, in consequence of the mountainous character of the country. The energetic engineer, however, to whom the execution of the task was intrusted, has thrown and suspended his wires from mountain to mountain, at immense altitudes and in straight lines, riding over deep ravines and valleys without any intermediate supports, the poles being fixed on the summits, at distances varying from 800 to 1300 yards apart. Occasionally, and when local circumstances require it, as in passing through villages and towns, the line is continued underground, out of which emerging, and again meeting with high mountains, it resumes its flight, in the shape of a wire bridge, from crest to crest; this again sinks underground, to travel below the streets of Genoa, till it reaches the station in the ducal palace. This picturesque line of telegraph is so well arranged, and the isolation of its wires is so perfect, that, notwithstanding the adverse circumstances presented by nature, it has been at work daily and nightly during the worst part of last winter, and has been the ready and faithful messenger of the incessant communications transmitted through it.

Not less wonderfully has the forerunner of the electric telegraph—the railway system—continued

to extend its iron roads, with all their concomitant advantages. The annual passenger traffic in Great Britain alone, we understand, exceeds its population fourfold, and is conveyed at three times the speed and one-third the fares formerly charged by the old stage or mail coaches; whilst the cost of the conveyance of merchandise, minerals, and agricultural produce has been reduced full fifty per cent., as compared with the rates charged on canals and turnpike roads fifteen years ago. Among the curiosities of railway construction which have lately attracted our attention, the following description of an American railroad over ice will be read with interest. In order to understand the subject, it must be borne in mind that the line of rail between the cities of Baltimore and Philadelphia is intersected by the Susquehanna river, at a point where the latter is about four-fifths of a mile in width. The communication between the opposite banks is usually kept up by means of a large steam ferry-boat, upon which the passengers cross from one point to the other, independent trains with their locomotives being kept in waiting for them. In the winter season, however, the Susquehanna, flowing as it does from the bleak and mountainous regions of the north, brings down large quantities of floating ice, which, from the shallowness of the water at the mouth of the stream, collect in immense masses and dam up the water, so as often seriously to impede the railroad steamboat. Thus, in the rigorous winter of 1851-2, the engineer of the railway saw his ferry line at Havre de Grace cut off, and the river filled almost to the bottom with a vast accumulation of cakes of ice, a foot thick, edged up and frozen in that position, so as to present a mass of great strength, but of most forbidding superficial aspect.

Under these circumstances, the engineer determined to form over this rude glacier a temporary *railroad* for goods, and a *sledge road* alongside of it, upon which two-horse sleighs could carry his passengers, and by means of towing lines propel the cars over the river. The first step was to fix the position of the railroad; for upon this rough surface of ice, a straight line between the ferry landings would have required too much excavation and embankment of ice and snow. The line was accordingly made with several curves; the projections and ridges of ice were cut away, and broken fragments of the same material were used to fill up the hollows. Upon this levelled surface a track was laid. As the banks of the river, however, were some feet higher than the surface of the rail, inclines were made on each side, along which the cars were worked, descending by their own weight, and ascending by means of ropes attached to a steam-engine. Forty cars per day, laden with valuable merchandise, were worked over this novel tract by the above means, and were propelled across the ice by two-horse sleighs, the towing-line being a rope of the size of a man's finger.

(To be concluded.)

A Quarter of an Hour with a Bad Book.—About twenty-five years ago I formed a most intimate acquaintance with a young man of fine education and commanding talents, and we soon became bosom friends. One morning after school, at a street-corner, he handed me a book, which he said he could loan me for only one quarter of an hour. We stood at that corner for a few moments, while I looked at the obscene pictures and read a few pages in that polluting volume. I handed it back to him, and never saw it again; but the poison took effect, "the sin left its mark." I cannot erase the effect of the impure thoughts which in that quarter of an hour that vile book lodged in my heart, and which, may God forgive me, I harboured there. I can and do pray against the sin, and trust by God's grace yet to conquer it; but it is a thorn in my flesh, and still causes me great bitterness and anguish.

Young men, as a lover of your souls, I tell you in all sincerity that there is nothing which I would not willingly give to have the veil of oblivion cast over the scenes and the sentiments of that corrupt volume, which still haunt me like foul spectres during my hours of private devotion, in the sanctuary, and at the communion table. O, what sad work did that quarter of an hour make upon a human soul! *Young men, beware of bad books, and beware also of evil companions.*

My early friend, after well-nigh accomplishing my ruin, became a dissolute man, imbibed infidel sentiments, and at last, as I greatly fear, died by his own hand. "Let him that thinketh he standeth, take heed lest he fall."—*American Messenger.*

For "The Friend."

BUSINESS.

"First month, 1815. Business, in its proper sphere, is useful and beneficial, as well as absolutely necessary; but the abuse of it, or an excess in it, is pernicious in many points of view: I cannot approve, in very many respects, of the intense degree of application and attention, which seems often to be required of those that are in business.

"There is one danger to which the man of business is particularly exposed, and which is the more alarming, because it is concealed,—I mean the danger of gaining a worldly spirit, and of losing that tenderness of conscience, that love of religion, which is the ground of all virtuous conduct. The person who is engaged in worldly affairs, whether the sphere of his engagements be large or small, should be most anxiously attentive to his eternal interests, that they also may be kept in a flourishing, profitable condition; if this be not the case, the saying of William Penn is true in regard to such a one, 'He that loses by getting, had better lose than gain.' He should also be very jealous of his scanty leisure, that he may not omit to employ some of it in his daily duties to his Maker, and in the constant cultivation of that holy frame of mind, which, *it is the slow though sure tendency of the spirit of the world, silently to counteract.* For I own I tremble at the very idea of any man's mainly pursuing his perishable interests, when perhaps in one short moment he is gone. How inconceivably terrible and exquisite must be that man's anguish, whilst on the very brink of going he knows not whither, to think that he has given up an eternity of bliss, for the empty grasp of that which is not."

As I perused the preceding extract from the "Letters, &c., of John Barclay," I thought the sentiments therein contained might be profitably revived at this time; and should any on reading it, feel that they have need to fear lest they be swallowed up by the things of time and sense, may they be willing to pause and seriously inquire what profit it will be to them should they gain much wealth if the immortal soul is unprepared for an admission into the kingdom of rest and peace.

There may be some, who, being connected in business with those who seem to be living for this world alone, are in great "danger of gaining a worldly spirit, and of losing that tenderness of conscience, that love of religion," which in earlier life have been theirs. May these think seriously of their present situation, and though difficulties, which they may deem insurmountable, lie in their path, and prevent them from disconnecting themselves from their present engagements, yet, as these cry mightily to Him whose we are and whom we ought to serve, he will make a way of escape for them, if they are only watchful enough to see it, and humble enough to embrace it, when it is manifested to them.

How often do we see those to whom talents have been entrusted, burying them as it were in the earth, while their business occupies their thoughts and time almost to the exclusion of everything else. Social and religious duties are neglected, the heart becomes callous, the temper is soured, the affectionate and social feelings are blunted: and should such attain the height of their wishes and find themselves possessed of much of this world's goods, yet a void will be felt which nothing earthly can supply, and the language will be applicable, "He gave them their request, but sent leanness into their souls."

How different is the state of those, who are endeavouring to "seek first the kingdom of God and his righteousness," trusting that all things necessary will be added. These, though they may have many difficulties to contend with in their passage through the wilderness of this world, have a sustaining hope that there is treasure laying up for them in Heaven, "where neither moth nor rust doth corrupt, and where thieves do not break through nor steal."

No doubt there are many who often feel weary of this world, and regret that so much of their time is occupied in attending to those things which perish with the using; still they see no how it can be otherwise. Let these endeavour as much as possible to live loose from these necessary cares, and whilst engaged in them seek to have their thoughts lifted above, that thus "sweet incense may ascend from their hearts to the throne of glory."—B.

Eleventh month 24th, 1854.

ARCTIC FOXES.

A little white fox was caught alive in a trap this morning. He was an astute visaged little scamp, and although the chains of captivity, made of spun yarn and leather, set hardly upon him he could spare abundant leisure for bear bone and snow. He would drink no water. His cry resembled the inter-paroxysmal yell of a very small boy undergoing spanking. The note came with an impulsive vehemence, that expressed no only fear and pain, but a very tolerable spice of anger and ill temper. He was soon reconciled however. The very next day, he was tame enough to feed from the hand, and had lost that startled wildness of look, which is supposed to characterize his tribe. He was evidently unused to man, and without the educated instinct of flight. Twice when suffered to escape from the vessel, he was caught in our traps the same night. Indeed, the white foxes of this region—we caught more than thirty of them—seemed to look at us with more curiosity than fear. They would come directly to the ship's side; and, though startled at first when we fired at them, soon came back. They even suffered us to approach them almost within reach of the hand, ran around us, as we gave the halloo in a narrow circle, but stopped as soon as we were still, and stared us inquisitively in the face. One little fellow, when we let him loose on the ice after keeping him prisoner for a day or two scampered back again to his cubby-hole on the deck. There may be matter of reflection for the naturalist in this. Has this animal no natural enemy but famine and cold? The foxes cease to visit us soon after this, owing probably to the uncertain ice between us and the shore; they are shrewd ice-masters.—*Dr. Kane's Arctic Narrative*

For "The Friend."

The Unity of the Human Race.

Some of our zealous and exclusive devotees of ience, from whom better things might have been xpected, have latterly shown a disposition to ountenance the notion that the human family re not all descended from one parent, according o the clear testimony of the Bible, and the uniersal belief of all ages and nations; but that ere is an original distinction of race, having its asis in a more or less perfect development. The llowing observations of one of our daily papers reference to this subject, are alike forcible and ist:—

"Professor Owen, the scientific successor of uvier, has just delivered an exhaustive lecture n the unity of the human race. It was pronced on the occasion of the twenty-fourth eeting of the British Association for the adancement of science, the text being, "The nthropoid Apes," which is that species of the pe family most nearly approaching to the human mily. He showed, from the teeth and other haracteristics, that it was impossible that such a reature could ever have been changed gradually nto one of a higher order, as is the theory of the otorious "Vestiges of Creation" school. "The hole burden of facts," he said, "must stand in ontravention of the hypothesis of transmutation nd progressive development." He declared that he unity of the human species was demonstrated y the constancy of those osteological and dental haracters, to which the attention is particularly irected in investigating the corresponding chaacters in the higher species of apes. He added, hat all the localities in which human bones ad been found in doubtful positions, geologically onsidered, had showed proofs of disturbance, or ate formation, and that no such fossils had been iscovered in regularly deposited layers of any livision of the tertiary series, which had remained ndisturbed. A comparatively full report of the ecture appeared in the London Athenæum for September 30th.

"It has become fashionable among a certain set of would-be-*savans*, and even among a few men of eal scientific attainments, to set aside the concurent belief of all ages, countries and races in the nity of the human race, and to teach that man s but a developed monkey. The very absurdity of the doctrine recommends it to these very illuminati, for particular classes of thinkers snap up paradox as eagerly as a trout darts at a red rag. Shallow-minds, one-sided minds, and excitable minds in search of novelty, easily fall into the error that what is new must be progress, that what is odd must be a discovery, that what violates all past experience must be reform. It is also unhappily the tendency of purely scientific studies to narrow the compass of thought to a particular view, just as the traveller, who came in front of one side of the gold and silver shield, maintained that the buckler was entirely aurifrous. An anatomist, unless a comprehensive thinker, is very apt to run into materialism. A student of psychological phenomena, if of a confined intellect, generally becomes a believer in spiritual rappings. A geologist is too apt to forget the great first cause in his examination of secondary causes. As miners, by working in the dark under ground, get to be weak in vision and short in sight, so men who study science exclusively, and especially some one pet branch of science, frequently lose that broad sweep of the intellect, which, like the aim of the soaring eye, takes in the whole universe of facts at a glance.

"The minds of largest scope, however, never fall into this error. All the greatest names in science have repudiated the shallow, immature and skeptical theories of the day. Bacon, Newton, Cuvier, and scores of other first-class thinkers, might be adduced as proofs of this. In our own time, Professor Owen, who is confessedly the leading mind in his department of science, takes similar ground against this absurdity of the nineteenth century—a diversity of race. But what is more, his range of studies peculiarly fit him to pronounce an opinion on this subject; nay, actually render him pre-eminently capable of giving a correct judgment. He has demonstrated, with the very arguments of this new-fangled school, that there is no truth in the theory of progressive development. He has turned the guns of the transmutationists upon themselves. But it is ever so in the history of science. Some poor, mole-blind observer, standing on the shore of the great ocean of truth, picks up a pebble, and being able to see the mighty waters but indistinctly, maintains, against all past experience, that the sea is made of little stones, and exhibits his specimen as a proof. By and bye, however, comes along a savan of more extended vision—a Professor Owen in one walk, or a Hugh Miller in another—and lo! the pretty bubble of the fool is blown aside with a breath."

RELIGION.

Pure religion and undefiled before God and the Father is this: To visit the fatherless and widows in their affliction, and to keep himself unspotted from the world.—*James* i. 27.

Religion must be our business, then it will be our delight.—*J. Mason.*

> Religion is the chief concern,
> Of mortals here below;
> May I its great importance learn,
> Its sovereign virtue know. *Fawcett.*

Religion is the tie that connects man with his Creator, and holds him to his throne. If that tie is sundered or broken, he floats away a worthless atom in the universe, its proper attractions all gone, its destiny thwarted, and its whole future nothing but darkness, desolation, and death.—*Daniel Webster.*

> Religion! Providence! Another state!
> Here is firm footing; here is solid rock!
> This can support us; all is sea besides;
> Sinks under us, bestows, and then devours.
> His hand the good man fastens on the skies,
> And bids earth roll, nor feels her idle whirl.
> *Young.*

Too many persons seem to use their religion as a diver does his bell, to venture down into the depths of worldliness with safety, and there grope for pearls, with just so much of heaven's air as will keep them from suffocating, and no more; and some, alas! as at times is the case with divers, are suffocated in the experiment.—*G. B. Cheever, D. D.*

> But true religion, sprung from God above,
> Is, like her fountain, full of charity;
> Embracing all things with a tender love;
> Full of good-will and meek expectancy;
> Full of true justice, and sure verity
> In heart and life. *Henry Moore.*

The humble, meek, merciful, just, pious, and devout souls are everywhere of one religion; and when death has taken off the mask, they will know one another, though the divers livery they wear make them strangers here.—*Penn.*

> Religion bids all sin depart,
> And folly flies her chastening rod;
> She makes the humble, contrite heart,
> A temple of the living God. *Monigomery.*

Selected.

CHRISTIANITY.

"The externals of Christianity, and the different interpretations of the Scripture, have been made pretexts for all the contentions, divisions and cruelties, which have rent the church into so many parts; and nothing short of an individual attention to the grace and good Spirit of God, is likely ever to unite them. The effect of this on the heart and mind, is to illuminate the understanding, and to destroy those evil propensities of corrupt nature; from which all contrariety, discord, and persecutions originate: it is, therefore, the only way to unity and peace; because what it leads one man to do or say, it never leads another to oppose or contradict.

"So that no one can possibly give any more certain proof of faith, in the outward coming and ministry of Christ, than by a simple and entire dependence on the influence, instruction and aid of the Holy Spirit; seeing it was to this he referred his disciples and followers, for all the intelligence respecting him that was necessary for them. He, therefore, who so depends on this unerring guide, as to refrain from everything, however specious, which this does not present to his mind, and faithfully adheres to its manifestations and guidance, is a true believer in, and real follower of Christ.

"Behold the shepherd's boy! Under the shepherd's direction, he watcheth the flock by day, and foldeth them by night—this is his constant and only employment; save that when he espies a traveller on the road, he runneth to open a gate; or, if the traveller be a stranger, to answer his inquiries about the way. But lo! a storm suddenly arisesh; some of the sheep are scattered, and in their fright flee for shelter to the forest: moved by anxiety for these, he seems to forget the flock, and pursueth the stragglers; but alas! in seeking for them, he loseth himself in the mazes of the wilderness. Ah! poor shepherd's boy! What now canst thou do? Will the master, when he finds the flock entrusted to thee deserted, condescend to follow thee, and inquire into the cause? Yea, poor shepherd's boy! have hope;—the shepherd, too, misseth the wanderers. He apprehendeth the occasion of thy absence; and, having himself traversed all the perplexing ways of the wilderness, not only can, but will find thee out. He will not upbraid, but comfort and restore thee; for he not only knoweth the proneness of his sheep to wander, but also the difficulties of thy station, and no one either tendeth his flock, or openeth or shutteth a gate to travellers, without being rewarded with the smiles of his presence."—*Dyllwyn.*

Magnetic Observatory.

The Washington Globe states that during the year a magnetic observatory has been constructed on the grounds of the Smithsonian Institution. "It principally consists of an underground room, enclosed within two walls, (to insure an equal temperature,) between which a current of air is allowed to pass, in order to prevent dampness. This observatory has been supplied with a set of apparatus for determining the continued variations in direction and intensity of terrestrial magnetism. By an ingenious application of the photographic process, the invention of Mr. Brooks, of England, the instruments are made to record, on a sheet of sensitive paper moved by clock-work, their motions. It is proposed to keep these instruments constantly in operation, for the purpose of comparing results with other observations of a similar character in different parts of the world, and also for the purpose of furnishing a standard

to which the observations made at various points by the coast survey, and the different scientific explorations which are now in progress in the western portions of the United States, may be referred, and with which they may be compared."

For "The Friend."

"MINUTES OF ADVICE."

The minutes of advice issued by our last Yearly Meeting held in Philadelphia, were, no doubt, salutary to many of its members, to whom the cause of truth is still dear, and who are endeavouring to be faithful in their day; but to whom the aspect of things looks discouraging, and who have their low seasons on account thereof; yet are nevertheless willing to "endure hardness," and to press through difficulties for the "hope of the promise made to our fathers." These, notwithstanding the degeneracy amongst us, really believe that the doctrines and testimonies upheld by the early Friends, were given to them to bear by the great Head of the church himself; and that the institution of our discipline was in His ordering. And they cannot but admire with what dedication they gave themselves up to follow the pointing of the Divine finger, "through good report and evil report;" of the latter of which they seemed to experience the larger portion. Yet they were not without their comfort, their "rejoicing being the testimony of their conscience, that with simplicity and godly sincerity, not with fleshly wisdom, but by the grace of God they had their conversation in the world." Of the inward joy and consolation of the Holy Spirit they were made abundant partakers; and this joy nothing was permitted to take from them.

They felt the true spiritual belief to be much wanting, and were, therefore, concerned to adhere to, and to teach sound doctrine, being made experimental witnesses of the sufferings that follow an unreserved dedication to the Lord in all things. It was principally in their adherence to the leadings of his Spirit in things small in themselves, but in which they dare not be unfaithful to please the pride of man, that they were made partakers of such a large share of suffering, which they underwent joyfully for his sake; and it is my belief that if we have to suffer in the present day for the cause which we have espoused, our greatest share will be for our unflinching adherence to those things which the truth leads into, in opposition to that Spirit which rules in the unregenerate heart of man. Though we are called unto sound doctrine, and the enemy may, and has endeavoured to lay us waste in this respect, wherein I trust he will be foiled, and will not be permitted to prevail, yet he can try us with other snares; and I believe he is endeavouring to make some loose their love, by rendering them lukewarm in the support of those testimonies, which are the offspring of "the faith once delivered to the saints."

With what grief do we sometimes hear excuses made for departures, under the plea "that our doctrines are beset, and these are of the most importance;" "and there are such and such other defects amongst us," intimating that "if discipline were carried out in these, we would find many culpable," &c. O, miserable subterfuges, thus to endeavour to excuse one error by another, and to palliate faults by such flimsy excuses, esteeming such subjects as are treated on in our late "Minutes of Advice," "little things." O, that none may be carried away by such dissimulation, and so be induced to give way through fear, instead of standing fast to that, to which we have been most surely called; even though such reasonings may come from sources we were looking to for help instead of hindrance, thus increasing the suffering of the honest-hearted; but the Lord is sufficient for his own work, and will choose his own workmen, and lay his yoke on whomsoever he will, and enable to bear it according to his own design, and prosper it in the hands of his servants, as they look to him alone for counsel and strength; and all that may be arrayed against them, crying, "peace where there is no peace," will not be able to deter them from that which he has called for at their hands.

These exercised ones are, with their superior meeting, "brought under much concern, in consequence of the increased expensiveness and show, which are gradually obtaining a place among Friends at the time of burials," "the costliness of the materials, and the unsuitableness of the attire, in which the lifeless body is arrayed, as if to make it a spectacle for beholders, and to gratify the pride of the living," "the needless expense," "and large entertainment," "as though it was intended to make the occasion one of vain show, instead of a solemn opportunity." The resort to fashionable "places of interment," "where customs are sanctioned, which are at variance with our well known testimonies," thus "opening a door to weakness," "and preparing the way for departures from those salutary restraints, which in the wisdom of truth have been placed around our members, and which have so evidently tended to preserve them in a conformity to our religious principles and practices."

Will not such as are concerned for the principles of the society, value these "salutary restraints, which in the wisdom of truth have been placed around our members?" "and be willing to conform to the regulations of society in this respect?" and be "engaged to discourage the practice" of introducing monuments into our grave-yards, endeavouring, "in the spirit of christian love," "to carry into effect," that which is called for at our hands? being willing to suffer, if need be, the reproach and opposition of the world, and of unfaithful ones amongst ourselves, not doubting but he who has hitherto helped us, will enable us to do, and to suffer for his sake. We ought to be willing not only to do, but to fill up our measure of suffering for the body's sake. Our early Friends suffered much, even to the laying down their lives for the Lord's sake, and for one another. And though our suffering may not come in the same way, ought we not, nevertheless, to be willing to bear our portion in whatever way it may be permitted to overtake us? They gave their cheeks to them who smote them, and failed not to meet together publicly to manifest their allegiance to the King of Kings, though scoffings, buffetings, and prisons awaited them; and the very children in some cases met together, when their parents were taken away to noisome dungeons, being made partakers of the marvellous love, which the Father had bestowed on them, and which, through all, was their comfort and support. And nothing short of his power inwardly revealed, could have thus supported them joyfully in the midst of tribulation. The day may come, when, if we are not so supported, we must fall, therefore let none despise the day of small things; let none fail to show on whose side they are, when the Master calls for it, or when buffetted or stricken. Let us not deny him for fear of suffering, for this will not avert it; some thing will betray us, and we may be allowed to go still further, and heap one enormity upon another, like poor Peter who began to curse, and to swear, to show that he was not "one of this man's disciples," until the warning of which the dear Master had told him, was permitted to remind him of his denial. O, that none may go on rebelling, and thus deny their divine Master, by slighting of him in his humiliation; for, in the language of the "Advice," "the Lord's mercy, and goodness, and forbearance have been abundantly extended to us; He has made known his testimonies with clearness, and to the *obedient* has given wisdom and strength, to hold them up with convincing brightness to others. Though we are a rebellious people, and he has permitted afflictions to overtake us for our chastisement, and has covered us as with a cloud, yet, in his long-suffering kindness, we believe the offers of his love and help are still extended; and if we cleave to the Lord with full purpose of heart," to serve him, he will "turn our captivity as the streams in the south." "He will again give his gifts, even to those who have been rebellious, and will beautify the place of his sanctuary, and make the place of his feet glorious." And the "Advice" continues that "we desire to encourage the honest-hearted ones, who have been 'baptized into Christ,' and planted in the 'likeness of his death,' to lift up their heads in living faith, that his mercies are new every morning, and that as they have partaken of the 'likeness of his death,' they shall be also in the 'likeness of his resurrection.' In his time he will open a door which none can shut, and grant supplies of strength to testify of his goodness, and to invite others to come, 'taste, and see that the Lord is good; blessed is the man that trusteth in him.'"

N. C., Eleventh mo. 14th, 1854.

A New Kind of Brick.—We were shown lately an entirely new material for the construction of buildings. It is a preparation of sand and lime put into moulds, and operated upon with a most powerful press. The specimens we saw had about three times the superficial area of a common brick, though, of course, their size would depend upon the pleasure of the maker. They are made with an open space in the centre, occupying one-half the length and about one-third the breadth of the brick. Those we saw were a handsome gray colour, as smooth as dressed stone could be, and apparently as solid as granite. Their real solidity was about equal to a good burnt brick, though they had been made but about three weeks, and time and exposure are expected to harden them continually. They can be furnished as cheaply as brick, and unless some difficulty is developed with regard to them not now apparent, it seems to us they must come into active demand for building purposes. They would certainly appear as beautiful as the finest stone, and making, as they do, a hollow wall, with a smooth interior surface, they can be papered against, or painted, or whitewashed, without the necessity of lathing or plastering.—*Kenosha Tel.*

A Touching Custom.—There exists at Lhassa a touching custom, which we were in some sort jealous of finding among infidels. In the evening, as soon as the light declines, the Thibetan men, women, and children cease from all business, and assemble in the principal parts of the city, and in the public squares. As soon as the groups are formed, every one sits down and begins slowly to chant his prayers in an under tone, and the religious concert produces an immense and solemn harmony throughout the city, powerfully affecting to the soul. The first time we heard it, we could not help making a sorrowful comparison between this pagan town, where all prayer is common, with the cities of Europe.—*Huc's Travels in Tartary.*

Prayers and tears are the weapons, with which the saints have obtained the greatest victories.

RETURN—ONCE MORE RETURN.

Return—once more return,
Oh Wanderer, to thy God,
A voice yet on thee calls,
A finger points the road:—
Why wilt thou, sinful, still
The proffer'd boon disdain,
Did Jesus come to save,
Yet bleed—yet die in vain?

Return—trust not to youth,
To strength, health, wealth, renown;
Thine eyelids may be shut,
Ere even this day goes down;
Where'er thy steps are bent,
Death hovers by thy side,
Thou know'st not what an hour
May to thy fate betide!

Behold the mighty sun,—
He metes out day by day;
Each new moon's circlet saith,
"A month hath passed away:"
Preach not unto thy heart
The seasons, as they roll,—
"Nearer and nearer draws
To judgment-seat thy soul?"

"Return!" the promise saith,
"Hark! wayward wanderer, ho!
Thy sins, as scarlet red,
Shall white be made as snow!
Trust in the Saviour, trust,—
Against Sin's torrent strive;
Thy faith shall make thee whole;
The soul that hears shall live!

"Before the Lord cast down
The burthen of thy sin,
The old man and his deeds,
And a new life begin;
So, walking in the light
By revelation given,
Through darkness and through death,
Thy path shall lead to heaven!"

THE WIDOW'S GOD.

In this lone hour of deep distress,
When heavy sorrows round me press,
Encouraged by thy gracious word,
I trust thee as the widow's God.

A husband lies in death's embrace,
The grave is now his resting place;
O, as I pass beneath thy rod,
Reveal thyself the widow's God.

Assuage my grief, remove my fears,
Suppress my murmurings, dry my tears,
Help me to own the chastening rod,
And bless thee as the widow's God.

Be thou my counsellor and stay,
Protect by night, and guide by day;
Then, as I travel life's rough road,
I'll praise thee as the widow's God.

An Eccentric Will.—Mr. Railing, of New Hampshire, Eng., was among the victims of the last railroad accident between Brighton and London. His heirs, after having paid him the customary funeral honours, did what all heirs do in similar cases, opened the will of the deceased, to ascertain what share each was to have in his posthumous liberalities. As he had never given a penny to either of his relatives, during his lifetime, they expected to be the richer now that he was no more. One may imagine the surprise caused by the first line of the will.

"This is my testament. I give and bequeath all my goods, present or future, movable or immovable, in England, or on the continent, to that railroad company on whose road I have had the happiness to meet with death, that blessed deliverance from my terrestrial prison."

Further on, the testator gives his reasons for his bequest. The idea had taken firm possession of his mind that he was destined to die a violent death, and the most desirable one in his view was that caused by the explosion of a locomotive. He travelled, therefore, constantly on the railroads in England, Belgium and France. There was not a station where he was not known. All the conductors were familiar with his peculiar costume. He had narrowly escaped death several times. Once, he was shut up in a car under water, another time he was in the next car to the one that was shattered, and he described with the greatest enthusiasm those terrible accidents, when he saw death so near, without being able to obtain it. Disappointed in Europe, he went to the United States. He made frequent excursions in boats on the Ohio, the Mississippi, the Ontario, and the Niagara, but notwithstanding their frequent explosions, he returned with a whole skin. He was destined to be crushed under a car of the mother country. It is said that the relatives will attempt to break the will on the ground of insanity, but it is probable that the railroad will win the suit in spite of the proverb that the murderer never inherits from his victim.—*Ledger.*

For "The Friend."

The Spirit of Prayer.

The spirit of prayer, and the spirit of the world—which leads from it—are as opposite, as light to darkness, or life to death, and where one is found to prevail, the other is excluded. "To be carnally minded is death, but to be spiritually minded, is life and peace." The soul that is full of the riches, the honours, or the wisdom of the world, feels not its need of heavenly treasure, and is not, therefore, inspired with heavenly desires; but being content to embrace this present world, the fire of holy zeal is suffered to be extinguished, giving place to a sorrowful unconcern, which leads to darkness and doubt, and finally, to the sacrifice of all hope in Divine mercy, through the mediation and intercession of the Saviour.

And thus it has been, in the march of worldly prosperity, that we, as a people, have become exalted above the pure witness for truth in the heart, and forsaking our *first Love*, and not keeping ourselves from idols, until He, who has so long borne with our backslidings, has arisen, to chastise us, that we may render him the honour and worship which we profess to be due to him alone. And now, if we continue in the way of unrighteousness, by turning away from Him who smiteth us, and who is still calling us with a high and holy calling, what marvel, if he should continue to scatter us, until the name we profess shall become a by-word and a reproach among the nations around about us?

But, if we should be happily awakened to a sense of our degeneracy and danger, *before* it is too late, and led *in sincerity* to crave mercy of the great Head of the church, saying, in our hearts, "Spare thy people, O Lord, and give not thine heritage to reproach," he will doubtless arise for our help, and scatter the enemies that are besetting our way, and destroying our peace. In order that this may become the availing exercise of our spirits, we must be humbled, under a living sense of our captivity to the love of self, which is leading us to seek the honours, the pleasures, and the professions of this present world, to forsake the fountain of living waters for broken cisterns, which can hold no water.

How formal and lifeless is that worship, which is performed by a divided heart, in which the service of God and of mammon is attempted! and how much of this mixture do we find amongst us! Who, then, can wonder at the appearance of discord and confusion, as the revelation of the wrath of God, against the holding of truth in unrighteousness? And how can we expect to escape condemnation, if we continue to honour God with the lip and the tongue, while the heart is far from him—being separated by the love and worship of other things—seeking the honour which cometh from men, more than the praise of Him whom we profess to follow.

If our hearts are estranged from the *meekness, self-denial* and *forbearance*, of pure wisdom, and the exercise of humble and fervent supplication before the throne of grace, for help and preservation, how can we expect to receive the Divine blessing, which would unite our hearts unto God, and one unto another, in the bond of heavenly love? How can we look for a *united* travail of spirit, for the advancement of the blessed cause of truth and righteousness, in the earth? While our own wills, and self-interest, are served, we can but look for a dividing, party spirit, which will scatter many from the blessed fold of unity, into which our worthy forefathers were mercifully gathered, through faithfulness to the Divine will, as revealed in their own hearts. They manifested that they were the friends of Christ—their inward teacher—by obedience to his commandments; and preached the gospel not only by the ministry of the word, but also by their holy lives and conversation, in which they conformed to the example and will of Him, whom they followed in the way of cross-bearing and self-denial.

But how is it with us, who profess to be walking in the same narrow path which they had trod before us? Are we submitting our necks to the yoke of the cross, to the denial of self; or have we not rather become, in our own estimation, wiser than they, in counting the gain of wordly wisdom and riches, instead of regarding the surrender of *all our earthly passions and crowns* at the feet of Jesus, as the only condition of true discipleship? Have we yet arrived at that happy attainment, in which we truly feel, and openly acknowledge, with him who was first called by our name, that "*We are nothing, Christ is all?*" Or are we indulging that feeling of self-sufficiency which says in the language of conduct, "Who hath made thee a ruler and a judge over us?" and in which the exercise of living prayer unto God, that he would so direct our steps, as to lead us into "the unity of the Spirit, in the bond of peace," is rarely if ever felt. Those who are true Quakers have much to hope for, in the belief, that whatsoever they may ask in the name of Christ, shall be granted; and therefore no cause for discouragement in their endeavours to be faithful to Him who hath called them unto *watchfulness and prayer.*

Singing Birds for America.—Amongst the "passengers" by the Washington steamer, which left Southampton on Fourth-day, 25th ult., with the United States mails, were upwards of a thousand singing canary birds. A cabin was fitted up for them, close by one of the paddle-boxes. Almost every one of the birds was in a separate cage. This cage is dome-shaped, and is of basket-work, about eight inches long and four inches in height and width. Canary birds are exported in large numbers from Bremen to New York by the Southampton steamers, and they are collected from all parts of Germany. Some of the canaries exported from Bremen are famous for their song, particularly those from Saxony, and others are distinguished for their shape and colour. The latter kind of birds are half as long again as the ordinary canary; their bodies are slender and arched, like many of the birds of prey. They have long legs, their colour is a rich yellow, and their heads are beautifully spotted. Some of the birds taken out in the Washington had won prizes at Antwerp.

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

JANE BILES.

(Continued from page 94.)

The visit of William and Jane Biles to England and Ireland, appears to have been well accepted by Friends there. They returned towards the close of 1702, having been absent from America something under two years. In giving an account of their labours to their Friends at home, they expressed the satisfaction they had had in the performance of their duty in England and Ireland. In the language of the minute made on the occasion, in the meeting of ministering Friends, "the Lord being with them to furnish and uphold them in their service there, and to bring them again in safety to us, to their and our mutual satisfaction. Praised be his name forever."

Jane appears to have been strengthened in her bodily health, so as to perform the service assigned her abroad, and after her return, we have evidence that she was for several years able to attend to her religious duties. She frequented her own Yearly Meeting, and we find her at the Yearly Meetings for worship, which were held at divers places. Her concern for the promotion of the cause of Truth, led her to open in the Select Yearly Meeting, in First month, 1706, the case of a valuable Friend who had gone to a marriage consummated at the house of one who had separated from Friends, and who still continued in the separation. Jane took this opportunity of relieving her mind, and asking the judgment of the meeting, because the Friend was himself present, and could say whether her statement was correct, and offer such justifying circumstances as the case, in his apprehension, admitted of. The Friends, after listening to her statement, and her friendly charge against him, heard him fully in defence, "and having weightily considered the matter, it was the sense of the meeting, that he was condemnable therein, and that he was mistaken in the motion that led him thereto."

In examining the ancient records, and journals of members of our Society, the simplicity and faithful sincerity of the *old times* strikes us very pleasantly. Their honest, plain dealing one with another, was the effect of love—true christian love, and was many times, if not mostly, received in the same spirit. They do not appear to have thought that because a person did not unite with the actions or views of another, that it indicated any want of love, to say so. One of the prevalent errors of the present day, is the opinion, that a want of unity indicates a want of love, and that, to say we do not unite with what another has done or said, is tale-bearing and detraction. There is an abundance of suspicion expressed of a want of love in others, and it would be well for all, before expressing such a suspicion to consider, whether the feeling itself indicates an overflowing of the charity that thinketh no evil.

The last service I find Jane Biles engaged in, was in the year 1706, but doubtless she continued faithfully labouring as long as strength and health were afforded. The minute of her Monthly Meeting states, that she was "buried the 21st of the Tenth month, 1709."

WILLIAM BILES.

William Biles came from England to New Jersey, about the beginning of 1681, and having purchased land of Governor Andros, he soon after settled west of the river Delaware, in a part of what is now Bucks county. He appears to have been a married man, and had at least one son, called by his own name. Before settling on his new purchase, he appears to have resided a time at Burlington, and signed the address of the Monthly Meeting at that place, to the Yearly Meeting in London. The Monthly Meeting which issued the address, was held early in Twelfth month, 1680, but William Biles and a few others who were not then present, signed it previous to its being forwarded to England.

The next year after his settlement, he was chosen a member of the assembly, and during the year 1683, was diligent in attending to the duties of that station. In 1685, he was appointed one of the justices of the peace for Bucks county, and the next year was again in the assembly. From this time until the time of his death, he frequently represented his county in that body, and was esteemed a valuable member thereof.

His second wife was Jane Atkinson, whose life we have just given, and in her he had a faithful help-meet, and one well calculated to assist him on his journey heavenward. They were married in the year 1688, and appear to have often travelled in the ministry of the Gospel. He was one of the members of the Select Meeting, who signed the declaration against Keith, and he seems always to have been a clear-headed advocate of the principles of Quakerism.

(To be continued.)

Selected.

Gentleness.

"The wisdom that is from above is gentle." Little as this disposition is thought of by many, we find it considered in the holy Scriptures as a characteristic of the *true* Christian. *This* gentleness, indeed, is to be distinguished from passive tameness of spirit, and from unlimited compliance with the manners of others. That passive tameness which submits without a struggle to every encroachment of the violent and assuming, forms no part of Christian duty; but on the contrary, is destructive of general happiness and good order. That unlimited complaisance, which on every occasion falls in with the manners and opinions of others, is so far from being a virtue, that it is itself a vice, and the parent of many vices. It overthrows all steadiness of principle, and produces that sinful conformity to the world which taints the whole character. True gentleness renounces no just right from *fear*; it gives up no important truth from either *fear* or *flattery*; it is not only consistent with a firm mind, but it necessarily requires a *Christian steadiness* of *spirit*, and fixed principle, in order to give it any real value. It stands opposed to harshness and severity, to pride and arrogance, to violence and oppression: it is properly that part of charity which makes us unwilling to give pain to *any of our brethren*; and while it corrects all asperity of disposition and manner, it gives strength, magnanimity and sweetness.

To render Wood Incombustible.—A very excellent way to render wood incombustible, is to soak it in a strong solution of alum and the sulphate of copper. About one pound of alum and one of the sulphate of copper should be sufficient for 100 gallons of water. These substances are dissolved in a small quantity of hot water, then mixed with the water in the vessel in which the wood is to be steeped. The timber to be rendered fire-proof can be kept under the liquor by stones, or any other mode of sinking it. All that is required is a water-tight vessel, of sufficient dimensions to hold enough liquor to cover the timber, which should be allowed to steep for about four or five days. After this it is taken out and suffered to dry thoroughly before being used. Various substances have been prepared for the purpose; but, in answer to a correspondent, we present the above as being equal to any that we are acquainted with.—*Late Paper.*

For "The Friend."

Review of the Weather for Eleventh Month, 1854.

The Eleventh month has not been marked with sudden changes of weather this year, as is sometimes the case, though the average temperature was not quite so high as last year. There was but little appearance of the genuine Indian summer; yet it was mostly quite favourable for those who depend on their daily out-door labour for sustenance for themselves and families.

In this vicinity, there have been no storms to remark, but there are accounts of severe ones in different places. It is stated that great damage was done in various parts of the province of New Brunswick, by a storm, on the 13th and 14th. The rivers and streams overflowed and deluged the lowlands, swept away many bridges, &c. There was also quite a gale at St. Johns, Newfoundland, and in other places along the coast.

No snow has fallen here yet, except a few spits on the 20th. There has been considerable, however, in Canada and the Northern States. At Concord, N. Hampshire, there were ten inches of snow on the 30th. Accounts from N. York and Boston of the 30th say, "No snow yet, but freezing cold."

The Ohio river, which was so nearly dried up a short time ago, has again risen, so that boats in great numbers are now running.

It is thought the table below will be sufficient without further remark on the weather at this place. There was a brilliant aurora on the evening of the 18th, in the north-east, being too cloudy in the north to be visible there.

The average temperature for the month was near 42°,—about 3° lower than Eleventh mo. of last year. Amount of rain, 3.13 inches.

The mean temperature of the three autumn months, was 54°,—$\frac{3}{4}$ higher than for the same time last year. Amount of rain for the three months just ended, 8.896 inches,—for the corresponding time last year, 11.645 inches.

West-town B. S., Twelfth mo. 1st, 1854.

30	29	41	35	29.48	N. W.	3	Do.

For "The Friend."

The Truth is Unchanged and Unchangeable.

Let none be concluding, because those are and under the profession of Truth, whose eyes e god of this world hath blinded, and led them to the ditch of covetousness—which is idolatry -that the principles of our profession are in any gree changed, or altogether deserted; for though e love of other things has, in many instances, en suffered to choke the good seed, which has en sown in the hearts of those who profess with , and who may conform to plainness of dress d language, and the attendance of religious eetings; yet there are others, it is humbly be ved, in whom the seed of life is known to reign d have dominion, who can testify from living xperience, that those who are faithful to the easure and manifestation of grace in their earts, do not follow cunningly devised fables, ut substantial truth.

It is no new thing to find the professors, and en advocates of truth, covering themselves with covering, which is *not* of His spirit, whom we rofess to follow, which has always been an occa ion of stumbling to the weak; yet let it be re membered, that against the fruits of the Spirit— hich are love, joy, peace, *long-suffering*, *gentle ess*, goodness, faith, meekness, and temperance— here is no law.

Because hypocrisy in any, or all its forms, is ound amongst us, it is no evidence against the eality of truth, which has ever been mocked by oth professors and profane. But by far the ost dangerous enemy, is the secret hypocrite, ho is betraying, as it were, the Truth into the ands of its enemies—by making a holy profes ion, while giving way to evil practices—and hereby stumbling honest inquirers after the way f holiness, which is the way of pleasantness and eace.

The higher our profession, the greater is our esponsibility, but it does not follow that the reater is our faithfulness. Are we found, in ife and conversation, upholding the standard which our worthy forefathers not only raised, but aithfully upheld? for it is written of them that hey *feared God, and hated covetousness*, and that having walked in the light of the Spirit, to the nd of their journey, they laid down their heads n peace. It was to the heart that they looked hemselves, and referred others, for the spring of every evil, as well as the working place of the Spirit of Christ, for the correction of all unrighteousness.

But how is it with us? Are we not looking out of ourselves for the occasion and remedy of discord and contention, instead of searching within our own hearts, for the cause of the confusion and sorrow in which we are involved? Are we not looking to others as the occasion of the difficulty, and for deliverance from it, rather than endeavouring to turn our attention inward, to search out the root of bitterness in ourselves, and to give ourselves up to fervent and humble exercise of spirit, on our own account, as well as that of others, that the great Head of the church would be pleased in his infinite love and mercy, thoroughly to purge us from every form of enmity, and unite us together in Him?

The shakings which we are experiencing are, no doubt, designed to try the foundations of all, and those who are disposed to forsake the Truth because of its reproach, may be compared to the chaff which the wind driveth away. It is lamentable, indeed, to behold the departures from our Christian profession, which are found amongst us by the indulgence in a worldly spirit which betrayeth into anger, malice, envy and strife, and where these are, there is confusion and every evil work. But let it be borne in mind, that these *are* the fruits of the spirit of darkness, which stands opposed to the Spirit of Christ, which we profess to follow. It is *our sins* that have separated us from Christ, and one from another; and it is only through repentance and the forgiveness thereof that we can ever be restored to "the unity of the Spirit in the bond of peace."

"The danger in society, doth not lie so much in this, that some may have a differing view in some things from the general sense; as it doth in this, namely, when such that so differ, suffer themselves to be led out of the bond of charity, and labour to impose their private views upon the rest of their brethren, and are offended and angry if it be not received; this is the seed of sedition and strife, that hath grown up in too many, to their own hurt; therefore beware of it, and seek not to drive a matter on in fierceness or in anger, nor to take offence unto your minds at any, because what seems to be clear to you, is not presently received. Let all beware of their own spirits and natural tempers, and keep in a gracious temper, *then* are ye fit for the service of God, whose house ye are, as ye keep upon the foundation that God hath laid."

Now, as we are favoured to behold the difference between profession alone, and the real principle of Truth, let us be encouraged to manifest our faith by our works, and not by an empty profession be deceiving ourselves, and stumbling others; for we are each one of us accountable for our faithfulness to the measure and manifestation of grace in our own hearts, and no profession however high, can screen us from the judgment of Him who is of purer eyes than to behold iniquity. "The hope of the hypocrite shall perish, but they that trust in the Lord shall never be moved."

Discoveries in Science and Art.

There is a quarry of white sandstone near Edinburgh, upon which rests a thick bed of dark slate, over which the hot trap must have once flowed, and thereby was subjected to a sort of natural distillation. This found its way into the crevices of the white stone below where it is now found. It is a light, wafy substance, varying from the colour of gamboge, to that of dark amber, melts at the same temperature as beeswax, which it equals in hardness, and burns with a bright flame. Some of the shales of the orclite are very rich in inflammable matter, and yield in the retort, oils, naptha, and wafy substance known as paraffine. Of this, candles are made equal to wax, and extensive works have been recently erected in England and Scotland for their manufacture. It is said that these snow-white candles can be made of dark Irish turf, and works are in progress with this end in view.

Thermography is the name which designates a newly discovered method for transferring figures and tracings, whether natural or artificial, to wood, calico and paper, directly from the objects themselves, provided these possess or are capable of being converted into plane surfaces. This invention is an offshoot of the mode employed in Birmingham and elsewhere for transferring raised patterns, such as lace, to metal, by means of pressure—a process called nature-printing, and which consists in taking impressions in lead, a soft alloy, gutta-percha, or other suitable material, from natural objects, a flower, feather, &c., by pressure, then obtaining metallic electro-plates from impressions, and finally printing from these electro-engraved plates in the ordinary way.

The French crystal palace covers—the ground floor—27,068 square yards; the surface of the gallery of the circumference covers 18,072—total 45,140 yards. The large room numbers 216 windows; the pavilions 192; on the ground floor there are 388 columns in cast-iron, and 816 on the second floor; the central nave has a length of 192 yards, with a breadth of 48, and its height at the entablature is 18 yards. The building has consumed 822,000 square yards of cut stone, without counting the filling stone and the mortar —4,500 tons of castings, 3,600 tons of iron, and 33,000 square yards of unpolished glass.

The recent discovery of extracting aluminum from clay, in France, is a matter of much interest in scientific circles. It is so inoxydizable, that it resists the action of air in a muffle heated to a temperature equal to that required for the assay of gold. Lead burns in the test and vitrifies at the side of the aluminum, without the latter losing any of its properties. This metal conducts electricity eight times better than iron, as well, and perhaps better, than silver; it does not alloy itself with mercury, and takes but a few traces from lead; it gives with copper slight traces, very hard and very black, even when the copper enters but 25 per cent. into the composition of the melange.

A process has been discovered by which cordage of superior quality to that made from hemp may be manufactured from cotton. It is said to be less affected than any other rope by exposure to the weather, suffers less by abrasion, does more service, is as strong, of the same size, weighs less, does not readily absorb moisture or water, and when strongly impregnated with its natural oil, resists the action of moisture for a long time; it stretches no more, if as much, as other rope, and requires no paint or tar to protect it from the weather, and though mildew may cover its surface and blacken it, it does not penetrate the body of the rope.

Selected.

Simple Faith.

"Be not afraid, only believe." Two children were standing at evening on the summit of a hill, watching the setting sun as it seemed slowly to roll along the bright horizon. Said the elder, "What a way the sun has moved since we saw it coming from behind that tree!" "And yet we remember," said the youngest boy, "we learned in this morning's lesson with our father, that the sun never moves at all." "I know we did," replied the first, "but I do not believe it, because I see that it is not so. I saw the sun rise *there* this morning, and I saw it set there to-night. How can a thing get all that distance without moving? We know very well, that if we did not move, we should remain always just where we are upon this hill." "But our father," said the other, "our *father* told us that it is the earth that moves." "That is impossible, too," replied the elder, "for we see it does *not* move: we are standing upon it now, and it does not stir, how can we pretend to think it moves, when all the time it stands quietly under our feet?" These simple ones might divide mankind between them, and carry the banner of their parties through the world from first to last; there never has been, and there *never will* be *any other division*, but they that take, and they that will not take their father's word. We may take the Scripture definition of the two parties, under what terms we please, explain them, descant upon them, write volumes to elucidate or confound them—it comes to the one simple description at last—they who *do*, and they that do *not* their heavenly Father's will. Let us not forget the *simplicity* of faith; it is the confidence which a *little* child places in his father's words. And let us remember, too, that our eternal destiny hinges on our believing or not believing.

An Illustration of Scripture.—A traveller in Syria says, that at the close of the day the roads are filled with wandering herds and flocks, and droves of donkeys, with one attendant herdsman, all returning home for the night, after pasture on the neighbouring hill-tops. As soon as they get to the outskirts of the village, each separates from the other, and unattended, pursues its way to its master's door. "The ox knoweth its owner, and the ass his master's crib."

SUMMARY OF EVENTS.

EUROPE.—News From England to the 18th.—*The War.*—The Russian despatches via Vienna, state that from the 5th to the 9th, nothing of importance had occurred at Sebastopol. The bombardment continued, but the breaches were always repaired without loss of time. The despatches from both sides say that preparations are being made for an assault. Both parties are in want of reinforcements, but the allies more than the Russians. The Russians are beginning to feel the want of ammunition. The force of the allies has been reduced by battle and disease to 50,000 men, which has caused much alarm in England and France, and the utmost efforts are being made to send instant reinforcements. All the mail steamers are taken up to convey troops. The great hospital in Sebastopol with 2000 wounded, has been destroyed by the fire of the allies, and four Russian ships of war in the harbour sunk by them. The typhus fever had broken out in the city from the large number of dead remaining unburied. Conflagrations were continually occurring from the red hot shot fired into the town, and water was getting very scarce. The Russians were preparing for street fighting, and were posting cannon so as to sweep the streets, fortifying houses, &c. Menschikoff, in his account of the 5th, admits the loss of 4000 men, and states that the loss of the allies was at least as great. Lord Raglan's despatch differs little from that of Gen. Canrobert. Three English generals were killed, viz., Sir George Cathcart, General Stranways and General Goldie, and six others wounded. He says that the Russians greatly exceeded in number those engaged on the Alma, and that their loss was enormous.

Another statement makes the English loss about 2000. The French 1500, and the Russians between 7000 and 8000. Sickness is spreading in the allied camps. The Turkish army under Oma Pacha, was in movement towards the river Pruth. A Turkish man of war had foundered at sea with the Admiral and 700 men on board; a Turkish frigate also had been lost in the Black Sea.

THE BALTIC.—The English fleet had left the Baltic. Winter had set in with unusual severity. At Dantzic the snow was a foot deep; there was much lumber and grain there ready for shipment, but no prospect of getting it off.

ENGLAND.—At Liverpool, flour had declined 6*d.* a bbl. Consols had fallen to 91¼; the demand for cotton was moderatively active.

FRANCE.—A new French loan of 500,000,000 or 600,000,000 francs, is proposed. The French troops are being withdrawn from Italy.

CANADA.—The Canadian Parliament is engaged in discussing the removal of the old feudal tenures. The lands in Lower Canada are chiefly held in manors, containing from nine to thirty-six square leagues, divided into holdings, for which latter the tenants pay a small rent, perform certain services to the lord, pay fines on its transfer, and grind their corn at the seignorial mill. Nearly five millions of acres are held in this antiquated way. The population occupying these lands, is of pure French blood, and amounts to about five hundred thousand.

SANDWICH ISLANDS.—The British Consul at Honolulu has remonstrated, earnestly, against the proposed annexation of the Islands to the United States. The King is reported to be in favour of the measure. An ice-house was being erected at Houolula, and a vessel from Sitka with 500 tons of ice, was expected to arrive soon.

The great volcano of Hawai was more active than it had been for the past five years.

UNITED STATES.—The second session of the 33d Congress met on the 4th inst.; quorums present in both houses. In the absence of Senator Atchison, Lewis Cass was chosen President of the Senate, pro. tem. The President's message was sent in; it does not present any points of special interest. The Secretary of the Treasury in his report states the receipts of the fiscal year ending Sixth mo. 30 last, from all sources, to be $73,549,705, which, with the balance in the Treasury, Seventh mo. 1, 1853, $21,942,392, gives a total for the year of $95,492,597. The expenditures for the year have been $75,354,630, leaving a balance on the 1st of Seventh mo. of $20,137,967. The amount of public debt outstanding, Seventh mo. 1, was $47,180,508. The Secretary anticipates a falling off in the customs, owing to the hard pecuity Presaty and short crops.

Railroads.—There are said to be now in progress, and likely to be completed, in the United States, over 12,000 miles of railroad. This estimate embraces only those actually under way, and, in most cases, under contract throughout. The entire cost of these various undertakings will probably not be less than $350,000,000.

The Whaling Fleet.—According to the New Bedford Mercury, the fleet in the Pacific has had only about half the average success of former years. In the Ochotsk and Arctic seas, also, the fishing has been unsuccessful. There are about 250 ships in those seas, and the report is, that they have found the whales scarce and small, and that they have been unable to obtain anything like the usual quantity of oil.

Specie in the Treasury.—The statement of the U. S. Treasurer shows that on the 1st inst., there was in the various depositories, subject to draft, the sum of $26,248,106.

Slave Trade from the East Coast.—The ship Valparaiso recently arrived at New York from Macao. On her voyage she touched at St. Helena, and found there a vessel from the East Coast of Africa, which reported 800 negro slaves on the coast, and their owners offering $20,000 for their safe carriage to Cuba, the freight to be paid by a house in *New York.*

The New Acquisition.—There is said to be a fine agricultural and mineral region within the boundaries of the Gadsden purchase, and the settlement of the territory has already commenced from California.

Chinese Testimony, not valid.—In the Supreme Court of California, a conviction for murder has been set aside on the ground that it was procured by the testimony of Chinese witnesses. The ruling of the Court was, that Chinese are not competent to give testimony against whites.

Wells in the Desert.—A joint resolution has been passed by the California Legislature, instructing the representatives of the State in Congress to endeavour to obtain an appropriation for the sinking of wells, in the Humbolt Desert, Utah Territory, for the relief of emigrants and others, journeying by that route to and from California.

Philadelphia.—The mean temperature of the Eleventh month, according to the register kept at the Pennsylvania Hospital, was 45°.4. The highest temperature was 70° on the 1st, and the lowest, 26° on the 5th. The amount of rain was 2.83 inches. Mortality last week, 169, of which 4 were from cholera.

California.—The Steamer Star of the West brings $737,000 in gold, and one week's later news. The Indian Reservation in Colusi county, was already occupied by five hundred Indians. Preparations were making for the coming season, and it was expected that about two thousand acres of wheat and barley would be raised on the reservation. The Tuolumne and Mercia rivers were swarming with salmon, and many persons were doing a profitable business on these streams, catching and preserving these fine fish.

Miscellaneous.—Russia Draining England of Gold.—It appears that notwithstanding the war, and the blockade of the Russian ports in the Baltic, England still imports, through Prussia, the hemp, hides, tallow, and grain of *Russia*, in undiminished quantities, and at enhanced prices; and also that these articles have now to be paid for chiefly in gold. Thus England is forced to supply the Czar with no small portion of the funds needed by him for warlike operations. While the war lasts, England will probably be compelled to pay Russia in this manner from twenty to twenty-five millions of dollars yearly.

Horrid Occurrence.—An item of the last news is, that the great hospital in Sebastopol was set on fire by the allied fleet, and was burned to the ground, with all its inmates—*two thousand sick and wounded men.* This circumstance is said to be passed over as quietly as possible in the French and English papers; but it is worthy of deep consideration as manifesting the savage,—nay, *demoniac* character of *war.*

The Cholera in Sardinia, this season, caused 18,872 deaths out of 37,079 cases reported to the government.

A Thriving Watering Place.—In the village of Saratoga Springs, N. Y., over one hundred buildings have been erected within the past year, and about sixty are in the process of construction. Of these many are expensive structures. The resident population of the village is about 6000.

WEST-TOWN SCHOOL.

Assistant Teachers are wanted in the Boys and Girls' departments of this Institution. The opportunity which this station furnishes for prosecuting their studies, free from any expense, presents a favourable opening for young persons, who wish to perfect themselves in the higher branches of learning, or to prepare for the business of Teachers. Those who wish to engage, are requested to make early application to Nathan Sharples, Concordville; Pennock Passmore, Goshenville; or Thomas Evans, Samuel Bettle, Jr., Elizabeth Peirson, or Sidney Coates, Philadelphia.

INDIAN CIVILIZATION.

The committee is desirous of engaging the services of a well qualified Friend to teach the school at Tunessassah, &c. Friends, who may feel concerned to engage in that station, are requested to make early application to Joseph Elkinton, No. 377 S. Second street, or Thomas Evans, No. 180 Arch street, Philadelphia, or Ebenezer Worth, Hamerton, Chester county, Pa., or Thomas Wistar, Fox Chase, Philadelphia co., Pa.

Philad., Ninth mo. 20, 1854.

MARRIED, on the 29th ult., at Friends' Meeting-house, Muncy, Lycoming county, Pa., JAMES ECROYD to RACHEL, daughter of Jacob and Rachel E. Haines, all of the above place.

DIED, in Cincinnati, O., the 29th of Seventh mo., 1854, ANN SHIPLEY; an approved minister of the Society of Friends, in the 94th year of her age.

——, on the 10th of Eleventh month, 1854, after a protracted sickness, EMMALINE N. HAINES, wife of Isaac Haines, of Cropwell, N. J., and member of Upper Evesham Monthly Meeting of Friends, in the forty-eighth year of her age. She was naturally of a meek and retiring disposition, diligent and faithful in attending all her religious meetings, as long as her feeble health would permit, and manifesting a deep concern that her family should accompany her. In the spring of 1853, it appeared as though she could not continue long, which brought her under great exercise of mind. She, however, began slowly to recover, and, although under great bodily weakness, was again active and useful in her interesting family, yet never able to attend a religious meeting. During this interval she kept a watchful care, fearing she might enter into the spirit of the world, sometimes saying, "No treasure, no earthly consideration, nothing but the Lord's will could induce her to come back again." In the spring of 1854, she relapsed with increased bodily suffering, which she bore, without murmuring. In the Fifth month, being asked by a dear friend, how she felt, she replied, "For the most part, very calm, my sufferings have been greatly lengthened out, and sometimes the enemy would persuade me all was wrong,—notwithstanding, I am entirely resigned to the will of the Lord, all must be laid at the foot of the cross; there we receive the crown." Afterwards, being under great suffering, she said, "Oh, pray to the heavenly Father for a speedy release; that he will take me home to himself; I feel nothing in my way." The twenty-third Psalm was repeated to her, after which she said, "but oh, not until his own time, I ask only for patience, and that my lamp may be kept trimmed and burning." She manifested much anxiety, lest patience should not hold out to the end, saying, "I feel my spirit not so strong to bear up now, as at some former times, and sometimes fear my anxiety to go, is keeping me back; yet I long to join that company which surround the throne, singing the songs of Moses and the Lamb." A few days before her death, she said, "I now feel the Lord's presence to be very near; oh, how good he is; when he sends one affliction, he takes another away." A few hours previous to her departure, she said, "I think the gates are opening; join with me in supplication, that I may not be long in the valley and shadow of death;" adding, "come quickly, Lord Jesus; cut short the work in righteousness." Soon after, all the family at home were called around the bed, whilst she took an affectionate leave, enjoining it upon them, each, separately, to live in the fear of the Lord." Her husband being for a short time absent from home, and fearing lest she should not hold out until his return, she said, "If I never see your father again, give my dying love to him; tell him to seek the Lord, and by careful walking, strive to meet me in heaven." Soon after, her husband came in; she was unable to recognize him, and in a few minutes passed quietly away, having her fervent petition in a remarkable degree, granted.

Postage to any part of Pennsylvania, for three months, paid in advance, three and a quarter cents; to any rt of the United States, for three months, if paid in vance, six and a-half cents.

A TESTIMONY

f Hitchin Monthly Meeting, concerning Ann Lucas, who died on the 27th of Second month, 1853, in the 84th year of her age; a Minister fifty-four years.

In recording the death of our beloved and valued iend, we are deeply sensible of the loss we have stained; and whilst we seek not to exalt the reature, we would magnify the sufficiency of that race which enabled her, during a long series of ears, to maintain an unshaken testimony to the ruth, and, by her Christian example and deep xperience in spiritual things, to edify those among hom her lot was cast.

Ann Lucas was the eldest daughter of Samuel nd Hester Bowly, and was born at Cirencester, n the 8th of Ninth month, 1769. She had the estimable advantage of a truly pious and excelnt mother.

In childhood her constitution was delicate; but soon became apparent that her mind was of no dinary character; and, as she advanced in years, y submission to the teachings of heavenly wisom, she became qualified for usefulness in her mily; and to her numerous acquaintance and iends was a bright example of dedication to hat she believed to be her duty.

Among the few memoranda found after her deease, are some which allude to this period of her fe. She writes:—"In a religious opportunity a Friend's family, when I was about eighteen, nder the ministry of a Friend, a strong impreson suddenly took hold of my mind, which I ardly know how to describe; the subject being, far as I recollect, quite unexpected, and not alded to in what was expressed by the minister: was, that I should at some time be required to eld to a similar service. I well remember the rce with which it was presented, and the effect had to bring me under great conflict of mind. here was a desire to be faithful, if such were my ue of duty; yet there was a disposition to shrink om the exposure, and an unwillingness to surnder the will. Neither was there, I apprehend, preparation of heart for such an engagement; nerefore much tossing succeeded, and continued r seven years before I gave up to it; although had during that interval been sometimes on the ery point of giving up; and condemnation and orrow were the consequences of disobedience." robably in allusion to the same subject, she obrves:—"The state of my mind is such as words annot set forth; indeed, I feel so clouded and ewildered, through repeated disobedience, that I know not how to move; and when I looked after a gleam of light, it was with fear lest I should again disobey its pointings, and thereby increase my darkness."

During this long season of close trial and deep baptism of spirit, there is good reason to believe that the great work of the soul's sanctification was carried forward, and her heart was renewed in Christ Jesus; and as faithfulness was maintained, a period of clearer perception was permitted to succeed, and qualification received for the work of her Lord and Master, whom she had so anxiously desired to serve. She was recorded a minister by her Monthly Meeting, in the year 1798, in the twenty-ninth year of her age.

About three years previous to this period, from an apprehension of duty, she undertook to continue a day-school which had been established in Cirencester, for the children of Friends. This engagement was pursued till near the time of her marriage with William Lucas, of Hitchin, which took place in the latter part of the year 1798.

Our dear friend was endowed in no common degree with powers of discrimination and judgment, combined with much practical wisdom. To a mind thus gifted and brought under the restraining influences of the Holy Spirit, many were the opportunities which presented for usefulness in the church, and for the exercise of the graces of the Christian character in the intimate relations of private life. As a wife and a mother she was truly exemplary; as a friend, her counsel and sympathy were much sought after and highly valued, especially in times of illness, difficulty or trial; her assiduity and kindness in relieving the wants of the poor will long be remembered by those who partook of her bounty.

While thus faithful in the discharge of her social duties, her care not to neglect those which appertained to the church was also conspicuous. She was eminently qualified for service in meetings for discipline, in which she was greatly esteemed by her friends for the soundness of her judgment and the consistency of her conduct. By her clear views of Christian doctrine, combined with an unwavering attachment to our religious testimonies, she was enabled to serve the church on various important occasions.

Her communications in the ministry were never long, but weighty, convincing, and comprehensive.

On the great doctrines of redemption by Christ, and the work and office of the Holy Spirit, she was remarkably clear, and was often led, in a forcible manner and in scriptural language, to set them forth to our edification.

Whether engaged in arousing to greater diligence, or in handing the word of encouragement, she was ever watchful not to exceed her commission.

Her religious services were principally confined to the limits of her own Quarterly Meeting.

Among her memoranda is the following (without date):—"True simplicity is indeed beautiful; but by looking for examples of it in our fellow-creatures, and measuring ourselves by them, we are in danger of falling short of the standard. It is only to be attained by a close attention to the teachings of Christ in the heart; bearing in mind that memorable reply to the inquiry, 'And what shall this man do?' 'What is that to thee? Follow thou me.'"

Whilst earnestly endeavouring thus to follow her Lord and Master, her memoranda evince the low estimate she had of her own attainments:—"Ninth month 8th, 1828.—Entered my sixtieth year, under humiliating feelings, in the consideration of an advanced stage of life being attained without proportionate improvement. Alas! for the uncertain future." "Ninth month 8th, 1839. My seventieth birthday. Is there oil in the vessel with the lamp?—if not, it is not a time to slumber or sleep, but earnestly to seek for it where it can alone be had."

In the year 1846 our dear friend had to pass through the close and severe trial of a separation from her beloved husband. Their union, which had subsisted for forty-eight years, was greatly blessed. It was her constant aim to cheer and comfort him during his rather protracted decline; and her sweet consolation to believe that his end was peace.

After this painful bereavement she seldom left her home; and though diligent in the attendance of meetings, she withdrew from the extended sphere of usefulness in which she had been engaged: her faculties continued unimpaired, her interest in her friends and for her poor and sick neighbours undiminished, and her spiritual life bright and vigorous.

In the year 1849 she penned the following memorandum:—"On looking back on some omissions of apprehended duty in early life, I have seen and much regretted that my mind had not been more clearly directed *to the constraining love of Christ*, as the only sufficient motive for obedience to his requisitions; and I am glad to believe that of later time the youth in our Society are better instructed on this important point, and that it will assist them to prove that declaration of an Apostle,—"We have not followed cunningly-devised fables, when we made known unto you the power and coming of our Lord Jesus Christ."

In humble submission to the Divine will, she endeavoured in faith and patience to support the increasing weight of bodily infirmity; and, as with the lamp trimmed and the light burning, she appeared like one waiting for the coming of her Lord, she would often very feelingly allude to her approaching end.

She continued gradually to decline till the 25th of Second month last, when, owing to a slight cold, her bodily powers became suddenly prostrated. With her usual clearness of discernment she perceived that her end was at hand, and although, from her great weakness, she was unable to express much, she was preserved in sweet serenity of mind, repeatedly referring to the text, "In returning and rest shall ye be saved, in quietness and in confidence shall be your strength." On a hope being expressed that she did not feel anxiety as to the termination of her illness, she said,—"I have but one hope, *that* set before us in the Gospel." Addressing one of her grand-children, she observed,—"Thou art the eldest of the family—

there is a great deal in *that*. I know I have not held my place as I should. I hope you will not depart from the testimonies and practices of Friends; I have never in my long life seen any reason to deviate from them. I recollect a message sent to me by a kind friend when I was very young:—Whereto thou hast already attained, mind the same thing. It is a very good maxim. I believe the New Testament sets forth our views very clearly." At another time she said, "Nothing can exceed the awfulness of an unseen world." She was told that many friends had inquired after her, and asked whether she wished her love particularly to any? She answered, "I am almost too weak to express much, but I think my love is to them *all*. I do not think my love to my friends is at all diminished. I have been very much favoured to receive great love and kindness from my friends." She seemed to recognize the different members of the family till very near the close, when the restlessness which often precedes dissolution having gradually subsided into a quiet slumber, she peacefully expired, and we doubt not the purified spirit released from the enfeebled tabernacle, is, through redeeming love and mercy, rejoicing in the presence of her Lord.

Selected for "The Friend."

DIVINE WORSHIP.

"The Lord is good unto them that wait for him, to the soul that seeketh him. It is good that a man should both hope and quietly wait for the salvation of the Lord." Since then, man in his natural state is thus excluded from acting or moving in things spiritual, how or what way shall he exercise this first and previous duty of waiting upon God, but by silence, and by bringing that natural part to silence? which is no other way, but by abstaining from his own thoughts and imaginations, and from all the self workings and motions of his own mind, as well in things materially good as evil; that he being silent, God may speak in him, and the good Seed may arise. This, though hard to the natural man, is so answerable to reason, and even natural experience in other things, that it cannot be denied. He that cometh to learn of a master, if he expect to hear his master, and be instructed by him, must not continually be speaking of the matter to be taught, and never be quiet, otherwise how shall his master have time to instruct him? Yea, though the scholar was ever so earnest to learn the science, yet would the master have reason to reprove him, as outward and indocile, if he would always be meddling of himself, and still speaking, and not wait in silence patiently to hear his master instructing and teaching him, who ought not to open his mouth, until by his master he was commanded and allowed so to do. So also if one was about to attend a great prince, he would be thought an impertinent and an imprudent servant, who, while he ought patiently and readily to wait, that he might answer the king when he speaks, and have his eye upon him to observe the least motions and inclinations of his will, and to do accordingly, would be still deafening him with discourse, though it were in praises of him, and running to and fro, without any particular and immediate order, to do things that perhaps might be good in themselves, or might have been commanded at other times to others; would the kings of the earth accept of such servants or service? Since then, we are commanded to wait upon God diligently, and in so doing, it is promised that our strength shall be renewed; this waiting cannot be performed but by a silence or cessation of the natural part on our side, since God manifests himself not to the outward man or senses, so much as to the inward, to wit, to the soul and spirit. If the soul be still thinking and working in her own will, and busily exercised in her own imaginations, though the matters as in themselves be good concerning God, yet thereby she incapacitates herself from discerning the still, small voice of the Spirit, and so hurts herself greatly, in that she neglects her chief business of waiting upon the Lord: nothing less than if I should busy myself, crying out and speaking of business, while in the meantime I neglect to hear one, who is quictly whispering into my ear, and informing me in those things, which are most needful for me to hear and know concerning that business. And since it is the chief work of a Christian to know the natural will in its own proper motions crucified, that God may both move in the act, and in the will, the Lord chiefly regards this profound subjection and self-denial. For some men please themselves as much, and gratify their own sensual wills and humours in high and curious speculations of religion, affecting a name and reputation that way, or because those things by custom or other ways are become pleasant and habitual to them, though not a whit more regenerated or inwardly sanctified in their spirits, as others gratify their lusts in acts of sensuality, and therefore both are alike hurtful to men, and sinful in the sight of God, it being nothing but the mere fruit and effect of man's natural and unrenewed will and spirit. Yea, should one, as many no doubt do from a sense of sin, and fear of punishment, seek to terrify themselves from sin, by multiplying thoughts of death, hell, and judgment, and by presenting to their imaginations the happiness and joys of heaven, and also by multiplying prayers and other religious performances, as these things could never deliver him from one iniquity, without the secret and inward power of God's Spirit and grace, so would they signify no more than the fig-leaves wherewith Adam thought to cover his nakedness. And seeing it is only the product of man's own natural will, proceeding from self-love, and seeking to save himself, and not arising purely from that divine Seed of Righteousness, which is given of God to all for grace and salvation, it is rejected of God, and no ways acceptable unto him; since the natural man, as natural, while he stands in that state, is, with all his parts, arts, and actings, reprobated by him. This great duty then of waiting upon God, must needs be exercised in man's denying self, both inwardly and outwardly, in a still and mere dependence upon God, in abstracting from all the workings, imaginations, and speculations of his own mind, that being emptied as it were of himself, and so thoroughly crucified to the natural products thereof, he may be fit to receive the Lord, who will have no co-partner nor co-rival of his glory and power. And man being thus stated, the little seed of Righteousness which God hath planted in his soul, and Christ hath purchased for him, even the measure of life and grace, which is burdened and crucified by man's natural thoughts and imaginations, receives a place to arise, and becometh a holy birth and geniture in man; and is that divine air in and by which man's soul and spirit comes to be leavened; and by waiting therein, he comes to be accepted in the sight of God to stand in his presence, hear his voice, and observe the motions of his Holy Spirit. And so man's place is to wait in this; and as hereby there are any objects presented to his mind concerning God, or things relating to religion, his soul may be exercised in them without hurt, and to the great profit both of himself and others; because those things have their rise not from his own will, but from God's Spirit; and therefore as in the arisings and movings of this, his mind is still to be exercised in thinking and meditating, so also in the more obvious acts of preaching and praying. And so it may hence appear we are not against meditation, as some have sought falsely to infer from our doctrine; but we are against the thoughts and imaginations of the natural man in his own will, from which all errors and heresies concerning the Christian religion in the whole world, have proceeded. But if it please God at any time, when one or more are waiting upon him, not to present such objects as give them occasion to exercise their minds in thoughts and imaginations, but purely to keep them in his holy dependence, and as they persist therein, to cause his secret refreshment and the pure incomes of his holy life to flow in upon them, then they have good reason to be content, because by this, as we know by good and blessed experience, the soul is more strengthened, renewed and confirmed in the love of God, and armed against the power of sin, than any way else; this being a foretaste of that real and sensible enjoyment of God, which the saints in heaven daily possess, which God frequently affords to his children here for their encouragement, especially when they are assembled together to wait upon him."

Mind what you Say before Children.

It is always well to avoid saying everything that is improper; but it is especially so before children. And here parents, as well as others, are often in fault. Children have as many ears as grown persons, and they are generally more attentive to what is said before them. What they hear, they are very apt to repeat; and as they have no discretion, and not sufficient knowledge of the world to disguise anything, it is generally found that "children and fools speak the truth." See that boy's eyes glisten while you are speaking of a neighbour, in a language you would not wish to have repeated. He does not fully understand what you mean, but he will remember every word; and it will be strange if he does not cause you to blush by the repetition.

A gentleman was in the habit of calling at a neighbour's house, and the lady had always expressed to him great pleasure from his calls. One day, just after she had remarked to him, as usual, her happiness from his visit, her little boy entered the room. The gentleman took him on his knee, and asked, "Are you not glad to see me, George?" "No, sir," replied the boy. "Why not, my little man?" he continued. "Because mother don't want you to come," said George. "Indeed! how do you know that, George?" Here the mother became crimson, and looked hard at her little son. But he saw nothing, and therefore replied, "Because, she said yesterday, she wished that old bore would not call here again." That was enough. The gentleman's hat was soon in requisition, and he left with the impression that "great is the truth, and it will prevail."

Another little child looked sharply in the face of a visitor, and being asked what she meant by it, replied, "I wanted to see if you had a drop in your eye; I heard mother say you had frequently."

A boy once asked one of his father's guests who it was that lived next door to him, and when he heard his name, inquired if he was not a fool. "No, my little friend," replied the guest, "he is not a fool, but a very sensible man. But why did you ask that question?" "Because," replied the boy, "mother said the other day, that you were next door to a fool; and I wanted to know who lived next door to you."—*New York Observer.*

From the Leisure Hour.

HOW WE GET ON.

(Concluded from page 98.)

Many of our readers will remember the early prognostications of the dire disasters that were to ensue on the adoption of the railway system. The opponents of the measure circulated the most frightful rumors for the purpose of producing a universal panic and resistance. Among other absurd things, country gentlemen were gravely told that partridges and pheasants would cease to exist in the neighbourhood of a railway, as all birds would be alarmed and frightened away by the noise, or killed by the smoke of the fiery locomotive. That these phantoms, however, were as visionary as many others conjured up by the infatuated fears of alarmists, the following anecdote will sufficiently prove. About this time last year, it was found that a black redstart had built its nest on the collision spring of a third-class carriage, which had been for some time out of use, at the railway station in Giessen, Hesse Darmstadt. On discovery, the nest contained five eggs. Without disturbing it, the carriage was now attached to a train and sent to Frankfort-on-the Maine, distant between thirty or forty English miles. At Frankfort it remained thirty-six hours, and was then brought to Giessen, from whence it went to Zöllar, distant five English miles, and having been kept awhile there, it again came back to Giessen; so that four days and three nights elapsed between the bringing of the carriage into use and its last return to Giessen. The nest, however, had not been abandoned by the parent birds, but was found to contain five young ones, and it was then removed by the humane wagon-master to a secure place, where he saw the parent birds visit the nest; and he inspected it himself, until at first three and then the other two young birds had flown, none remaining at the end of four or five days. It was concluded that one at least of the parent birds must have travelled with the train, to furnish the callow brood with the requisite warmth, shelter, and food; and the conductor of the train to Frankfort stated that, while stopping on the several journeys, he repeatedly noticed a red-tailed bird constantly flying from and to the part where the nest was situated in that particular carriage. If so, it was doubtless availing itself of the stoppages, busily to collect the insects, with which to supply the cravings of the little unfledged and unconscious travellers by that rapid mode of locomotion.

We turn now to another department of art, in which a most remarkable improvement has been made during the last few years. When the late Sir Robert Peel proposed his measure for the removal of the duty upon glass, he sagaciously remarked that there was no foreseeing the limits of the novel application of this beautiful manufacture. The Crystal Palace was one of the first and most glorious results of that statesman's wise policy; and that fairy-like structure has, as our readers well know, been succeeded by a swarm of smaller translucent palaces in humble imitation of the great prototype. But glass has, meanwhile, been applied to numerous other novel purposes. One of the most recent of these applications is its employment in the construction of walls for the growth of fruits and plants. The variableness of the British climate, and the great difficulty which it occasions of procuring, with anything like certainty, a crop of fruit from brick or stone walls, led a —— Ewing to consider whether this could not be obviated by substituting hollow walls of glass and iron; and the invention has proved perfectly successful. By constructing the walls of sufficient width they become hothouses on the best principle: the trees they contain are completely surrounded by light and exposed to the action of the sun's rays during the whole of the day; while they form a delightful promenade in our uncertain climate during the winter months. One of these walls has been erected, by the London Horticultural Society, in their gardens at Chiswick.

In concluding this brief and discursive glance at some of the more curious phases of mechanical, scientific, and artistic improvement in 1852, we may do so by calling attention to a few interesting facts, mentioned by Dr. Lyon Playfair in a lecture to the Society of Arts, illustrative of the modern application of chemistry to perfumery. Little do many of our young ladies and gentlemen imagine, as they inhale some delicious "extract of violet," or a choice "*parfum de millefleurs*," that the substances from which such essences are drawn, are the product not of the garden but of the chemist's laboratory. It is even so; nay, more, such artificial perfumes are derived from substances of an intensely disgusting odour. The artificial oil of bitter almonds, now so largely employed in perfuming soap, is prepared by the action of nitric acid on the fetid oils of gas tar. Many a fair forehead, too, is damped with *eau de millefleurs*, without knowing that its essential ingredient is derived from the drainage of cowhouses! Even to confectionery these chemical products are applied. A peculiarly fetid oil, termed fusel oil, gives, when distilled in a certain manner, the oil of pears, so much enjoyed by children and ladies in the *bon-bons* called pear drops. The oil of apples is made from the same fusel oil. The delicious oil of pine-apples is obtained from a product of the action of putrid cheese on sugar! or, more agreeable still, by making a soap with butter, and distilling it with alcohol and sulphuric acid. This mixture is now largely employed in England in the preparation of the pine-apple ale. Finally, oil of grapes and oil of cognac, used to impart the flavour of French cognac to British brandy, are little else than fusel oil. The winter-green oil, imported from New Jersey, and there made from a plant indigenous to the place, can be artificially prepared from willows and a substance procured in the distillation of wood. All these are direct modern applications of science to an industrial purpose, and imply an acquaintance with the highest investigations of organic chemistry.

The facts, so dissimilar in kind, which we have thus woven together, may appear somewhat insignificant in themselves; but, nevertheless, as indications of the restless activity and inquisitive enterprise of the mind of our age, they become significant and interesting. As the intuitive mind of the great Newton deduced from the common incident of a falling apple the whole theory of gravitation, so may we detect in some of the preceding scientific discoveries and triumphs of mechanical skill, the germs and earnest of more surprising advances in knowledge; while the ever-expanding resources which nature opens up to its students and explorers cannot fail to excite, in every devout mind, a more glowing admiration and love for that wonder-working God from whom all these created treasures sprung.

The truly humble man is not troubled and afflicted, because in some respects he fails in securing to himself the good opinions of his fellowmen. It is true, he attaches a degree of value to the favourable sentiments of others; but as he attaches unspeakably greater value to the favour of God, he can meet their opposition, their rebukes and misrepresentations, with entire calmness and peace of spirit. And hence it is, that in ordinary cases, when he is the subject of such misrepresentation and abuse, he is not particularly solicitous to defend himself, and to make replies. He does not discover anxiety and trouble of mind, in relation to it. He knows, if he acts in simplicity of heart, and with a sincere desire for the Divine glory, God will so order events that in due time the honour of his reputation will be sustained, so that he is willing, for the present at least, to stand silent in the presence of his accusers, that both he and they may see the salvation of the Lord.

Night Telegraph.—L. Lewenberg, optician, of New York, has invented a machine for preventing accidents at sea during the prevalence of a fog, to which he applies the name of Night Telegraph, and which seems worthy of more attention than it has hitherto received. L. Lewenberg is confident that his invention would for ever put a stop to collisions at sea—at least that it is far preferable to any of the signals now known to the commercial world. With one of these instruments on board of a vessel, it is claimed that no such accident could happen as the one which befel the Arctic. If this position is correct, the invention is of the highest importance, and measures should be adopted at once for giving it a trial. It is stated that the contrivance is very simple, and not expensive. Some gentlemen should come forward and make a trial of it. There can certainly be no difference of opinion as to the necessity of devising some plan whereby vessels at sea in a storm or fog may make known their whereabouts. If it will prevent collisions at sea, or tend to prevent them, no time should be lost, but its utility and efficiency should be tested forthwith.—*Late Paper.*

Selected.

A little boy, seven years of age, being one morning asked by his mother to sit still for half an hour, and then tell her his thoughts, said, after a pause, "it would be impossible to tell his thoughts, they were the same that had been in his mind for more than a year, and so delightful, that the more he thought, the more he wished to continue in the sweet meditation, and if all the world could come into the same feeling, it would be impossible for any to be miserable." Being surprised at such a reply from so young a child, she asked if he could recollect the first time he felt these serious impressions? He said, "they came on by degrees, and from a desire to be good, and to serve God." In reply to the inquiry, "if he were willing to die and go to heaven?" he said, "he had heaven already in his own heart: and if he should be called from the world, his spirit would unite with God his Father." But he desired to live, to pray for others who were wicked, and that often when alone, he burst into tears for the sins of the world. He could not speak of these things to his companions at school, knowing he should be ridiculed, —that he suffered much in his mind among such wicked boys, being grieved they should offend so good a God, and troubled lest they should continue hardened in wickedness; he said he was distressed also for himself, in struggling against the temptations before him, and feared he might do something wrong; but that these thoughts which were continually with him were his great comfort. On his mother asking, if he knew from whence these thoughts proceeded, he said, "yes, from God—it was God's Spirit in him—the eldest sister of this little boy, aged twelve years, being present, burst into tears, and said, "Mamma, what but the Spirit of God, could make a child like him, speak after this manner?" The experience of this dear child bears a striking testimony to the powerful influence of the Light and Spirit of

Christ Jesus, operating in the secret of the soul. Nothing short of this could have brought his mind into prayer and weeping for the sins of the world, or into a holy fear for himself lest he should do wrong. By yielding obedience to its tendering power and manifestations, he became a disciple, indeed, of Him, who so loved mankind, that He laid down His life a sacrifice for the sins of the whole world; and he experienced the truth of that declaration, "If we walk in the light as God is in the light, we have fellowship one with another, and the blood of Jesus Christ his Son, cleanseth us from all sin."

We would tenderly encourage you all, dear children, to follow his example, in minding the reproofs of this blessed Light and Spirit, by which you are warned when you are tempted to do wrong, and made sorry for your transgressions. Oh! turn not from them, even if they should, for a season, fill you with sadness. "The reproofs of instruction are the way of life." As you are engaged to give diligent heed thereunto, they will, in the end, assuredly lead you into the enjoyment of the peace of God, which passeth all understanding, and your "meditation of Him shall be sweet."

For "The Friend."

The Spirit of Restoration.

The Christian spirit that moved Friends, to labour with those who were drawn into separation from them, is hinted at in the following short letter, written in 1669 by John Rouse to Sarah Fell:—"Dear Sister: we have had several precious meetings since the General Meeting, for the gathering those who have gone astray; in which the power and glory so irresistibly broke in upon them, that many of them were very much broken, and gave open testimonies against that spirit that had seduced them from the unity of Friends, very much to the satisfaction of the faithful. The power wrought so effectually among them, that Friends had little need to set forth the evil of the course they had followed; for they themselves gave sufficient testimony of the evil thereof. And the bowels of Friends were so enlarged towards them, that I believe there will be meetings appointed for the gathering of them, so long as any, that are honest among them, are left ungathered."

George Fox, in his journal, writes:—"We had great service in London this year, and the Lord's truth came over all; and many that had been out from Truth, came in again this year, confessing and condemning their former outgoings." And again,—"Several meetings we had with them, and the Lord's everlasting power was over all, and set judgment on that which had run out. In these meetings, which lasted whole days, several who had run out with John Perrot and others, came in again, and condemned that spirit which led them [with him] to keep on their hats when Friends prayed, and when they themselves prayed. Some of them said, that if Friends had not stood, they had been gone, and had fallen into perdition."

Thomas Ellwood also mentions the "memorable meeting appointed to be holden in London, through a Divine opening in the motion of life, in that eminent servant and prophet of God, George Fox; for the restoring and bringing in again those who had gone out from Truth, and the holy unity of Friends therein, by the means and ministry of John Perrot." "When that solemn meeting was appointed at London, for a travail of spirit on behalf of those who had thus gone out, that they might rightly return, and be sensibly received into the unity of the body again, my spirit rejoiced, and with gladness of heart I went to it; as did many more of both city and country; and with great simplicity and humility of mind, did honestly and openly acknowledge our outgoings, and take condemnation and shame to ourselves." "Thus, in the motion of life, were the healing waters stirred, and many, through the virtuous power thereof, were restored to soundness; and indeed not many were lost. And though most of those who thus returned, were such, as with myself, had before renounced the error and forsaken the practice; yet did we sensibly find, that forsaking without confessing, (in case of public scandal,) was not sufficient; but that an open acknowledgment (of open offences) as well as forsaking them, was necessary to the obtaining complete remission."

But few, we apprehend, can be ignorant that the attempts which have been made by different writers in the Society, to introduce views on some doctrinal subjects, opposed to the acknowledged faith of Friends, have brought much uneasiness and concern upon many, who cannot conscientiously receive anything which they believe to be subversive of that faith. This has been the commencing point of the difficulties, now spread over the Society; as from its rise, all acts or opinions contrary to its principles and discipline, which have been taken up and supported by parties, have produced similar effects. But we may see by the schisms which have followed, up to this time, that separation does not put an end to the evils, or relieve Friends from the suffering which has been produced; nor will the acknowledgment by Yearly Meetings, of seceding bodies, arrest the disease, and restore cordial love and unity between the different Yearly Meetings, and the members at large. This result will not be attained while separation is looked to, for the removal of the causes of division, and while Friends of dissimilar sentiments are directly or indirectly striving to make separations. It was not the course that was pursued in the rise of the Society. Then they strove, in the spirit of meekness and Christian love, to convince those who had missed their way, and they lived and acted towards them, in that Divine Spirit which seeks the recovery of all, and the preservation of the Society as a united body. Party spirit cannot heal our malady, or support the cause of Christ. Our troubles should bring us under individual searching of heart, and relinquishing all unauthorized and unsanctified zeal, induce us to let the Lord take the government of each one into his hand, that we may be thoroughly humbled, and led to give up our own wills, and our own opinions and actings, that are contrary to his will. We may then hope, that as we apply to Him in sincerity to "undertake for us," he will make a way out of our lapsed condition, where to us there may appear to be none, and restore to the Society universally, the precious uniting love, and the confidence in each other, which distinguish the members of His church, and give strength to advance his cause and kingdom in the earth. Separations, and even the thought of creating them, would then cease. We should not be called upon to decide between adverse bodies, terming each other separatists; but the whole Society, being of one mind in relation to doctrine and practice, and governed by one adorable Head, would hold harmonious intercourse. Ministers of the gospel would be received in love, wherever the Master sent them, and the fruits of their labours, and of other spiritually minded members, would contribute to our growth in the Truth, and the increasing usefulness of the Society in the world.

Dread the slightest approach to dissimulation and insincerity: all will be wrong if the heart gets wrong.

Selected.

Passages from the Writings of Thomas Story, who died 1742.

"As the nature and virtue of the Divine essential truth increased in my mind, it wrought in me daily a great conformity to itself, by its own power; reducing my mind to a solid quietude and silence, as a state most fit for attending to the speech of the Divine Word."

"The washing of the feet signifies the cleansing of the ways; and those who are washed in the laver of regeneration will walk in clean paths and bring forth fruit according to the nature of the tree of life; such will walk in faith, love, obedience, peace, holiness, mercy and truth. Wilt thou wash my feet, O Lord! with the washing of regeneration; that I may tread the paths of life before thy face."

"Come ye ragged ones, come sit down before the King; for he is meek and lowly, and loveth the humble. Though you be naked, he will clothe you with righteousness; though you be hungry, he will feed you with the bread of eternal life. Fear not, ye of low degree, for with our God there is no respect of persons. Fear not, O ye little ones; for he showed you his loving kindness of old; and with Him there is no shadow of turning. I was silent before the Lord as a child not yet weaned. He put words in my mouth, and I sang forth his praise with an audible voice. I called unto my God out of the great deep; he put on bowels of mercy, and had compassion on me, because his love was infinite, and his power without measure. He called for my life, and I offered it at his foot-stool; but he gave it me as a prey, with unspeakable addition. He called for my will, and I resigned it at his call; but he returned me his own in token of love. He called for the world, and I laid it at his feet, with the crowns thereof; I withheld them not at the beckoning of his hand. But mark the benefit of exchange! For he gave me instead of earth, a kingdom of eternal peace; and, in lieu of the crowns of vanity, a crown of glory. I said, 'What am I, that I should receive such honour?' But he removed the mountains out of my way, and by his secret workings pressed me forward."

"I followed the voice of the Shepherd, who gave me food according to my strength, and found all things even as he had said of old, and a name by which I shall be saved."

"I will call for perseverance in the ways of life; for the hidden manna, day by day received."

"My Comforter also taught me to pray in knowledge as in faith; I begged Himself, and he gave me all. He gave me power to do wonders also; to keep his commandments, through his Holy Spirit; and to walk in the paths of righteousness with joyful songs. I will call upon Him in the days of temptation; and when I am in the shadow of death, the Lord shall be my strength."

"Watch, O ye disciples of the Lamb of God! lest ye be found sleeping when your Lord cometh, and be thereby unfitted to enter into his rest and glory. Watch and pray lest you enter into the temptation of self-confidence."

What Farmers Might Do.—One of our paper makers, speaking of the scarcity of rags, writes thus:—"If our people would only raise flax, instead of importing their linseed and oil for their own use, we should soon have paper stock in abundance. Those farmers in this county who raised flax this year, have sold their crops, standing in the field, at $40 per acre, and some get more than that."—*New York Sun.*

NATURE.

The God of nature, and of grace,
In all his works, appears;
His goodness through the earth we trace,
His grandeur in the spheres.

Behold this fair and fertile globe,
By him in wisdom planned;
'Twas he who girded like a robe,
The ocean round the land.

Lift to the firmament your eye,
Thither his path pursue;
His glory, boundless as the sky,
O'erwhelms the wondering view.

He bows the heavens—the mountains stand
A highway for their God;
He walks amidst the desert land,—
'Tis Eden where he trod.

The forests in his strength rejoice;
Hark! on the evening breeze,
As once of old, the Lord God's voice
Is heard among the trees.

Here on the hills he feeds his herds,
His flocks on yonder plains;
His praise is warbled by the birds,
O, could we catch their strains!

Mount with the lark, and bear our song,
Up to the gates of light;
Or, with the nightingale, prolong
Our numbers through the night!

In every stream his bounty flows,
Diffusing joy and wealth;
In every breeze his Spirit blows,
The breath of life and health.

His blessings fall in plenteous showers
Upon the lap of earth,
That teems with foliage, fruit, and flowers,
And rings with infant mirth.

If God has made this world so fair,
Where sin and death abound,
How beautiful beyond compare,
Will paradise be found! *Montgomery.*

The Rubber Trade.—A correspondent of the Boston Post, writing, from Para, Brazil, under date of Sept. 17th, says,—"The American commerce of Para will this year reach about five millions of dollars, or one-third of the whole commerce of Para, and of this great valley. This commerce consists, too, in one article, whose demand is every day rapidly increasing; so much so, that instead of five millions it must very soon be twenty millions. Nor is it a less interesting fact that four-fifths of all the rubber produced here is manufactured in the United States, and that the whole increase of its trade, if properly conducted, will yield a vast wealth to hundreds in the manufacture and sale of these rubber goods in the United States."

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

WILLIAM BILES.

(Concluded from page 102.)

We need not particularize the labours of William Biles, which have been already set forth in the sketch of his wife's life. After returning from England, he was engaged in various religious labours at home, and in the neighbouring provinces. Being in the legislature of 1705, he was so indignant at the childish acts of Governor Evans, that he gave utterance to such speeches as "he is but a boy,"—"he is not fit to govern us," and some others equally contemptuous. The words were not spoken in the house; but being carried to the ear of the Governor, he was excited, and demanded of the assembly his immediate expulsion. This they refused to do, and the Governor in his anger broke up the session. He then sued William for defamation. Getting a verdict for a small portion of the damages claimed, he imprisoned William; but finally finding the whole community incensed against him for the course he was pursuing, he released his prisoner without the fine. William was satisfied that he had allowed the warmth of his feelings to get the better of his judgment when he had spoken the honest convictions of his mind, relative to the weak-minded, quarrelsome Governor, and he hesitated not to condemn his so speaking. It does not appear but that he was as useful in religious as well as civil concerns afterwards, as he had been before this affair took place. His friends speak well of his religious labours, and he was a member elect of the assembly when he died. His burial took place, Third mo. 19, 1710.

There appears to be good evidence in the testimonies of various kinds left concerning this Friend, that he was one qualified by the Great Minister of Ministers, to labour in his cause, and that his Gospel labours were blessed to the good of the church. How much more useful in the Lord's hand, he and many of his fellow-ministers would have been, if they had refused all public offices, we cannot tell.

THOMAS EVERDEN.

This Friend, whose name is often written in the early records, Evernden, lived at Canterbury, Old England, where he was convinced of the truth, and was strengthened to bear persecution, without flinching for his Christian support of it. In the Sixth month, 1661, we find him arrested and imprisoned without mittimus, for being at a religious meeting. In 1663, he was excommunicated for absence from the national worship, and in the Fifth mo., 1670, was again imprisoned for attending religious meetings. The last instance of his suffering in England that I find, was an imprisonment for more than three months, for having been taken at a meeting in Canterbury, towards the close of 1682. Soon after this, he must have removed to America, where he settled at Fishing Creek on the Eastern shore in Maryland.

He had received of the Lord Jesus a gift in the ministry, and he was faithful in the exercise thereof. Labouring in various provinces of this new country, to the spreading of the truth, and to the comfort of the honest-hearted seekers after spiritual substance. Friends, residing in Maryland, were sufferers at the time he settled, on account of their refusal to take oaths. The lower house of assembly had passed in 1681 a law "for the relief of tender consciences in relation to oaths and swearing;" but the upper house, probably at the suggestion of Lord Baltimore, the proprietary, threw the bill out. On the 25th of Fifth month, 1688, Lord Baltimore, by proclamation, dispensed with the use of oaths in testamentary cases. This afforded much relief to Friends, and they felt bound to send the "proprietary" a written acknowledgment of their gratitude therefor. After referring in it to the great inconvenience, they, "with many helpless widows and orphans, have suffered for many years past upon account of testamentary matters, merely because for conscience-sake we could not swear;" they then acknowledge the favour done them by the proclamation, and add, "Whereas the proprietary has been pleased therein not only to dispense with oaths in testamentary cases, but also to acknowledge our willingness to submit to the laws and government for conscience-sake, as his long experience of us can witness, that where we cannot for conscience-sake actually do, we have and can patiently suffer. And we not only return thee our thankful acknowledgment of thy favours to us in the said proclamation, but can promise, with God's assistance, that our quiet, upright and peaceable deportment under thy government shall ever be such, as the proprietary shall never have just cause to withdraw the least of his love and favour from us; and if it should ever happen that any professing the name of Quaker, should otherwise demean himself, we do declare, that neither we, nor our principles, have any unity or fellowship with such person or persons."

This document which bore date, Ninth mo. 7, 1688, was signed by Thomas Everden, amongst others.

When George Keith was endeavouring to spread discord and disunity amongst Friends throughout the whole society, the leading members in Maryland stood firm against him, and in the Eighth mo., 1692, issued a testimony against him. They tell him that he may expect the judgments of the Lord, and to become "as a dead dry tree." Thomas Everden was here also at his post, as one of those who had a testimony to bear against all error, as well as in favour of all truth.

(To be continued.)

Poisonous Coloured Confectionery.

The Lancet commissioners, in reporting the result of their investigations respecting coloured confectionery, express their surprise at the extent to which deadly and virulent poisons are daily made use of by the manufacturers of those articles. One hundred and one samples were analyzed; and of the yellows, seventy contained chromate of lead and coloured gamboge; seventy-nine of the reds contained cochineal, red lead, and bi-sulphuret of mercury; eight of the browns contained ferruginous earths, either vandyke brown, umber, or sienna; two of the purples contained Prussian-blue and cochineal; thirty-eight of the blues contained indigo, Prussian-blue, Antwerp-blue, and a sulphuret of sodium or aluminum; nineteen of the greens contained Brunswick-greens, consisting of a mixture of chromate of lead and Prussian-blue, verditer or carbonate of copper, Sheele's green or arsenite of copper. The above colours were variously combined in different cases, three and even four poisons occurring in the same parcel of confectionery. In four of the samples the colours were painted on with white lead or carbonate of lead; thirteen of the samples were adulterated with hydrated sulphate of lime; seventeen samples were adulterated with wheat flour, three with potato flour, and one with arrow-root.

For "The Friend."

Travelling in the Andes.

Though going down hill by the barometer, we were evidently crossing a chain of mountains, which the stream at the bottom of the valley has saved us the trouble of ascending and descending, by clearing a way through for itself, and leaving the mountains on either hand towering thousands of feet above our heads. The ride was the wildest we have yet had; the road sometimes finding room along the borders of the river, and then ascending nearly to the top of the hills, and diminishing the foaming and thundering stream to a noiseless silver thread. The ascents and descents were nearly precipitous; and the scene was rugged, wild, and grand beyond description.

We saw some miserable huts on the road, and not a few asses carrying reeds and poles from Chanchamayo. It seemed a providence that we did not meet these at certain parts of the road, where it is utterly impossible for two beasts to pass abreast, or for one to turn and retreat; and the only remedy is to tumble one off the precipice, or to drag him back by the tail until he reaches a place where the other can pass. Von Ischudis relates an instance of his shooting a mule which met him at one of these places.

We met with a considerable fright, in this way, to-day. We were riding in single file along one of these narrow ascents, where the road is cut out of the mountain side, and the traveller has a perpendicular wall on one hand, and a sheer precipice of many hundreds of feet upon the other. Mr. Gibbon was riding ahead. Just as he was about to turn a sharp bend of the road, the head of a bull peered round it, on the descent. When the bull came in full view he stopped, and we could see the heads of other cattle clustering over his quarters, and hear the shouts of the cattle-drivers, far behind, urging on their herd. I happened to be abreast of a slight natural excavation, or hollow, in the mountain side, and dismounting, I put my shoulder against my mule's flank and pressed her into this friendly retreat; but I saw no escape for Gibbon, who had passed it. The bull, with lowered crest, and savage, sullen look, came slowly on, and actually got his head between the perpendicular rock and the neck of Gibbon's mule. I felt a thrill of agony, for I thought my companion's fate was sealed. But the sagacious beast on which he was mounted, pressing her haunches hard against the wall, gathered her feet close under her and turned as upon a pivot. This placed the bull on the outside, (there was room to pass, though I did not believe it,) and he rushed by at the gallop, followed in single file by the rest of the herd. I cannot describe the relief I experienced. Gibbon, who is as gallant and fearless as man can be, said, "It is of no use to attempt to disguise the fact—I was badly scared."—*Herndon's Narrative.*

It is not safe to dwell upon the failings and weaknesses of the church, without at the same time dwelling upon the resources and goodness of God. In the exercise of humble faith, we must connect the greatness of the remedy with the virulence of the disease. Otherwise we shall promote the plan of our great enemy, by falling into a repining and censorious spirit; a state which is injurious to ourselves, and offensive to our heavenly Father.

Genius! what is it? Without religion, genius is only a lamp on the outer gate of a palace. It may serve to cast a gleam of light on those that are without, while the inhabitant sits in darkness. —*H. Moore.*

Elastic Power Accumulators.

Among the curious inventions of the day, few are more attractive, (we did not intend to pun,) than those included in our title. India-rubber shoes, clothes, combs, etc., are familiar to us all, and here we have another application of this wonderful substance. A small rubber string can be stretched by any child. Now, suppose he has ten, twenty, forty of these, all fastened at one end to the same spot. If he begins, one by one, stretching each to the utmost, and attaches them to a moveable object, what will he witness? Nothing, perhaps, at first, but as he continues the process, by and by the accumulating power of these cords will overcome the inertia of the object, the cords will contract, and the object to which they are fastened will be drawn away from its position.

This process may be managed systematically, and the elastic cords combined at one end, or all connected with a ring, or hook, or staple, while the free end is adapted to such modes of fastening as any one may choose.

A pound of vulcanized India-rubber, a foot long, if stretched to six feet, will support four hundred pounds. It follows, that by a little union of forces immense power may be obtained.

A modification of a boy's bow and arrow is one of the simplest adaptations of this power. If a smooth tube of suitable dimensions be furnished at one end with a looped cord, fastened to it on opposite sides, with any additional provisions for convenience in handling it with facility and accuracy, we get an engine perhaps as powerful as an air-gun. The tube furnishes an accurate guide for the arrow, and the arrow being drawn back, while locked into the elastic cord, by a notch, as into the string of the bow, it will escape, when liberated, with a force corresponding to the tension of the loop.

Harpoon-projectors are contrived on this plan, and in fact there seems no end to the modified forms in which this remarkable substance may be made useful. In the harpoon-projector several cords are applied, each of which is extended singly, and when all are properly arranged, the harpoon is set free by a trigger-movement.

A patent has been taken out in England, for the application of this "power" to different purposes, and we are informed by an English journal that this has been substituted, as a motive-power, for steam, and that a small screw-vessel is now in progress with the same sort of a "prime-mover." How this substitution can be made effective is beyond our conjecture, as we do not comprehend what power is to operate the elastic force.

Ear of Corn.—It is evident that an ear of corn was not so named from resemblance to the ear, the organ of hearing, but that it must have had some quite different origin. Now, if we consider the Latin term for it, namely, spica, we see its resemblance to spiculum, which means an arrow; and if we consider this a little further, we see that it is not at all casual, but that it is an intentional metaphor, and, in truth, a very just and natural one. For the rising crop is like a field of little spears. Many passages of the poets allude to this resemblance. So in English we speak of blades of corn, from this resemblance to miniature sword blades. From what precedes, I think there can be no doubt that the phrase "an ear of corn" originally meant "an arrow of corn," *i. e.* a single blade, spiculum, or spica. But this conjecture becomes more certain, when we recollect the name for an arrow in Anglo-Saxon, namely, earh; whence comes the derived term earh-fere, a quiver (literally, an arrow-bearer.) It is plain then, that the "earh of corn" must have been the blade itself, or the single spikelet.

Excessive Study in the Public Schools.

Boston prides itself on the superiority of its public schools; and we think Boston is justly entitled to take the highest rank among the cities of the civilized world, for the facilities afforded by its citizens for the education of youth. But notwitstanding the large expenditures of money for the erection of beautiful and commodious school houses, for mathematical and other instruments for teachers, &c., all of which give a character to our Boston schools, there does exist an evil in the present system of educating children, which seriously demands attention, and if possible, a remedy. It is the ambition of the teachers of our schools to have their scholars thoroughly instructed, and that they may appear well before the committee at examinations; and for that purpose, lessons in great numbers, and requiring toilsome study, are imposed upon them. No discrimination is made as regards the mental or physical capacity of the individual members of a class, but *all* are required to be perfect in their answers, or else they lose their position in the class and school. Not one fifth of the time devoted to school hours is allowed for study, being occupied by recitations; and the severe tasks the poor children have in getting their lessons, must be apparent, when it is known that so long a time is required in reciting them.

The scholars of the second class, for instance, have to commit to memory from *twelve* to *twenty five* pages of geography, three to six pages of arithmetic, the same of grammar, three pages in spelling, besides exercises in reading, writing, &c. Now these lessons must be studied out of school, at the time which should be devoted to exercise and recreation. The imposition of such severe tasks upon young and growing children, must enfeeble their constitutions, and often incapacitate them, if they arrive at maturity, for enjoying life. We have seen many children who were ambitious to accomplish all that was required of them by their teachers; and to do so, the greatest portion of the twenty-four hours was necessarily devoted to their books, scarcely allowing time for taking their meals. It must be obvious to every one that such close application to study produce in their turn, a train of diseases which cannot always be eradicated. Aching heads, loss of appetite, sleepless nights, inflamed eyes, with other devitions from health, are the accompaniments and the consequences of this excessive mental exertion. It is our intention in a future number to enter more into detail in regard to the condition of the present school system, so far as it has a tendency to impair health and abridge life in the young; but in the meantime, it is hoped that our school committee will give the subject their attention and correct the abuse complained of.—*Boston Medical and Surgical Journal.*

He who lifts a finger, or moves a foot in an enterprise without God, does it at the hazard, not only of displeasing Him, but of failing of his own object. We ought, therefore, to exercise the same sense of dependence, and the same submissiveness of spirit, in the choice and employment of the means applicable to a given end, which we exercise in relation to the end, when in the provindence of God it is either accomplished, or fails to be accomplished. "Except the Lord build the house, they labour in vain that build it. Except the Lord keep the city, the watchman waketh but in vain."

Clock Manufacture.—The New York Tribune, in speaking of the latest Yankee clock ingenuity, says that it has seen one just manufactured, that measures time as the hours are counted in Japan, the hands making a diurnal revolution in twelve Chinese hours. From it we gather, also, the following interesting statistics:—

Mayor Jerome, of New Haven, has been successful in securing a ten per cent. reduction of duty on American clocks shipped to England.

The superior beauty and cheapness of the American clocks has almost annihilated the German clock trade with England. The town of Bristol, in this State, has fourteen clock factories, employs 440 hands, using $334,000 in capital, producing 421,000 finished clocks.

Plymouth, too, has three factories, employs 215 hands, using $150,000 in capital, producing 300,000 clocks.

Litchfield, also, employs thirty hands; capital, $30,000; produce, 3,000 clocks.

Ansonia has two factories, employs 140 hands, using $132,000 capital, producing 102,000 clocks.

Southington has two factories, employs forty-five hands, using $42,000 capital, producing 41,000 clocks.

Winsted has one factory, employs forty hands, using $36,000, producing 30,000 clocks.

New Haven has three factories, employs 405 hands, using $258,000, producing 374,000 clocks.

Total number of hands employed in clock-making in the State, 1275. Total capital, $1,002,000. Total number of clocks, 794,000 per year.

New York city furnishes about one-fourth as many clocks in a year as Connecticut does, and their annual value is $1,500,000.

Published by request.

To Cure a Felon.—A felon generally appears at the end of the fingers or thumbs, it is extremely painful for weeks and sometimes months, and in most cases, cripples or disfigures the finger or thumb that falls a victim to it. But it can be easily cured if attended to in time. As soon as the pain is felt, take the white skin of an egg, which is found inside the shell, put it round the end of the finger or thumb affected, keep it there until the pain subsides. As soon as the skin becomes dry, it will be very painful, and likely to continue for half an hour or more, but be not alarmed. If it grows painful, bear it, it will be of short duration compared to what the disease would. A cure will be certain.—*Exchange.*

As felons are very painful, any remedy to relieve a person from its excruciating pain is valuable. We do not know whether the above is all pretends to be or not, but within the past year we have known of the spinal marrow of an ox or sow applied by three different persons, with the most satisfactory results, in relieving the pain and securing the speedy cure of their felons. This we are confident will be very useful information to many persons. The spinal marrow should be applied fresh every four hours for two days.—*Scientific American.*

When God has fully prepared our hearts for religious action, we need not fear that he will fail to find for us our appropriate work. He knows the work which is to be done, and the time of its being done, as well as the dispositions which are suited for doing it. Be *watchful*, therefore, but *wait* also. A good soldier, in the spirit of watchfulness, is always ready for action; but he does not anticipate, by a restless and unwise hurry of spirits, the orders of his commander.

THE FRIEND.

TWELFTH MONTH 16, 1854.

In our columns of to-day will be found an article from the Southern Soup Society, inviting contributions from those who are able to give, to enable them to meet the demands for food which are likely to be made upon them throughout the present winter.

There can be no doubt that most, if not all, of our benevolent institutions will find their means taxed to the uttermost, by the wants of the increased numbers, who will most probably resort to them for some alleviation of their distress; many being brought into great difficulties who may have never before known what it is to be destitute of many of the comforts of life. There is a large number of mechanics, and labourers, discharged from workshops and other places, where they have been accustomed to obtain constant employment and good wages, who find themselves at this inclement season of the year unable to procure work of any kind, by which to earn the bread daily required for themselves and families, who are willing to work and ashamed to beg, and whose slender resources, saved in more prosperous times, must soon be exhausted by the extravagant prices at which the necessaries of life are now selling. These must swell the number of claimants on the sympathy and bounty of those who possess more than is required to provide for themselves and their households, and who, as good stewards of the manifold blessings received, should be willing to dispense liberally of their abundance, for the help of their needy brethren and sisters.

We are aware that it is not needful to address to the readers of "The Friend" a homily on the duty of almsgiving, and the reciprocal benefit derived by those who seek out and relieve the poor, the sick, and the destitute. Nevertheless there may be good effected by "stirring up the pure mind by way of remembrance," and the present time calls loudly upon us all not to be slack in rendering such assistance as may be in our power, both by gifts of money and by using our personal exertions in carrying comfort to the habitations of the afflicted.

"He that hath pity upon the poor, lendeth to the Lord, and that which he hath given will He pay him again."

One lesson which the difficulties of the present times might teach us, if we were disposed to be instructed by them, is, that a mistake is committed by many of our young men who desert the pursuits of agriculture, or decline engaging in the mechanical arts, in order to enter on the more dazzling and exciting life of a merchant, or the supposed easy practice of medicine, or of the law. For many years past, this has been a subject that has attracted the attention and awakened the fears of some of the most sagacious and experienced among us, and a warning voice has been occasionally raised against the increasing propensity, and the loss it would probably result in, both to individuals and to our religious Society. Not that there is any evil necessarily connected with either of the avocations alluded to, but because that many are enticed by the hope of quickly obtaining wealth into attempting to follow them, who are not calculated to fulfil the duties they impose, and who must therefore almost certainly fail to prosecute either of them with success; and also because they are most frequently attended with temptations peculiarly calculated to lead away from the simplicity and purity of our profession.

How many of the young men who come into the city from the country with the hope of making money more rapidly by the gains of trade and commerce, than by tilling the soil, or working at the anvil or the bench, are disappointed in their expectations, frustrated in their schemes for entering into business, and instead of being at the head of a successful concern, are obliged to pass the better part of their lives as clerks for others; or having embarked on the uncertain tide of commerce, are wrecked by the first adverse gale, and left crippled in means and injured in credit, to contend against the dangers and difficulties of a second attempt. Even where the effort to do a large mercantile business appears to have been crowned with success, and the dreams of wealth seem about to be realized, it is often attained at the expense of true peace of mind; numberless inquietudes, attendant on uncertain hopes and well-grounded fears, divide the time into laborious anxious days, and restless, sleepless nights. The object of desire may have been obtained, and yet some unforeseen disaster snatch it away before it could be enjoyed, the scheming of a life being rendered fruitless by a blow, and the labour of years destroyed in a day.

As regards the practice of medicine, its ease and remunerations are generally greatly overestimated. Years of servitude, with but little pecuniary compensation, must pass by before those who may be finally successful can realize the rewards of an extensive practice. And, should that be obtained, (which is always a matter of uncertainty,) the life of such a physician is necessarily one of great anxiety and almost uninterrupted toil, both mental and physical, accompanied with a sacrifice of a large share of those enjoyments that are found only within the quiet scenes of the domestic circle. Passed at the bedside of his languishing patients, in the contaminated atmosphere of the sick chamber, exposed, even in the abodes of the rich, to the vexations and disappointments arising from the prejudice of ignorance, and the excitement of ill regulated passions, he must give the utmost efforts of his senses, his intellectual powers, and his attainments, to analyze the symptoms of each successive case claiming his care, to discover the secret seat of disease, devise the remedies that shall mitigate pain, soothe the wretchedness of sickness, and ward off the stroke of death. Day after day passes in the wearisome performance of these duties, often for no other compensation than the gratification arising from the consciousness that he understood his duty, and performed it. He must often rest content to find himself disregarded or forgotten, when the hour of suffering and dismay has passed by, by those to whom, under the blessing of divine Providence, he has been the instrument of restoring health, and the enjoyments to which it gives zest; and prepare himself, not unfrequently to see those over whom he has been watching with anxious solicitude, and in whose restoration he feels a deep interest, taken from under his care, to be placed in the hands of ignorant charlatans and designing quacks. We would then say to our young friends, do not mistake your calling, it is far better to start in life with a competent knowledge of some one of the mechanical arts, than to enter upon the arduous study of medical science, with the hope of earning your bread by the sweat of the brow in the practice of medicine.

We have not adverted to the many temptations

and dangers incident to the merchant's counting-house, and the lecture-room, especially to young men coming into the city from the country, which so often betray them into practices altogether inconsistent with our religious profession, and lead them into courses by which they lose their right in the Society. This part of the subject may be referred to at another time.

SUMMARY OF EVENTS.

EUROPE.—News from England to the 22th ult., and from Sebastopol to the 14th.—*The War.*—Since the sanguinary conflict on the 5th, (now known as the battle of Inkermann,) the hostile forces had been holding each other in check, neither having sufficient confidence in their own strength to make a decisive attack. Both the allies and the Russians had received reinforcements; the former, at the rate of about a thousand per day. A winter campaign in the Crimea was evident, and wooden barracks for 20,000 men were being shipped by the British government. The British war office has issued a circular calling upon the militia to give as many volunteers as possible to the regiments of the line, and to the marine service. Every available steamship was taken up, for the purpose of sending troops to the seat of war. The Cunard steamships Niagara and Arabia having been taken by the government, no vessel belonging to that line would leave Liverpool till the 9th inst., after which one would be sent every alternate week. The Collins line was to change their days of sailing after the departure of the steamer of 29th ult., from Fourth to Seventh-days, in order that transatlantic communication might be inconvenienced as little as possible. A despatch from Prince Menschikoff, dated Sebastopol, Nov. 12, states that at that date the bombardment continued. The allies, (he says), had not advanced in their operations since the 8th, and were still fortifying their lines in the rear of Balaklava. The English accounts of the battle of Inkermann state the loss of the Russian army at 9000, killed and wounded. The British division of the allied army was chiefly engaged in this conflict, the desperate character of which may be inferred from the large number of officers, killed and wounded. The English loss is returned as follows—Generals Cathcart, Strangways, Goldie, and Torrens, killed; and Brown, Bentinck, Buller, and Adams, wounded. Thirty-eight English officers were killed, ninety-six wounded, and two were missing; 442 rank and file were killed, 1760 wounded, and 156 missing—total, 2502. The French loss was not so heavy. The number of the allied troops in the hospitals, is stated to be nearly 3000.

THE BALTIC.—Fourteen Russian war steamers had made a reconnoissance in the Baltic, as far as Dago, without encountering any of the allies. Admiral Napier had received orders to remain at Kiel until the 4th inst.; it is now considered necessary for a large part of the fleet to winter at Kiel.

AUSTRIA.—The Russian government has expressed its willingness to treat with Austria, and to withdraw the troops from the frontiers of Galicia; but not much confidence is felt in the sincerity of the offer. It is supposed to be prompted by the wish of Russia to restrain Austria from taking a more decided stand with the Western Powers.

ENGLAND.—At Liverpool, the demand for cotton was moderate, and prices slowly declining. Philadelphia and Baltimore flour, 44s. Trade was dull at London. Many of the aristocracy were in mourning for the death of kinsmen in the Crimea, which had an effect in curtailing the number of balls, &c., and also diminished the sales of the west end shops—the depositories of articles of taste and luxury. Over £96,000 had been collected in aid of the wives and children of the dead and wounded soldiers.

UNITED STATES.—*Congress.*—Senator Bright, of Indiana, has been elected President of the Senate, pro tem., it being expected that he will serve for the remainder of the session. In the House of Representatives, a resolution was offered instructing the Committee on Ways and Means to bring in a bill reducing the duty on railroad iron, or allowing an extended credit on the same; laid on the table, by a vote of 97 to 71. The House also voted on the River and Harbour bill, which was returned before the adjournment with the President's veto. It failed, the vote being 95 to 80; not two-thirds.

The revenue of the United States being too large, the President in his message recommends a reduction of the duties on imports; an increase of the army is suggested as necessary for the protection of our extended borders. The west-office expenses have been during the year $8,710,997; the receipts, $6,955,586; the expenses are swelled by the large payments to the ocean steamers, in all about two millions. The number of acres of public land sold during the year, is 7,035,735.

The payments, on account of the public debt during the year, were $24,356,308. The imports for the year were $6,321,317, in excess of the exports, including gold, which is now classed with the productions of the country.

The Secretary of the Treasury gives a statement of the currency, which makes the total amount of gold and silver coin in circulation, Ninth month 30, 1854, at $241,000,000, and a total bank circulation of $204,689,200.

The whole number of soldiers authorized by law for the U. S. army, is 14,216; but the actual strength is only 10,745. During the past year, four officers and sixty-three men were killed, and four officers and forty-two men wounded, in hostilities with the border Indians. The Secretary of War recommends the use of camels and dromedaries for military purposes.

Slavery in Kansas.—At the recent election for a delegate to Congress, J. W. Whitfield, the pro-slavery candidate, was elected by a large majority. It is stated that the river counties in Missouri sent over thousands of their young men, to counteract the "treasonable schemes" of the free soilers.

Great Yield of Wheat.—Gov. Bigler says, that during the past season, California has produced the astonishing yield, in one instance, at least, of *eighty two and a half bushels of wheat to the acre.*

Safety of Railroads.—The Philadelphia, Wilmington, and Baltimore Railroad is to be enclosed with a board fence, from Baltimore to Havre de Grace, in order to guard against the intrusion of cattle, which has been a cause of annoyance and frequent accidents.

Search for Dr. Kane.—The Chamber of Commerce, N. Y., has passed resolutions to memorialize Congress to appropriate a sum sufficient to despatch a steam propeller and a storeship, to succor the crew of the Advance.

New York.—The feeling at the stock exchange is said to be decidedly better, yet failures, defalcations, and hard times are still the prevailing topics. The exports of specie have nearly ceased, the rates of exchange having fallen below the point, at which it is profitable to ship it.

New Orleans.—A number of commercial firms have failed. The cotton market is dull and declining. Flour, 9.12½ and 9.25. The steamboat Gypsie was burned on the 7th inst., at the mouth of New River. Dr. Harker, his son and daughter, with other persons, lost their lives. On the 29th ult., the American ship Shakspeare sailed with the largest cargo ever shipped from the port; it consisted of 3,068,085 pounds of cotton and 124 barrels of rosin; the whole valued at $389,716.

Philadelphia.—Mortality last week, only 127.

California.—The North Star arrived on the 9th, with California dates to the 16th ult. She brought 309 passengers and $1,384,000 in gold. The overland emigrants, who were arriving, had encountered great hardships. The financial affairs of the state were said to be in a prosperous condition. By the steamship Golden Gate, New York news had been received at San Francisco in 23 days and 10 hours, the shortest time out yet made. Flour, 12.75 per bbl. Dates from the Sandwich Islands to Tenth mo. 28, had been received. The annexation feeling was said to be strong at Honolula, and that the heir apparent whose signature was only wanting to complete the arrangement, had signified his willingness to give it.

Miscellaneous.—The Sault St. Marie Canal will be ready for navigation at the opening of the spring. Vessels may then clear from the head of Lake Superior, for any part of the world, and pass through the river St. Lawrence, without breaking bulk.

Return of Emigrants.—About 12,000 European emigrants have returned home since Fifth mo. last, in the N. York packet ships.

The Storm, on the 2d and 3d inst., was very violent in the Northern and Eastern States, and along the coast. Much damage was done to property, and many lives lost; in some places there was a heavy fall of snow.

Pennsylvania Railroad.—The Second track of this road has been completed across the Allegheny mountains, and the whole line between Altona and Johnstown, is complete, with the necessary sidliugs and stations.

Trade of the Lehigh.—During the year just closed, 1,245,582 tons of coal were sent to market from this region, being 179,432 tons more than last year.

Telegraph in Sweden.—The laying down of the cable containing the electric wires, has commenced between Elsinore, in Denmark, and Helsingborg, in Sweden. When completed, Stockholm will be in direct communication with Milan, and with all the electric lines in Denmark, Germany, Belgium, and France.

Value of Street Sweepings.—The annual sweepings of the streets of Paris sell for $700,000, after they are collected at the depot for manure.

Shawls.—At the Bay State Mills, in Lawrence, Mass there are annually manufactured four hundred thousand shawls, valued at upwards of a million and a half of dollars.

RECEIPTS.

Received from Jas. Taylor, agt., O., for John Wanze $2, vol. 28; from Wm. Carpenter, agt., S., N. J., $2, vol. 27, and for J. M. Sinnickson, $2, vol. 27, for S. Denn, Sl. Reeve, and H. Allen, $2 each, vol. 28; from S. B. Smith, agt., O., for Paul Seers, $2, vol. 27; from A. E. Kimberly, Io., $1, to 26, vol. 28; from Wm. Mickle agt., W., N. J., for Rachel R. Clark, $2, vol. 27, for D. Packer, $2, vol. 28; from F. H. Williams, agt., N. Y. for himself and R. W. Wright, W. Mekeel, Aaron Mekeel John A. Potter, S. E. Hoag, Chas. B. Owen, Chas. Wood and Jarvis Wooden, $2 each, vol. 28, and for Geo. B. Collins, $3, to 26, vol. 28; from G. M. Eddy, agt., Mass for C. W. Howland, $4, vols. 27 and 28; from Amy C. Hoopes, Pa., $2, vol. 28; from P. P. Dunn, N. J., $2, vol. 28.

SOUP HOUSE.

The Society for supplying the poor of the city with soup, being about to open their house, No. 16 Green's Court, between Spruce and Pine streets, and Fourth and Fifth streets, respectfully solicit the aid of the benevolent to enable them to meet the pressing wants of the poor, during the present season of suffering. Donations in money will be gratefully received by the Treasurer, Jeremiah Hacker, No. 144 South Fourth street, or Thomas Evans, No. 180 Arch street, and in flour, rice, beef, vegetables, &c., at the house.

Those who advert to the high prices of food and fuel, and the difficulty of procuring employment at the present time, will readily perceive, that the calls for aid of the industrious poor, are likely to be unusually numerous, and that increased means will be required to meet them, while few charities afford so much relief at so small a cost, or in so unobjectionable a manner.

WEST-TOWN SCHOOL.

Assistant Teachers are wanted in the Boys and Girls departments of this Institution. The opportunity which this station furnishes for prosecuting their studies, free from any expense, presents a favourable opening for young persons, who wish to perfect themselves in the higher branches of learning, or to prepare for the business of Teachers. Those who wish to engage, are requested to make early application to Nathan Sharpless Concordville; Pennock Passmore, Goshenville; or Thomas Evans, Samuel Bettle, Jr., Elizabeth Peirson, or Sidney Coates, Philadelphia.

INDIAN CIVILIZATION.

The committee is desirous of engaging the services of a well qualified Friend to teach the school at Tunessassah, &c. Friends, who may feel concerned to engage in that station, are requested to make early application to Joseph Elkinton, No. 377 S. Second street, or Thomas Evans, No. 180 Arch street, Philadelphia, or Ebenezer Worth, Hamerton, Chester county Pa., or Thomas Wistar, Fox Chase, Philadelphia co., Pa. Philad., Ninth mo. 20, 1854.

FRIENDS' ASYLUM.

Committee on Admissions.—Samuel Bettle, Jr., No. 101 North Tenth street; Charles Ellis, No. 95 South Eighth street, and No. 56 Chestnut street; William Bettle, No. 14 South Third street; John C. Allen, No. 179 South Fifth street, and No. 227 North Front street; Horatio C. Wood, No. 210 Race street, and No. 37 Chestnut street; William Thomas, No. 242 North Fifth street, and No. 48 South Wharves; Townsend Sharpless, No. 187 Arch street, and No. 32 South Second street; John M. Whitall, No. 161 Filbert street, and No. 138 Race street.

Visiting Managers for the Month.—Townsend Sharpless, No. 187 Arch street; William Hilles, Frankford; James Thorp, Frankford.

Superintendent.—Dr. Joshua H. Worthington.

Matron.—Margaret Worthington.

PRINTED BY KITE & WALTON,
No. 3 Ranstead Place, Fourth above Chestnut street.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXVIII. SEVENTH-DAY, TWELFTH MONTH 23, 1854. NO. 15.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 50 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, paid in advance, three and a quarter cents; to any art of the United States, for three months, if paid in dvance, six and a-half cents.

From the London Quarterly Review.

How London is Supplied with Food.

[The following selections from an article in the st number of the London Quarterly Review, ay interest the readers of "The Friend."]

If, early on a summer morning before the noke of countless fires had narrowed the horizon f the metropolis, a spectator were to ascend to e top of St. Paul's, and take his stand upon the lcony, that with gilded rail flashes like a fringe fire upon the summit of the dome, he would see eeping beneath his feet the greatest camp of men pon which the sun has ever risen. As far as he uld distinguish by the morning light, he would hold stretched before him the mighty map of e metropolis; and could he ascend still higher, would note the stream of life overflowing the im of hills which enclose the basin in which it ands.

In the space swept by his vision would lie the ngregated habitations of two millions and a lf of his species—but how vain are figures to nvey an idea of so immense a multitude. If orway, stretching from the Frozen Ocean down the southern extremity of the North Sea, were to mmon all its people to one vast conclave, they ould number little more than half the souls ithin the London bills of mortality. Switzerland, her thousand valleys, could not muster such an my; and even busy Holland, within her mast-ronged harbours, humming cities, and populous ains, could barely overmatch the close-packed illions within sound of the great bell at his feet. s the spectator gazed upon this extraordinary rospect, the first stir of the awakening city would adually steal upon his ear. The rumbling of heels, the clang of hammers, the clear call of e human voice, all deepening by degrees into a nfused hum, would proclaim that the mighty ty was once more rousing to the labour of the ay, and the blue columns of smoke climbing up heaven that the morning meal was at hand. t such a moment the thought would naturally ise in his mind,—In what manner is such an semblage victualled? By what complicated heels does all the machinery move by which vo millions and a half of human beings sit own day by day to their meals as regularly id quietly as though they only formed a snug ttle party at Lovegrove's on a summer's after-oon? As thus he mused respecting the means y which the supply and demand of so vast a ultitude is brought to agree, so that every one enabled to procure exactly what he wants, at e exact time, without loss to himself or injury to the community, thin lines of steam, sharply marked for the moment, as they advanced one after another from the horizon and converged towards him, would indicate the arrival of the great commissariat trains, stored with produce from all parts of these isles and from the adjacent continent. Could his eye distinguish in addition the fine threads of that far-spreading web which makes London the most sensitive spot on the earth, he would be enabled to take in at a glance the two agents—steam and electricity—which keep the balance true between the wants and the supply of London.

If our spectator will now descend from his giddy height, and will accompany us among the busy haunts of men, we will attempt to point out to him whence those innumerable commodities, which he has seen pouring into the town, have been obtained, the chief marts to which they are consigned, and the manner in which they are distributed from house to house. Had London like Paris its octroi, the difficulty of our task would be limited to the mere display of official figures, but, thanks to a free policy, we have no such means of getting at strictly accurate estimates, and must therefore content ourselves with the results of patient inquiry among the foremost carriers—the railway companies—aided by such other information as we have been able to procure. For the sake of convenience, and of sequence, let us imagine that the principal daily meal is proceeding, and, according to the order of the courses, we will endeavour to trace the various edibles to their source—the fish to its sea—the beast to its pasture—the wild animal to its lair—the game to its cover—and the fruit to its orchard; to point out how they are netted, fattened, bagged, gathered, and conveyed to their ultimate destination—the *great red lane* of London humanity. Let us begin with fish, and that unrivalled fish-market which all the world is aware rears its head by London Bridge.

Those who remember old Billingsgate, with its tumbledown wharf, and dock half choked with corruption and oyster-shells—a dirty remnant of the days of Elizabeth—will enter with pleasure Bunning's new market. Through its Italian colonnade are seen the masts of the fishing smacks, and the brown wharves of the opposite side—a pleasing picture, which instantly fixes the artistic eye. The busy scene within the market, between the hours of five and seven in the morning, is one of the marvels of the metropolis. Billingsgate is the only wholesale fish-market in London, and it may therefore be imagined how great must be the business transacted within its walls. Of old, nine-tenths of the supply came by way of the river, the little that came by land being conveyed from the coast, at great expense, in four-horse vans. Now the railways are day by day supplanting smacks, and in many cases steamers; for by means of its iron arms, London, whilst its millions slumber, grasps the produce of every sea that beats against our island coast, and ere they have uprisen it is drawn to a focus in this central mart. Thus every night in the season the hardy fishermen of Yarmouth catch a hundred tons (12,081 yearly), principally herring, which, by means of the Eastern Counties Railway, are next morning at Billingsgate. The South-Western Railway sends up annually, with the same speed, 4000 tons of mackerel and other fish, the gatherings of the south coast. The North-Western collects over night the 'catch' from Ireland, Scotland, and the north-east coast of England, and adds to the Thames street mart 3578 tons, principally of salmon, whilst the Great Northern delivers to the early morning market, or sometimes later in the day, 3248 tons of like sea produce. The Great Western brings up the harvests of the Cornish and Devonshire coasts, chiefly mackerel and pilchards, to the amount of 1560 tons in the year; and the Brighton and South Coast conveys the incredible number of 15,000 bushels of oysters, besides 4000 tons of other fish. Nearly one-half in fact of the fish-supply of London, instead of following as of old the tedious route of the coast, is hurried in the dead of night across the length and breadth of the land to Billingsgate, and, before the large consumers in Tyburnia and Belgravia have left their beds, may be seen either lying on the marble slabs of the fishmongers, or penetrating on the peripatetic barrow of the costermonger into the dismal lanes and alleys inhabited by 'London Labour and the London Poor.' These prodigious gleanings from what Goldsmith might well call the 'finny deep,' are conveyed from the termini in spring vans, drawn by two, and occasionally by four horses. Salmon come in boxes, herrings in barrels, and all other kinds of fish in baskets. Sometimes as many as sixty of these vans will arrive in the narrow street leading to the market in the course of two or three hours, and the scene of confusion occasioned by their rushing among the fishmongers' carts and the costermongers' barrows, the latter often amounting to more than a thousand, is almost as great as that at Smithfield; for the fish, like the live-stock trade, has long outgrown its mart, and Billingsgate, as much as Smithfield, is choked for want of space. Let the visitor beware how he enters it in a good coat, for, as sure as he goes in in broad cloth, he will come out in *scale* armour. They are not polite at Billingsgate, as all the world knows, and 'by your leave' is only a preliminary to your hat being knocked off your head by a bushel of oysters or a basket of crabs. In the early part of the morning, the traffic is carried on in comparative quiet, for the regular fishmongers, who have the first of the market, conduct their business with little disturbance, but it would gladden the heart of a Dutch painter to see the piled produce of a dozen different seas glittering with silver and brilliant with colour. Gigantic salmon, fresh caught from the firths and bays of Scotland, or from the productive Irish seas, flounder about, as the boxes in which they have travelled disgorge them upon the board. Quantities of delicate red mullet, that have been hurried up by the Great Western, all the way from Cornwall, for the purpose of being furnished fresh to the fastidious palates at the West End; smelts brought by the Dutch boats, their delicate skins varying in hue like an opal as you pass; pyramids of lobsters, a moving mass of spiteful claws and restless feelers, savage at their late abduction from some Norwegian fiord; great heaps of pinky

shrimps; turbots, that lately fattened upon the Doggerbank, with their white bellies bent as for some tremendous leap; and humbler plaice and dabs, from our own craft—all this bountiful accumulation forms a mingled scene of strange forms and vivid colours, that no one with an eye for the picturesque can contemplate without interest. Neither is the scene always one of still life, for it is no rare occurrence for the visitor to behold a yelling knot of men dragging with ropes through the excited crowd a royal sturgeon, nine feet in length. If the spectator now peeps down the large square opening into the dismal space below, which appears like the hold of a ship lately recovered from the deep, he will see the shell-fish market, where piles of blue-black muscles, whelks, and grey cockles turned up with yellow, give the place a repulsive aspect of dirt and slop. There are but few buyers seen here, and they are generally women belonging to the costermonger class, for the men rather disdain the shell-fish trade. These female itinerants may be noticed wandering about from basket to basket, occasionally gouging out a whelk from the shell with the thumb, to test the lot, and then passing on to the next.

(To be continued.)

DIVINE WORSHIP.

"Every one, who worships God in spirit and in truth, is sensible that there are two contrary powers or spirits, to wit, the power and spirit of this world, in which the prince of darkness bears rule, and over as many as are acted by it, and work from it; and the power and Spirit of God, in which God worketh and beareth rule, and over as many as act in and from it. So, whatever be the things that a man thinketh of or acteth in, however spiritual or religious as to the notion or form of them, so long as he acteth and moveth in the natural and corrupt spirit and will, and not from, in, and by the power of God, he sinneth in all, and is not accepted of God. For hence both the 'ploughing and praying of the wicked is sin;' as also whatever a man acts in and from the Spirit and power of God, having his understanding and will influenced and moved by it, whether it be actions religious, civil, or even natural, he is accepted in so doing in the sight of God, and is 'blessed in them.'

"From what is said, it doth appear how frivolous and impertinent their objection is, that say they wait upon God in praying and preaching, since waiting doth of itself imply a passive dependence, rather than an acting. And since it is and shall yet be more shown, that preaching and praying without the spirit, is an offending of God, not a waiting upon him, and that praying and preaching by the Spirit pre-supposes necessarily a silent waiting to feel the motions and influence of the Spirit to lead thereunto; and lastly, that in several places (of Scripture) where praying is commanded; watching is specially prefixed as a previous preparation thereunto; we do well and certainly conclude, that since waiting and watching are so particularly commanded and recommended, and cannot be truly performed but in this inward silence of the mind from men's own thoughts and imaginations, this silence is and must necessarily be a special and principal part of God's worship. The excellency of this silent waiting upon God doth further appear, in that it is impossible for the enemy, the devil, to counterfeit it, so as for any soul to be deceived or deluded by him in the exercise thereof. Now in all other matters he may mix himself with the natural mind of man, and so by transforming himself, he may deceive the soul, by busying it about things perhaps innocent in themselves, while yet he keeps them from beholding the pure light of Christ, and so from knowing distinctly their duty, and doing of it. For that envious Spirit of man's eternal happiness knoweth well how to accommodate himself, and fit his snares for all the several dispositions and inclinations of men; if he find one not fit to be engaged with gross sins, or worldly lusts, but rather averse from them, and religiously inclined; he can fit himself to beguile such a one, by suffering his thoughts and imaginations to run upon spiritual matters, and so hurry him to work, act, and meditate in his own will. For he well knoweth that so long as self bears rule, and the Spirit of God is not the principal and chief actor, man is not put out of his reach; so, therefore, he can accompany the priest to the altar, the preacher to the pulpit, the zealot to his prayers, yea, the doctor and professor of Divinity to his study, and there he can cheerfully suffer him to labour and work among his books, yea, and help him to find out and invent subtile distinctions and quiddities, by which both his mind and others, through him, may be kept from heeding God's light in the conscience, and waiting upon him. There is not any exercise whatsoever, wherein he cannot enter, and have a chief place, so as the soul many times cannot discern it, except in this alone: for he can only work in and by the natural man, and his faculties, by secretly acting upon his imaginations and desires, and therefore, when he, to wit, the natural man, is silent, there he must also stand. And therefore, when the soul comes to this silence, and, as it were, is brought to nothingness as to her own workings, then the devil is shut out; for the pure presence of God, and shining of his light, he cannot abide, because so long as a man is thinking and meditating as of himself, he cannot be sure but the devil is influencing him therein; but when he comes wholly to be silent, as the pure light of God shines in upon him, then he is sure that the devil is shut out; for beyond the imaginations he cannot go, which we often find by sensible experience. For he that of old is said to have come to the gathering together of the children of God, is not wanting to come to our assemblies. And, indeed, he can well enter and work in a meeting, that is silent only as to words, either by keeping the minds in various thoughts and imaginations, or by stupefying them, so as to overwhelm them with a spirit of heaviness and slothfulness: but when we retire out of all, and are turned in, both by being diligent and watchful upon the one hand, and also silent and retired out of all our thoughts upon the other, as we abide in this sure place, we feel ourselves out of his reach. Yea, oftentimes the power and glory of God will break forth and appear, just as the bright sun through many clouds and mists, to the dispelling of that power of darkness; which will also be sensibly felt, seeking to cloud and darken the mind, and wholly to keep it from purely waiting upon God. The excellency of this worship doth also appear, in that it cannot be stopped nor interrupted by the malice of men or devils, as all others can. Now, interruptions and stoppings of worship may be understood in a twofold respect, either as we are hindered from meeting, as being outwardly by violence separated one from another, or when permitted to meet together, as we are interrupted by the tumult, noise, and confusion, which such as are malicious, may use to molest or distract us. Now, in both these respects, this worship doth greatly overpass all others; for how far soever people be separated or hindered from coming together, yet as every one is inwardly gathered to the measure of life in himself, there is a secret unity and fellowship enjoyed, which the devil and all his instruments can never break or hinder. But it doth as well appear, as to those molestations which occur, when we are met together, what advantage this true and spiritual worship gives us beyond all others; seeing in despite of a thousand interruptions and abuses, one of which were sufficient to have stopped all other sorts of Christians, we have been able, through the nature of this worship, to keep it uninterrupted as to God, and also at the same time, to show forth an example of our Christian patience towards all, even oftentimes to the reaching and convincing of our opposers."

It is, in the present day, evident that, when people meet together to worship God in spirit and in truth, they must look to him, who is invisible; humbly waiting upon him for renewed ability to worship him in the beauty of holiness, and in the life and power of our Lord and Saviour Jesus Christ. Truly, nothing short of the same power that raised Lazarus out of the grave, can quicken and raise our souls out of death and darkness, and give us a foretaste of heavenly joy, and bless us with the sure mercies of David. Therefore, as the eye of a servant is to his master, and the eye of a maiden to her mistress, so let us keep our spiritual eye to the Lord; so that he may indeed become our "Everlasting Light, and our God, our glory."

New Jersey, Eleventh mo., 1854.

For "The Friend."

"In the world," saith our blessed Lord, "ye shall have tribulation, but in me peace." His followers in all ages have come through great tribulation to inherit living and eternal substance—to inherit "the peace of God which passeth all understanding," which is able to "keep the heart and mind through Christ Jesus." Therefore let none feel discouraged because of the tribulations which attend them in the present time, but rather be patient, knowing this, that "tribulation," if properly abode in, "worketh patience, patience experience, and experience hope, and hope maketh not ashamed because the love of God is shed abroad in our hearts by the Holy Ghost, which is given unto us." The sore trials and besetments of various kinds that are to be encountered by the Christian traveller in his passage through time, "are not to be compared with the glory that shall be revealed," when his "earthly house of this tabernacle shall be dissolved," for "our light affliction, which is but for a moment," as saith the Apostle Paul, "worketh for us a far more exceeding and eternal weight of glory." As we bow our necks to the yoke of Christ, and take up his daily cross, yielding ourselves to the sanctifying and redeeming influence of his Holy Spirit upon our hearts, we shall find it our portion many times to partake of much that the natural disposition shrinks from, yet He who hath promised that he would never leave nor forsake his followers, even in the greatest extremity of trial is abundantly able to sweeten every bitter cup and will not fail to do it, as we bow in resignation to every alloted dispensation of His providence with the language of child-like submission and obedience, "not my will, but thine, O Lord, be done."

Penna., Twelfth mo., 1854.

"Forgive us our trespasses, as we forgive those that trespass against us." If we rightly understand these and other passages of similar import no person can regard himself as accepted in the Divine sight, who has not the spirit of forgiveness towards his neighbour.

From "The Leisure Hour."

The Sea: its Distribution, Depth, Extent and Level.

The ancients called the sea, or rather the water of which it is composed, an element, thinking that it was one of those simple or primeval substances incapable of decomposition. The researches of modern chemistry, however, have proved water to be a compound produced by the combination of two gases. Yet, in another sense, the sea is an element; it is an element of life to all animal and vegetable creation. If there were no sea, the earth would be a burning, arid waste, vegetation would languish and die, and man, with all inferior animals, would perish under an intensity of heat incomparably more painful than that of the far-spreading wastes of the sandy deserts. The sea is as necessary to the existence of man as the soil which covers the earth. It is one of the physical conditions on which the continuance of his life depends, not only by yielding refreshing vapours to the atmosphere, but by the absorption of noxious gases, which would rapidly accumulate and soon become fatal were it not for the absorbing power of water. The earth would be incomplete without a sea, for all the purposes at least to which its Creator has evidently destined its present existence.

If the sea had not been necessary to man, as an element in the world of his habitation, its importance might be shown as the highway of commerce, connecting distant lands, bearing the bounties of varied climates, and the industry of races, from one extremity of the earth to the other. As a natural object, it is viewed in all its phases with unceasing interest. In calm, it impresses the mind with a feeling of security, such as its placid majesty and grandeur; in storm, with a sense of fear and reverential awe, so terrific is its power and uncontrollable its fury, did not He who gave it its bounds hold the winds in his grasp.

The sea is a vast collection of water in deep valleys. The bed of the sea is only a continuation of the coasts by which the waters are bounded and confined. Dry land is a succession of hills, mountains, and valleys, and the bed of the sea is formed in the same manner; but, being relatively lower than the surrounding lands, the water has accumulated, modifying, enlarging, and in some cases forming its reservoirs and channels. The earth has, at several distinct periods of its history, been the theatre of terrific catastrophes affecting the superficial arrangements of mountains and valleys, and consequently of land and water. The upheaving of stratified rocks, the intrusion of igneous or volcanic masses, and other phenomena, distinctly traced by geology, sufficiently attest this fact. Upon strata, tilted into an almost perpendicular direction, are frequently found horizontal beds containing marine or fresh-water shells, and bearing such appearances as might be expected in earthy deposits from water in periods of greater or less tranquillity. Even at the top of lofty hills and mountains, this curious phenomena has been frequently observed, leading consecutively to the conclusion that some of the highest peaks of the earth, rising above the denser clouds, and round which the lightnings hover like the eagle over her craggy home, were at some former period a portion of the bed of the ocean. The Apennines, the Alps, and the Andes give the same evidence; but our proof may be taken from lesser heights and nearer home. That great mass of chalk traversing the counties of Sussex, Surrey, and Kent, and forming the most lofty districts round the metropolis, contains a countless multitude of sea-shells. This important mineral formation is from seven to eight hundred feet thick, and its entire mass is crowded with the relics of marine animals, the shells of mollusks, and the bones of fish. The chalk, therefore, must have been formed at the bottom of the sea, and was once its bed; but, by some great physical force, the ancient receptacle of the ocean was lifted above its surface, and a new basin received its waters.

These changes, or revolutions, as they are called by geologists, account for the formation of mountains and valleys, and the distribution of land and water. Nor are instances wanting in modern history of great and violent forces, by which, in the interval of a few hours, the relative positions of land and water have been reversed. But without dwelling on the dreadful convulsions of nature, now happily infrequent, it is sufficient to observe that water in motion is of itself a disturbing and reproducing agent. England, now separated from the continent of Europe by the Straits of Dover, was once, probably, united to France, for the chalk cliffs of Dover range with those of Calais; while at Boulogne and the adjoining coast there is a still more strange coincidence with the strata and stratification of Folkstone and Hythe. There is no reason to suppose that the two countries were separated by any sudden elevation or depression of the land, or by any volcanic force; it appears to have been produced by the slow, but not the less powerful, action of the waves of the ocean. This was an effect similar to many still in progress.

If the bed of the sea is uneven like the surface of land, consisting of mountains, hills, and valleys, the depth of water must vary considerably. Scoresby, whose name is well known as a scientific voyager in the Polar ocean, once threw his sounding-line in the Greenland sea to the depth of 1200 fathoms, or one mile 640 yards, without finding a bottom. An officer in the United States service reported recently that, in a voyage from Rio de Janeiro to Saldana Bay, Cape of Good Hope, he sounded in latitude 28° 21′ S. and longitude 29° 17′ W., and reached the bottom at the depth of 3100 fathoms, or three and a half miles. The sounding, he says, was made with a thirty-two pound shot and a line 5000 fathoms in length, and the time occupied was one hour and nine minutes. Some curious experiments were made by Massey, under the orders of the lords of the admiralty, in H. M. sloop "Trinculo," commanded by captain Booth. A strong copper globe, inclosed in a net of cord, was fixed to a line 840 fathoms long, at a distance of about 40 fathoms from the lead. When the line was drawn up, it was found that the globe had been exploded by the external pressure of the water, and the line divided, so that the lead was lost. On another occasion, a globe was sunk with a greater weight, the line being of the same length, and this also was exploded, but the line returned without having reached the bottom. La Place, the French astronomer, calculated that the mean depth of the sea is nearly the same as the difference between the polar and equatorial diameters; but it is the opinion of astronomers generally, that the greatest depth of the ocean does not exceed 30,000 feet, and, except in the remarkable results said to have been obtained by the American officer, a bottom has seldom been reached at a depth exceeding one mile.

Seven-tenths of the surface of the earth is covered with water, a fact which led some thoughtless and sceptical minds to impugn the wisdom of the arrangement, and to charge God with folly. Some of these would-be-creators even explained how the world should have been constructed, and the benefits to be derived from the adoption of their plans. Science as well as religion frowns on these impious visionaries. The profoundest researches of the mathematician and astronomer not only prove that the present is the best distribution, but that no other could secure the permanent stability of existing physical conditions, or supply the necessities of animal life. This conclusion is not to be avoided, although the mind is at first startled with the contemplation of the great extent of the water compared with the dry land. The southern hemisphere, as will be seen by examining a terrestrial globe, is an almost continuous sea; and the Pacific ocean is of greater extent than all the dry land upon the surface of the earth. But this vast mass of water is constantly changing both its place and condition. At one time it is floating as an imperceptible vapour in the atmosphere, then, collected in clouds, descending in fertilizing showers upon mountain and plain. Down the steep declivities of elevated districts it descends in small unconnected streams, which uniting form rivulets and torrents, and falling into the plains combine in the gorges and deepest ravines of the valleys, producing rivers. Winding along their sinuous channels, they here and there spread over the low grounds, and everywhere carry fertility in their course, discharging themselves at last into the ocean from which they rose, having fulfilled their missions of mercy, until they recommence a series of mutations little differing from that already described. Thus is the earth preserved as a fit nursery for vegetation, and a habitation for mankind.

In a study of the distribution of the waters of the ocean, there must be a constant reference to the force by which all its states of motion and rest are governed—that force is gravitation. One of the most important effects of this cause is, that water maintains its level unless disturbed by the interference of other forces. It is scarcely possible to imagine how great a confusion and disorder would result from the suspension of this law, if but for an hour. The invariability of the law gives to man the power of binding that vast element, water, to his service, and of making it subservient to his wants. It flows through the channels he cuts in his lands, and drains or irrigates his fields at his pleasure; it spouts from his fountains, falls in graceful sheets over the little barriers he constructs, moves the machinery he invents to lessen his daily toil, and brings to his cities the productions of neighbouring or remote countries, depositing them at the very threshold of his barns and warehouses. But this element, so beneficent, so docile, is only under control because its Creator has placed it under a law compelling it always to seek the lowest depression, and in all its reservoirs to maintain its level. Even with the protection of this law, accidental causes sometimes momentarily overpower the continued agency of gravitating force, and, escaping from its appointed channels, it spreads with desolating power over cultivated districts and populous towns.

(To be concluded.)

Mule Trade of Bourbon County, Ky.—The Paris (Ky.) Citizen gives some statistics of the mule trade of Bourbon county, which show a steady increase both in the demand for and value of these animals. In 1843, according to the assessor's books, there were in the county 1932 mules, valued at $41,343, or an average of $21.31 per head; in 1854, 7436, valued at $562,800, or $75.70 per head. The principal markets are the Southern States, where they are used on cotton and sugar plantations. In Virginia they are used on the farm and the road. Baltimore furnishes a large market for the smaller animals, where they are shipped to the West Indies, to pack coffee from the mountain-plantations. One dealer in Baltimore

purchases annually 1000; and another in Richmond, Va., about double that number, one farmer in Bourbon county selling him every year between 500 and 800.

Selected for "The Friend."

Sayings of William Penn.

"It is a severe rebuke upon us, that God makes us so many allowances, and we make so few to our neighbour; as if charity had nothing to do with religion; or love with faith that works by it.

"I find all sorts of people agree, whatsoever were their animosities, when humbled by the approaches of death; then they forgive, then they pray for and love one another; which shows us, that it is not our reason, but our passion that makes us hold up the feuds that reign among men in their health and fullness.

"Did we believe a final reckoning and judgment, or did we think enough of what we do believe, we should allow more love in religion than we do; since religion is nothing else, but love to God and man. 'If ye love me,' says our blessed Redeemer, 'keep my commandments;' then he will love us; then we shall be his friends; then he will send us the Comforter; then, whatsoever we ask, we shall receive; and then, where he is we shall be also, and that forever.

"Nothing shows our weakness more than to be sharp-sighted at spying other men's faults, and purblind about our own. When the actions of a neighbour are upon the stage, we can have all our wits about us, and are so quick and critical, we can split a hair and find out every failure and infirmity; but are without feeling, or have but very little sense of our own. Much of this comes from ill nature, as well as from an inordinate love of ourselves, for we love rambling better than home, and blaming the unhappy, rather than covering and relieving them. They have a right to censure, that have a heart to help; the rest is cruelty, not justice.

"Friendship is an *union* of *spirits*, a marriage of hearts, and the bond thereof *virtue*. There can be no friendship, where there is no freedom. It will speak freely, and act so too, and take nothing ill, where no ill is meant; nay, where it is, it will *easily* forgive, and forget too, upon small acknowledgments. Friends are true twins in soul; one is not happy without the other, nor can either be miserable alone. As, if they could change bodies, they take their turns in pain, as well as pleasure; relieving one another in the most adverse conditions. What one enjoys, the other cannot want. Like the primitive Christians, they have all things in common, and no property, but in one another. Yet be not a friend beyond the altar, but let virtue bound thy friendship; else it is not friendship, but an evil confederacy.

"We should make more haste to right our neighbour than we do to wrong him; and instead of being *vindictive*, we should leave him to judge of his own satisfaction. True honour will pay treble damages, rather than justify one wrong by another. Some oppose honour to submission; but it can be no honour to maintain what it is dishonourable to do. If thou hast done an injury to another, rather own it than defend it. One way thou gainest forgiveness; the other, thou doublest the wrong, and the reckoning.

"Nothing does reason more right, than the *coolness* of those who offer it; for truth often suffers more by the heat of its defenders, than from the arguments of its opposers. Zeal ever follows the appearance of truth, and the assured are too apt to be warm; but it is their weak side in argument; zeal being better shown against sin than persons, or their mistakes. In all debates let truth be thy aim; not victory or an unjust interest; and endeavour to *gain*, rather than to expose, thy antagonist. Give no advantage in argument, nor lose any that is offered. This is a benefit which arises from temper.

"Passion, more than anything, deprives us of the use of our judgment; for it raises a dust very hard to see through. I have often thought that a passionate man is like a weak spring, that cannot stand long locked; and it is as true that those things are unfit for use, that cannot bear small knocks, without breaking. He that cannot bear contradiction, may, with all his wit, miss the mark. A man's strength is shown by his *bearing*. He that corrects out of passion, raises revenge sooner than repentance. It is one of the most fatal errors of our lives, when we spoil a good cause by an *ill management*; and it is not impossible that we may mean well in an ill business; but that will not defend it. If we are sure our end is right, we are too apt to gallop over all bounds to compass it; not considering that lawful ends may be very unlawfully attained. There is a troublesome humour, some men have, that if they may not lead, they will not follow. This comes of an over-fullness of ourselves, and shows we are more concerned for *praise*, than the success of what we think a good thing."

"Religion is the fear of God, and its demonstration *good works*; and faith is the root of both. Serving God concerns the frame of our spirits, in the whole course of our lives, and God is better served in resisting a temptation to evil, than in many formal prayers. To be like Christ, is to be a Christian, and regeneration is the *only* way to the kingdom of God, which we pray for. 'Without faith it is impossible to please God,' nor can we fear what we do not believe. The devils also believe, and know abundance; but this is the difference: their faith works *not* by love, nor their knowledge by obedience; and therefore they are never the better for them. And if ours be such, we shall be of their church, *not* of Christ's; for as the Head is, so must the body be. Christ was *holy*, humble, harmless, *meek* and merciful, when among us, to teach us what we should be when he was gone; and *that* minister whose life is not the model of his doctrine, is a babbler rather than a preacher, a quack rather than a physician of value. 'He that lives in love, lives in God.' Tongues shall cease, and prophecy shall fail, and faith shall be consummated in sight, and hope in enjoyment; but love remains. Love is above all; and *when* it prevails in us all, we shall all be lovely, and in love with God, and one with another. Amen."

For "The Friend."

The Suffering Poor.

Whilst enjoying the blessings of a comfortable home at this inclement winter season, let us remember the poor, who, without shelter, food, and some almost naked, are suffering within our city. Others, not quite so destitute, but reduced to want by a discharge from their regular employment, by inability of their employers to pay their wages, claim our aid to keep them from suffering for food, fuel, &c. May we each stop ministering to the pride of man; avoid all extravagance and unnecessary expense, that we may assist in feeding the hungry, clothing the naked, &c.

The Moyamensing House of Industry, on Catharine street, above Seventh street, receives the destitute homeless poor, affording them temporary employment and relief whilst there. Its funds are nearly exhausted, while the present high price of provisions, and numerous applicants for relief, call loudly for help. Donations in money will be received by Wistar Morris, Treasurer, South Third street, below Walnut street. Provisions of all kinds, cast-off clothing and coal would be sent for, or can be sent to the Moyamensing House of Industry as above. If Friends in the country have contributions of turnips, potatoes, and other vegetables, corn meal, &c., they would be very acceptable. Those whom our heavenly Father has blessed with abundance, and permitted to become stewards of large estates may now make *profitable investments* of some of their surplus income, by contributing toward the relief of the poor, it will afford a more comfortable retrospect than to add interest to principal, or field to field. Surplus funds, distributed to relieve the poor from time to time, will settle better in *the final audit*, than an overgrown estate showing a large balance for distribution, too often tending to the ruin of those who inherit it. J.

Philada., Twelfth mo. 18th, 1854.

Selected.

A WORD FOR PEACE.

"Peace I leave with you; my peace I give unto you not as the world giveth, give I unto you."—John xiv. 27.

If such the legacy bequeathed
By Jesus to his *own*,
If such the meek injunctions breathed,
Ere he from earth had flown,
How should his lowly followers *fight;*
Reading his gracious words aright.

His kingdom is not of this world,
Nor by it understood!
The banner from his cross unfurl'd,
Leads not to acts of blood!
The Christian's warfare is within,
With pride and passion, self and sin.

Whence come your wars, frail worms of dust?
What are your fightings for?
Envy and hatred, greed and lust,
Which in your members war;
Dwells such a dark, unhallowed host,
In temples of the Holy Ghost?

When angels first to shepherd's ears,
Announced the Saviour's birth,
What *watchword* did the heavenly spheres,
Pour down on listening earth?
"Glory to God, who dwells on high;
Toward men—good will and unity!"

When Christ on Calvary's blood stained hill,
His life a ransom paid,
What peaceful love, triumphant still,
Prompted the prayer he prayed!
A prayer—how tender, brief, and true.—
"Forgive; *they know not what they do.*"

"*'Tis by its fruit the tree is known;*"
The test of Truth is love!
Have they, then, reverently shown
Their's to the Lord above,
Who bid their fellow-creatures bleed,
And by their acts belie their creed?

Thank God! this gospel truth, no more
To one small sect confined,
From sea to sea, from shore to shore,
Shall flash on many a mind;
Till earth below, and heaven above,
Join in one hymn of *Peace and Love!*

BERNARD BARTON.

Selected.

Think ye, 'twas meant that man should find no spell
Of joy and beauty in the song-bird's lay?
Or, were the bright flowers only meant to tell,
A warning tale of bloom that must decay?

Were it not worse than vain to close our eyes
Unto the azure sky and golden light,
Because the tempest-cloud doth sometimes rise,
And glorious day must darken into night.

Wiser and better, with a thankful mind,
To bless our God for every glory given;
And with a gentle heart to seek and find
In things on earth, a type of things in heaven.

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

THOMAS EVERDEN.

(Concluded from page 109.)

In prosecuting the work called for at his hand by his divine Master, Thomas Everden attended Philadelphia Yearly Meeting, in the year 1701. At that meeting he was appointed one of a committee to write an epistle to London Yearly Meeting, to acknowledge its care in answering the remonances in respect to this country, of Dr. Bray." Thomas Bray was an Episcopal clergyman, of Maryland, who, going to England about the close of 1700, or beginning of 1701, there published several papers, all bearing more or less on the state of religion in the colonies. The first paper which was called a "Memorial," was intended to show the necessity of a fund being raised in England to pay a number of competent persons, who should be sent as missionaries to America, to christianize the inhabitants, many of whom, particularly the Quakers, he accounted infidels. It was to answer the attacks on the Society of Friends, with which these various pamphlets abounded, that Joseph Wyeth, on behalf of Friends in London, published "Remarks on Dr. Bray's Memorial, &c." Joseph says, in his preface, "My intent, therefore, in publishing the following remarks, is briefly to prevent, or remove the prejudices which his mis-reports, concerning us, may have raised, or might raise; by plucking off those bear-skins, which he has brought from America, and cast over us, to disguise us, that so he might expose us to the rage of the people, and as far as he can, to the displeasure of the government." It would be out of place in an account of Thomas Everden, to go into a synopsis of these witty and reasonable "remarks on Dr. Bray." Thomas, as well as other friends in Maryland, had exerted themselves to oppose the passage of a bill by the Assembly of Maryland, to make the Church of England the established church of the province. Dr. Bray says of himself and fellow professors, "After many struggles with the Quakers, 'tis to be hoped, we are in a fair way, at last, to have an Established Church." They had obtained the passage of a law by the Assembly to that effect, one of the provisions of which laid a tax of forty pounds of tobacco on each taxable inhabitant for the support of the clergy, but the law had not received the Royal assent at the time he wrote. Joseph Wyeth thus comments on the passage we have just quoted from Dr. Bray,—"Had he endeavoured the establishing a church there, according to the true apostolic and evangelical manner, he need not have struggled with the Quakers about it. But if the church, which he would have established, cannot be established without taking from the Quakers, and others dissenting from him, their properties and liberties, it is not to be wondered at, if all that are so concerned, dislike his struggle for such an establishment. The churches of Christ, in the first ages of Christianity, as they were not gathered by the help or force of secular power; so neither were they established by it. It was the Divine power, and effectual working of the Holy Spirit, which (then and still accompanies the true evangelical ministry), as it opened the understanding and hearts of the people, and inclined them to receive and embrace the faith and doctrines of the Christian religion, so it established them in the faith and doctrines received; and disposed their minds to a spontaneous, ready, and cheerful communication of their outward substance, to supply the necessary occasions of their religious societies, though labouring under the greatest pressures from the civil magistrate."

Thomas Everden was a frequent visitor of Philadelphia at the time of the Yearly Meeting, and we find mention of his attendance at various meetings, in the vicinity of the city. He continued faithful in his labours of love until near the close of his life. His friends say of him, "He was one whom the Lord fitted for the work of the ministry, and he preached the gospel of peace. The Lord also gifted him to be helpful in the government of the church, and to maintain the order of the Gospel. In the meekness of wisdom and power of God, was he made to testify against those that stood not faithful in their testimonies for the trust, which the Lord required at their hands. And such as would not be restored by the spirit of meekness in the labours of love, and be prevailed upon to be orderly in their conversation, he was zealous that they should be testified against, and careful he was to maintain the testimony of Truth in the simplicity thereof. He also zealously and faithfully laboured long in the Lord's vineyard, to the convincing, building up, and confirming many in the faith of God's elect, in many parts of America. The Lord's power and presence attended him in all the services he concerned him in, and greatly blessed him and his labour in the Gospel."

He was taken sick early in the Third month, 1710, and during the time of his continuance in the body, he was enabled to express the satisfaction he felt in looking to his removal. He said, "He did expect the Lord had sent the messenger of death to summon him to his long home;" adding, "Death is made easy to me, because I know the sting is taken away, and my Lord is near me." He often said to this effect, "I have but little pain, for my Lord whom I have served, is with me, and fills my treasury."

During his illness he felt a salutation of love and Christian counsel spring in his heart flowing towards his brethren and sisters at the Meeting of ministering Friends held at West River. Under this feeling he wrote the following epistle to them:

"From Fishing Creek, the 24th of the Third mo., 1710.

"Friends,—In the love of the Lord Jesus Christ, I salute you all. I am at this time very weak in body, in expectation of my dissolution to be near at hand.

"Blessed be the Lord God, who hath called us, and chosen us to be witnesses, not only in word and doctrine, but in a holy life and godly conversation. His living and powerful presence is with me, and in this I greatly rejoice.

"My brethren, my love abounds greatly to you, and I embrace and salute you in the same love and life, with which the Lord hath loved me.

"Receive this friendly exhortation from your dying brother, as I think, that as God has given us a gift, and opened our mouths in his name, that you abide and live in his name; for herein are we made instrumental for the gathering of others, and to glorify his name. What! hath God chosen us, and counted us worthy to speak to his church and people, and to turn many to righteousness. Surely, brethren, it greatly concerns us to walk, even as our Lord walked when he was upon the earth, according to the measure of the gift of grace that we have received from Him, in patience, in meekness, and wisdom, and heavenly gravity, and few words, such as minister grace to the hearers, and those who converse with us.

"Since I last saw you, my service has been chiefly at Cecil, and Chester, and Great Choptank.

"Farewell, farewell, in the Lord.

"THOMAS EVERDEN."

As he lay quietly awaiting his close, his heart was often warmed by the love of the Gospel towards those who came to see him, and he exhorted at times his children, his friends, and his neighbours, to keep to truth, and in love with one another. He said, "How good a thing it is to have the favour and smiles of Jesus upon a dying bed, which cannot be had out of the truth." He exhorted all to serve the Lord faithfully, and to stand up for the testimony of Truth in their day, not fearing the frowns of men; adding, "What should I have done now, if I had gained the whole world, and had been destitute of the favour of my Lord, which is more to me than all the world."

Thus, uttering many heavenly expressions, and bestowing many good admonitions on those around him, he grew weaker until the 5th of the Fourth month, 1710, when he departed to his everlasting rest.

Glimpses of the East.

MARRIAGE FEAST.

During our stay at Aleppo, Signor Fatallah, a wealthy neighbour, who was likewise proprietor of a silk manufactory, married his son to the daughter of an opulent fellow-townsman. Preparations on a grand scale had long been going forward, and among a vast concourse of friends and acquaintances invited to celebrate the nuptials, we also were included. The auspicious moment arrived, and we proceeded to Fatallah's house, escorted by a band of native musicians. On arriving at the residence of the bridegroom, we were ushered into a long room in which guests were seated from the door to the upper part, according to their rank in life; the chief guests being seated at the head of the divan on either side of the master of the house; others were ranged lower and lower; the poorest guests were close to the doorway, and one or two so poor that they did not aspire to a place on the divan, but squatted themselves cross-legged on the ground. On the arrival of a fresh guest, the master of the house would rise and come forward to receive him; and if, as happened on some occasions, the guest, from mock humility, would seat himself in a position lower than what his actual rank of precedence entitled him to, an absurd scuffle would ensue, in which the master of the house would endeavour to drag the other higher up into the room, and the guest, with many "Stafer Allahs," (God forbid,) and many false protestations, pretend reluctantly to yield to the distinction proffered him, and so gain honour in the sight of the assembled multitude. Such scenes brought vividly to my mind our Lord's parable about the meek being exalted; and rendered it clearly evident that this etiquette, so strictly adhered to by the natives of all Syria to this present hour, existed in the time of the Redeemer, and has been practised from the patriarchs downward.—*Dr. Hamilton.*

DOGS IN EASTERN CITIES.

Your eye is attracted instantly in the streets of Damascus by the number of thin, lounging, hungry dogs that you meet. They have no owners, no food but the garbage of the streets, no kennels but the manure heaps and angles of the streets, no protection but the law of passive toleration. No man owns a dog—no man injures a dog. The cats are fondled and caressed because they kill the serpents; the dogs are tolerated because they clean the streets. The donkey, the mule, or the camel falls down and dies; and where it falls there it lies, until, in the course of a few hours, the dogs have devoured it, and the rays of the sun have rendered the effluvia innocuous. These dogs

are universal in the East, and indeed they seem to be the companion of man over the whole world, though in the East their good qualities are not used for his advantage. Buffon thinks they are all derived from the original type of the shepherd's dog. In the East one sees no white dogs nor any spotted ones; they are mostly brown, blackish, and of an ash colour. They have no bark; they howl and make noise enough, but the fine, well-defined *bow vow* is entirely wanting. This is the sign of the civilized domesticated dog, and seems to denote the refinement of canine education. The dog, if allowed to run wild, as in America, loses the *bark*, as in a few generations a family in the back woods would lose the habits of civilized life. I need not say the Turks do not eat dogs, for they hold them to be as unclean and abominable as swine. No pig dare approach the holy city of Damascus, and the man who brought it might lose his life. A Jew once, out of the love of money, brought me a sucking pig under his cloak, holding its snout all the time to prevent its squeaking. A ham discovered among your provisions would stop a whole caravan. The dogs in Damascus have established a kind of police among themselves, by which they know and maintain their several districts, and a strange dog intruding would be speedily expelled. They are always at the starving point, and if the offal and garbage of the street or district could support another, it would be there. They lie in the streets; the man, the camel, or the donkey steps over them; they rise not—they make no effort to clear the way. No merciless wheels have taught them to keep to one side. At night you cannot travel through the streets without a lamp, for this, among other reasons, that you would trample upon the dogs and get bitten. They are, however, in general, great cowards, and a firm face, or the lifting of a stone appals them.—*Graham's Jordan and the Rhine.*

VEILED LADIES.

There is another great difference between the general appearance of London and Damascus, viz.: in the eastern city you see not the bright, joyous countenance of woman; she is deeply veiled. In Egypt she is enveloped from head to foot in a dark, and in Syria in a white sheet, which effectually obliterates all traces of shape, absolutely equalizes to the eye all ranks, ages, and conditions, and suggests to the beholder the idea of a company of ghosts. During five years in the East I never saw the face of a woman in the streets, nor did I ever see the face of a Mohammedan lady at all. I walked into the house of a Moslem on one occasion without having signified my approach, when, the ladies being unveiled, raised such shouts of terror and indignation, that I speedily made my way to the street again. You may see the feet, but not the face. One of the highest magistrates of Damascus visited me occasionally, and in the summer season he uniformly put off his slippers, and sat down on his bare feet before me on the divan. It is so with the ladies also. The feet may be seen, and much of the bosom also, in some places, but never the face. Conceive now how ludicrous the streets of London would appear if green, white, black and gray turbans moved indiscriminately, instead of the present hats; and that all the ladies walking, or on donkeys, instead of the present varieties of showy dress, beautiful bonnets, and smiling faces, presented only the appearance of headless ghosts clothed in white!—*Ibid.*

A FEAST WITH THE BEDOUINS.

After the usual ceremonies, interchanging the kiss of friendship, and drinking coffee, the feast was spread. We were served with curds and whey, to be drank out of the hollow of our hands, for we saw no spoons, and our supper consisted of an entire sheep cut in pieces and boiled in lebbin, or sour milk; for the Bedouins never boil their meat in water, and seldom, if ever, eat bread with their flesh. Their manner of eating, which we were obliged to conform to, was as follows:—The pieces of mutton were thrown into a large wooden bowl, and the fat of the tail being cut in lumps, was placed on the top, for this was reckoned the chief delicacy, and was bolted with the greatest avidity. A smaller bowl containing hot butter (from goats' or sheep's milk) was brought in and poured over the meat. It was necessary to be on the alert, for as many as could get near were squatted around the mess, and every hand was eagerly employed in snatching and tearing the pieces of meat. Those who were not able to approach the bowl stood at the backs of the other more fortunate guests, and thankfully received the half-gnawed bones, which they finally threw to the dogs, who formed the outer circle. The repast was concluded by a dish of burgul, made of green wheat, peeled, and boiled in the same sour milk which had served for the cooking of the mutton. It was eaten by being formed into balls by the hand, and then, by the help of the thumb, dexterously thrust into the mouth.—*Travels in Arabia.*

THE SHEPHERD AND HIS FLOCK.

We passed a very small fountain of pure water, called "'Ain Hil Jerabek." This is a favourite resort of the shepherds, who are great epicures in water. Its name is not uncommon in these mountains. It signifies "the fountain of the opening of the knapsack." All the shepherds have a little sack of skin which they carry, strapped like a soldier's knapsack upon their back. In this they keep their scanty fare; and when they reach a spring of pure water, they unloose it, and eat their meals with a relish which those alone can realize who breathe pure mountain air, and are braced by vigorous exercise. Often have I sat beside the bubbling fountain in the midst of these simple and wild-looking shepherds of Anti-Lebanon, and told them tales of other lands, that to them were stranger far than any story of the "Thousand and One Nights." I have seen their flocks gathered around them in one dense mass, and I have not been a little astonished and pleased to observe that this mingling gave rise to no confusion. Each shepherd, when he had finished his repast, or when his time of rest is over, rises from his place and walks away, calling to his sheep or goats in a peculiar way, and immediately his own flock separate themselves from the throng and follow him. The other shepherds do so too, and each flock follows its own master. How beautifully illustrative of the words of our Saviour: "He calleth his own sheep by name, and leadeth them out. And when he putteth forth his own sheep, he goeth before them, and the sheep follow him: for they know his voice. And a stranger will they not follow: for they know not the voice of strangers." John x., 4, 5.—*Rev. J. L. Porter's Travels from Damascus to Baalbeck.*

He who serves the Lord perfectly at the *present moment*, though it be in a small thing, such as the hewing of wood, or the drawing of water, does in reality glorify Him more than another who is prospectively athirst and anxious for things of much greater consequence, but at the same time neglects or imperfectly performs his present duties.

For "The Friend."

"Beware of the Leaven of the Pharisees."

Amid the many besetments in the Christian path, perhaps there is hardly anything so specious, seductive and stupefying to religious sensibility and discernment, as "the leaven of the Pharisees." Under high pretensions to divine knowledge, and a rigid observance of many things, may in a day of fleshly ease pass in the sight of the superficial as the true spiritual influence, and sense of experimental Christianity, while at the same time it is directly the opposite. Nothing appears to be more iniquitous in the Divine sight than hypocritical pretensions to religion; when the humble, self-denying walk, does not mark our steps, and true abasedness in our deportment and uprightness in our conduct are not discoverable.

Perhaps some may be almost ready to imagine that nothing of Pharisaic zeal exists at the present time; that it is a species of error which once flourished, but now is happily extinct. There appears, however, no perceptible reason for this conclusion: if it is a correct one, it is marvellous that this abomination should have totally disappeared, while all other kinds of wickedness continue so rife in the passing age. If any indulge in this belief, for want of vigilance in guarding against the insinuating coils of a Pharisaical spirit, there appears to be one weak side in the character of which the enemy of all good will be very likely to avail himself.

Our blessed Lord pronounced a woe against the Scribes and Pharisees who sit in Moses' seat, who make broad their phylacteries, and enlarge the borders of their garments, saying unto them, "for ye devour widows' houses, and for a pretence make long prayers." It will not hurt the best of people to inquire seriously of themselves, whether they are entirely clear at all times and upon all occasions of making sanctimonious pretensions for the purpose of securing sinister desires? Another indication of a Pharisaical spirit, is to love the uppermost rooms at feasts, and the chief seats in the synagogues, and greetings in the markets, and to be called of men, Rabbi, Rabbi. But we find a direct reproof in the context, of this forward spirit, which loves the applause of men, more than the humility of the cross, and to be considered masters and leaders of the people, "lording it over God's heritage," in this language, which our blessed Redeemer addressed to the multitude and to his disciples, "But be not ye called Rabbi: for one is your master, even Christ; and all ye are brethren. And call no man your father upon the earth: for one is your Father which is in heaven. Neither be ye called masters: for one is your Master, even Christ. But he that is greatest among you, shall be your servant. And whosoever shall exalt himself, shall be abased; and he that shall humble himself, shall be exalted." (Matt. ch. 23, 8-12 vs.)

The vice of intemperance, with its awful and tragical effects of almost daily occurrence, with every other iniquity which tends to debase and brutalize the human race, and to render people miserable, justly claims our continual and unequivocal renunciation; but while striving against vice in our own will and time, we may be hampered by a Pharisaic zeal equally repulsive and destructive to vital Christianity, which, bloated by a sense of its own attainments in righteousness, is the same spirit which was so forward in accusing our blessed Lord, who came eating and drinking, of being "a gluttonous man, and a wind bibber, a friend of publicans and sinners," although He was our holy pattern of moderation, temperance and sobriety.

While engaged in the performance of religious ty, how desirable it is to examine often, and see le all our exercises and labours proceed from h sincerity of the heart; that it is our conti- nal concern to seek the assistance of One who condescend, if we do our part, to keep our from stumbling, to be tongue and utterance us, and mercifully impart ability to perform ry work for His acceptance, to His honour and ry, and our own preservation in humility d composure of mind. Here quietude and ce will be found, durable in their nature, l far surpassing all the corrupting gratifica- ns of a vain, restless and bewildered imagina- n.

It behoves all to be careful that lukewarmness d indifference do not prevail, so that we become iss in regard to keeping the eye single to m, who will make known our duty, and give ability rightly to effect it, as we confidently k of him wisdom and strength. If we are con- ned to do this, we are giving heed to the index hich alone can rightly refer us to the page of life, d we learn moderation in all things, diffidence and dousy of self and its capabilities, and "that it not in man that walketh to direct his steps," to produce great reforms, in his own will and sdom; but that he is only as the instrument in e hand of Him who alone can perfect every od thing. Our safety consists in living near to at Power which is the life and light of men, in hich as we act and move, our humility will be pparent, and we shall do all things in the fear the Lord, seeking his infallible counsel for rection, knowing that in this alone "is good nderstanding," which will direct us in that path, we desire to do our duty in all things that leads righteousness and to peace with our blessed reator.

New York, Twelfth mo. 1854.

Greatest Steamer in the World.—The immense rew and paddle steamer, building by Scott Rus- ll, at Millwall, England, for the Eastern Steam Navigation Company, is to be completed in twelve onths. Her keel has been laid down, and seve- al of her bulkheads, or compartments, are raised, nd the works are proceeding with energy and ex- pedition. A railroad has been laid down the ntire length of her way, to facilitate the convey- nce of the materials from the factory to the dif- erent parts of the vessel. The exact dimensions f the ship are as follows: Tonnage, builder's mea- urement, 22,000 tons; tonnage burthen, 10,000 ons; extreme length, 680 feet; extreme breadth, 83 feet; extreme depth, 58 feet; power of en- zines, (screw and paddle,) 2600 horse. Her en- zines are in the course of construction, and will be fitted in the vessel before she is floated off. The hull will be entirely of iron, and of more than usual strength, the magnitude of her size enabling Brunell, the architect, to introduce many precau- tionary measures conducive to support and secu- rity. From her keel up to six feet above the water-line is double, of a cellular construction. The upper deck will also be strengthened on the same principle, and will form a complete beam, similar to the tube of the Britannia Bridge, so that any external injury will not affect the tight- ness or the safety of the ship. She is divided into ten separate water-tight compartments, each being sixty feet in length, enabling her to take out suf- ficient fuel for a voyage to Australia, and back to England without stopping.

Our chief troubles do not arise from our living in the world, *but from the fact of the world's liv- ing in us.*

For "The Friend."

It has been now two centuries, since George Fox, who has been styled "the founder of Quaker- ism," commenced his gospel labours. I need not advert to the success which attended those labours; history records it; and the ultimate establishment of our religious Society, amid many trials and dis- couragements, (permitted, no doubt, in best wis- dom,) is not among the least evidences, of the christianity of the profession we make to the world.

Our forefathers in the Truth, were enabled to promulgate the religion of Christ in its simplicity and purity, without endeavouring after any new discovery; and, as they lived near to what they professed, their labours were crowned with suc- cess. They did not attempt to preach any other doctrine than that which was spoken by Christ and the Apostles; and in their writings, we dis- cover a very guarded care, to communicate that only which bore the "form of sound words."

But, after a lapse of two hundred years, some of their avowed followers,—professing the same faith, announce the startling discovery, that there were subjects in the economy of religion, which had not occurred to the minds of early Friends; and that Christianity was better understood, and better practised now, than in the days of George Fox. We have never accustomed ourselves to venerate things antiquated merely because they were old, but we have always believed that the principles of early Friends embraced all of Chris- tianity; and we have also discovered, that *those* who have professed something new, have generally landed themselves and their followers, somewhere on the barren shores of unbelief.

New trials seem to await our beloved Society,— the lion's roar had scarcely died away,—the sepa- ration in '27, with its attendant trials and diffi- culties, was still fresh in the minds of many; when an insidious and very plausible spirit re- vealed itself, and its endeavour to sap the very foundation of Quakerism.

Of this I have no desire to say much, it pains me to speak of it at all; though lamentable evi- dences of its existence is still apparent, among the members of our once favoured Society.

Faithful and long tried Friends sounded the alarm when they saw the danger near; but, un- happily, there were ears too willing to list to the sweet sounds of the charmer; and were carried away with this new fashioned kind of Quakerism, which too many believed, was but an improvement upon the old.

Had the prayer of the heathen, though with a sublimer faith, "*light, or I perish,*" been the clothing of Friends' minds generally, we have no doubt that light would have been afforded, which would have enabled them, individually and collec- tively, to have detected the approach of the enemy, as well as to have decreed righteous judgment, and the present very embarassed state of Society in this land have been avoided.

But we have no wish to dwell on what might have been, or what might not have been; we are content to take things as we find them; "Suffi- cient unto the day is the evil thereof." Nor do we think it well to be too much cast down with ex- isting circumstances; believing that *He* "who is all merciful and slow to anger," still regards his people with an eye of pity and tender compassion; and, although many may have virtually departed from the faith of their ancestors, and are making but a lifeless profession, we are afresh incited to the belief, that there are those, here and there, who will stand for the testimonies once given us as a people to bear; whom the great Head of the church will make instruments of power, to effect his own purposes; who can work by few as well as by many; and although we may become a "stripped and peeled people," (much reduced as regards numbers,) we think we can see, even amid the gloom which now overshadows, the dawn of a better day, when the faithful shall yet experience a renewal of those favours of heavenly regard, which were early given and long continued to our forefathers in the Truth.—E.

Twelfth mo. 15th, 1854.

New Contrivance in Ironing.—The heating of irons, as we are led to suppose, is often attended with great inconvenience. Sometimes they are too hot, sometimes too cold, sometimes they crock the muslins, etc., etc. A patent has been taken out in England, for heating them by steam. An elastic tube, of requisite length, is connected at one end with a steam-boiler, and at the other end, the iron being hollow, with the interior of the iron. Two tubes may be provided, so as to keep up a constant current of steam through the iron. Much time, now consumed in changing the irons, will be saved by this plan, and there may be also economy in the heating. A very small boiler, in summer, may be substituted for the kitchen grate, and in all cases an ordinary fire will be quite suf- ficient for keeping the irons hot.

Another advantage is obvious. To prevent an inconvenient degree of heat upon the hand, a double plate, with an air-chamber between, may be arranged above the steam-chamber, and, by the use of a non-conducting handle, all danger of this sort may be entirely obviated.

Few Christians perish from the cutting winds of adversity, while many wither and fall beneath the burning sun of prosperity.

THE FRIEND.

TWELFTH MONTH 23, 1854.

In our columns of this week will be found com- munications calling attention to two charitable institutions standing in need of pecuniary aid to meet the pressing demands made upon them by the suffering poor.

The weather is now very cold, and there is a prospect of a long winter, during which many will feel the pinching of poverty, who perhaps have always heretofore been able to provide com- fortably for themselves and those dependent upon them. We believe there is a disposition among most of our members to do their part towards affording relief in this time of peculiar trial, and we hope they will do it promptly and judiciously.

SUMMARY OF EVENTS.

EUROPE.—News from Liverpool to the 29th ult.— *The War.*—The latest intelligence from the Crimea is contained in a despatch of Prince Menschikoff, under date of the evening of the 18th. He states that the siege operations of the allies have been suspended, and the cannonade gradually relapsed. On the 18th, it had almost entirely ceased. It would seem that since the terrible battle of Inkermann on the 5th, neither party had been in a condition to resume active hostilities. The *Russian Invalide* announces officially the Russian loss on that day, to be 42 officers and 2969 men killed, and 206 officers and 5791 men wounded. The French lost 1726 men, killed and wounded. The allied army was engaged in fortifying the position occupied by its right flank. On the 14th ult., there was a violent storm in the Black sea, which did great injury to the English fleet. Thirty-two transport ships were lost; some foun- dered with all on board, and others were driven on shore. Three mail steamers were also stranded. The crews of many of the stranded vessels had fallen into the hands of the Russians. Active exertions continued

in England and France, in sending more troops to the Crimea. Advices from Constantinople to the 20th ult., state that during the previous ten days, at least 15,000 men destined for Sebastopol, had passed the Bosphorus on their way thither. Seventeen first class English steamers were at Toulon, embarking troops. All the French ships from the Baltic were under orders for the Mediterranean. It was reported at Kiel on the 23d, that a portion of the Russian fleet from Helsingfors had captured two British cruisers in the Gulf of Finland. The Czar's sons, Michael and Nicholas, had retired from Sebastopol.

ENGLAND.—Parliament had been summoned to assemble on the 12th inst. There were rumors of a proposition for a loan of ten millions sterling; an increase of the income tax, and that power would be asked for the embodiment of the militia, by compulsory ballot, if required. *Liverpool.*—The cotton market was declining, and holders were pressing on the market. Flour, from 42s. to 44s. a bbl.

PRUSSIA.—The Russian answer to the Prussian note, expresses the willingness of the Emperor to treat on the following terms: *First.* A common guarantee by the Five Powers of the rights of the Christian subjects of the Porte, without distinction, as to confession. *Second.* A common protectorate of the Principalities to be exercised by the Five Powers on the terms of the Treaties now existing between Russia and the Porte. *Third.* A revision of the Treaty of 1841. *Fourth.* The free navigation of the Danube.

INDIA AND CHINA.—The overland mail brought Bombay dates to Tenth mo. 21, and from Hong Kong to Tenth mo. 11. It is asserted that the Russians have invaded Bokhara, and had defeated 50,000 men sent out by the Badshaw Kokan, who had sent to request British aid against the invaders. At Canton there had been less fighting, and the insurgents had retired further from the city. The Chinese families were returning to Canton.

MEXICO.—Dates to the 6th. The insurgents are reported to have been routed at Moralia, in the province of Michoacan, on the 29th ult., when three hundred were killed. An election was progressing to decide whether Santa Anna is to continue as President. The cities of Mexico and Vera Cruz voted almost unanimously for him.

CANADA.—The amended feudal tenure abolition bill has passed the Parliament, and received Lord Elgin's assent.

UNITED STATES.—*Congress.*—In the Senate, a bill has been introduced by Adams, of Mississippi, to establish an uniform rule of naturalization throughout the United States. The bill requires a residence of twenty-one years before naturalization, and acts prospectively upon those foreigners only, who may enter the United States, after the passage of the act. A resolution offered by Sumner, of Mass., was adopted, directing an inquiry into the expediency of abolishing the tax on merchant seamen, known as hospital money, and of allowing them the use of the hospitals, free from all tax. Badger, of N. C., has introduced a bill for increasing the compensation of members of Congress, and of Judges of the Supreme Court.

Slaves.—The census returns show that there are 347,525 slaveholders in the United States, of whom two own over one thousand slaves each; nine, over five hundred each; fifty-six, over three hundred each; one hundred and eighty-seven own over two hundred each; and fourteen hundred and seventy-nine own over one hundred each. The greater number of slaveholders own less than four slaves each.

Occupations.—The farmers outnumber by far all other professions. Their number in 1850 was 2,363,950; the class which approaches nearest them, is that of labourers, who numbered 909,786. The carpenters stand next, counting 164,671, and then shoemakers, 130,473.

The Indians.—The report of the Secretary of the Interior states that within the past year, fourteen Indian treaties have been negotiated, all of which evince a just and liberal spirit towards the poor Indian. He regards it as one of the highest duties of the government to see, that our engagements with the Indians should be executed with the most scrupulous good faith on our part, and that mild and persuasive measures should be employed to induce them to become a settled and agricultural people, and that force or coercion should not be resorted to, except in extreme cases.

Kansas.—Gov. Reeder, of Kansas, refuses to give a certificate of election to the delegate just chosen to represent that Territory in Congress, because of the illegality of votes. A large party from Missouri entered Kansas on election day, to secure the choice of a pro-slavery candidate. This invasion, it is said, outnumbered the resident citizens of Kansas.

New York.—At the late election for Governor in that State, 469,431 votes were given, divided as follows—Clark, 156,804; Seymour, 156,495; Ullman, 122,282; Bronson, 33,850.

Philadelphia.—This city last week suffered severely from conflagrations. On the 12th inst., a fire broke out in the extensive lamp and chandelier manufactory of Cornelius, Baker & Co., on Cherry street, between Eighth and Ninth, which with its contents was entirely destroyed. The building was five stories high, 116 feet front on Cherry street, 132 feet deep, and built in the most substantial manner. The fire extended to buildings in the vicinity, more than thirty of which were either destroyed or seriously injured. Total loss, at least $150,000. On the night of the 14th, a fire commenced in one of the lofty edifices on the north side of Chestnut, west of Fifth street; a number of the adjacent valuable buildings were involved in the destruction, and a vast amount of goods of various kinds consumed. The loss by this fire is estimated at more than $400,000. Several other fires of less magnitude occurred the same night. Mortality last week, 149.

A New Governor for Utah.—Col. Edward J. Steptoe, now at Salt Lake, with a detachment of U. S. troops, has been nominated by the President as Governor, in place of Brigham Young.

Miscellaneous.—*Hebrews in the U. S.*—According to the synagogue rolls, there are more than 120,000 Jews in the United States.

Earthquake in N. Hampshire.—On the 11th, a smart shock of an earthquake was felt at Portsmouth and Exeter, and the towns in their vicinity. It is stated that the motion of the earth was quite perceptible, and the noise attending like the swift approach of a heavy carriage on frozen ground.

Cod Fishing at Cape Island.—Immense numbers of cod have been recently taken at Cape Island, and large parties were continually going out after them.

Darien Ship Canal.—The Secretary of the Navy deems that the question has been settled by the exploration of Lieut. Strain, and that the proposed canal by that route is totally impracticable.

Double Track across the Atlantic.—Lieut. Maury proposes a double track across the Atlantic for steamers; or, in other words, that steamers bound to Europe, shall invariably take a particular course, and those bound to the United States, another. This, he thinks, would lessen the liabilities to collisions.

Valuable Copy-rights.—It is stated in the Boston Traveller, that Little, Brown & Co., of Boston, have paid the family of the late Judge Story $150,000 for copyrights of the various works written by the Judge.

RECEIPTS.

Received from Jos. Gibbons, agt., for T. Allen, Io., $2, to 14, vol. 29; from E. Bundy, agt., O., for I. J. Schofield and Eli Hodgin, $2 each, vol. 28—Ann Rachael Hoag, N. Y., $2, vol. 28; from Jehu Faucett, agt., O., for W. Heald, Isaac Carr, Isaac Bonsall, Theo. Morlan, Mahlon Whinery, J. S. Cadwallader, Isaac R. Carr, Ind., and Jacob Bishop, $2 each, vol. 28—Anna Macy, Benj. Antram, and Ed. Bonsall, jr., $2 each, vol. 27—Ann Street, $4, vols. 27 and 28—James Heald, $2, to 53, vol. 28; from G. Howard Leeds, N.J., per H. C. W., $8, to 52, vol. 28; from M. M. Harvey, $2, to 6, vol. 29.

THE WESTERN SOUP SOCIETY.

This useful institution opened its house on the 15th inst., for the daily distribution of soup to the destitute poor of the western part of our city. It appears that during the past winter, they distributed over 20,000 quarts of soup, and about 8000 loaves of bread to 1110 applicants, of whom 411 were adults, and 699 children.

As there is every appearance of a severe winter, and much suffering among the poorer classes, on account of the high prices of provisions and fuel, and the scarcity of employment, the managers would appeal to their friends for aid and support in carrying out the objects of the society.

Donations in provisions will be thankfully received at the soup-house, at the S. E. corner of Seventeenth and George streets; or in money by either of the managers, or

WILLIAM BIDDLE, Treasurer,
SAMUEL L. BAILY, Secretary.

INDIAN CIVILIZATION.

The committee is desirous of engaging the services of a well qualified Friend to teach the school at Tunessassah, &c. Friends, who may feel concerned to engage in that station, are requested to make early application to Joseph Elkinton, No. 377 S. Second street, or Thomas Evans, No. 180 Arch street, Philadelphia, or Ebenezer Worth, Hamerton, Chester county Pa., or Thomas Wistar, Fox Chase, Philadelphia co., Pa

Philad., Ninth mo. 20, 1854.

WEST-TOWN SCHOOL.

Assistant Teachers are wanted in the Boys and Girls departments of this Institution. The opportunity which this station furnishes for prosecuting their studies, free from any expense, presents a favourable opening for young persons, who wish to perfect themselves in the higher branches of learning, or to prepare for the business of Teachers. Those who wish to engage, are requested to make early application to Nathan Sharples Concordville; Pennock Passmore, Goshenville; or Thomas Evans, Samuel Bettle, Jr., Elizabeth Peirson, or Sidney Coates, Philadelphia.

SOUP HOUSE.

The Society for supplying the poor of the city with soup, being about to open their house, No. 16 Green's Court, between Spruce and Pine streets, and Fourth and Fifth streets, respectfully solicit the aid of the benevolent to enable them to meet the pressing wants of the poor, during the present season of suffering. Donations in money will be gratefully received by the Treasurer, Jeremiah Hacker, No. 144 South Fourth street, or Thomas Evans, No. 180 Arch street, and in flour, rice, beef, vegetables, &c., at the house.

Those who advert to the high prices of food and fuel, and the difficulty of procuring employment at the present time, will readily perceive, that the calls for aid to the industrious poor, are likely to be unusually numerous, and that increased means will be required to meet them, while few charities afford so much relief at so small a cost, or in so unobjectionable a manner.

DIED, at Union Vale, Dutchess county, N. Y., on the 5th of Fourth mo. last, BETHANA, wife of Henry Barmore, and daughter of Zeno Carpenter, (deceased,) aged 67 years; a highly esteemed member of the Society of Friends. In early life she chose that better part, that could not be taken from her, and continuing to lean on the arm of her blessed Master, she was sustained through a well spent life, so that when the summons came for her departure, she yielded with joy, and not with grief. Of a cheerful, happy and contented disposition, adorned with christian meekness, she had drawn around her a large circle of friends, who had long enjoyed her hospitality. On whom among them shall her mantle fall?

——, at the residence of her father, Jairus Hutchinson, in East Goshen, Chester county, Pa., on the 7th of Fourth month last, ANN HUTCHINSON, in the 58th year of her age. Of a meek and quiet spirit, and of exemplary deportment, her loss is deeply felt by her surviving friends.

——, on the 18th of Eighth mo., 1853, at the residence of her son, REBECCA HAINES, widow of Clayton Haines; a valued and useful member of Upper Evesham Monthly Meeting, in the sixty-ninth year of her age. Through life she appeared to give the Great Master and His cause the first place in her heart, and when services in society were required of her, she was faithfully at her place, not permitting her own concerns to prevent her giving attention thereto. In the discharge of what she believed was required of her, she was faithful without fear or favour. In her last illness, her mind seemed centered in resignation to the will of her divine Master, both as to her bodily sufferings, (which were very great,) and the termination of the disease, but was alive to the welfare of our religious Society, and continued a deep mourner, on account of the state of the church.

——, on the 9th day of Tenth mo., 1854, at his residence, Sewickly, in Westmoreland county, Pa., in the 65th year of his age, SIMON B. MCGREW, a member of Providence Monthly Meeting.

——, on the 6th of Eleventh mo., 1854, at his residence, in Fayette county, Pa., SAMUEL COPE; a member of Providence Monthly Meeting; in the 83d year of his age.

——, at his residence, in East Goshen, Chester co., Pa., on the 26th of Eleventh mo., 1854, ENOS J., son of Enos and Hannah Thomas, in the 29th year of his age. He bore a protracted illness of about eight months, with christian patience and resignation, often saying his afflictions were all sent in mercy, to wean him from this world; and through his entire reliance on a crucified Saviour, his surviving friends have the consoling belief his end was peace.

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

From the London Quarterly Review.

How London is Supplied with Food.

(Continued from page 114.)

Busiest among the busy is seen the 'Bommeree' or middleman—sometimes called the forestaller. The province of this individual is to purchase the fish as it comes into the market, and divide it into lots to suit large and small buyers, separating the qualities according as they are designed for St. James's or St. Giles's. These worthies used at one time to forestall the market extensively, when they felt certain, from the state of the tide, that no fish supplies could be poured in for the day, but now the railway defeats their tactics, and the utter uncertainty of the arrivals has done away with this branch of their business. After the 'trade' has been supplied, and the serge-aproned 'regulars' have loaded their light spring carts, there comes, especially in certain fish seasons, an eruption of purchasers of a totally different character—the costermongers of the streets. This nomade tribe, which wanders in thousands from market to market, performs a most important part in the distribution of food. They are for the greater part the tradesmen of the poor, and by their energy and enterprise secure to our working-classes many of the fruits of both sea and land, which they would never taste but for them. About seven o'clock the army of street-vendors, foot and 'donkey,' for the greater number rattle up in barrows drawn by that useful animal, begin visibly to change the whole hue and appearance of the place. Young fellows in fustian coats and Belcher handkerchiefs throng the market, and board the smacks, 'chaffing,' biggling, joking, and swearing—but never fighting, for the costermonger has too much to do at present to make physical demonstrations. Among the most eager of the itinerant salesmen the visitor speedily distinguishes the Judaic nose. The Hebrews, who are in great force about this neighbourhood on account of the dried-fruit trade, which is mainly in their hands, deal largely also in fish. The poorer members of the fraternity purchase the bigger portion of the fresh-water supply, such as plaice, roach, dace, &c., in fact nearly everything caught by the Wandsworth fishermen, whose picturesque 'bawley' boats, which often contain both his family and fortune, may generally be seen moored in the stream between Battersea reach and Kew bridge, a mass of brown nets and umber canopies lit up by the brilliant red caps of their owners, just such as Constable loved to paint in the foregrounds of his landscapes. These fish, if not alive, must at least retain the spasmodic quivering of the flesh which remains immediately after death, or the Jews will not buy, for reasons we suppose connected with their religion, since their chief trade is among the rich and poor of their own people. The Wandsworth fishermen also supply all the white-bait that is consumed at Greenwich and Blackwall: it is caught generally between the latter place and Woolwich at night, and it is singular that a fish which is among the most delicate we have should flourish in one of the foulest parts of the foulest river in Europe. The area of the market, as soon as the costermongers appear, speedily becomes broken up into numbers of little circles, strictly intent upon the eye of individuals who take up a position high over their heads upon the boards or stands. These are the salesmen, disposing by auction of the fish consigned to them. Some of the dealers are moneyed men, and will lay out their fifty pounds of a morning, re-selling to their fellows again at a profit. The smaller capitalists combine in threes and fours, and thus manage to get their commodities at wholesale prices. The activity of the market mainly depends upon the season of the year and the amount of fish. The energy of these peripatetics is surprising: they look in at Billingsgate, and if the supply runs short they are off again immediately to Covent-Garden, for they deal in everything, and the barrow that one morning you see filled with fresh herrings, the next is blooming with plums. If, on the contrary, a large cargo of sprats comes suddenly into London, or if soles should be unusually plentiful, it is known in an incredibly short space of time all over the town, and they flock to the market in thousands; as many as five thousand is the usual attendance on such occasions. These costermongers absorb more than a third of the whole Billingsgate supply; of sprats and fresh herrings they take fully two-thirds. Turbot and all the costlier fish they purchase sparingly, but they buy largely when it chances to be cheap, as in the cholera year of 1849, when prime salmon went a-begging at four pence a pound! If the market is dull, and prices are high, the fact is speedily known, and the cry of 'No smacks at the Gate' is sufficient to turn the current immediately in the direction of the 'Garden.'

Steam, as we have already intimated, has revolutionized the fish-trade, and is rapidly sweeping away the whole fleet of smacks propelled by sails, as ruthlessly as the rail did stage-coaches. A few years ago all the oysters were brought by water to Billingsgate; but a short time since a great natural bed, called the Mid-Channel Bed, which stretches for forty miles between the ports of Shoreham and Havre, was discovered, and, the dredging-ground being free to all comers, a vast field of wealth has been opened to fishermen, especially as from the proximity of the Brighton and South Coast Railway the produce can be sent immediately to town, and escape the dues of metage and other tolls to which all fish landed at the market is liable. Sea borne oysters are thus placed at a great disadvantage, and the different companies owning them justly complain at a city expanies which takes a large sum annually out of their pockets, besides the charge for porterage it entails upon the purchasers. Alston, who is, without doubt, the largest oyster-fisher in the world, sent up last year between 40,000 and 50,000 bushels from his fishery Cheyney Rock, near Sheerness, and paid 800*l.* for metage. The whole trade paid no less than 3000*l.*, and this for services which their own men could do as well themselves, were it not for a custom which enforces idleness upon the smack people.

The 'scuttle-mouths,' as they are termed from their huge shell, pay no attention to season, and consequently oyster-day has now in a great degree lost its significance. The 4th of August is still, it is true, the opening day at Billingsgate, but the supply from without has taken the wind out of its sails. Only those who have witnessed the crowds filling all the streets leading to the Market long before the hour of business—6 o'clock in the morning—can understaud the eagerness exhibited of old to obtain some of the first day's oysters. All this is now gone. There were not more than eighteen smacks at the opening of the present year, and, few as were the arrivals, the buyers were not eager. The Mid-Channel oysters, which have thus disturbed the old trade, are of a large and by no means delicate kind, such as come from Tenby, Jersey, &c.—coarse fish, eaten by rough men—third-class oysters, in fact, which rarely penetrate to the West End, unless to make sauce. Real Natives are greater aristocrats among their fellows than ever; the demand for them has for a long time far exceeded the supply, and the price has consequently risen. Of the birth, parentage, and nurture of this delicate fish, a curious tale could be told. Designed for fastidious palates, much care and attention is bestowed upon its breeding. The *habitué* of the Opera, who strolls up the brilliantly lighted Haymarket towards midnight, and turns in to any one of the fish supper-rooms that line its western side, little dreams of the organization at work to enable him to enjoy his native. Most of the oysters, with the exception of the Mid-Channel bed, are regularly cultivated by different companies, who rear and tend them at different parts of the south coast and of the Thames at its mouth. Of these companies there are nine, in addition to individuals who possess and work what might be called sea-farms, several of which are miles in extent. In all the beds there is a certain space dedicated to natives. At Burnham, Essex, the 'spat,' or fecundated sperm, is stored in large pits, and sold as native brood, which is afterwards 'laid' in that portion of the different beds appropriated to privileged oysters. Here the young natives remain for three years, when they are generally brought to market. So far their education is left, in a certain degree, to nature; but once in the possession of the fish-shopkeepers, art steps in to perfect their condition. They are now stored in large shallow vats, being carefully laid with their proper sides uppermost, and supplied daily with oatmeal: a process which is calculated rather to fatten than to flavour, and there are many who think that, like show cattle, they are none the better for overfeeding. 'Natives' packed in barrels form one of the articles of food that is largely sent out of London into the country, as all persons know who tra-

vel much at Christmas-time, and notice with astonishment the pyramids of oyster-barrels which crowd the platforms of all the termini of the metropolis.

The frying-pans of London are mainly supplied with soles all the year round by the trolling-boats of Barking, of which there are upwards of 150 belonging to different companies. They fish the North Sea off the coasts of Yorkshire and Holland, particularly the Silver and Brown banks Of old, the smacks used to carry their own catch to Billingsgate, but the loss of time was so great, that latterly fast-sailing cutters have been employed to attend upon the fishing-smacks, and bring their produce to market packed in ice. Of this splendid craft, which can sail almost in the eye of the wind, there are 40; and the total number of seamen employed is not less than 2000, the greater part of whom have been taken as boys from the workhouse and trained by this capital service into first-rate seamen. It is curious to follow the small proceedings of the world into their ultimate results. The gastronome, smiling complacently as he withdraws the cover, and reveals a well-browned pair of soles, would never guess that they and their kind are the immediate cause of a happy transmutation of parish burthens into the right arm of our strength. Eels are constantly imported to Billingsgate by the Dutch boats. The galliots never moor close alongside the wharf, as the wells in which they bring their fish alive cause them to draw too much water, but they anchor midway in the stream, by twos and threes—their brown sides, flat bows with high cheek-bones like their navigators, and bright verd green rudders, adding to the picturesque appearance of the river. The great fat creatures brought by them mainly supply the eel-pie houses, and contribute largely, we are informed, to that oleaginous kind of soup which people too hungry to be curious mistake for veritable oxtail and calves' head. The Dutch boats do not, however, confine themselves to eels. They deal in turbot, soles, and all kinds of flat-fish, such as frequent the Dogger Bank, much to the discredit of our native enterprise, neglecting, as we do, the splendid deep-sea fishing ground off the south-west coast of Ireland, where cod and salmon are to be found in abundant quantities, whilst those who know the west coast well, declare there is turbot enough in Galway bay 'to supply the whole of Europe for the next hundred years.'

(To be continued.)

For "The Friend."

Let all your Works be Wrought in God.

Having oftentimes felt great concern for the prosperity and growth of our religious Society, and for the members thereof individually, as well as for others who may be seeking the right way; I felt a willingness to endeavour in few words to turn the attention of my friends to what we always have professed; that nothing of the will and wisdom of man alone, can work the works of God.

It has appeared to me, that if we would entirely cease from our own willings and runnings, leaving all to the great Head of the church, and in simple humble dependence on him, endeavour to "be still and know that he is God," and "stand still and see his salvation," thus in a humble teachable state waiting for his counsel and direction, and moving in conformity to his holy will, and not in our own wills; then I believe we might confidently look for relief which would redound to the glory of God and the maintenance of the principles of our religious Society; and we have no right to expect it from any other source.

Influence of Non-resistance over the Savage.

"An intelligent Quaker of Cincinnati," says G. W. Montgomery, "related to me the following circumstance, as evidence that the principle of non-resistance possesses great influence even over the savage. During the last war, a Quaker lived among the inhabitants of a small settlement on our western frontier. When the savages commenced their desolating outbreaks, every inhabitant fled to the interior settlements, with the exception of the Quaker and his family. He determined to remain, and rely wholly upon the simple rule of disarming his enemies, with entire confidence and kindness. One morning he observed through his window a file of savages issuing from the forest, in the direction of his house. He immediately went out and met them, and put out his hand to the leader of the party. But neither he nor the rest gave him any notice; they entered his house, and searched it for arms, and had they found any, most probably would have murdered every member of the family. There were none, however, and they quietly partook of the provisions which he placed before them, and left him in peace. At the entrance of the forest, he observed that they stopped, and appeared to be holding a council. Soon, one of their number left the rest, and came towards his dwelling, on the leap. He reached the door, and fastened a simple white feather above it, and returned to his band, when they all disappeared. Ever after, that white feather saved him from the savages, for whenever a party came by and observed it, it was a sign of peace to them."

This fact is highly interesting and instructive, but if the Friend were a true Quaker, he did not rely on the rule of disarming his enemies with confidence and kindness, but on that arm of everlasting power upon which he ventured himself and his all, in simple obedience to the commands of his Saviour; and his rejoicing must have been, not exultation at the success of an experiment, but humble gratitude for the unmerited providential care of Him, who "numbers even the very hairs of our heads."—(*Illustrations of Kindness.*)

Floods of the Amazon.

The river was now so high that a great portion of the lowlands between the Rio Negro and the Amazon was flooded, being what is called "Gapo." This is one of the most singular features of the Amazon. It extends from a little above Santarem up to the confines of Peru—a distance of about seventeen hundred miles, and varies in width on each side of the river from one to ten or twenty miles. From Santarem to Coari, a little town on the Solimoes, a person may go by canoe in the wet season without once entering into the main river. He will pass through small streams, lakes, and swamps, and everywhere around him will stretch out an illimitable waste of waters, but all covered with a lofty virgin forest. For days he will travel through this forest, scraping against tree-trunks, and stooping to pass beneath the leaves of prickly palms, now level with the water, though raised on stems forty feet high. In this trackless maze the Indian finds his way with unerring certainty, and, by slight indications of broken twigs or scraped bark, goes on day by day as if travelling on a beaten road. In the Gapo peculiar animals are found, attracted by the fruits of trees which grow only there. In fact, the Indians assert that every tree that grows in the Gapo is distinct from all those found in other districts; and when we consider the extraordinary conditions under which these plants exist, being submerged for six months of the year till they are sufficiently lofty to rise above the highest water-level, it does not seem improbable that such may be the case.

Many species of trogons are peculiar to the Gapo, others to the dry virgin forest. The umbrella chatterer is entirely confined to it, as is also the little bristle-tailed manakin. Some monkeys are found there only in the wet season; and whole tribes of Indians, such as the Puruptis and Muras, entirely inhabit it, building small easily-removed huts on the sandy shores in the dry seasons, and on rafts in the wet; spending a great part of their lives in canoes, sleeping suspended in rude hammocks from trees over the deep water; cultivating no vegetables, but subsisting entirely on the fish, turtle, and cow-fish, which they obtain from the river. On crossing the Rio Negro from the city of Barra, we entered into a tract of this description. Our canoe was forced under branches and among dense bushes, till we got into a part where the trees were loftier, and a deep gloom prevailed. Here the lowest branches of the trees were level with the surface of the water, and were many of them putting forth flowers. As we proceded, we sometimes came to a grove of small palms, the leaves being now a few feet above us; and among them was the maraja, bearing bunches of agreeable fruit, which as we passed the Indians cut off with their long knives. Sometimes the rustling of leaves overhead told us that monkeys were near, and we would soon perhaps discover them peeping down from among the thick foliage, and then bounding rapidly away as soon as we had caught a glimpse of them. Presently we came out into the sunshine, in a grassy lake filled with lilies and beautiful water-plants, little yellow bladderworts, (Utricularias,) and the bright blue flowers and curious leaves with swollen stalks of the Pontederias. Again in the gloom of the forest, among the lofty cylindrical trunks rising like columns out of the deep water; now a splashing of falling fruit around us would announce that birds were feeding overhead, and we could discover a flock of paroquets, or some bright blue chatterers, or the lovely pompadour, with its delicate white wings and claret-coloured plumage; now with a whirr a trogon would seize a fruit on the wing, or some clumsy toucan make the branches shake as he alighted.—*Travels on the Amazon.*

For "The Friend."

Make Hay while the Sun Shines.

Every farmer knows the importance of observing this saying, and that if, in consequence of fearing exposure to the heat, the dread of encountering bodily fatigue, or for want of proper diligence, he neglects this part of his business, he loses the only opportunity of securing his crop profitably to himself.

Although literally, this saying appears to rest with the greatest practical force upon the husbandman, yet it is very significant in matters of more extensive interest, and involves far more serious consequences, than the preservation or loss of a field of hay.

While favoured with health, activity, and the opportunity of securing a competence under the Divine blessing, a diligent application to some honest calling, for support, and the ability to live reputably amongst men, is a reasonable duty; and it is proper for every one who would make the best use of his time, in younger years, to strive to furnish the mind with useful and profitable knowledge by assiduity, and a discriminating care in literary pursuits: unless there is a prudent effort in these respects, we have a prominent example of omitting to make hay while the sun shines.

But the matter of transcending importance to every individual, is not to neglect the opportunity

mercifully given to work while it is day, before the night cometh wherein no man can work; and as ability is afforded by the blessed Author of our existence to do his will, we should diligently labour in his vineyard, that we may know an increase of that heavenly treasure in our earthly tenements, that saving knowledge which is alone conferred, while engaged above all other considerations to do that which is well pleasing and acceptable in his holy sight. How important that we do not turn aside from this essential work, though we may have but few helpers, fearing fatigue and the reproach of the humble toil, for though trials and opposition may attend us, these will only promote the consummation of our important object, if we faint not from oppression and discouragement.

Oh! then, that there may be a diligent perseverance in the Christian path, and adherence to the knowledge of the Lord till it increase and cover the earthly nature in us, as the waters cover the sea; looking to Him for strength to labour, and for a blessing upon our substance; resting assured that even in spiritual things, there is no other way to realize that needful fruition, which all require in the winter season, comparable to hay that was made while the sun shone, for our needful support and preservation.

N. York, Twelfth mo., 1854.

For "The Friend."

Fashion in Names.

"Fashion plays queer freaks with its wand. A late innovation is, the using of the middle name, and dropping the first and "Christian" index. For instance, Jones, who always was distinguished in his younger days by plain John D. or "Jack," has concluded that appellation to be "vulgar," and is now only known as J. Daw Jones, more appropriate to be given in full, and would doubtless be a most correct index to the man. Peter G. Jenkins has become convinced that Peter is too homely a cognomen for one who walks so high in aristocratic circles, and brings him too much on a level with the common herd; he, therefore, now plumes himself P. Green Jenkins. Just so with Isaac C. Bacon; all his fellows are making the change, and he cannot see how he can keep in good standing, without joining in the revolution: away goes the "Isaac," and "I. Cooke Bacon" is engraved upon his card."

So goes the new mania, no matter how ridiculous. And we are sometimes not a little amused (not to say mortified,) to hear some parents, quite sensible people, too, on most subjects, always call out, with seeming emphasis, the *middle* name given to their children, because, as they may think, of some superiority in the family that bears it; as if that was to be their advancement or passport to a "better country," or their right and safe progress through this present world. In how many shapes does pride show itself?

Communicated for "The Friend."

As the season has now arrived in which our pavements are liable to be glazed over with ice, endangering life and limb, and are so at the time I am writing, I would say to all housekeepers, have common table salt strewed over your pavements as soon as the sleet begins to form, and you will prevent much trouble thereby—one quart of salt will be sufficient for a large pavement; and what is the expense of a quart of salt, compared to a fractured head, or a broken leg. Try it,—try it all winter, if needful, and tell your neighbours of it.

Ye that have estates, be sober in the use of them: ye that have none, be sober in your desires.

THE NILE.

When at Khartoum, near the junction of the two branches of the river, Bayard Taylor describes the great stream as follows:—"The Nile was to me a source of greater interest than all the negro kingdoms between Khartoum and Timbuctoo. There, two thousand miles from his mouth, I found the current as broad, as strong, and as deep as at Cairo, and was no nearer the mystery of his origin. If I should ascend the western of his two branches, I might follow his windings twelve hundred miles further, and still find a broad and powerful stream, of whose source even the tribes that dwell in those far regions are ignorant. I am confident that when the hidden fountains shall at last be reached, and the problem of twenty centuries solved, the entire length of the Nile will be found to be not less than *four thousand miles*; and he will then take his rank with the Mississippi and the Amazon—a sublime trinity of streams! There is, in some respects, a striking resemblance between the Nile and the former river. The Missouri is the true Mississippi, rolling the largest flood and giving his colour to the mingled streams. So of the White Nile, which is broad and turbid, and pollutes the clear flood that has usurped his name and dignity. In spite of what geographers may say—and they are still far from being united on the subject—the Blue Nile is not the true Nile. There, at the point of junction, his volume of water is greater, but he is fresh from the mountains, and constantly fed by large, unfailing affluents, while the White Nile has rolled for more than a thousand miles on nearly a dead level, through a porous, alluvial soil, in which he loses more water than he brings with him. The Blue Nile, whose source, the honest, long-slandered Bruce did actually discover, rises near lat. 11° N. in the mountains of Godjam, on the south-western frontier of Abyssinia. Thence it flows northward into the great lake of Dembra or Tzana, near its southern extremity. The lake is shallow and muddy, and the river carries his clear flood through it without mixing. He then flows to the south and south-east, under the name of Tzana, along the borders of the kingdom of Shoa, to between lat. 9° and 10°, whence he curves again to the north, and finds his way through the mountains of Fazogl to the plains of Sennaar. His entire length cannot be less than eight hundred miles. The stream is navigable as far as the mountains, about three hundred miles from Khartoum, where it is interrupted by rapids."

"After I had been eight or ten days in Khartoum, I began to think of penetrating further into the interior. My intention on leaving Cairo, was to push on as far as my time and means would allow, and the White Nile was the great point of attraction. The long journey I had already made in order to reach Soudân, only whetted my desire of seeing more of the wild, barbaric life of Central Africa, and, owing to the good luck which had saved from any delay on the road, I could spare three or four weeks for further journeys, before setting out on my return to Egypt."

Having procured a fast sailing little craft, he ascended the White Nile for a distance of about two hundred and fifty miles, until he reached the first village of the Shillorks—the utmost point to which it was deemed prudent to go, on account of the savage character and hostile feelings of the population occupying the banks of the river in the regions beyond. The following extracts give an interesting view of portions of the voyage, which, aided by favouring winds, was accomplished in a shorter time than might have been expected:—"During the whole forenoon we sailed at the rate of six or seven miles an hour, in the centre of the river, whose breadth varied from two to three miles. The shores no longer presented the same dead level as on the first day. They were banks of sandy soil, ten or twelve feet in height, and covered with forests of the gum-bearing mimosa, under which grew thickets of a dense green shrub, mixed with cactus and euphorbia. The gum is a tree from twenty to thirty feet in height, with a thick trunk and spreading branches, and no Italian oak or chesnut presents a greater variety of picturesque forms to the painter's eye. The foliage is thin, allowing the manifold articulations of the boughs and twigs to be seen through it. It was most abundant on the Kordofan side, and the greater proportion of the gum annually exported to Egypt, comes from that country. The broad tide of the river, and the wild luxuriance of the continuous forests that girdled it, gave this part of its course an air of majesty, which recalled the Mississippi to my mind. There was not a single feature that resembled Egypt."

"After passing Tura, (the terminus of a short caravan route of four days to Obeid, the capital of Kordofan,) a mountain range, some distance from the river, appeared on the right bank. The peaks were broken and conical in form, and their pale violet hue showed with fine effect behind the dark rim of the green forests. With every hour of our progress the vegetation grew more rank and luxuriant. On the eastern bank the gum gave place to the flowering mimosa, which rose in a dense rampart from the water's edge, and filled the air with the fragrance of its blossoms. Myriads of wild geese, ducks, cranes, storks, herons and ibises, sat on the narrow beaches of sand, or circled in the air with hoarse clang and croaking. Among them I saw more than one specimen of that rare and curious water-bird, whose large, horny bill, curves upward instead of downward, so that it appears to have been put on the wrong way. As he eats nothing but small fish, which he swallows with his head under water, this is not such a great inconvenience as one would suppose. The bars which occasionally made out into the current, seemed as a resting place for crocodiles, which now began to appear in companies of ten or fifteen, and the forests were filled with legions of apes, which leaped chattering down from the branches to look at us. A whole family of them sat on the bank for some time, watching us, and when we frightened them away by our shouts, it was amusing to see a mother pick up her infant ape, and scamper off with it under her arm. The wild fowl were astonishingly tame, and many of them so fat that they seemed scarcely able to fly. Here and there, along the shore, large broods of the young were making their first essays in swimming. The boatmen took great delight in menacing the old birds with pieces of wood, in order to make them dive under water. There were some superb white cranes, with a rosy tinge along the edges of their wings, and I saw two more of the crested king-herons.

"After passing the island of Tshebeshi, the river, which still retains its great breadth, is bordered by a swampy growth of reeds. It is filled with numerous low islands, covered with trees, mostly dead, and with waste, white branches which have drifted down during the inundation. In the forests along the shore, many trees had also been killed by the high water of the previous summer. There are no habitations on this part of the river, but all is wild, and lonely, and magnificent. I had seen no sail since leaving Khartoum, and as the sun that evening threw his last rays on the mighty flood, I felt for the first time that I was alone, far in the savage heart of Africa. We dashed along at a most exciting rate of speed,

brushing the reeds of the low islands, or dipping into the gloom of the shadows thrown by the unpruned forests. The innumerable swarms of wild birds filled the air with their noise, as they flew to their coverts, or ranged themselves in compact files on the sand. Above all their din, I heard at intervals, from the unseen thickets inland, the prolonged snarling roar of some wild beast. It was too deep-toned and powerful for a leopard, and we all decided that it was a lion. As I was watching the snowy cranes and silvery herons that alighted on the boughs within pistol-shot, my men pointed out a huge hippopotamus, standing in the reeds, but a short distance from the vessel. He was between five and six feet high, but his head, body and legs were of enormous bulk. He looked at us, opened his great jaws, gave his swine-like head a toss in the air, and plunged hastily into the water. At the same instant an immense crocodile, (perhaps twenty feet in length,) left his basking place on the sand, and took refuge in the river. Soon afterwards, two hippopotami rose in the centre of the stream, and after snorting the water from their nostrils, entertained us with a peculiar grunting sounding, like the lowest rumbling note of a double bass. The concert was continued by others, and resumed from time to time through the night. This was Central Africa, as I had dreamed it—a grand, though savage picture, full of life and heat, and with a barbaric splendor, even in the forms of Nature.

"As the new moon and the evening star went down together behind the mimosa forests on the western bank, we reached the island of Hassaniych, having sailed upwards of one hundred and forty miles since the evening before."

Having recently read an account of Charles Marshall, in "Piety Promoted," 1st vol., page 200, I thought some of his remarks during his last illness would be worth inserting in "The Friend." A SUBSCRIBER.

He said: I have two things that lie upon me to Friends, which I desire may be communicated to them.

The first is, That they gather down into the immortal seed and word of life in themselves, and be exercised in it before the Lord, and duly prize and set a value upon the many outward and inward mercies and blessings, and heavenly visitations, that the Lord has eminently bestowed upon them, since the morning of the day of his blessed visitation; then shall they grow and be preserved in a living freshness to him: and the Lord will continue his mercies to them, and they shall not want his divine refreshing presence in their meetings together before him.

The second thing is, That those Friends to whom the Lord hath given great estates, ought to cast their bread upon the waters, and do good therewith in their lifetime; for those who are enjoyers of such things should see that they are good stewards thereof. Oh! the many poor families that such persons might be a help to! How easily might they, with a little, assist many a family to live in the world! and what a comfort would it be for such, to see the fruits of their charity in their lifetime.

[The following extract has, we believe, been in "The Friend" before, but at the request of a subscriber we give it another insertion.]

"I confess that increasing years bring with them an increasing respect for men who do not succeed in life, as those words are commonly used. Heaven has been said to be a place for those who do not succeed on earth; and it is surely true that celestial graces do not best thrive and bloom in the hot blaze of worldly prosperity. Ill success sometimes arises from a superabundance of qualities, in themselves good—from a conscience too sensitive, a taste too fastidious, a self-forgetfulness too romantic, a modesty too retiring. I will not go so far as to say, with a living poet, that "the world knows nothing of its greatest men," but there are forms of greatness, or at least excellence, which "die and make no sign;" there are martyrs that miss the palm but not the stake; heroes without the laurel, and conquerors without the triumph."

Selected.

THE RIVER OF LIFE.

There is a pure and peaceful wave,
That rolls around the throne of love,
Whose waters gladden as they lave
The peaceful shores above.

While streams, which on that tide depend,
Steal from those heavenly shores away,
And on this desert world descend,
O'er weary lands to stray.

The pilgrim faint, and nigh to sink
Beneath his load of earthly woe,
Refreshed beside their verdant brink,
Rejoices in their flow.

There, oh! my soul, do thou repair,
And hover o'er the hallowed spring,
To drink the crystal wave, and there
To lave thy wearied wing.

There droop that wing, when far it flies
From human care, and toil, and strife;
And feed by those still streams that rise
Beneath the Tree of Life.

It may be that the waft of love,
Some leaves on that pure tide have driven,
Which passing from the shores above,
Have floated down from heaven.

So shall thy wounds and woes be healed
By the blest virtue that they bring;
So thy parched lips shall be unseal'd,
Thy Saviour's praise to sing.

Selected.

THE SICKLE AND THE SWORD.

There went two reapers forth at morn,
Strong, earnest men were they,
Bent, each at his appointed task,
To labour through the day.

One bied him to the corn-field, where
Ripe stood the golden grain,
He reaped, and bound it into sheaves,
And sang a merry strain.

And lo! the other takes his stand,
Where rolls the battle's tide;
His weapon, late so clear and bright,
With crimson stains is dyed.

And furiously he tramples down,
And lays the ripe grain low;
He is death's reaper, and he gives
An oath with every blow.

To which of these two lusty men,
Most honour should we give;
He who destroys, or works to save
The food whereby we live.

And by the mighty Judge of all,
Which think ye is abhorr'd;
Which deems He best for man to use,
The *sickle* or the *sword?*

H. G. ADAMS.

Very commonly, when God sees any one of his children begin to take their ease, and to rest in past experiences, and feel somewhat strong in themselves, he sends some notable affliction or cross; as if he said, Have you no livelier duties to me? Withdraw, Comforter! Smite, sickness! Vex him Satan! Persecute him enemies. As He saith in Hosea, v., 15th, "I will go and return to my place till they acknowledge their offence, and seek my face; in their affliction they will seek me early."

For "The Friend."

Practical Hints.

"Humanity will direct to be particularly cautious of treating with the least appearance of neglect, those who have lately met with misfortunes, and are sunk in life. Such persons are apt to think themselves slighted, when no such thing is intended. Their minds being already sore, feel the least rub very severely. And who would be so cruel as to add affliction to the afflicted?

If a man complains to you of his wife, a woman of her husband, a parent of a child, or a child of a parent, be cautious how you meddle between such near relations, to blame the behaviour of one to the other. You will only have the hatred of both parties, and do no good with either. But this does not hinder you from giving both parties, or either of them, your best advice in a prudent manner.

Sincerity is to speak as we think; to do as we pretend and profess; to perform and make good what we promise, and to be *really* what we would seem and appear to be. It is an excellent instrument for the speedy dispatch of business, by creating confidence in those we have to deal with, and saving the labour of many inquiries.

If you happen to fall into company where the talk runs into party, scandal, folly, or vice of any kind, you had better pass for morose or unsocial, among people whose good opinion is not worth having, than wound your own conscience by joining in conversation which your heart disapproves.

It is ill manners to trouble people with talking too much, either of yourself or your affairs. If you are full of yourself, consider that you or your affairs, are not so interesting to other people as to you.

Deep learning will make you acceptable to the learned; but it is only an easy and obliging behaviour, and entertaining conversation, that will make you agreeable in all companies.

If you have a friend that will reprove your faults and foibles, be thankful for it, and consider that you enjoy a blessing which the President of the United States has not."

Statistics of Trade.—What will our political financiers say of the following facts, which are stated in the journals of the day?

The supply of gold received from California has been inadequate to supply the drain made by the demands of our foreign trade. The shipment of specie from the United States to foreign countries, from the 1st of the First month to the 2d of the Ninth month of this year, has been about $36,000,000.

While this drain of specie is going on with such drastic force, the official statements show that the foreign imports at the port of New York for the Eighth month of this year exceed the imports for the same month of last year about $3,000,000.

The quantities of goods thrown upon the New York market during the Eighth month of the past four years were as follows:

1851,	.	.	$6,783,216
1852,	.	.	9,684,591
1853,	.	.	11,668,731
1854,	.	.	14,194,646

It must be manifest to every rational mind, that the increasing population, and wants, wealth, and ability of the country, do not require any such rapid increase in the supply of foreign goods.

For "The Friend."

BIOGRAPHICAL SKETCHES,

of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 117.)

RICHARD GOVE.

Richard Gove, who was born in 1651 or 2, was in early life a resident of Plymouth, in Devonshire, England, and by occupation was a joiner. He was convinced of the truth as held by Friends, and was called on to suffer for his testimony thereto. On the 31st of Third month, 1676, he was married to Bridget O'Chilston, at Friends' meeting, in Broad street, Plymouth. In the summer of 1683, he was a prisoner in Bridewell, with many of his friends, one of whom thus wrote to Thomas Salthouse and Thomas Lower,* from the prison, under date of Sixth mo. 26th, 1683 :—

"My dear and well-beloved Friends! the memorial of your love is fresh amongst us, and daily invites us to have some correspondence with you, that we may know how it is with you, and your fellow-prisoners, who suffer with us for the testimony of a good conscience; the consideration of which doth more and more engage us to believe, that whatsoever the Lord suffers to come upon us, will be for the honour of his name, and for the good of all that suffer patiently the trial of their faith, on this trying, sifting, winnowing day, that God hath suffered to come upon this nation, so that a separation may be made betwixt them that serve God, and them that serve him not; so blessed and happy will all such be, who are faithfully found waiting with their lamps trimmed for the coming of the Bridegroom." The writer then gives a list of those Friends, suffering for conscience' sake, in the different prisons in that place, in all seventy-two.

Soon after his release from this confinement, Richard Gove, united with a number of Friends, principally tradesmen of Plymouth, in purchasing a tract of land of William Penn. The tract they called Plymouth, after their native place, and in 1685 they removed thither with their families. It is probable that the tradesmen and citizens found their new employment in clearing wild land burdensome, and they longed for a more congenial mode of obtaining a livelihood, and so in a few years they all removed into Philadelphia. One of the settlers, John Chilson or Shilson, probably a brother-in-law of Richard Gove, had removed into the new city before the close of 1686, the rest followed before 1689.

From this time, 1689, we find frequent mention of Richard Gove in the records of our religious Society, and of his appointment to various services. In 1692 he was one of those who signed the testimony against George Keith. We know not at what time he first appeared in the ministry, but his first certificate to travel was granted in the Eleventh mo. 1696, to visit Friends in "Maryland, Virginia, and elsewhere," in company with Thomas Musgrave, a valuable Friend in the ministry, then in America on religious service. In the succeeding Fifth month, he was again liberated to visit Maryland and Virginia, having, it would appear, in the previous month attended, with the approbation of the meeting of ministering Friends, a Yearly Meeting on the western shore of Virginia. Of this last extensive travel, he, after his return, made report that he found "much openness amongst the people, great readiness to come to Friends' meetings, and hear the testimony of Truth, and some seemed to bow under it. Friends in the parts visited, desired to be remembered and visited."

* Then in prison in Launceston, Cornwall.

We know not when his first wife deceased, but he married again on the 8th of Fifth mo. 1698. In the Eleventh month of that same year he was liberated to visit the meetings of Maryland, Virginia, and Carolina, in company with Thomas Chalkley. Thomas Chalkley gives little account of their labours in Maryland, but of Virginia he says, "We had several meetings there amongst Friends and others, many being well satisfied concerning the Truth, and spoke well of it."

In the Fourth mo. 1699, Richard attended the Yearly Meeting of Maryland. Of this opportunity, Richard Johns, a valuable Friend of that province, thus writes: "Dear Aaron Atkinson came from New England, Griffith Owen and Richard Gove from Pennsylvania, and Roger Gill and Thomas Story from Virginia, to attend our Yearly Meeting, where they had indeed good service for the Truth."

In the Seventh mo. 1699, Richard Gove laid before Friends of his Monthly Meeting a concern which rested upon him of paying a religious visit in England. The meeting had unity with his prospect, and a certificate was directed to be prepared for him, which was done, and being brought to the Monthly Meeting, in the Eighth mo., it was approved and signed. He accompanied Aaron Atkinson, who, having finished his religious labours in America, was about returning home. They sailed from the Chesapeake on the Ninth month of that year.

Of his labour of love in England on this visit, I find no record, and he does not appear to have remained there much over a year. On his return to America, he is said to have come in company with John Estaugh. After reaching his own home, he did not settle down in the enjoyment of rest from his Master's service. No; the traces of his dedication grew much more abundant. His labour in neighbouring meetings was great, and at his Master's call, he frequently left his home to visit distant places. In the beginning of 1703, with the approbation of his friends, he accompanied John Kinsey to "East Jersey, Long Island, Rhode Island, and New England." In the Seventh month, the visit being completed, John Kinsey gave "an account of the prosperity of Truth [where they had been], and the great openness [manifested] to receive Friends; and he brought a letter from Richard Gove to the same purport. In Connecticut, several were under inquiry."

In the latter end of the year he spread before his friends for their consideration a prospect he had had of visiting Carolina with Jacob Mott. This concern embraced the meetings on the eastern shore of the Chesapeake, and it appears that after visiting such meetings on the western shore as they were drawn to, they went down on the eastern side, visiting as they went, intending to pass over to Virginia from the southern end of the peninsula. This they found it impracticable at that time to effect, and so returned to the north. Richard Gove, however, did not feel his mind released from the concern for Carolina, and on opening a prospect to his friends of a visit to Barbadoes, in the Third month following, 1706, he mentioned his view of going by Carolina. It appears that he soon after proceeded to the south, and completed his visit there before the Seventh month, when we again find him in Philadelphia. He reported that Truth was prospering in many places in the southern countries he had visited, and that in Carolina there were "some young Friends zealous for good order and discipline." He also reported that certain papers on discipline, prepared by Philadelphia Yearly Meeting, and sent for the information and benefit of the Friends of Carolina, "had come there in an acceptable time."

When Richard Gove laid his prospect of paying a religious visit to Barbadoes in the Third month of this year before his Monthly Meeting, full unity with his concern was expressed by the meeting, but he told them he did not then apply for a certificate, but wished it to rest in the minds of Friends until the time to move in it came. A minute was therefore made to this effect, but no committee was appointed to prepare a certificate. On his return from the southern visit, the Monthly Meeting for the Sixth month was over, and the Yearly Meeting occurring about the middle of the Seventh month, he had no opportunity of asking for a certificate from his friends previous to the sitting of the Select Yearly Meeting, before which he thought it right to lay his prospect for their unity and concurrence. This meeting, although uniting with the concern, was brought into a consideration as to what was best to be done, inasmuch as it had then recently become a practice for Monthly Meetings to prepare certificates for their members who had religious prospects, previous to the meetings of ministers granting any. However, as the members of Philadelphia Monthly Meeting testified that the Monthly Meeting, and the Seventh-day morning meeting, had both unity with the prospect, although they had neglected the proper method of expressing it, the Select Yearly Meeting directed a certificate of its unity to be prepared for him, desiring, however, that it might not become a precedent. John Estaugh was also liberated for similar service, and being bound together in the fellowship of the gospel, and with unity of concern, they proposed going together.

After diligently attending his own and neighbouring meetings until the middle of Ninth month, Richard was joined by his companion, and soon after sailed for Barbadoes. We here insert a copy of the certificate granted Richard Gove, because a passage in it became a subject of remark in a season of peculiar difficulty and danger.

"The Yearly Meeting of ministering Friends, held in Burlington the 16th day of the Seventh month, 1704, to our Friends and brethren in Barbadoes, or whom these may concern, sends greeting:

"Dear and well-beloved Friends, in the love of our Lord Jesus Christ, by which we are united into one spirit, though distant in body, do we dearly salute you, desiring that grace, mercy, and truth, may be increased and continued amongst you, and give you to understand that our esteemed friend Richard Gove laid before our meeting, that a concern hath been upon his mind for a considerable time to visit Friends in your parts, and desired the unity and concurrence of this meeting therein.

"Now these may certify whom it may concern, that the said Richard Gove is a man of an innocent life and godly conversation, as becometh a minister of the gospel; his labour having been great and edifying to the churches of Christ, amongst whom he hath travelled for several years past, much of his time. *Our desires are to the Lord that he may keep and preserve him in the dangerous voyage from the hands of unreasonable men,* not doubting but the visit of him, and our dear friend John Estaugh, who is to be companion, will be very acceptable to you. So into the hands of the Almighty God, who is a tender Father and protector of his children, do we commit them, desiring and praying for the prosperity of the Lord's people, and that we may always dwell in a sense of his great love. In the feeling of which at this time we bid you farewell, and subscribe,

"Your friends and brethren."

From "The Leisure Hour."

The Sea: its Distribution, Depth, Extent, and Level.

(Concluded from page 115.)

It is easy to understand why water and other liquids maintain their level. There is a powerful attractive force in every body, drawing every particle towards the centre. This attraction acts upon fluids in the same degree as upon solids; but as the component parts of all liquids are less closely united, and have a less restrained motion among each other, the effects of the attraction upon them are more perceptible. If no other force than terrestrial gravitation acted upon the water of the ocean, it would have exactly the same form of surface as the globe itself, the outline of which, as is well known, only differs from a right sphere in a slight depression of the poles, and a corresponding extension at the equator. This bulging of the equatorial diameter is by geologists attributed to the diurnal revolution of the earth, the accumulation there of water by centrifugal force, and the consequent deposition of a thicker mass of sedimentary matter. But, whether this be the cause or not, the form is similar to that which would be taken by a viscid or fluid body turning on its axis. In consequence of the rotation of the earth on its poles, every point of the surface describes a circle in one solar day. But it must be evident, from an inspection of a terrestrial globe, that a place situated upon the equator describes the larger circle; in fact, the circle of rotation has its maximum at the equator, and diminishes with the distance from that line till it vanishes at the poles.

If we observe the effect of a rapid rotatory motion upon a fluid body, and apply our observations to the result of diurnal rotation upon the waters of the ocean round the equator, we shall discover one of the most important deviations from the universal law, that the surface of water takes and retains a constant level. A simple illustration is obtained in trundling a mop. When it is dipped into the sea by a sailor and turned round with a rapid motion by two strings attached to the stick, resting upon the gunwale of the vessel, it swells out in the middle and has a form very similar to that of the earth. But, as the mop revolves, the water with which it is saturated flies off, not from the end but from the centre, the very part where it is most extended. The force by which this propulsion from the greater diameter is produced has been called the centrifugal force, and is found, both by experiment and calculation, to increase with the distance from the centre in the same manner as the gravitating force decreases. If the earth revolved with the same velocity as the mop, proportioned to its size, and its central attractive force were not proportionably greater, all other things being equal, the sea would be in the same manner projected from the equatorial regions. But the centrifugal force at the earth's equator is so determined, that although it has sufficient power to accumulate a greater body of water, it does not sufficiently neutralize the gravitation of the planet as to eject it from the surface. The level of the sea, however, is disturbed by centrifugal force, and a larger body of water is accumulated at the equatorial than any other regions of the terrestrial surface.

What has been said prepares the mind to appreciate another instance of adaptation, in that proportion which exists between the masses of water and the height of those mountain ranges in the tropics which form the summit-peaks of dry land. There is no self-evident reason why the mountains of the Cordilleras should have been no higher than they are. The force that raised them might have been a thousand times greater. If such had been the elevation of this vast range, the seas on both sides of the coasts of America would have been raised by their attraction, and the ports of Japan and of France would have been left dry. Hence, it appears that in the distribution of land and water, the height of mountains is an element of calculation as well as the centripetal and centrifugal forces.

The long continuance of the wind from one quarter will frequently occasion a disturbance of the oceanic level in a particular locality. There is on record a remarkable instance of this in the effects of a storm in November 1824. This tempest appears to have commenced on the coasts of England and Holland, and to have then extended itself along the coasts of Norway, Sweden, and Russia. On the 18th and 19th of the month it was most violent. At Stockholm, vessels were driven from their moorings and suddenly overwhelmed. At Udivalla the sea was raised eight feet above its ordinary level, and ships were washed upon the land to a distance of 4000 feet from their anchorage. But at no place were the effects more violent than at St. Petersburg. The bridges of the Neva were washed away, the houses in the lower part of the town were inundated to the depth of ten feet, and a brig, washed on shore, was wrecked in the street of the Grand Perspective. The loss of life during the storm cannot be calculated, but must be counted by thousands.

The sea frequently breaks its bounds, and flows in a huge wave over both neighbouring and distant shores, during violent volcanic eruptions. Thus, at the time of the destruction of Catania, it made an inroad on the coast and did much damage. So also, during the great earthquake at Lisbon, the water of the ocean was elevated in a huge wave extending hundreds of miles from the site of direct disturbance.

Selected for "The Friend."

TRUE HARMONY.

"When we love God with all our hearts, and his creatures in his love, we are then preserved in *tenderness* toward [all] mankind; but if *another* spirit gets room in our minds, and we follow it in our proceedings, we are then in a way of disordering the affairs of society. In the love of Christ there is no respect of persons; and while we abide in his love, we live *not* to ourselves, but to him who died for us. And as we are *thus* united to Christ, we are engaged to labour in promoting that work in the earth, for which he suffered.

"In the harmonious spirit of society, 'Christ *is* all in all.' Here it is, that 'old things are put away, all things are become new, all things are of God.' If we do not walk in that state where 'Christ is our life,' *then* we wander. If we walk not in his light, we walk in darkness, and 'he that walketh in darkness, knoweth not whither he goeth.'"

"To keep to right means, in labouring to attain a right end, *is* necessary; if we strive only in that state where Christ is the light of our life, our labour will stand in the true harmony of society; but if people are confident that the end aimed at is good, and in this confidence, pursue it so eagerly, as not to wait for the Spirit of Truth to lead them, *then* they come to a loss. 'Christ is given to be a leader and commander of the people.' Again, 'The Lord shall guide thee continually.' Again, 'Lord, thou wilt ordain peace for us, for thou also hast wrought *all* our works in us. In the Lord we have righteousness and strength.'"

"In *this* state, our minds are preserved watchful in following the leadings of his Spirit, in all our proceedings, and a care is felt for reformation *in general*. In keeping faithful to the *pure* Counsellor, and under trying circumstances, suffering adversity for righteousness' sake, there is a reward. How few have faithfully followed that holy Leader, who prepares his people to labour for the restoration of true harmony amongst our fellow-creatures!

"'In the *pure* Gospel spirit, we walk *by faith* and not by sight.' In the obedience of faith, we die to the narrowness of *self-love*, and our life being hid with Christ in God, our hearts are enlarged toward mankind *universally*; but in departing from the *true* light of life, many have stumbled upon the dark mountains. That purity of life, which proceeds from faithfulness in following the Spirit of Truth, that state where our minds *are* devoted to serve God, and all our [desires] *are* bounded by his wisdom, *this* habitation has often been opened before me, as a place of retirement for the children of the light, where we may stand separated from that which disordereth and confuseth the affairs of society, and where we may have a testimony of our innocence, in the hearts of those who behold us."

"Many *are* the vanities and luxuries of the present age, and in labouring to support a way of living conformable to the present world, the departure from that wisdom that is pure and peaceable, has been great. Under the sense of a deep revolt, and an overflowing stream of unrighteousness, my life has often been a life of mourning. 'This was the sin of Sodom; pride, fulness of bread, and abundance of idleness, were found in her, and in her daughters; neither did she strengthen the hands of the poor and needy.'"

"Friends in early times refused, on religious principle, to make, or trade in superfluities; but for want of faithfulness some gave way, even those whose examples were of note in society, and from thence others took *more* liberty. Members of our Society worked in superfluities, and bought and sold them, and thus *dimness* of sight came over many. At length Friends got into the *use* of some superfluities in dress, and in the furniture of their houses; and this hath spread, from less to more, till superfluity of some kind is common amongst us. In this declining state, many look at the example, one of another, and too much neglect the pure feeling of Truth."

"When people, through the power of Christ, are thoroughly settled in the right use of things, and freed from all unnecessary care and expense, the mind in this true resignation is at liberty from the bands of a narrow self-interest, to attend from time to time, on the movings of his Spirit upon us, though he leads into that, through which our faith is closely tried."

"While Friends were kept *truly* humble, and walked according to the purity of our principles, the Divine witness in many hearts *was* reached: but when a worldly spirit got entrance, *therewith* came in luxuries and superfluities, and spread little by little, even among the foremost rank in society, and from thence others took liberty in that way, more abundantly."

"The state of mankind was harmonious in the beginning, and though sin hath introduced discord, yet through the wonderful love of God, in Christ Jesus our Lord, the way is open for our redemption, and the means appointed to restore us to primitive harmony. That if one suffer by the unfaithfulness of another, the mind, the most noble part of him that occasions the discord, is thereby alienated from its true and real happiness."

"Our duty and our interest, are inseparably united, and when we neglect or misuse our talents, we necessarily depart from the heavenly fellowship, and are in the ways to the greatest evils.

therefore, to examine and prove *ourselves*, to find what harmony the power presiding in us, bears with the Divine nature, is a duty not more incumbent and necessary, than it would be beneficial."

"If we consider the life of our blessed Saviour when on earth, as it is recorded by his followers, we shall find that one uniform desire for the eternal and temporal good of mankind discovered itself in *all* his actions. If we observe men, both apostles and others, in many different ages, who have *really* come to the unity of the Spirit, and the fellowship of the saints, there still appears the like disposition, and in them, the desire for the *real* happiness of mankind, has outbalanced the desire of ease, liberty, and many times, of life itself."

"If, upon a true search, we find our natures *are* so far renewed, that to exercise righteousness and *loving-kindness*, according to our ability, towards all men, without respect of persons, is easy to us, or is our delight; if our love is so orderly and regular, that he who doeth the will of our Father, who is in heaven, appears, in our view, to be our nearest relation, our brother, sister, and mother; if this be our care, there is good foundation to hope that the blessing of God will sweeten our treasures during our stay in this life, and that our memory will be savory, when we are entered into rest."

For "The Friend."

The Cross of Christ—The Way to a Crown Immortal.

Until each one comes experimentally to feel that there is no other way to a place in the heavenly kingdom, but by taking up a daily cross to their own wills and inclinations, and submitting to the will of Him who has testified that "he that taketh not up his cross and followeth after me, is not worthy of me," we can in no wise realize the necessity of submitting to the many humiliating processes of refinement that are needed, in order to purify the heart, and make it a fit receptacle for the blessed presence of Him who will not make his abode with those who do not endeavour to receive him in the way of his coming.

To those who are moving along, as it were, smoothly with the tide of life, and following after the delusive pleasures and vain customs of an unregenerate world, the cross of Christ will appear of too crucifying a nature to be submitted to, and the monitions of the "still small voice" will not be allowed to influence the heart; the door of which is too often sorrowfully closed against the entrance of Him "who taught as never man taught."

It is sorrowfully apparent that a shunning of the cross, a desire to please the world of mere professors in religion, and an undue and eager pursuit after the things of time, (which do perish with the using,) are weakening some of those who once stood firm in the principles and practices of our forefathers in the Truth, and are leading them away into the "lo here's and lo there's," until their minds are alienated from those pure principles which the doctrines of "Friends," (if lived up to,) would establish. There must be a living up to our principles, in practice as well as precept,—a possession instead of profession alone,—a heartfelt desire and willingness to become a cross-bearing people,—before we can realize the "beauty there is in holiness,"—before the language can be truly applied to us, "ye are the light of the world."

Amidst the many discouraging prospects which often attend the minds of the deeply concerned and humble ones amongst us, arising from the inroads which the spirit of the world is making; drawing the opposers of Truth from the true foundation on which our Society was established, it is a comfort to believe and know that there are those who are maintaining our principles and doctrines, being preserved on that sure foundation, even amidst these discouraging and proving times; men and women who are daily taking up and bearing their cross in order to reap life everlasting, and to win souls to Christ. Such will be blessed, and a succession of such will be continued in ages to come, so that the testimonies of the gospel as given to us to bear, will not become extinct, or our Society entirely swallowed up in the great vortex of the world.

Maryland, Twelfth mo., 1854.

What a Mowing-Machine can do.—The Springfield Republican states that Captain Samuel Parsons, of Northampton, cut, made, and put into his barns, sixty-two loads of hay during the first week of July, commencing on the 3d, beside mowing for others to the amount of $40 in the same time. The whole was accomplished with what would be equivalent to the labour of one man for thirty-eighty days. He mowed in one day, and in less than nine hours, eleven acres, producing from two to two and a half tons per acre.

THE FRIEND.

TWELFTH MONTH 30, 1854.

It may be remembered by many of our readers, that the Meeting for Sufferings in Philadelphia, prepared, and in 1851 published, an Exposition of the African Slave Trade, which was furnished at the time to the President, heads of the departments, the members of Congress, and to the governors of the different States, as well as widely disseminated among the community at large. It was hoped that by thus bringing the extent and dreadful cruelties of the trade as still carried on, before the public; and especially by furnishing our legislators with correct information in a condensed form, of the manner in which it is entered into and supported by persons who fit out their vessels in ports of the United States, and sail under our national flag, the government might be induced to take some steps towards suppressing the nefarious traffic, and rescuing its ensign from the disgrace thus brought upon it. The subject had obtained particular attention from two of the ministers of the United States at the court of Brazil, and in their official capacity they have communicated to our government the course pursued by the slavers; far the greater part of whom avail themselves of protection from search by the British or American cruizers, by carrying both American and Spanish papers; the former to be exhibited when they are overhauled by the British, and the latter when stopped by the American commanders.

It is notorious that vessels of various sizes are frequently fitted out in our ports, which transport to the coast of Africa, the articles of barter, the provisions, and all the appliances necessary for carrying on the slave trade to Cuba or Brazil, though the ports of the latter country are now closed against them. When arrived on the African coast, a nominal sale and transfer is made to some Spaniard or Portuguese, carried out with them, or appointed to meet them there, and the vessel ships her human cargo, packed into the smallest possible space, and with her double set of flags and papers, sails in search of a market for her tortured freight.

All this has been known for years to our government, the subject having been twice brought before Congress by special messages from two of our former Presidents, and yet nothing has been done to prevent the abominable traffic from going on. Having enacted a law which declares the trade to be piracy, and awards the punishment of death to any citizen convicted of being engaged in it, it would seem that our legislators are willing to think themselves exempted from any further care or action in the case, though the evidence has been constantly accumulating, that few who are tempted by its enormous profits to enter into this illegal commerce, are deterred by the fear of detection, which they know is not easily accomplished; and if it should occur, that the severity of the punishment is an almost insuperable barrier against its infliction.

In the exposition to which we have alluded, the whole system as devised and pursued by American citizens, is exposed, and proven by official documents; and many cases related of American vessels and citizens being captured while largely engaged in the business; but Congress cares too little for the complicated sufferings of the poor blacks, or has been too much engaged in the squabbles of party politics, to give attention to the matter. In the meantime, the slave power, emboldened by its successful efforts to extend its blighting influence, has openly advocated the repeal of the existing laws against this horrible trade, in order that our ports and marine may be employed in its prosecution, and the traffic which has cost England such a vast expense of life and money to suppress, may be revived and carried on by the inhabitants of this boasted Republic.

The following account, taken from a late paper, will inform our readers of the manner in which the commerce is managed at the present time. It is asserted by one of the New York journals, that this Captain Smith has given information of several merchants in that city and in Boston, who are directly or indirectly connected with it.

"In the United States Circuit Court for New York, Captain James Smith has been convicted of being engaged in the slave trade between the Coast of Africa and the Island of Cuba.

"The facts which were proven in this case were substantially these: In January last, Capt. Smith went to Boston, where he purchased the brig Julia Moulton, cleared her in ballast for Newport, and on the 2d of February brought her to New York. There he engaged one James Wills as mate, telling him that he was going on a slave-trading voyage, agreeing to pay him $40 a month on the outward voyage, and from $1200 to $2000 for the passage back. A crew was shipped of about fifteen persons, mostly young men, and a large quantity of provisions, water, &c., with lumber, was taken on board. On the 11th of February, the brig cleared from New York, and on leaving the dock, Captain Smith pointed out to the mate a Portuguese, named Lemos, as the real owner of the vessel, and told him that *the Secretary of the Portuguese Consul at New York*, had accompanied him to Boston, and aided him in the purchase of the vessel. The ship was cleared by Captain Smith, and had regular papers for the Cape of Good Hope. After she had been out forty days, the timber on board was used to make a temporary deck or floor in the hold of the vessel, and all the other preparations necessary to receive a cargo of slaves, were made. At the end of sixty days, they made land on the coast of Africa, at a place called *Cobra*, where they were boarded by a boat which brought instructions, in accordance with which they cruised at sea for ten days longer, and then put in at a port further south, called *Ambrozzetta*, well known as a *depot* for the slave trade. Here, in the course of two or three hours, *six hundred and sixty-four negroes, including forty women, were brought on board, and stowed away as cargo in the hold of the brig*. They were placed on their sides, one lying in the lap of another—were taken out occasionally to be fed and aired, and after a voyage of sixty-five days, were landed on the south coast of Cuba. They were sent on shore in lighters. The furniture of the ship was then taken on shore, and the ship herself burned. Wills, the mate, came to New York in the brig Marcellus, where he again met Captain

Smith, who refused to pay Wills the balance due him on his contract, amounting to about $440, whereupon Wills imparted the nature of the voyage to a —— Donahue, by whom it was laid before the authorities. The result was the arrest, trial and conviction of Capt. Smith. The sentence of the law, which is death, was suspended for the present.

"This case is most important as demonstrating, by the evidence produced at the trial, and by the conclusions to which it forces the enlightened public of the entire country, that it is one of a class. It was shown therein how easily the traffic can be carried on *direct* from American ports; and how much more largely and constantly than, even with our knowledge of the coast of Africa, we had supposed.

"Captain Smith is not the first who has been convicted. Captain Flowery was tried in Boston some ten years ago, was convicted, was sentenced to pay a fine of one thousand dollars, and to undergo an imprisonment for five years; but after serving about two years, he was pardoned, he being in feeble health, and shortly afterwards died."

SUMMARY OF EVENTS.

EUROPE.—News from England to the 9th inst. The most important intelligence is the fact, that Austria has definitively joined the Western Powers. On the 2d inst., a treaty of alliance was signed at Vienna by the Plenipotentiaries of Austria, France, and England. The exact terms of the treaty are not known; but from the well known reluctance, and apprehended faithlessness of Austria, there was a distrust of much advantage from the alliance. It is also said that Prussia was about to join the allies. Consols had advanced to 93¼. Flour was dull; Western, 42*s.*; Philadelphia and Baltimore, 43*s.* 6*d.* No material change in cotton. *The War.*—The allies were forwarding troops with the utmost haste to the Crimea, but great difficulty was experienced by France in obtaining vessels. It was thought that the force of the besiegers would amount to one hundred thousand by the middle of the month. Affairs before Sebastopol were unchanged. There had been some fighting, but none of much importance. The garrison continued to make sorties. Reinforcements were arriving for both of the contending armies. The English and French were mainly occupied in strengthening their positions against attack, and in establishing new batteries. Meanwhile reports that the English had attempted to establish themselves near the head of the dockyard, but were repulsed with loss. A despatch from Gen. Canrobert, dated Nov. 28, says, "The rain has ceased, and the weather is improving. Our works will now exhibit fresh activity. Our reinforcements continue to arrive. The enemy still shows no signs of activity, but continues to protect the town by repeated entrenchments. It is stated that several hundred Russian wagons laden with provisions and ammunition, were overtaken by a snow storm, and lost, and that at present there are only provisions in Sebastopol for fourteen weeks."

Admiral Hamelin has resigned the command of the French squadron in the Black sea, and returned to France. The remainder of the French troops in Greece, had been ordered to the Crimea. A despatch from Bucharest of the 6th Dec., says, that 40,000 Turks and 100 guns will be embarked at Varna and Baltechili, the next week, for the Crimea.

The losses of the allies by the great storm on the Black sea, had been severe. A vast quantity of winter clothing, provisions, and ammunition, was lost in the transports, and also a great number of persons forming their crews.

AUSTRIA.—Commercial letters say, that Austria has entered into the treaty unwillingly, but preferred it to breaking entirely with France and England.

SPAIN.—Espartero has advised the Queen to send for Madoz and Oleazo, to form a cabinet. The Cortes have decided to maintain the present dynasty on the throne. Soulé, the American minister, had arrived at Madrid.

AUSTRALIA.—The revenue of the colony of Victoria, during the quarter ending Sixth mo. 30, amounted to the enormous sum of $4,081,975. The revenue from gold licenses and escort fees, was $741,450. From duties on intoxicating drink, $898,985; on tea and coffee, $95,000; for licenses to sell liquors, $323,390. From sales of land and town lots, $1,760,270.

THE NAVIGATOR ISLANDS.—These islands have a population of 33,901, of which the foreign residents number 120. In 1830 all the inhabitants were heathens, and without a written language. At the present time, all, except about two hundred, are professedly Christians, and the greater portion of the Scriptures have been translated and printed.

UNITED STATES.—*Congress.*—The proceedings, since the commencement of the session, have been generally of an unimportant character, and the two Houses do not show a disposition to dispose promptly of the business brought before them. The newly elected delegate from Kansas has been admitted to his seat in the House. It is now asserted that he owes his election to his personal popularity, and that the slavery question was not involved with it.

The House of Representatives has adopted a resolution introduced by the Committee on Commerce, which authorizes the President of the United States to take the requisite measures, in order to procure the erection of a first class light-house on Cape Race, Newfoundland. The United States to pay an equitable portion of the expenses.

Railroads.—The receipts of the Cleveland and Columbus Railroad Company the present year have been $1,210,000; the net earnings, about $605,000, which is about fourteen per cent. on the cost of the road. The Ohio and Pennsylvania Railroad Company has also done a profitable business. The earnings of the road for the year are about $1,200,000, being more than was expected. In Illinois, railroads have been extended rapidly. There are fifteen different roads, having 2612 miles of railway, all terminating at Chicago. Vermont has 400 miles of railroad, which have probably cost $24,000,000. The value of the taxable property of the State has doubled within the last ten years. The Sunbury and Erie railroad, in Pennsylvania, has been completed to Williamsport. On the 18th, the first train of cars arrived at Williamsport, from Philadelphia.

Chicago.—The Chicago Daily Press says, that a thorough examination of the subject establishes the fact that Chicago is the greatest grain port in the world. Its exports of grain far exceed those of New York, or any of the cities of the old world.

Utah.—The appointment of Col. Steptoe as Governor of Utah, has been confirmed by the Senate. The term of office commences immediately.

New York.—The number of emigrants continue to arrive at this port, many of whom require immediate relief. It is stated that the freights received by New York ship-owners on all the exports to foreign countries, do not equal in amount the passage-money paid to them by the immigrants from Europe. Those now arriving are mostly Germans.

Philadelphia.—The Delaware is much obstructed by floating ice. Vessels are enabled to arrive and depart, by the aid of the city ice-boat, and steam. The great destruction of property by fire within a few months past, has induced an earnest call upon the City Government for more efficient means of protection against the danger.

A fire-alarm telegraph, the adoption of steam fire engines, and a re-organization of the fire department, are demanded. Mortality last week, 173.

Ship Building.—At New York, 86 vessels have been launched the present year, with a tonnage of 80,130, and costing at least $5,200,000. At Boston, the number of vessels built was 59, and the tonnage, 69,550; the value, $4,483,430. When the vessels now building are launched, it is supposed that ship building will be nearly suspended for a time.

Copper in Georgia.—A rich copper mine has been opened in Fannin county, Geo.

Lead in Galena, Ill.—In digging a vault at the Bradley House, a valuable *lode* of the mineral was found, and permission has been obtained to tunnel Beach street, in order to procure it.

Miscellaneous.—Panama Railroad.—This road will probably be completed the present month, when the transit across the isthmus from the Atlantic to the Pacific steamers, may be made in six hours.

Cattle Raising in Illinois.—Isaac Funk, of Bloomington, McLean county, Ill., recently sold at Chicago fourteen hundred head of cattle, averaging about seven hundred each, for the sum of sixty-four thousand dollars.

A Trace of the City of Glasgow.—A recent number of the Belfast (Ireland) Northern Whig, contains the information that a portion of the bow of a vessel had been picked up on the shore at Ballochgair, which bears every mark, $4,483,430. When the vessels now building are launched, it is supposed that ship building will be nearly suspended for a time.

Copper in Georgia.—A rich copper mine has been opened in Fannin county, Geo.

Lead in Galena, Ill.—In digging a vault at the Bradley House, a valuable *lode* of the mineral was found, and permission has been obtained to tunnel Beach street, in order to procure it.

Miscellaneous.—Panama Railroad.—This road will probably be completed the present month, when the transit across the isthmus from the Atlantic to the Pacific steamers, may be made in six hours.

Cattle Raising in Illinois.—Isaac Funk, of Bloomington, McLean county, Ill., recently sold at Chicago fourteen hundred head of cattle, averaging about seven hundred each, for the sum of sixty-four thousand dollars.

A Trace of the City of Glasgow.—A recent number of the Belfast (Ireland) Northern Whig, contains the information that a portion of the bow of a vessel had been picked up on the shore at Ballochgair, which bears every mark, by having belonged to the lost steamer. It has on it in large gilded characters, not much defaced, "City of Glasgow," and in the corner, "Let Glasgow flourish." It has been forwarded to the builders, Todd and McGregor, Glasgow, for identification.

The Artesian Well at Charleston, S. C., has reached a depth of 1217 feet. The water which ascends, is equal to twenty gallons a minute, and by its force brings up great quantities of sand. The work is believed to be now nearly accomplished, and that in this body of sand, the long-sought water will be found.

A Cold Day.—The papers give the state of the thermometer at a number of places, on the morning of the 20th, as follows—Philadelphia, 7° and Boston, 8° above zero. Portland, 1° below. Eastport, Me., 5° below. Bangor, 17° below. St. Johnsbury, Vt., 36° below. Albany, 14° below. At the latter place, teams were crossing the river on the ice, which was thick and firm. In Jefferson co., N. Y., it was 21° below.

Distress on Lake Huron.—There is stated to be a great scarcity of provisions all along the coast of Lake Huron. But few of the people have procured their winter supplies, and much suffering is apprehended.

RECEIPTS.

Received from Jos. J. Hopkins, agt., Balt., $2, vol. 27, and for R. Snowden, $2, to 16, vol. 28, for B. P. Pleasants, $10, to 52, vol. 26; from M. Dingman, N. Y., $2, vol. 27; from James T. Frame, agt., Io., for himself, James Schooley, Abm. Cowgill, and W. D. Branson, $2 each, vol. 28, for Caleb Hawley, $2, to 16, vol. 29; from Josh. Maule, agt., O., $1, and for Elisha Bracken, $10, to 52, vol. 28; from Jesse Hall, agt., O., for Jos. Walton, Nathan Cook, Wm. Hall, jr., Margaret Binns, and Mt. P. B. School, $2, vol. 28.

INDIAN CIVILIZATION.

The committee is desirous of engaging the services of a well qualified Friend to teach the school at Tunessassah, &c. Friends, who may feel concerned to engage in that station, are requested to make early application to Joseph Elkinton, No. 377 S. Second street, or Thomas Evans, No. 180 Arch street, Philadelphia, or Ebenezer Worth, Hamerton, Chester county, Pa., or Thomas Wistar, Fox Chase, Philadelphia co., Pa.

Philad., Ninth mo. 20, 1854.

SOUP HOUSE.

The Society for supplying the poor of the city with soup, being about to open their house, No. 16 Green's Court, between Spruce and Pine streets, and Fourth and Fifth streets, respectfully solicit the aid of the benevolent to enable them to meet the pressing wants of the poor, during the present season of suffering. Donations in money will be gratefully received by the Treasurer, Jeremiah Hacker, No. 144 South Fourth street, or Thomas Evans, No. 180 Arch street, and in flour, rice, beef, vegetables, &c., at the house.

Those who advert to the high prices of food and fuel, and the difficulty of procuring employment at the present time, will readily perceive, that the calls for aid to the industrious poor, are likely to be unusually numerous, and that increased means will be required to meet them, while few charities afford so much relief at so small a cost, or in so unobjectionable a manner.

WEST-TOWN SCHOOL.

Assistant Teachers are wanted in the Boys and Girls' departments of this Institution. The opportunity which this station furnishes for prosecuting their studies, free from any expense, presents a favourable opening for young persons, who wish to perfect themselves in the higher branches of learning, or to prepare for the business of Teachers. Those who wish to engage, are requested to make early application to Nathan Sharples, Concordville; Pennock Passmore, Goshenville; or Thomas Evans, Samuel Bettle, Jr., Elizabeth Peirson, or Sidney Coates, Philadelphia.

THE WESTERN SOUP SOCIETY.

This useful institution opened its house on the 15th inst., for the daily distribution of soup to the destitute poor of the western part of our city. It appears that during the past winter, they distributed over 20,000 quarts of soup, and about 8000 loaves of bread to 1110 applicants, of whom 411 were adults, and 699 children.

As there is every appearance of a severe winter, and much suffering among the poorer classes, on account of the high prices of provisions and fuel, and the scarcity of employment, the managers would appeal to their friends for aid and support in carrying out the objects of the society.

Donations in provisions will be thankfully received at the soup-house, at the S. E. corner of Seventeenth and George streets; or in money by either of the managers, or

WILLIAM BIDDLE, Treasurer,
SAMUEL L. BAILY, Secretary.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXVIII. SEVENTH-DAY, FIRST MONTH 6, 1855. NO. 17.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 50 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

From the London Quarterly Review.

How London is Supplied with Food.

(Continued from page 122.)

We believe, however, it is now in contemplation to go to work upon a large scale in those waters, having screw-steamers to collect the produce and bring it to Milford Haven alive in wells, from which port it would come, via the South Wales and Great Western Railways, to Billingsgate within twenty-four hours after it was caught. The value of screw-steamers having capacious wells has been fully tested by Mr. Howard, of Manningtree, Essex, who fitted an engine and screw into one of his welled fishing smacks. Scarcely a lobster, out of twenty thousand put alive into the boat, was lost, whilst large numbers of those brought in sailing smacks perish. The last week in July of the present year he tried the experiment of bringing salmon alive from Sir James Matheson's salmon fishery in the Lewis Islands, Scotland, to Grimsby, and on the 1st of August they were sold in Billingsgate for 1*s.* 2*d.* per lb., while, on the same morning, salmon of the same size brought in ice sold for 6½*d.* per lb. Cod and other fish are brought alive with the same success in the welled steamers from the North Sea and the coasts of Scotland. It is almost time that some new ground were found in place of the famous Dogger Bank, which has now been preyed upon by so many nations for centuries, and has supplied so many generations of Catholics and Protestants with fast and feast food. No better proof that its stores are failing could be given than the fact that, although the ground, counting the Long Bank and the north-west flat in its vicinity, covers 11,800 square miles, and that in fine weather it is fished by the London companies with from fifteen to twenty dozen of long lines, extending to ten or twelve miles, and containing from 9,000 to 12,000 hooks, it is yet not at all common to secure even as many as four score fish of a night—a poverty which can be better appreciated when we learn that 600 fish for 800 hooks is the catch for deep-sea fishing about Kinsale.

Towards the latter end of August the great herring season commences. Yarmouth is the chief seat of this branch of the piscatory trade. Every night when the weather is fine the fishermen of this old port "shoot" upwards of 300 square miles of net. Neptune in his ample arms never gave the ocean so magnificent an embrace. The produce of this wholesale sweeping of the sea is brought to town by the Eastern Counties Railway. They come up to Billingsgate packed in barrels and in bulk, and the number sold in the year seems almost fabulous, being upwards of a *billion*. Next to the herring fishery, the sea harvest of most importance to the poor of London is that of sprats, which come in about Lord Mayor's day, and it is a popular belief that the first dish is always sent to the chief magistrate of the city. If a telegraph were to be laid down to all the alleys and courts, the fact of a large arrival of these little creatures at Billingsgate would not be sooner made known to the lower orders than, by some mysterious process, it is at present. Goldbam, the clerk of the market, accustomed as he is to the sudden invasions of the costermongers, informs us that the scene on board the smacks laden with sprats is really frightful. The people hang thick as sea-weed from the rigging, throng the decks, and swarm on every available inch of plank, until the wonder is that the whole of the puny fleet does not capsize with the weight. The cause of the scramble is that the street sellers will not buy until they have seen the sample, and every one consequently tries to gain the highest point, that he may look down into the hold whilst a man tumbles about the sprats with a shovel in silver showers. The plaice season succeeds to that of sprats, with the interval of mackerel, which continues until the end of May, when Scotland and Ireland begin to pass down their salmon into the market. But where do all the lobsters come from? The lovers of this most delicious of the crustacea tribe will probably be astonished to learn that they are mainly brought from Norway. France and the Channel Islands, Orkney and Shetland, do, it is true, contribute a few to the metropolitan market, but full two-thirds are reluctantly, and with much pinching and twisting, dragged out of the thousand rock-bound inlets which indent the Norwegian coast. They are conveyed alive in a screw-steamer and by smacks in baskets, sometimes to the extent of 20,000 of a night, to Great Grimsby, and are thence forwarded to town by the Great Northern Railway—another ten thousand arriving perhaps from points on our own and the French coast. The fighting, twisting, blue-black masses are taken as soon as purchased to what are termed "the boiling houses," of which there are four, situated in Duck and Love Lanes, close to the market, and here, for a trifling sum per score, they change their dark for scarlet uniforms. They are plunged into the boiling cauldron, basket and all, and in twenty minutes they are done. Crabs are cooked in the same establishments, but their nervous systems are so acute, that they dash off their claws in convulsive agony if placed alive in hot water. To prevent this mutilation, which would spoil their sale, they are first killed by the insertion of a needle through the head. The lobster trade is mostly in the hands of one salesman, Saunders, of Thames street, who often has upwards of 15,000 consigned to him of a morning, and who causes no less than 15,000*l.* a-year to flow into the fishy palms of Norwegians for this single article of commerce. As to the total supply of fish to the London market, we borrow the following estimate from Mayhew's very clever book on "London Labour and the London Poor." The figures seemed to us at first sight so enormous, that we hesitatingly submitted the table to one of the largest salesmen, who assured us that it was no overstatement:—

And now for the *pièce de résistance*.

Description of Fish.	No. of Fish	Weight of Fish.
		lbs.
WET FISH.		
Salmon and salmon trout (29,000 boxes, 14 fish per box)	406,000	3,480,000
Live cod (averaging 10 lbs. each)	400,000	4,000,000
Soles (averaging ¼ lb. each)	97,520,000	26,880,000
Whiting (average 6 to 6 oz. each)	17,920,000	6,720,000
Haddock (averaging 2 lbs. each)	2,570,000	5,040,000
Plaice (averaging 1 lb. each)	33,600,000	33,600,000
Mackerel (averaging 1 lb. each)	23,520,000	23,520,000
Fresh herrings (250,000 barrels, 700 fish per barrel)	175,000,000	42,000,000
Ditto in bulk	1,050,000,000	252,000,000
Sprats	——	4,000,000
Eels from Holland (principally), England, and Ireland (6 fish per lb.)	9,797,760	1,905,280
Flounders (7,200 quarterns, 36 fish per qu.)	259,200	43,200
Dabs (7,500 quarterns, 36 fish per quartern)	270,000	48,750
DRY FISH.		
Barrelled cod (15,000 bbls., 40 fish per bbl.)	750,000	4,200,000
Dried salt cod (5 lbs. each)	1,600,000	8,000,000
Smoked haddock (65,000 barrels, 300 fish per barrel)	19,500,000	10,920,000
Bloaters (265,000 baskets, 150 fish p. b'ket)	147,000 000	10,600,000
Red herrings (100,000 barrels, 500 fish per barrel)	50,000,000	14,000,000
Dried sprats (9,600 large bundles, 30 fish per bundle)	288,000	95,000
SHELL FISH.		
Oysters	405,896,000	——
Lobsters (averaging 1 lb. each fish)	1,200,000	1,200,000
Crabs (averaging 1 lb. each fish)	600,000	600,000
Shrimps (324 to a pint)	498,428,648	——
Whelks (227 to a half bushel)	4,943,200	——
Muscels (1000 to half bushel)	50,400,000	——
Cockles (2000 to half bushel)	67,392,000	——
Periwinkles (4000 to half bushel)	304,000,000	——

(To be continued.)

Selected.

"Christians may be considered as *nominal* and *real*. There are vast numbers who are called Christians, not because they possess any love for Christ, but because they happen to be born in what is called a Christian country, educated by Christian parents, and sometimes attend Christian worship. There are also many whose minds are well informed respecting the Christian system, who prefer it to every other, and who make an open profession of it; and yet after all feel but little of the real power of Christianity. A *real Christian* is one whose understanding is enlightened by the influences of Divine grace; who is convinced of the depravity of his nature; who sees his own inability to help himself; who is taught to behold and love God as the chief good, the Lord Jesus as the only way to obtain felicity, and that the Holy Spirit is the grand agent [in regenerating him], and in applying the blessings of the gospel to his soul. His heart is renovated by the power of Divine grace, and brought to revere, honour, worship, trust in, and live to God, [through the obedience of faith.] His affections are elevated above the world, and centre in God alone. He embraces him as his portion, loves him supremely, and is zealous in the defence and the support of his cause. His temper is regulated, his power roused to vigorous action in the service of his divine Master [by his Spirit]; his thoughts spiritual, and his general deportment amiable and uniform. In fine, the *true* christian character exceeds all others, as much as the meridian sun outshines the feeble light of the glow-worm. Like Moses, he chooses rather to

suffer affliction with the people of God than to enjoy the pleasures of sin for a season, esteeming the reproaches of Christ greater riches than all the treasures of Egypt; for he has an eye to the eternal recompense of reward among the saints in light.

The New Gas Works.

It is asserted, we suppose correctly, that in the works recently completed at Point Breeze, the city of Philadelphia possesses an establishment for the manufacture of gas superior to any in the world. The immense gas-holder will contain 1,800,000 feet of gas, which, it is said, is one million more than the largest gas-holder in London. The following account of its construction, furnished by a daily paper, may probably interest some of our readers:—

"The gas-holder is 90 feet high, and 162 feet long. It is supported by 12 pentagon towers, of beautiful construction, each 92 feet high. It is of the telescopic pattern, and was commenced on the 12th of January, 1853, and on the 20th of September of the same year, the outer section was lowered. The inner or upper section is 158 feet 6 inches in diameter, and 45 feet deep, with hydraulic cup or seal, 20 inches deep by 6 inches wide. The side, including the cup, is composed of 22 rows of sheets of Nos. 10, 11 and 12 iron, joined together by button-head rivets, at intervals of one inch each. It was kept in shape by an angle iron frame, supported by 24 cast-iron legs or uprights. The legs were in the form of the letter D, cast in five sections of 9 feet each, and bolted together, while a score 6 by 10 inches runs the whole depth of the side, so as to admit of loading of the gas-holder, with any extra pressure required. Each row of sheets contains 84 distinct pieces, and the section 1848 sheets.

"The crown of the upper section is composed of No. 12 sheet iron, laid in 16 circles, with upwards of 2000 sheets. It is supported by a king post of boiler iron, 7 rings of angle and bar iron, and 24 trusses of round and square iron, from ¾ to 1½ inches thick. The trusses contain 2,678 pieces. On the crown of the holder are 6 manhole plates and 2 bonnets for stand-pipes, with an elevation of 4 feet. The outer or lower section is 160 feet in diameter, and 45 feet deep, with a cup similar to the upper section. The side has also twenty-two rows (1,848 sheets of iron) varying in thickness from No. 10 to No. 14, and rivetted together like the other. In the two sections, 490,000 pounds of wrought-iron were used, and 175,000 pounds of cast-iron—total, 665,000 pounds, or nearly 300 tons of iron. There were 687,934 rivets used in the construction of the holder, and for the purpose of facilitating the driving of them, all the holes were bored previous to being removed from the manufactory.

Church Discipline.

In the establishment of the restraining rules, by which we as a people profess to be governed in our religious association, we have good reason to believe that the framers of them were divinely assisted, under a right concern for the support of good order; and where any of these are suffered to be habitually violated, weakness necessarily ensues, both to the individuals, and the body of which they are members.

In the periodical inquiry into the clearness of our members in respect to breaches of discipline, there is one that is very seldom if ever answered without exceptions, and that is the appearance of sleeping in meetings. Any departure in this respect, tends to the reproach of a good profession, yet an occasional lapse, is, of course, more tolerable, than an habitual indulgence in this reproachful practice; such as is to be found in some meetings, where even the absence of the habitual offenders would seem more excusable than the constant reproach, of which they are conspicuously guilty, in the face of a professedly worshipping assembly. Where such occupy conspicuous seats, a change of situation would be some relief, though an entire reform is demanded, as lifelessness, as well as life, is pervasive; and increases the exercise of those (in a meeting where this is prevalent,) who are engaged in struggling against it. This may seem a small matter to be an occasion of much concern, but there is more to make it so, than would be supposed upon a superficial view of its effects, and it is to be hoped that such offenders will be led seriously to consider it, and endeavour to overcome the spirit of drowsiness in meetings for divine worship, whenever assailed thereby; and that those who are in authority may faithfully discharge their duty in supporting the discipline, by the extension of proper care, in cases of the kind referred to.

In reference to the requirements of discipline, in the regulation of our outward concerns, they are marked by evident wisdom, and among these are moderation in business, faithfulness to promises, justice in the payment of debts, and living within the bounds of our circumstances; and how often has the departure from these, caused shipwreck in business, as well as in faith and character, to the reproach of our religious Society. Then, in respect to conduct and conversation, how wholesome are the restraints, a regard for which, would preserve from all lightness of manner or language; from all gaiety of attire and inconsistency of speech; from being found unnecessarily at places of public resort, and from a departure from temperance and moderation on any occasion.

All these, from the first named to the last, may, and doubtless do seem small things, to many; but to those who *have* been convinced of the necessity of a hedge round about us, in order for our own preservation, and to prevent the introduction and spread of evil, even the least of them will be regarded as indispensable, and worthy of strict attention and regard; for it is the little foxes that spoil the tender vine; and though little things are little things, yet to be faithful in little things *is* something great.

To return to the first named matter of concern, let offenders and those in authority, unite in the endeavour after a reformation, which in some cases is so much needed, there being instances where the weakness is so glaring, as to be an occasion of remark and solicitude.

Sustaining Qualities of Different Kinds of Food.—The cereal grains contain the largest proportion of flesh-and-blood-producing material, and among them wheat is predominant. But the actual quantity of nutriment even in wheat is much less than is generally supposed; that portion of the grain which is converted into muscular fibre not exceeding fourteen per cent. of the whole. When, however, we compare the nutritious qualities of wheat with those of potatoes, the former stands very high in the scale, and the latter sinks so low as seemingly to justify the anathemas of Cobbet. In the first place, seventy-six per cent. of the weight of potatoes consists of water, from which no nourishment whatever is derived; and of the remaining twenty-four parts, only two per cent. consists of nutriment. The result of the examination of the comparitive values of potatoes and wheat as articles of food, proves that the latter not only contains a larger proportion of nutriment, but a proportion so great as to exceed the difference in their prices, and that it is cheaper to feed men on good wheaten bread than on potatoes, if both be used exclusively of other articles of diet.—*Professor Bentley.*

Selected for "The Friend."

Upon the Season of Winter.

To the thoughtful and the feeling mind, the season of winter comes not without a blessing upon its wings;—and perhaps the noblest lessons of religion are to be learned amid its clouds and storms.

It is, in the first place, a season of solemnity, and the aspect of everything around us is fitted to call the mind to deep and serious thought. The gay variety of nature is no more;—the sounds of joy have ceased, and the flowers which opened to the ray of summer, are all now returned to dust. The sun himself seems to withdraw his light, or to be enfeebled in his power; and while night usurps her dark and silent reign, the hosts of heaven burst with new radiance upon our view, and pursue through unfathomable space their bright career.

While we contemplate the decaying sun,—while we weep over the bier of nature, and hear the winds of winter desolating the earth,—what is it that this annual revolution teaches even to the infant mind? Is it that the powers of nature have failed, that the world waxeth old, and that the night of existence is approaching? No! it is that this reign of gloom and desolation will pass;—it is that spring will again return, and that nature will re-assume its robe of beauty. In the multitude of years that have gone before us, this mighty resurrection has annually been accomplished. To our fathers, and the old time before them, the yearly beneficence of Heaven has been renewed; and, while the night of winter has sunk in heaviness, joy hath as uniformly attended the morning of the spring.

We are taught that the power which first created existence is weakened by no time, and subject to no decay.

Such are the first instructions which this season is fitted to bring. Amid the solemn thoughts which it awakens, it leads us to the contemplation of that boundless Wisdom which governs the revolutions of nature; amid the apparent decay of being, it reminds us of that almighty power by which all is renewed; and, by the very contrasts which it presents, it tells us of the unceasing goodness of Him "whom both summer and winter obey."

Of the innumerable eyes that open upon nature, none but those of man see its author and its end. There is something very solemn in this mighty privilege. Let, then, the storms of winter blow, and the rains of heaven descend. While every inferior nature shrinks from their approach, let us meet them as the signs of the same goodness, which brings forth the promises of spring, and fulfils the hopes of the harvest; let us see them, as the evidence of that Wisdom, which makes momentary evil the source of final good.

Twelfth mo., 1854.

An Illustration of Scripture.—A traveller in Syria says that at the close of the day the roads are filled with wandering herds and flocks, and droves of donkeys, with one attendant herdsman, all returning home for the night, after pasture on the neighbouring hill-tops. As soon as they get to the outskirts of the village, each separates from the other, and unattended pursues its way to its master's door. "The ox knoweth its owner, and the ass his master's crib."

For "The Friend."

Christian Endurance.

Near the close of the year 1688, a war broke out in Ireland, threatening a general destruction of the English and other protestants, and in that fearful state of the country, many left their dwellings and their stocks, and fled. But Friends generally kept their places, and held their religious meetings, trusting in the Lord, who rules in heaven and earth, and sets bounds to the sea and the raging waves thereof, though they were in great peril from multitudes of unmerciful, bloodthirsty men banded together. In some parts, Friends were great succourers of the distressed English, who were stript of their substance, driven away, and their houses burnt; and it was remarkable to them how they that were in government, appeared then to favour, and endeavour to preserve Friends, who not only aided the distressed, but keeping to their peaceable principles, convinced them that none had anything to fear from them. But notwithstanding all the endeavours they used for the help of others, and in their own circumspect deportment, Friends suffered great losses, and endured many hardships from the army, and passed through many perils from the outrageous rabble, and plunderers of the country. Their lives also appeared to be endangered, so that it seemed almost impossible they should be preserved; yet in the midst of the terror and destruction surrounding them, the Lord's power was wonderfully manifested for their deliverance, to their admiration and comfort.

Near Charlemont, Friends generally kept their places, particularly John Whiteside, whose family was wonderfully preserved, though often in imminent danger from the Rapparees, their dwelling being between an English and an Irish garrison, who had hot engagements, killing each other at his very house. At one time there were 700 Irish to 60 English and French, by computation; they burnt one of his outhouses, while he and his son lay sick in another so near, that it was admirable both it and they were not burnt; and yet the Irish who plundered Friends, and destroyed their buildings, were forced to withdraw. Thomas Greer, a Friend, lost his life by a shot made into his mother's house in the night, by Rapparees coming, it was supposed, to rob them. Friends of Ulster gave this testimony concerning him, that he was an honest Friend, and zealous for Truth. At Moate Grange the meeting was held for a long time through much danger and difficulty, being but six miles from an Irish garrison at Athlone, from which scout parties made great spoil upon the country, and to which the Rapparees took the English they caught. While John Clibborn, who resided at Moate, kept his house, it was open to all, and a place of relief to many Friends and all others. But finally he was plundered and hardly used by those barbarous men, who came in the night, took him by the hair, and threatened to cut off his head, and at last drove him and other Friends away, and burnt their houses. The hand of the Lord was eminently extended for the defence and preservation of Friends, in very many ways and places; and though many of their English neighbours fell by those murderers, yet Friends knew of but four whom they could own of their Society in all that nation, that lost their lives by violence, and two of them were too forward in exposing themselves to danger. It pleased the Lord, they say, in mercy, (and for a remnants' sake, no doubt,) to shorten those times of great exercises, that they were mostly ended in less than three years, and *Friends generally were low in their minds*, and *their hearts open to one another*, so that those who had something left, were willing to communicate to those who were in want, and they that had been driven off, generally returned to their dwellings. It is remarkable, that the meetings were peaceable, and kept as usual for the worship of God, without much disturbance; also those for discipline, Monthly, Provincial, and National Meetings, though many times they went to them at the peril of their lives; and the Lord was pleased to accompany them with his glorious, heavenly presence; Truth gained ground, and Friends came more into esteem, through their innocent, wise deportment in the fear of God.—*Rutty*.

[In our editorial of last week, we furnished our readers with an account of the conviction of Capt. Smith for being engaged, as an American citizen, in the slave trade, with some remarks thereon. The following, taken from the "Evangelist," is his account of the manner in which this illegal traffic is carried on.]

THE SLAVE TRADE IN NEW YORK.

It has often been said that the slave trade was still carried on from New York, but as the charge has been of a vague and general character, it has attracted little attention. We are beginning to get light on the matter. There is now lying in the Tombs in this city a man who has been tried and found guilty of being engaged in the slave trade. This is said to be the first conviction ever obtained under the law by which it was made piracy. The testimony in the case was ample. And though he protests against his condemnation, on the ground that he is a foreigner, and not amenable to the laws of the United States, he does not deny the fact of his share in the business. He speaks of it freely, and relates with unconcealed exultation the particulars of his wild and desperate career.

We have chanced to see and talk with this noted captain in his prison. What he told us was not communicated in confidence, for he never saw us before, and did not know who we were. He spoke to us as an entire stranger. All our conversation was through the grated door of his cell. We made no attempt to gain his confidence, or to draw out the secret history of his life. He told his own story, not like a criminal making a confession, but rather with the freedom and pride of an old soldier relating his battles. Nor did he intimate a wish that what he said should be kept private. Indeed, he had boasted to others of his deeds on the African coast. His disclosures, therefore, are public property. Some of these are so curious as to be worth making known. Whether he tells the truth, the world must judge. It is not very probable that a man would make up a story which implicated him in a capital crime. Besides, his account is consistent with itself; it agrees with what was proved on the trial, and with the descriptions in Captain Canot's book. We believe, therefore, that he has let out the truth.

"New York," says Captain Smith, "is the chief port in the world for the slave trade." He repeated two or three times, "*It is the greatest place in the universe for it.* Neither in Cuba nor in the Brazils is it carried on so extensively. Ships that convey slaves to the West Indies and South America are fitted out from the United States. Now and then one sails from Philadelphia, more from Baltimore, but most of all from New York. This is our headquarters. My vessel was the brig Julia Moulton. I got her in Boston and brought her here, and sailed from this port direct to the coast of Africa." "But do you mean to say that this business is going on now?" "Yes, all the while. Not so many vessels have been sent out this year—perhaps not over twenty. But last year there were probably thirty-five."

"Are there large shipping-houses engaged in it?" "Yes; I can go down to South street, and go into a number of houses that help to fit out ships for the business. I don't know how far they own the vessels or receive the profits of the cargoes. I had rather not have American owners; I prefer Spaniards or Portuguese. But these houses know all about it. They know me.. They see me sail out of port with a ship, and come back a passenger. They sometimes ask me, 'Captain, where is your ship?' [With a shrug.] They know what has become of her. When a cargo of slaves is landed, the vessel is often destroyed, not to be a witness against her officers and crew."

"But how do you manage to get away without exciting suspicion?" "Why, you see, we keep close, and get everything aboard, and do not ask our papers until we are just ready to sail. Then we go to the Custom House, and take out papers for Rio Janeiro, St. Helena, Cape de Verde Islands, or any port you please—it don't matter where—and instantly clear."

"But if you were seized at that moment, could the officers tell, by searching the ship, that she was a slaver?"

"Oh, yes, they couldn't help knowing. Besides, they must suspect something from seeing such an almighty crew. My little brig carried but 200 tons, and could be manned by four men. But I had fourteen before the mast. The moment of leaving port is the one of danger. But we don't lose time. A steamer is kept ready, and we get under weigh immediately. Often two or three slavers leave at once. We steam down the bay, and over the bar, and then the ocean is before us, and we set our course for any quarter we please."

"But when you reach the African coast, are you not in great danger from British ships-of-war?"

"Oh, no, we don't care for the English squadron. We run up the American flag, and if they come aboard all we have to do is to show our American papers, and they have no right to search us. So they growl and grumble and go off again."

"That may do very well when you are going in empty. But suppose you are coming out with a cargo of slaves on board?"

"Even then we can get along well enough, if the niggers will keep quiet. We put them all below deck and nail down our hatches, and then present our papers. The officers have no right to go below. The only danger in this case is, that they will stay on board too long. They often suspect the truth, and hang about for an hour or two. By this time the niggers are stifled, and begin to make a noise. Then the thing is out, and they seize the ship."

"After that, I suppose you are punished?"

"Oh, no; we generally get off. You see, as we are Americans, they must bring us to an American port to be tried. But if they run the ship into port along the coast, they get one pound a head for every re-captured slave. So they generally prefer to let us go, and get their prize-money."

"How many slaves could you carry on your vessel?" "We took on board 664. We might have stowed away 800. If she had been going to the Brazils we should have taken that number. She would carry 750 *with pleasure*. The boys and women we kept on the upper deck. But all the strong men—those giant Africans that might make us trouble—we put below on the slave deck." "Did you chain them, or put on handcuffs?"

"No, never; they would die. We let them move about." "Are you very severe with them?" "We have to be pretty strict at first—for a week or so —to make them feel that we are masters. Then we lighten up for the rest of the voyage."

"How do you pack them at night?" "They lie down upon the deck on their sides, body to body. There would not be room enough for all to lie on their backs."

"Did many die on the passage?" "Yes; I lost a good many the last cruise—more than ever before. Sometimes we find them dead when we go below in the morning. Then we throw them overboard."

"Are the profits of the trade very large?" "My brig cost $13,000 to fit her out completely. My last cargo to Cuba was worth $220,000. But it was seized by the late Captain-General, Pezuela. He did more to break up the slave trade than any one else. If he had remained in office, he would have stopped it altogether. But now Concha is back again, and it goes on as flourishing as ever."

"But I thought Concha was the great enemy of the slave trade?" So he is—in words. He talks a great deal, but Pezuela acted. From time immemorial the planter's estate has been sacred. But Pezuela respected nothing. He seized the negroes wherever he could find them, even on the plantations. By this he incurred the enmity of the planters: and he would probably have been assassinated, if he had not been recalled."

"Did you ever have fights with the English ships?" "Yes; once a ship-of-war chased two of us. We knocked the sticks out of her. We didn't stop to look after the dead. At another time I was captured. It was in a dead calm, and there was no chance to get away. When I saw that we were gone, I went below and stove every cask of water but one. The other ship was short, too. So we had both to put into the land to get water. They put on board of us a Lieutenant and crew. But he did not know the coast, and, as we drew toward land, he had to make me pilot, threatening, at the same time, to shoot me if I ran her on shore. I took the helm and ran her into an inlet. No sooner had we passed the mouth than we saw on the bank the baracoons of the slave factors. They all knew me, and boats put off from shore. The Lieutenant hailed them in English, and told them to keep off. At the same time I hailed them in Spanish, and told them the vessel was a prize. That night they came off in force and re-captured her. We put the Lieutenant and his men into a boat and sent them adrift, while I went down the coast and took in a cargo of slaves, and carried them safely across the ocean."

"Why, captain, this must be exciting business."

"His eyes flashed fire as he replied, "It's splendid. It makes a man jump to think of it! To be cutting away at the rate of eleven knots an hour, with a ship in chase, and walking right away from her!"

That instant we saw in the prisoner the rover of the seas, again standing on his deck, with the huge hull of a ship-of-war looming above the horizon.

"But how did you get caught at last?"

"The mate betrayed me. I never liked the man. He was scared. He had no heart. You see it takes a man of a *particular constitution* to engage in our business. When once at sea with a slave cargo, we are in *free bottoms*. We belong to no country. We are under the protection of no law. We must defend ourselves. A man must have a great deal of nerve in such a situation, when he is liable to be chased by ships-of-war, or perhaps, finds himself suddenly in the midst of a whole fleet. The mate once served me a trick, for which I should have been perfectly justified in shooting him dead. We were running in between the islands Martinique and Dominique, when suddenly there shot out from behind the land an English steamer. The mate thought it was a ship-of-war, and so did I. He was frightened to death, and instantly turned the vessel off her course. That was the very movement to bring down the enemy in chase. I saw the danger and flew to the helm, and put her back again, and we passed by in safety."

"But are you not tired of this business?" "Why, I did n't want to go out, the last voyage. I tried to get another captain to take charge of my ship. I wanted to stay at home and get married. *But good men in our business are scarce.* And I had to go."

But the noble captain seemed ambitious of a higher career. "What I should like best of all," said he, "would be, to go *privateering*. To command a merchant-ship, and to go lumbering along, loaded down with freight—that I cannot bear. It kills me. But give me a well-built clipper, with six guns on a side, and a long Tom in the middle, and a letter of marque to range the ocean, and I would n't call the President my brother!"

Such was the substance of Capt. Smith's story. We allowed him to run on with his exploits, to see what stuff a slaver was made of. Was there ever a more perverted nature? Here is a man whose boast is in the gigantic character and the success of his villanies. His courage is to show his power over the weak and defenceless; to crowd hundreds of human beings into a close hold, where a hundred and fifty die in a few weeks; and his greatest exultation to have defied the laws of the whole civilized world! But the most important reflection is on the weakness and negligence which permits this traffic to go on unchecked. *New York, the chief port in the world for the slave trade!* Thirty-five slavers a-year sailing down our bay! Is this true? If so, why are not these vessels searched and seized? On whom rests the blame! Do officers of the government connive at the traffic? Or are they so blind as not to see what passes under their eyes? Or are they too weak or too indolent to enforce their country's justice?

Now you say, alas! Christianity is hard: I grant it: but gainful and happy. I contemn the difficulty, when I respect the advantage. The greatest labours that have unanswerable requitals, are less than the least that have no regard. Believe me, when I look to the reward, I would not have the work easier. It is a good master whom we serve, who not only pays, but gives; not after the proportion of our earnings, but of his own mercy.—*Hall.*

Invention.—Mr. Arthur sent to the Fair of the Maryland Institute an "Air-tight Preserving Canister." It is thus described:—It is a common tin canister made with an annular trough, at the outside of the top, with a cover to fit loosly into it; this trough is filled with a very adhesive cement prepared for the purpose, and in order to close the vessel hermetically, it is only necessary to heat the cover slightly, and press the flange into the cement. It is well known that fruits and vegetables may be preserved in a fresh state for any desirable length of time by heating them up to a certain point and then cutting them effectually off from contact with the atmosphere. The usual method of doing this is to solder them up in tin cans; but this process of soldering is out of the reach of housekeepers generally, and fresh fruits and vegetables are rarely put up by private families. But with the canister to which we are now calling attention, the whole thing may be done with so much ease that the ordinary process of preserving must to a great extent be superseded by it. Butter may also be hermetically sealed and preserved from spring to winter.—*L. Paper.*

Selected.

THE DYING CHRISTIAN.

Deathless principle, arise!
Soar, thou native of the skies!
Pearl of price by Jesus bought,
To his glorious likeness wrought,
Go, to shine before his throne,
Deck his mediatorial crown;
Go, his triumph to adorn;
Made for God, to God return.

Lo, he beckons from on high!
Fearless to his presence fly;
Thine the merit of his blood,
Thine the righteousness of God!
Angels, joyful to attend,
Hovering round thy pillow bend;
Wait, to catch the signal given,
And escort thee quick to heaven.

Is thy earthly house distrest,
Willing to retain its guest?
'Tis not thou, but it must die—
Fly, celestial tenant, fly!
Burst thy shackles, drop thy clay,
Sweetly breathe thyself away.
Singing to thy crown remove,
Swift of wing, and fired with love.

Shudder not to pass the stream,
Venture all thy care on him,
Him, whose dying love and pow'r
Still'd its tossing, hush'd its war:
Safe as the expanded wave,
Gentle as the summer's eve;
Not one object of his care
Ever suffered shipwreck there!

See the haven full in view,
Love divine shall bear thee through;
Trust to that propitious gale,
Weigh thy anchor, spread thy sail!
Saints in glory perfect made,
Wait thy passage thro' the shade!
Ardent for thy coming o'er,
See they throng the blissful shore!

Mount, their transports to improve,
Join the longing choir above,
Swiftly to their wish be given,
Kindle higher joy in heaven!
Such the prospects that arise
To the dying Christian's eyes!
Such the glorious vista, Faith,
Opens through the shades of death.

Pillar Letter Boxes.—A simple and efficient plan for facilitating the posting of letters in the most populous parts of London has been adopted. It consists of placing pillar letter boxes along the leading thoroughfares, at intervals of half a mile or thereabouts. These hollow pillars will be fitted for the reception of letters, and fixed on the footway, in such a position as not to obstruct traffic of any kind, and the Post-office department will itself bear the whole cost of construction and erection. The letters are to be taken out every hour, so as to continue the present admirable system of the London Post-office, whereby any letter posted within three miles of the General Post-office, is delivered to its address within a period of not more than two hours from the time at which it was deposited in the letter box.

Shun tattlers and mischief-makers as thou wouldst shun *thieves* and *robbers*.

Docking Horses.—We are glad to see that the abominable practice of docking and nicking horses is getting out of fashion. It prevails in no other country in the world but England and the United States; we got it from the mother country, and the sooner we leave it off the better. It is wonderful how anybody but an ignorant, narrow minded blockhead of a jockey should ever have thought of it, being as offensive to good taste as a violation to every human feeling. Has nature done her work in such a bungling manner, in framing that paragon of animals, the horse, that he requires to have a large piece of bone chopped off with an ax, to reduce him to symmetry? or that beauty and grace can be obtained only by cutting a pair of its large muscles?

The docking and nicking of horses, says an intelligent writer on farriery, is a cruel practice, and ought to be abandoned by the whole race of mankind. Every human being possessed of a human heart and magnanimous mind, must confess that both the docking and nicking of horses is cruel; but that creature called man attempts thus to mend the work of his almighty, wise Creator—in doing which he often spoils and disfigures them. What is more beautiful than a fine horse, with an elegant long tail and flowing mane, waving in the sports of the wind, and exhibiting itself in a perfect state of nature? Besides, our creator has given them to the horse for defence as well as beauty. The same author relates an instance of a fine hunting horse owned by an Englishman, which could carry his rider over a five barred gate with ease; but he thought the horse did not carry as good a tail as he wished—he therefore had him nicked, and when he got well he could scarcely carry him over two bars—"Thus," said he, "I have spoiled a fine horse; and no wonder, for it weakened him in his loins." Any man of common sense would give ten per cent. more for a fine horse whose tail had never been mutilated, than for one which had been under the hand of a jockey.—*Woonsocket Patriot.*

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

RICHARD GOVE.

(Continued from page 125.)

On the 14th of the Tenth month, the vessel in which the Friends were, having arrived near Barbadoes, it was captured by a French privateer. The boarding party having made the crew and all the passengers except the two Friends go on board the privateer, they expecting to be sent also, went to the side of the vessel, but were turned back. It was then the dusk of the evening, and the Friends felt comforted under a sense of the notice of Providence, which they did believe was manifested in their being kept together on board the vessel. Had they been carried on board the privateer with the rest, they would in great probability have been separated from each other. Having secured the captured vessel, the privateer stood for Martinico, a French island, and the prize slowly followed. The voyage was long, and the master of the prize found the time so tedious, and their progress so slow, that he declared the hand of the great God was against them. He sometimes threatened,—his unreasonable impatience with the elements, spreading to all around him,—to throw the Bibles overboard which he found the Friends often engaged in reading. He probably thought that the baffling winds and little headway of the vessel, were somehow or other connected with those Bibles, and perhaps was affronted at the quiet resignation of the prisoners, who could enjoy their reading at such a time.

At the end of a fifteen days' run, they found themselves at Martinico. An officer of the port came on board, and showed a singular trust and confidence in the prisoners, leaving all in the vessel under their care that day and the night following. On the next day the officer returned, with several persons who appeared to be people of consequence on the island. On examining the Friends, they looked at their certificates, which one of the company who understood English translated to the rest. Of the testimony to their good lives and godly conversation given in the certificates, they do not appear to have taken any notice, but when they came to the passage in which the meeting expressed its desire that R. Gove might be preserved "from the hands of unreasonable men," one of the company cried out, "See, now, the Spirit has deceived you; for you are not preserved as they would have it!" To this one of the Friends answered, "The Spirit has not deceived us. That mentioned, is only the desire of our friends; and it is possible that there may be some service for us here also." Upon this the islanders—who were all Roman Catholics —cried out, "See, now, they are come to convert the Fathers! We will have you together, and you shall dispute it out." None of the Popish ecclesiastics, however, came near them, except an Irish priest, who had previously visited the Protestant prisoners often to endeavour to "bring them over" to his faith. He was allowed, it was said, forty shillings for every convert, and he found little difficulty in inducing some of the sailors to conform through the convincing argument of good food to hungry stomachs. He knew how potent this kind of reasoning was to unsanctified men, who held religion only in profession, and therefore seldom came without bringing food with him. Although the other prisoners wished him to dispute on religious subjects with the Quakers, he manifested no disposition to engage them. At last, however, urged on by the continued entreaties of the other prisoners, he determined to try them. He commenced with John Eslaugh, and finding that he could make no headway with him, he closed the argument with him by calling him a heretic. He then turned to Richard Gove, who stood by with his Bible in his hand. It would appear that Richard did not wait for him to say anything, but read out of his Bible the passage in Matthew, "Beware of false prophets, which come to you in sheeps' clothing, but inwardly they are ravening wolves," &c. Not relishing the pointed application of the text, the priest seized hold of the Bible and endeavoured to take it by force out of the prisoner's hands. Richard, however, did not yield it up, but it long bore the marks of the violence used in the attempt to force it away. The other prisoners, seeing he had left off attempting to reason, and was using physical arguments, told him with a shout that he was not able to dispute with the Quakers.

Among the prisoners were some who had long been in captivity. One of them was a Major of the English army, who, although not a strictly religious man, yet had been in the habit of reading prayers two or three times a week for the benefit of those confined. After Richard and John came, they were in the habit of holding meetings in the prison, sitting down in silence, and ministering as ability was from time to time received. The prisoners soon began to attend their meetings, whilst the prayer readings of the Major grew smaller and smaller. At this he grew angry, and undertook to reprimand some of them sharply for going to Quaker meetings. He was told by some of the most sober of them, "they had heard prayers long, and swearing and other ill conduct followed after they were over, which was very disagreeable, and rather worse than if there had been none." The Major's audience continuing to decrease, he made a violent attack on Richard and John, with high charges against the Quakers. John was the principal spokesman in reply, and he managed his cause so unanswerably, and spoke with such firmness and freedom, that his antagonist was enraged, and told him, if he spoke another word, he would dash his teeth down his throat. John was not dismayed at the threatened outrage, but feeling a concern for the benefit of those who were by, he continued his argument. As he proceeded, he was so cool and calm, that at length the Major was ashamed, and endeavoured to moderate his passion, and to pursue the argument in a proper temper. The quotations from the Bible adduced by John were so contrary to the Major's mind, that he declared the Quaker's Bible was not the same as his. Yet, after persuasion, being induced to look in his own, and finding the passages alike, he said, "I profess, I did not think there had been such a place." Finding all the places he examined similar in both, he became more friendly, and the disputants parted in mutual good will. From that he was kind and loving to the Friends.

A cartel for the exchange of prisoners having been agreed on between the English and French, it was found that the French had excepted from its benefit all the prisoners who were either bound to, or from Barbadoes. This would have continued our Friends' imprisonment, but Providence, who had a labour for them to perform for his service in Barbadoes, made a way for their release. Col. Byham, who was going as English commissioner from Antigua to Martinico to superintend the exchange of prisoners, was desired by Jonas Langford, a valuable Friend, and influential citizen of the former island, to inquire if there were any Friends there among the prisoners not included in the cartel, and if so, to use his influence to get them released. He promised to do so, and on inquiry found Richard and John. On this he went to the governor of Martinico, and asked him as a private favour, that the two Quakers, although bound to Barbadoes, might be liberated, and go with him to Antigua. The governor said, "What! the two apostles?" for such was the name they bore on the island, and forthwith gave his consent. They had been two months on the island, and although brought there without their will, yet in the ordering of Providence, so many openings for religious services had occurred, that they thought in no part of their travels had there been more evidence of their being in their proper allotment, although at the island of Antigua, where they were next carried, two persons were "thoroughly convinced" by their labours. So not only were they preserved from unreasonable men, but through the wicked acts of fierce privateersmen they were carried to perform their Master's service in a place which would have been closed to them, if they had not come as prisoners. From Antigua, no passage opening direct to Barbadoes, they went to Bermuda, and from thence reached their original destination in the spring of 1705. Their labour of love in Barbadoes was to their own peace of mind, and to the strengthening and comforting of those amongst whom they visited. They reached home in the summer following, their hearts clothed with thankfulness and praise to Him who still leadeth his own by ways that they know not, and in paths which they have not known, that they may perform his will.

During the latter part of 1705, and the whole of 1706, we can trace Richard Gove as very fre-

quently visiting the meetings in the neighbourhood of Philadelphia; but he was not abroad with a certificate again until the early part of 1707. In the First month of that year, he informed the Friends of his Monthly Meeting of a concern he felt to visit again Maryland, Virginia, and Carolina. His concern was united with, and a committee appointed to prepare a certificate, which was read, approved and signed, on the 25th of Second month. He appears to have been engaged in this service until the early part of the Seventh month. At the time of the Yearly Meeting of ministering Friends, held Seventh month 20th, 1707, he informed that body that it had rested on his mind for some time as a duty, to accompany Thomas Chalkley to the Western Islands, and so on to England, to pay a religious visit there. He said that at the time of the last Monthly Meeting of Philadelphia, he had not returned from his religious visit to the South. The meeting entered into feeling on the concern, and having unity with it, they recommended that if a certificate were granted by his next Monthly Meeting, it should be signed by the ministering Friends of Philadelphia. The Monthly Meeting united with the concern, and so did the meeting of ministering Friends, and on the 27th of Eighth month of that year the two Friends left Philadelphia in a sloop for Barbadoes. It was a time of war, and many French privateers beset those parts of the sea in which English traders were most likely to be found. When the vessel in which our Friends were, came near Barbadoes, it was chased by one of these French vessels, but through the providence of the Lord, escaped. After visiting Barbadoes, Antigua, Montserrat, Nevis, Anquilla, the last a place where no ministering Friend had ever been, and where, through their labours, several were "heartily convinced," and a meeting settled, they went to Jamaica, visiting Nevis and Antigua again on their way thither.

(To be concluded.)

A Man Overboard.

Sailors are men of rough habits, but their feelings are not by any means so coarse: if they possess little prudence or worldly consideration they are likewise very free from selfishness; generally speaking, too, they are much attached to one another, and will make great sacrifices for their messmates or shipmates when opportunities occur.

I remember once, when cruising off Terceira in the Endymion, that a man fell overboard and was drowned. After the usual confusion, and long search in vain, the boats were hoisted up, and the hands called to make sail. I was officer of the forecastle, and on looking about to see if all the men were at their station, missed one of the foretop men. Just at that moment I observed some one curled up, and apparently hiding himself under the bow of the barge between the boat and the booms. "Hallo!" I said, "who are you? What are you doing there, you skulker; why are you not at your station?"

"I am not skulking," said the poor fellow, the furrows in whose bronzed and weather-beaten cheek were running down with tears. The man we had just lost had been his messmate and friend, he told me, for ten years. I begged his pardon, in full sincerity, for having used such harsh words to him at such a moment, and bid him go below to his berth for the rest of the day—"Never mind, sir, never mind," said the kind hearted seaman, "it can't be helped. You meant no harm, sir. I am as well on deck as below. Bill's gone, sir, but I must do my duty." So saying, he drew the sleeve of his jacket twice or thrice across his eyes, and mustering his grief within his breast, walked to his station as if nothing had happened.

In the same ship, and nearly about the same time, the people were bathing alongside in a calm at sea. It is customary on such occasions to spread a studding-sail on the water, by means of lines from the fore and main yard-arms, for the use of those who either cannot swim, or who are not expert in this art, so very important to all seafaring people. Half a dozen of the ship's boys were floundering about in the sails, and sometimes even venturing beyond the leech rope. One of the least of these urchins, but not the least courageous of their number, when taunted by his more skilful companions with being afraid, struck out boldly beyond the prescribed bounds. He had not gone much further than his own length, however, along the surface of the fathomless sea, when his heart failed him, poor little boy; and along with his confidence away also went his power of keeping his head above the water, so down he sank rapidly, to the speechless horror of the other boys, who of course, could lend the drowning child no help.

The captain of the forecastle, a tall, fine-looking, hard-a-weather fellow, was standing on the shank of the sheet-anchor, with his arms across, and his well varnished canvas-hat drawn so over his eyes that it was difficult to tell whether he was awake, or merely dozing in the sun, as he leaned his back against the fore-topmast backstay. The seaman, however, had been attentively watching the young party all the time, and rather fearing that mischief might ensue from their rashness, he grunted out a warning to them from time to time, to which they paid no sort of attention. At last he desisted, saying they might drown themselves if they had a mind, for never a bit would he help them; but no sooner did the sinking figure of the adventurous little boy catch his eye, than, diver fashion, he joined the palms of his hands over his head, inverted his position in one instant, and urging himself into swifter motion by a smart push with his feet against the anchor, shot head foremost into the water. The poor lad sunk so rapidly that he was at least a couple of fathoms under the surface before he was arrested by the grip of the sailor, who soon rose again, bearing the bewildered boy in his hand, and calling to the other youngsters to take better care of their companion, chucked him right into the belly of the sail. The fore-sheet was hanging in the calm, nearly into the water, and by it the dripping seaman scrambled up again to his old berth on the anchor, shook himself like a great Newfoundland dog, and then jumping on the deck, proceeded across the forecastle to shift himself.

At the top of the ladder he was stopped by the marine officer, who had witnessed the whole transaction, as he sat across the gangway bammocks, watching the swimmers, and trying to get his own consent to undergo the labor of undressing. Said the soldier to the sailor, "That was very well done of you, my man, and right well deserves a glass of grog. Say so to the gun-room steward as you pass; and tell him it is my orders to fill you out a stiff norwester." The soldier's offer was kindly meant, but rather clumsily timed, at least so thought Jack; for though he inclined his head in acknowledgment of the attention, and instinctively touched his hat when spoken to by an officer, he made no reply till out of the marine's hearing, when he laughed, or rather chuckled out to the people near him, "Does the good gentleman suppose I'll take a glass of grog for saving a boy's life."—*W. Pilot.*

Peace of conscience, is as a brazen wall against the malice of men, the sting of death, and the fiery darts of Satan.

Concord in the Truth.

"The worship that Christ Jesus, the heavenly man, the second Adam, the Lord from heaven, set up above 1600 years since in the Spirit and in the Truth, for the true worshippers to worship in, whom God seeks after, is an infallible, eternal worship; for the Truth and the Spirit of God is infallible and eternal, in which they worship the eternal God. And Truth and the Spirit of God changes not, though man may change from it; the Truth makes no sects, nor schisms; for all sects and schisms be out of the Spirit of God, and out of Truth. The dragon, and the devil, and the destroyer, and the beast, are out of Truth, and his worshippers, and the will worshippers; for the devil abode not in the Father; and all they that worship they know not what, are out of the Truth and the Spirit of God. So had all Christendom kept to the Spirit and the Truth that the apostles and primitive church was in, they would have kept up Christ's worship, and in it, as the apostles did, that he set up above 1600 years since; and *there would have been no sect among them*, but they would have kept in the substantial worship; for Truth is substantial, and Truth and the Spirit of God doth not change, but brings people to be substantial; and in the Spirit they would have had a fellowship and a unity." "In this worship there is neither sect, nor schism, nor discord, for all *that* is out of Truth; for *concord is in the Spirit and in the Truth*, for the unity and the fellowship is in the Spirit, and it is called the bond of peace."—*G. Fox's Doctrines.*

Religion is the best *shield*, but the worst cloak in the world.

THE FRIEND.

FIRST MONTH 6, 1855.

Within a few days we have received the minutes of North Carolina Yearly Meeting, and we give below the minutes of three Yearly Meetings relative to the separation in Ohio.

INDIANA.

The committee to whom was referred for consideration the communications received from the two bodies, claiming to be Ohio Yearly Meeting, report: that we have met, and carefully read all the papers, in which are stated by the parties respectively, the causes and proceedings of the separation; and we have heard, furthermore, the testimony of two members of our own Yearly Meeting of ministers and elders, who were personally present at Ohio Yearly Meeting, and were eye and ear witnesses to what was done and said; and one, from that in North Carolina, who was present most of the time; and after deliberating on and fully considering the case, upon the evidence aforesaid, we are united in judgment that the meeting of which Jonathan Binns and Jane M. Plummer were clerks, was, and is, the meeting which should be recognized as Ohio Yearly Meeting, by ours; and the epistles and communications of that body received, read, and responded to, accordingly.

We are furthermore influenced to come to this judgment by the following, amongst other reasons:—

1st, Ohio Yearly Meeting has for several years past, by the influence of the party therein which now is organized into a separate body, with Benjamin Hoyle as its clerk, refused and prevented the reading of the regular epistles addressed to that Yearly Meeting by the Yearly Meeting in New England; and refused and prevented the answering the same, and all correspondence with

the latter Yearly Meeting, without good and sufficient reasons, as we believe: declining religious fellowship with the body of Friends in New England, with which we are in correspondence; and refusing to receive and recognize ministers from the limits of that Yearly Meeting, who have been travelling, as such, in the service of Truth, in Ohio, with regular certificates and minutes.

2d. They have recognized as members of our Society, and permitted to have a seat in the Yearly Meeting, and other meetings for discipline, persons who have been disowned in New England; in both of which cases our friends who have appointed Jonathan Binns as clerk, have constantly protested against such proceedings, and earnestly laboured, but without effect, to maintain the fellowship and good order of our religious Society; and have finally felt themselves impelled, after much suffering and remonstrance against the disorders aforesaid, continued throughout several years, as aforesaid, to appoint a clerk, and proceed with the regular business of the Yearly Meeting, without the unity of that party who caused the disorders complained of, and who recognize Benjamin Hoyle as their clerk. The aforenamed disorders in the Yearly Meeting have also been the occasion of confusion and difficulties in some of their subordinate meetings, by which the rights of members in New England have not been properly respected; the unity of Society has been greatly impaired, and its peace and harmony sadly broken.

Moreover, our Yearly Meeting, in its epistles to Ohio Yearly Meeting, has earnestly and affectionately entreated that Yearly Meeting to resume their correspondence with New England Yearly Meeting, thereby recognizing the true body with which we correspond, as such; and they have also been earnestly and plainly warned of the probable consequences of such irregular and disorderly proceedings as aforenamed, by a committee of conference of five of our American Yearly Meetings, in their "Address to Friends," a copy of which was sent to Ohio Yearly Meeting by ours, with our epistle, by a deputation from our Yearly Meeting; but the reading of which address was refused by the party now claiming to be Ohio Yearly Meeting, with Benjamin Hoyle for its clerk.

Wherefore, for the foregoing, and other reasons, which for brevity's sake we omit, we propose that our Yearly Meeting decline epistolary correspondence with the body last named as with a regular Yearly Meeting of Friends; at the same time entertaining the desire that the members thereof may return again into the unity and fellowship of Friends, which they have lost, and become again labourers together with us, and our brethren in America and Europe, in the faith, and love, and fellowship of the gospel.

The foregoing report having been read and considered, is very fully united with by the meeting.

BALTIMORE.

The joint committee, to whom were referred the epistles coming from the two bodies, each claiming the name and authority of Ohio Yearly Meeting, report, that they have carefully examined and considered the respective documents, and we, the undersigned members of the committee, are united in the conclusion that the epistles signed by Jonathan Binns and Jane M. Plummer as clerks, should be received and acknowledged as coming from Ohio Yearly Meeting with which we have unity; and that the epistles signed by Benjamin Hoyle and Rachel E. Patterson should not be received, inasmuch as we have sorrowfully to believe that they have been issued by a body with whose proceedings we cannot have unity.

In coming to this conclusion, the committee have believed it right to take a review of the position in which Ohio Yearly Meeting has been placed by a portion of its members.

They have refused to receive and acknowledge the epistle from New England Yearly Meeting for seven or eight years.

They have subverted the established order of society by an abridgment of the rights of members, by refusing to receive the credentials issued by meetings belonging to another Yearly Meeting.

They have conferred or attempted to confer upon individuals, privileges which they had forfeited in their own meetings, and to sustain them in assumed rights to which they are not entitled, by allowing them to sit in their meetings for discipline.

They have persevered in the neglect and violation of these important and vital practices and usages of our Society, which are essential to our prosperity as a people, although they have been earnestly and affectionately entreated in the epistles from our own Yearly Meeting, and by their brethren of five Yearly Meetings on this continent, to return to our established order.

They have refused to hear an address adopted and sanctioned by our Yearly Meeting, and four other Yearly Meetings, and sent to them by a committee of this Yearly Meeting, warning them of the consequences which appeared to us inevitable, and beseeching them to unite with other Yearly Meetings in pursuing that course which we believed could alone prevent results that would be deeply to be deplored.

And finally, a seat in the ministers' gallery in the Yearly Meeting of the present year was allowed Thomas B. Gould, who acted as clerk to the Separatists in New England in 1845, though at that time disowned by the Society, thus virtually owning and acknowledging the seceders of New England Yearly Meeting; and we may add that after the appointment of Jonathan Binns as clerk, he, the said Thomas B. Gould, became the companion and associate of the body of which Benjamin Hoyle is clerk.

It will not be denied that these departures from the discipline and usages of our Society, and these breaches of unity, as well as others which might be mentioned, were committed by the body who have now Benjamin Hoyle for clerk; and that the Friends who have placed Jonathan Binns at the clerk's table have steadily and earnestly advocated the ancient usages of our Society, and the course indicated by the discipline, and so affectionately and earnestly recommended by our Yearly Meeting and others; that they have borne the lamentable state of disorder, which had existed for several years, as long as they could do so, without identifying themselves with the members of a meeting which had been testified against by all the Yearly Meetings of Friends except their own and Philadelphia, and not acknowledged by any; that believing that the time for their release had come, they were favoured to be found "the friends of good order, and the supporters of our Christian doctrines and testimonies and discipline," and therefore they truly constitute Ohio Yearly Meeting, and are justly entitled to all the privileges which belong to that body.

But, whilst we cannot unite with the body of which Benjamin Hoyle and Rachel E. Patterson are clerks, we earnestly desire for the members who are now attached to it, that they may put away from them all that separates, and again come into that unity which formerly existed, and is now so seriously interrupted.

Which having been read and fully considered, is approved by the meeting.

NORTH CAROLINA.

The committee to whom was referred the examination of the epistles from each of the Yearly Meetings of Ohio and Baltimore, have proceeded to read them and deliberately consider the subject in its various relations, and are prepared to report to the meeting, that from the reading and solidly considering of said epistles and other documents in our possession, corroborated by the evidence of several Friends who were in attendance at Ohio Yearly Meeting, and therefore eye witnesses to some of the circumstances that led to a separation in that body, that we are united in the belief that the epistles signed by Jonathan Binns and Jane M. Plummer, are the proper ones to be read and responded to by our Yearly Meeting, as coming from the true and proper Yearly Meeting of Ohio.

In thus recommending to the meeting the reception of the epistle from one of the bodies purporting to be the Yearly Meeting of Ohio, to the rejection of the other, the committee think it will not be improper to mention some of the reasons that have brought them to the above conclusion.

It appears from evidence before us, that in the opening of that meeting, it was intruded upon by the presence of an individual who was not a member of the Society of Friends, which was strongly objected to, and remonstrated against by many concerned for the right maintenance of the discipline and good order of society. If Thomas B. Gould (the individual alluded to) had been permitted to remain in his seat without objection, that meeting would have been silently recognizing a meeting of the Separatists of New England, of which he was a member, he having been disowned by Friends before a separation had taken place at New England Yearly Meeting.

The acting clerk, Benjamin Hoyle, having identified himself with those who were encouraging the aforesaid individual in keeping his seat among them, very naturally created dissatisfaction in the minds of many, and an objection to his being re-appointed to that station; hence the representatives, when they conferred together, could not agree upon the name to recommend to the meeting as clerk. A part of them, however, by next morning, had conferred together, and agreed to propose Jonathan Binns for clerk, and James B. Bruff for assistant clerk; a large number of the meeting expressed their approval of this report, and of the appointment of the Friends named, with but a few voices raised in objection. We therefore consider them the duly appointed clerks.

After this, another of the representatives informed the meeting that they could not agree upon names for clerk and assistant. Wherefore the acting clerk at the table queried, if he made that report by direction of the representatives, being answered in the affirmative, Benjamin Hoyle made a minute continuing himself and the former assistant as clerks, without their names being proposed for that service by any of the representatives or any other person. We look upon this as a self-made appointment, and out of the order and usual course of the Society; and therefore we cannot consent to recognize in our epistolary correspondence, that body which has sustained and gone with Benjamin Hoyle as their clerk, and purporting to be Ohio Yearly Meeting.

The committee have thus given some of the reasons (many others might be mentioned) in support of the course we have herein recommended, but deem further evidence and detail unnecessary.

In regard to the two epistles from Baltimore,

we are informed by both bodies, whose statements nearly coincide, that upon the meeting approving the report of a committee appointed to examine the two epistles forwarded to them from Ohio, recommending the reception of the one signed by Jonathan Binns as clerk, a few Friends not uniting, when the meeting adjourned kept their seats and having since organized themselves as Baltimore Yearly Meeting, by appointing William Waring their clerk. We therefore propose that our Yearly Meeting read the epistle signed by Richard H. Thomas, and Julia Valentine, as clerks, as coming from the Yearly Meeting of Baltimore.

In thus rejecting the epistles signed by Benjamin Hoyle and Rachel E. Patterson, from Ohio, and those signed by William Waring and Elizabeth A. Balderston, from Baltimore, we do it in no spirit of unkindness, but under a settled conviction of duty, in promoting the good order of the discipline and the Society at large.

We have no doubt that among them are many deeply concerned. We, therefore, do not wish to give utterance to any expression which may tend to hurt the feelings of any; but with earnest desires, hope they may well consider their course, and yet be induced to return and unite with their respective bodies, that those Yearly Meetings may become as they once were. Signed.

Which, being read and deliberately considered, was fully approved by the meeting.

SUMMARY OF EVENTS.

EUROPE.—News from Liverpool to the 18th ult. The Atlantic, shortly after her departure from Liverpool on the 16th, met with an accident to her rudder head, which compelled her return, and was then unable to put to sea until the 18th. *The War.*—The dates from Sebastopol are to the 4th ult. Affairs within and without the city remained unchanged. Nothing could be done on either side, in consequence of the heavy rains, which had filled the trenches with water, and rendered the roads impassable. Deserters report that the Russians had received considerable reinforcements, but that they arrive without supplies, and almost destitute of clothing. The allies have received 15,000 to 20,000 additional troops, besides an abundance of supplies, warm clothing, and wooden huts to shelter about half the army. Omar Pacha was at Varna, embarking nineteen battalions, about 35,000 Turkish troops, for the Crimea. General Canrobert's despatch of the 3rd, says, "Rain is falling in torrents. Our roads are cut up; our trenches filled with water, and our siege operations, as well as our works, remain in a state of suspense. The enemy remains immoveable for the same reason as ourselves. In spite of these trials, the spirit of all is excellent, and we remain firm, and ready to resume our operations, as soon as ever the weather and the state of the roads, will allow us to stir."

ENGLAND.—Parliament was opened on the 12th. The Queen in her speech asks assistance to enable her to prosecute the war with the utmost vigor and effect. She anticipates important advantages from the recent treaty with Austria, and says, "I rejoice to observe that the general prosperity of my subjects remains uninterrupted. The state of the revenue affords me entire satisfaction, and I trust that by your wisdom and prudence you will continue to promote the progress of agriculture, commerce, and manufactures." The speakers in both houses expressed warm patriotic feeling, and a determination to support the government, though Earl Grey and others imputed to it want of energy and forecast in the conduct of the war. The exportation of lead from British ports has been prohibited. Flour has advanced 1s. a bbl. at Liverpool, and cotton has slightly declined.

RUSSIA.—The Empress is sick, and lies at the point of death. A storm in the sea of Azoff, had wrecked 40 Russian vessels. The advanced corps of the Russian guards already touches the Austrian frontier.

AUSTRIA.—The terms of the treaty have not been published. Lord J. Russell stated in Parliament, that it is not one of a *definite* and *offensive* character, but she concurred with England and France in the necessity of the four points for the security of Turkey, and if Russia did not accept them in the next campaign, she would join in the alliance against Russia.

PRUSSIA.—The Prussian Court has not yet formally acceded to the new treaty, but no doubts are entertained that it will do so at the fitting moment.

HAVANA.—Dates to the 23d ult. All the forts of the island had lately received heavy armaments from Europe. Several cargoes of slaves from Africa had been recently landed. A new edict for the registration of the slaves of the island, had been promulgated.

UNITED STATES.—*Congress.*—The House of Representatives has passed the bill to suppress the circulation of bank notes of a smaller denomination than five dollars, in the District of Columbia. It passed the Senate at the last session. The diplomatic bill, now before Congress, proposes the following salaries for Foreign Ministers: Great Britain, $17,500. France and China, each $15,000. Spain, Russia, Austria, and Prussia, each $12,000. Brazil and Mexico, each 10,000. Turkey, Peru, and Chili, each $9000, and all others, $7,500.

California.—News to Twelfth mo. 1. The shipments of gold continue large; the George Law arrived at New York, on the 25th ult., with $1,461,646 on freight, and the Sonora on her last trip brought to Panama from San Francisco, upwards of $1,800,000 in gold on freight. The want of water has been felt throughout the mining region, the winter thus far having been unusually dry, and many of the miners doing nothing, but waiting for rain. A mass of quartz weighing 160½ lbs., had been found recently by a party of five men in Calaveras county, fifteen feet below the surface. It is supposed to contain eighty per cent. of gold, and is valued at $26,262. At San Francisco, business was dull, and prices low, there being little demand from the interior. Wheat, best sample, $1.35 per bushel; bacon, 12½ cts.; flour, $12.75 per bbl.

Overland to California.—Influential parties in St. Louis have resolved to apply for a charter, for the purpose of establishing a line of stage coaches from the frontier line of Missouri to Sacramento City, and efforts were making in California to start a similar coach from the western end.

A Subterranean Telegraph to California.—The Committee on Territories in the House of Representatives, have reported in favour of a grant of two millions of acres of public land to aid in the construction of a line of telegraph, from the Mississippi or Missouri river, to the Pacific ocean. The scheme is considered not only practicable, but of great public utility. The line, it is supposed, may be completed within two years. The bill proposes that it shall be constructed by individual enterprise.

Minnesota.—According to the St. Paul (Minn.) Pioneer, about twenty-five thousand settlers have located themselves within the territory during the past season.

Pennsylvania.—The anthracite coal trade was prosecuted with vigor, during the past year. The Schuylkill region sent 1,988,478 tons to market by railroad, and 907,854 tons by canal. The Lehigh furnishes 1,245,815 tons. The Lackawanna, 937,692 tons, and the Shamokin, 66,400 tons,—in all, 5,145,739 tons, which is 579,010 tons more than in 1853. The rapid growth of the coal trade is shown by comparing the quantities supplied at intervals of ten years; thus in 1824, it was 2611 tons; 1834, 332,936 tons; 1844, 1,216,741 tons; 1854, 5,145,739 tons.

Pittsburg.—On the 28th ult., there was eleven feet water in the channel and rising, the ice was completely broken up, and the packets had commenced running.

New York.—There is unusual suffering among the poor, on account of the multitude of unemployed operatives of all kinds, and great efforts were being made in various ways to afford the much needed relief. The money market is easier, and stocks are beginning to recover from their extreme depression. The animals slaughtered for food in New York, during the past year, according to a published table, numbered as follows—bullocks, 115,847; calves, 68,584; sheep and lambs, 555,479; swine, 252,328.

Philadelphia.—Mortality last week, 194. The weekly reports of the Board of Health, show that 11,809 deaths occurred in Philadelphia, during the year 1854; of these, 4992 were adults and 6817 children; 3322 were under one year of age, and 3032 were from one to ten years of age. There were 200 deaths of persons, over 80 years; 60, over 90, and 13, over 100; 603 deaths were caused by cholera; 129, by cholera morbus; 784, cholera infantum; 112, apoplexy; convulsions, 698; consumption, 1377; croup, 302; dropsy, 404; disease of the heart, 140; dysentery, 444; debility, 454; diarrhœa, 214; fevers, 572; inflammation of brain, 261; of bronchi, 241; of lungs, 472; of stomach and bowels, 185; marasmus, 426; measles, 76; palsy, 103; smallpox, 41; whooping cough, 156; drowned, 117; casualties, 112; old age, 196.

Miscellaneous.—An Anthracite Locomotive has been running successfully upon the Boston and Providence railroad during the past week. The steam is generated entirely by anthracite coal, and the train is run at as economical and rapid a rate as with any other kind of coal.

Loss by Fire.—The loss by the recent fire at St. Louis, at which the rolling mill and iron foundry of Chanteau & Co. were destroyed, is estimated at $160,000.

The Quickest Passage on Record.—The ship Dreadnought, on her recent voyage from New York to Liverpool, made the run in 13 days, 11 hours, and 15 minutes, true time. This is said to be the quickest passage of a sailing vessel yet made.

Sixty Years ago.—The Boston (Mass.) Traveller says, on Christmas day, 1794, the ship Betsy, 190 tons, was launched at Salem, Mass.; thermometer, 80° at noon. The grease ran down on the ways, and men and boys indulged in swimming, as in summer.

Extravagance.—As an indication of the wild extravagance which has prevailed in the country of late, an importing house in New York, states that the amount of duties paid for *French artificial flowers*, for the first quarter of the current fiscal year, was almost double the amount of duties paid on *railroad iron*.

RECEIPTS.

Received from C. Bracken, agt., O., $2, and for John Hoge, $4, vols. 27 and 28, for Levi Hoge, $2, vol. 27; from A. Dirkin, Eng., for Richard Hall, 10s. to 16, vol. 29; from Wm. Foulke, agt., O., for Jesse Metcalf, $4, vols. 27 and 28, for Wm. Harmer, $2, vol. 27; for Wm. Masters and A. Dewees, $2 each, to 14, vol. 29; from A. Garretson, agt., O., for James Crew, $2, to 11, vol. 28; from J. King, agt., N. Y., for J. Leffinwell, $2, vol. 28; from G. D. Smith, Cin., O., $2, vol. 27; from Ell. D. Meredith, Pa., $2, to 17, vol. 29; from Jesse Kirk, O., and Elisha Kirk, $2 each, vol. 28; from J. P. Balderston, Md., $2, vol. 28; from Robert Iredell, Norristown, Pa., per C. W. $10.44 in full.

WEST-TOWN SCHOOL.

Assistant Teachers are wanted in the Boys and Girls' departments of this Institution. The opportunity which this station furnishes for prosecuting their studies, free from any expense, presents a favourable opening for young persons, who wish to perfect themselves in the higher branches of learning, or to prepare for the business of Teachers. Those who wish to engage, are requested to make early application to Nathan Sharpless, Concordville; Pennock Passmore, Goshenville; or Thomas Evans, Samuel Bettle, Jr., Elizabeth Peirson, or Sidney Coates, Philadelphia.

INDIAN CIVILIZATION.

The committee is desirous of engaging the services of a well qualified Friend to teach the school at Tunessassah, &c. Friends, who may feel concerned to engage in that station, are requested to make early application to Joseph Elkinton, No. 377 S. Second street, or Thomas Evans, No. 180 Arch street, Philadelphia, or Ebenezer Worth, Marshalton, Chester county, Pa., or Thomas Wistar, Fox Chase, Philadelphia co., Pa.

Philad., Ninth mo. 20, 1854.

FRIENDS' BOOKS.

Those wishing to procure Friends' books, may obtain most of the works commonly in use; at the prices they are retailed at in Friends' Bookstore, Philadelphia, by applying to Joseph Hobson, in Flushing, Belmont county, Ohio.

Flushing, Twelfth mo. 29, 1854.

MARRIED, at Friends' Meeting-house, Rahway, N. J., on the 28th of Twelfth mo., 1854, JOSEPH S. TOWNSEND, of Plainfield, to MERCY, daughter of Joel Wilson, of the former place.

DIED, at her residence, in Fallsington, Bucks co., Pa., on the morning of the 17th of Twelfth mo., 1854, after a short illness, RACHEL, wife of Robert Alexander, aged 75 years and 9 days; an esteemed member of Falls Monthly Meeting of Friends.

——, on the afternoon of the 17th of Twelfth month, 1854, in Concord, Delaware county, Pa., SAMUEL TRIMBLE, in the 30th year of his age.

PRINTED BY KITE & WALTON,
No. 3 Ranstead Place, Fourth above Chestnut street.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXVIII. SEVENTH-DAY, FIRST MONTH 13, 1855. NO. 18.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 50 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

From the London Quarterly Review.

How London is Supplied with Food.

(Continued from page 129.)

London has always been celebrated for the excellence of its meats, and her sons do justice to it; at least it has become the universal impression that they consume more, man for man, than any other town population in the world. It was a sirloin, fresh and ruddy, hanging at the door of some Giblett or Slater in a former century, that inspired, we suspect, the song which ever since has stirred Englishmen in a foreign land, 'The Roast Beef of Old England.' The visitor accustomed to the markets of our large provincial towns would doubtless expect to find the emporium of the live-stock trade for so vast a population of an imposing size. The foreigner, after seeing the magnificence of our docks—the solidity and span of our bridges—might naturally look for a national exposition of our greatness in the chief market dedicated to that British beef which is the boast of John Bull. What they do see in reality, if they have courage to wend their way along any of the narrow tumble-down streets approaching to Smithfield, which the great fire unfortunately spared, is an irregular space bounded by dirty houses and the ragged party-walls of demolished habitations, which give it the appearance of the site of a recent conflagration—the whole space comprising just six acres, fifteen perches, roads and public thoroughfares included. Into this narrow area, surrounded with slaughter-houses, triperies, bone-boiling houses, gut-scraperies, &c., the mutton-chops, scrags, saddles, legs, sirloins, and rounds, which grace the smiling boards of our noble imperial capital throughout the year, have, for the major part, been goaded and contused for the benefit of the civic corporation installed at Guildhall. Thanks to the common sense which has at length lifted up its potential voice, the days of Smithfield are numbered, and those who wish to see the enormous aggregation of edible quadrupeds before it takes its departure to its spacious new abode at Copenhagen Fields must not delay the visit much longer. The best time is early in the morning—say one or two o'clock of the 'great day,' as the last market before Christmas-day is called. On this occasion, not only the space—calculated to hold 4100 oxen and 30,000 sheep, besides calves and pigs—is crammed, but the approaches around it overflow with live stock for many hundred feet, and sometimes the cattle are seen blocking up the passage as far as St. Sepulchre's church. If the stranger can make his way through the crowd, and by means of some vantage-ground or door-step can manage to raise himself a few feet above the general level, he sees before him in one direction, by the dim red light of hundreds of torches, a writhing parti-coloured mass, surmounted by twisting horns, some in rows, tied to rails which run along the whole length of the open space, some gathered together in one struggling knot. In another quarter, the moving torches reveal to him now and then, through the misty light, a couple of acres of living wool, or roods of pigs' skins. If he ventures into this closely wedged and labouring mass, he is enabled to watch more narrowly the reason of the universal ferment among the beasts. The drover with his goad is forcing the cattle into the smallest possible compass, and a little further on half a dozen men are making desperate efforts to drag refractory oxen up to the rails with ropes. In the scuffle which ensues the slipping of the ropes often snaps the fingers of the persons who are conducting the operation, and there is scarce a drover in the market who has not had some of his digits broken. The sheep, squeezed into hurdles like figs into a drum, lie down upon each other, 'and make no sign;' the pigs, on the other hand, cry out before they are hurt. This scene, which has more the appearance of a hideous nightmare than a weekly exhibition in a civilized country, is accompanied by the barking of dogs, the bellowing of cattle, the cursing of men, and the dull blows of sticks—a charivari of sound that must be heard to be appreciated. The hubbub gradually abates from 12 o'clock at night, the time of opening, to its close at 3 P. M. next day; although during the whole period, as fresh lots are 'headed up,' individual acts of cruelty continue. Can it excite surprise that a state of things, the worst details of which we have suppressed, because of the pain which such horrors excite, sometimes so injures the stock that, to quote the words of one of the witnesses before the Smithfield Commission, 'a grazier will not know his own beast four days after it has left him?' The meat itself suffers in quality; for anything like fright or passion is well known to affect the blood, and consequently the flesh. Beasts subjected to such disturbances will often turn green within twenty-four hours after death. Slater, the well-known butcher of Kensington and Jermyn Street, states that mutton is often so disfigured by blows and the goad that it cannot be sold for the West-end tables. Many of the drovers we doubt not are ruffians, but we believe the greater part of this cruelty is to be ascribed to the market-place itself, which, considering the immense amount of business to be got through on Mondays and Fridays, is absurdly and disgracefully confined. According to the official account, the number of live stock exhibited in 1853 was—

Oxen.	Sheep.	Calves.	Pigs.	Total.
294,571	1,518,040	36,791	29,593	1,893,888

But this is far from giving a true idea of the whole amount brought into London. Much stock arrives in the capital which never enters the great mart. For example, Slater, who kills per week, on the average, 200 sheep and from 20 to 25 oxen, says, in his evidence before the Smithfield Commission, that he buys a great deal of his stock from the graziers in Norfolk and Essex. Again, 'town' pigs are slaughtered and sent direct to the meat market, while many sheep are bought from the parks, where they have been temporarily placed till they find a purchaser. A much more correct estimate of the flocks and herds which are annually consumed in London may be gathered from a report of the numbers transmitted by the different lines of railway, compiled from official sources by Ormandy, the cattle-traffic manager of the North-Western Railway. From this able pamphlet we extract the following table:—

	Oxen.	Sheep.	Calves.	Pigs.	Total for 1853.
By Eastern Counties	81,744	277,735	3,492	23,437	386,308
" L. & N. Western	70,435	248,445	5,113	24,287	348,280
" Great Northern	15,439	120,033	503	8,973	145,308
" Great Western	6,833	146,607	2,230	2,009	156,649
" L. & S. Western	4,000	103,000	1,733	1,710	109,442
" South Eastern	875	53,320	1,111	115	55,421
" L. & B. & S. Coast	863	13,690	111	54	14,724
" Sea from North of England and Scotland	14,662	11,141	421	3,672	29,896
" Sea from Ireland	2,311	3,472	21	5,476	11,280
Imported from the Continent	55,005	229,918	25,720	10,131	320,834
Driven in by road, and from the neighbourhood of the metropolis (obtained from the toll-gate lessees)	69,096	462,172	63,114	48,205	641,647
Total	323,188	1,930,793	101,776	127,852	2,182,609

These numbers show at a glance what a part the railway plays in supplying animal food to the metropolis, and how trifling in comparison is the amount that travels up on foot. The Eastern Counties lines, penetrating and monopolising the rich breeding and fattening districts of Norfolk and Essex, bring up the largest share. Many of the little black cattle, that tourists see in Scotland climbing the hills like cats, come directly from these counties, having some months before been sent thither from their native north to clothe their bones with English substance. By the same line we receive a fair portion of that great foreign contribution to our larders, the mere shadow of which so frightened our graziers some years ago, principally Danish stock, which finds its way from Tonning to Lowestoff, a route newly opened up by the North of Europe Steamship Company. The North-Western is next in rank as a carrier of live stock. This line takes in the

contributions from the midland counties, and, by way of Liverpool, abundance of Irish and Scotch cattle. The Great Northern is perhaps destined to surpass both in the quantities of food it will eventually pour into London, running as it does through the northern breeding districts, and receiving at its extremity the herds which come from Aberdeen and its neighbourhood.

(To be continued.)

For "The Friend."

Eager Pursuit of Trade.

During the commotions in Ireland, from 1688 to 1690, many Friends suffered greatly from the loss of their property and a comfortable subsistence. John Burnyeat then resided in that country, and was instrumental in strengthening them to bear their distress as Christians. While thus engaged, he warned them at a public meeting of a change that would ere long take place. "It is now a time of great trial upon you," he said, "in losing what you have; but the time will come when you will be as greatly tried with getting wealth;" which was soon accomplished. In an unexpected manner, great plenty succeeded great spoil and scarcity; trade sprung up, their stocks increased, many eagerly launched into business, and acquired riches, which proved injurious to the society in many respects. The children of Friends, perceiving their parents acquiring wealth, gave way to idle habits, became proud, self-conceited, and went into the vain fashions of the world in which they were indulged until some became so determined to take their own way, that their parents were unable to restrain them. This state of apparent prosperity, by which Satan deceived the unwatchful, and led them from the humility, self-denial, and dedication to the Lord, which is inseparable from a life of holiness, brought much exercise upon the faithful servants of Christ, who kept their habitations in the Truth. Great endeavours were used by these to check the eager pursuit of the world, which they saw would choke the growth of the good Seed, and cause those who gave way to it, to forget the eminent care and protection of divine Providence, in preserving their lives through the recent calamities in the nation.

To defeat the designs of the enemy, the Lord in mercy raised by his Holy Spirit a fervent zeal and courage in many Friends, to stand against this insatiable, avaricious disposition; and from men's and women's meetings, many admonitions and exhortations, both in word and writing, went forth to the members to keep close to Truth, and within the limits thereof, in their trade and worldly concerns. The Lord wonderfully accompanied those devoted men and women in that service, with his presence and power, to their great satisfaction and confirmation, and opened to them many ways to arrest the progress of that spirit of covetousness, and for their preservation, to good effect. The subject also claimed the attention of Leinster Province Meeting, in the year 1698, which issued an epistle, in which, after alluding to their labours on this subject, they say, "That which is chiefly before us, is to warn and admonish the church of Christ to beware of the snares of the unwearied enemy, which he lays in secret, and baits with the lawful things of this world, in this time of ease and great liberty. For his baits are suited to the times and seasons, to answer the inclination of people's minds, that go from things that are above, after the things that are below; and the generality of people are taken in his snares, and carried away after riches, preferment, honour, greatness, and vain-glory in the things of this world that are uncertain, and soon come to an end. He is striving to break in upon the people of our Society, whom the Lord hath called by his grace out of the world, to obey and follow him in all things, as lights in the world to his honour. And this enemy of all righteousness hath prevailed on many, that are not so careful and watchful in the light of Christ as they ought to be; and others following their examples to get riches, and be big in the world, invade other men's property, and fail in their purposes, so sacrifice religion and their own credit, to their greedy desire after gain, and give occasion for men to brand us with the character of covetousness, which causes the Truth professed by us to be evil spoken of, stumbles the minds of some that might otherwise join with us, and hinders the Lord's work of reformation, grieves his good Spirit, and wounds the hearts of his faithful servants."

"Now, being at our Province Meeting, and a great appearance of Friends, both men and women, and the mighty power of the Lord among us, under a weighty sense thereof, the affairs of the church were managed in great unity, peace and concord; and a weighty concern came upon our spirits, concerning the bounds and limits of getting, and the right using the lawful things of this world, and how far Friends might safely go into them. Much time being spent in church affairs to good satisfaction, the meeting adjourned until next day, and after the meeting for the worship of God was over, men and ancient concerned women Friends met to consider this weighty matter, and sat down in silence, retired to the Lord for his aid and counsel. The Lord was pleased to appear, and his power was great through his Spirit to our comfort, and many hearts were melted before him, because of his goodness, which bowed all spirits; and many heavenly things were opened in the testimony of Jesus, concerning the bounds, and the right use of the lawful things of this world. And it was agreed that a competency is sufficient for every one, and is the right bounds, with a due consideration of every one's charge, station, place and service. And that mind which will not be content with this, bears the character of covetousness, and renders such unfit to rule in the Church of Christ."

"Not that we intend to deprive any of the moderate and lawful use of the things of this world, or to take from any man his possessions, or to invade and take away property, but to bring all things into right bounds, and set them in their right places, that so none may be guilty of the great sin of abusing the Lord's mercies, but might use and enjoy them to his honour; that in so doing, they may have his peace and blessing, which is the true comfort of all enjoyments. Thus shall we give evident testimony to the world by our moderation, even in lawful things, that we are true followers of the Lord Jesus Christ in a self-denying life—building up one another in our most precious faith, and in our heavenly possession in Christ Jesus, over the greedy gain, greatness, and vain-glory of the world, and perishing fading things thereof, that soon come to an end. Here the rich man will not glory in his riches, but see the danger of them, and not lay hold of opportunities to heap up more, to make himself and posterity great in the world; but rather endeavour to lessen, that with more ease and cheerfulness he may serve God and his generation with what he hath, with all his might, being glad of every opportunity that presents, that he may do good, and be rich in good works, considering he is a steward, and his time uncertain in what he enjoys, and that he must be accountable to the Lord of all, for all things he possesses under him. Under the like consideration, the [poor] man will be glad that he is free from many temptations and snares, that the rich in this world are liable to fall into, and pierce themselves with many sorrows and hurtful lusts. He will bless the Lord for what he enjoys, not wanting food and raiment, with which he is well content and easy in his mind, that is towards the Lord, and seeks not from place to place, and from one country to another, in a covetous mind to heap up riches; but looks to the Lord with an eye of faith, to receive counsel from him in his undertakings, and dare not go beyond his limits, nor without his countenance; and all murmuring, repining and unbelief are kept out of the camp. There will be no craving spirits where the Lord rules, but all in their stations, according to their ability and gifts, endeavour to serve the Lord with all their might and substance, in their places where the Lord hath raised them, or ordered them, and may be serviceable; shaking themselves from the dust of the earth, putting on their beautiful garments of the Lord's government, and shining under the discipline thereof, rising over the earth and earthly things in the life and power of Christ, as lights in the world in this glorious day of the Lord."

Rutty remarks that this epistle shows the spirit of the faithful elders in those days, and the just conceptions they had of christian simplicity, moderation and self-denial; not confining it to certain superfluities in habit and speech, but also truly sensible that the cares of this life and the deceitfulness of riches, were as dangerous a snare to the old, as airiness in deportment and the love of other pleasures are to the young. It is also a standing evidence of the true spiritual wisdom and foresight of these men, with regard to the pernicious effects of the unbounded love and pursuit of riches, on the welfare of our christian Society, the truth of which has been abundantly confirmed by the experience of succeeding times. In five years after, he remarks, that although it was a time wherein opportunities seemed to offer for getting riches, by great trade, stocking farms, &c., yet several disappointments happened to those that took liberty herein, particularly on occasion of a great decay of trade, which ensued on the wars abroad; so that some who slighted and rejected the timely advice and warning given them, suffered great loss, both as to their inward condition, and outward affairs; but such who complied were sensible of the benefit thereof, both with respect to their ease in the things of this world, and their inward peace and satisfaction.

The signs of the present times, hold out strong admonition to us of this day, to "gather up the wares out of the land," and retrench in our worldly pursuits, in the lavish expenses, and in the indulgences which wealth leads to; in luxurious living, in rich dresses, and in the sumptuous furniture of our dwellings, which are at variance with the command to "seek first the kingdom of heaven, and the righteousness thereof"—the design of our creation, to glorify God, and to spread the religion of his beloved Son in the earth,—that we may be made meet for his everlasting kingdom in the world to come.

Power of Steam.—President Hitchcock says that there are in Great Britain, at the present day, fifteen thousand steam-engines driven by means of coal, with a power equal to that of two millions of men; and thus is put into operation machinery equalling the unaided power of 300,000,000 or 400,000,000 of men. The influence thence emanating reaches the remotest portions of the globe, and tends mightily to the civilization and happiness of the race.

From "The Leisure Hour."

LOOK OUT!

The importance of a phrase or a sentence is not always to be measured by its length. There are some sentences very lengthy and pretentious, that convey after all but a very homœopathic idea. Other sentences are characterised by force and brevity rather than elegance; they are short, sharp, and bustling, and strike you by their pithy embodiment of a thought that might be diluted and spread over any extent of letter-press. The one may boast of elegance and elaboration; the other has little to boast of but its force and fervour—qualities, by the way, not to be despised by those who seek to convey thought in written or verbal language.

It would be a curious subject of speculative inquiry to ascertain the changes and modifications a thought may undergo, in the form of its expression, by different classes of persons in different circles of society. In one class, it would be uttered in an ornate and florid style, embellished by apt illustration, classical quotation, and brilliant rhetoric. In another, it would be expressed in perfectly *exact* language, every word well chosen and set admirably in its proper place. In another, it would be advanced diffidently and defferentially, and prefaced by a "perhaps," the native politeness of the speaker militating against positiveness of assertion. In a fourth class, it would be condensed, as by the action of a high-pressure engine, into the smallest possible dimensions, to be fired off at you with the force and effect of a rifle-ball. What the elegant scholar or refined lady would express in quite a lengthened and formal sentence, the matter-of-fact policeman condenses into a gruff "Move on." While the carriage auditors at the hustings are enraptured with the elegant flow of language and felicity of illustration exhibited by the newly-elected M. P., in explaining to his constituents the abstruse science of political economy, a grimy voter in the crowd, in paper cap and shirt-sleeves, condenses the whole, for the benefit of his neighbours, into a single sentence of a dozen words.

Of a very large family of familiar phrases, current as "household words" in the mouths of men, we do not remember to have met with one more frequently than the injunction to "look out!" It is, to say the least of it, expressive; and it saves some breath and not a little time—valuable commodities in these days. You visit an acquaintance in town; and, on going forth into the public streets, your business-like friend cautions you to "look out;" meaning thereby—take care of your pockets. You reach a crossing, and are again told to "look out"—quite unnecessarily, you think; for you find it imperative to do so if you would get to the other side of the street. Seizing a favourable opportunity, you dodge between the omnibus past and the omnibus to come, to find yourself in contact with the nose of a cabman's horse, and hear the expostulation of the driver, uttered in the tones of injured innocence, "Why can't that 're gen'lman look out?" Escaped that peril, and glancing around you, you plant your foot on the opposite kerb-stone, alighting in your eagerness on the toe of a lady waiting to cross, and are accosted in shrilly accents with "Really, I wish *some people* would look out!" A print-shop near at hand attracts your attention, and you find yourself for the hundredth time earnestly contemplating the portrait of the great Duke, when a burly porter blunders against you, nearly prostrating you on the pavement; and on being remonstrated with, he explains indignantly to the by-standers, as though an apology were due from you, that "the gentleman wasn't a-looking out!"

Somewhat discomposed, you pass on, your natural amiability having been by this time largely tried; and for a while you get on smoothly enough, when you catch a confused clamour of voices shouting in the distance, "Look out, look out!" Suiting the action to the word, you behold a Smithfield bullock madly careering through the crowded street. This time, you think the admonition sensible and reasonable, and escape with all speed. Leaving the crush of the crowded thoroughfares, you take, perchance, a turn in the park, and have scarcely succeeded in recovering your equanimity, when a fussy old gentleman at your elbow pokes you in the ribs, exclaiming excitedly, for your especial benefit, the magic words, "Look out, look out!" explaining them by adding instantly the name of our gracious queen. As in loyalty bound, you rush to secure a good position by the time she passes. You become quite absorbed and enthusiastic, and turn homewards, that last stroke of good fortune having quite satisfied you with your morning's walk.

Removing your hat in the hall, you find how freely you are perspiring, and seek in vain in all the pockets you possess for the wherewith to chase the moisture from your brow. It is gone; that is quite clear: you think you have dropped it, and yet you do not usually lose such articles. You think again that you have been *eased* of it, and you wonder where, and by whom; but you suddenly remember the cunning face of one of those old-looking boys you meet with in London, and no where else, and how he particularly urged you to "look out" in an opposite direction, and are quite satisfied it was not lost in the way you at first supposed.

These are just a few of the instances in which an important meaning, that might suitably occupy a compound paragraph, is not unfrequently conveyed in the bustling, business-like, self-important phrase, "look out!" It has its own value, however; and apart from the trite and vulgar use familiar to us in every-day life, few phrases carry with them a greater amount of moral force, and a sententious sentiment of more universal application, than this. These two little words often epitomise, in the mouth of a business man, a whole volume of homiletics. We see, for instance, the man of few words conveying to his son, on leaving home to enter life, all the parental advice which maternal solicitude had scattered over several preceding weeks, in that one curt utterance, "Look out." We see, too, occasionally, a city man who is bored every night by the complaints of his wife of the manners, habits, morals, and faults of "those horrid servants," as they are too often unjustly called, and whose establishment is in a perpetual ferment through the incessant scoldings of the mistress. How quickly and quietly, when the nuisance reaches a certain climax, will the "head of the house" reduce all to peace and order by the use of the single phrase, "look out;" though in this case we confess this magic sentence should only be used in the last extremity.

"Look out," like everything else useful and good, may be *abused*, and is often employed by the selfish as the term by which to designate a course of low cuuning; it may also, however, be *used* with advantage to "point a moral" as well as to "adorn a tale."

If anything more were necessary to induce our readers to be, in the best sense, on the "look out" for their highest interests for time and eternity, it would only be to hint, that every unit of all that dreary company, who at the last shall "suffer the bitter pangs of the second death," might have stood "without fault before the throne," had they, when warned in their hour of danger, reverently and promptly obeyed the injunction—"LOOK OUT!"

For "The Friend."

Heights and Depths.

When pleasing or elating incidents occur, great care is necessary lest we are diverted from eyeing our sure Guide. The mind then may be estranged from Him, or carried away from that dependence upon the true source of life. If we endeavour to withdraw our thoughts from pleasing events, and seek that acceptable introversion of spirit, which will enable us to spread our cause before One who will compassionate our infirmities, as we apply to him for help, we may likewise look with confidence to his supporting hand, in times of deep discouragements From faithfulness and devotion to the service of his blessed Master, it was the Apostle's happy experience to be persuaded, that neither heights nor depths, nor any other creature, should be able to separate the faithful in his day from the love of God which is in Christ Jesus our Lord.

It doubtless proves a safeguard to us, sometimes to meet with mortifying and trying circumstances, in matters which we have known it to be our duty to accomplish, tending to suppress fleshly exultations, that our spiritual food may be only of that wholesome character which nourishes the soul up to everlasting life. It was shortly after David's triumph on killing Goliath, that he had to flee as a partridge to the mountains, from the hands of Saul. Alas! how prone is fallen nature to desire the adorning of the Almighty's jewels, and to feed on deeds of usefulness, forgetting that self must be slain, before a qualification is conferred by inscrutable wisdom to bring about good results.

The natural man is fond of imposing appearances, and prone to glory in his own attainments, forgetting, that of himself he can do nothing in the heavenly warfare, for "knowledge puffeth up, but charity edifieth." And "if any man think that he knoweth anything, he knoweth nothing yet as he ought to know;" every man's building must be proved of what kind it is, and the wood, hay, stubble, and everything of a perishable character must be consumed, so that the substantial and true material which can never be destroyed, may remain with us, and increase with our labours. That blessed faith which works by love to the purifying of the heart, should be the moving principle in all our efforts to advance the cause of Truth and righteousness in the earth: as we thus progress in the work step by step, leaning upon this staff of faith, our footing will be sure; and when tossed as on the deeps of trouble by adverse winds, we shall hear the comforting language from One who is Omnipotent, "Be of good cheer; it is I; be not afraid."

It is by the simplicity of the sling, and with the smooth stones from the brook, having the sharp edges of the unsubdued will worn away, that marvellous deeds are wrought, through the power of the Most High, and it is only those who begin in this simplicity, and adhere thereto, that will find the house of David grow stronger and stronger, and the house of Saul grow weaker and weaker, and experimentally know, though they may have to pass over *heights* and through *depths*, that their *kingdom* will assuredly be established forever.

New York, Twelfth mo. 1854.

If any one, said Epictetus, will lay to heart two words, taking care to observe and obey them, he shall mostly be without offence, and his life shall be much spent in peace. The two words are these: Bear and Forbear.

For "The Friend."

I have read with attention the minutes of the three Yearly Meetings, published in the seventeenth number of "The Friend," and deeply regret the exhibit they make of the weakness and present divided state of our religious Society. What must the members of other Christian denominations think of us, with our high and pure profession? How are our contentions calculated to stumble honest inquirers after Truth, and to produce blighting of the best life among our own members. Neither of the minutes touch the original cause of our troubles—the promulgation of unsound doctrines—nor bring the difficulties between the Yearly Meetings in our land, home to where they commenced—in New England, where the remedy for them must be applied. There, a departure from the discipline and usages of the Society, resulted in a division of the Yearly Meeting into two bodies, and since then, the work of separation has been going on, to the great grief of all the lowly, self-denying disciples of Christ among us wherever situated. I am more and more convinced that separations are never the means which the great Head of the Church makes use of for removing the evils that may exist in our religious Society; and that it is a sad reflection on our principles and church government, to suppose there is not a conservative power in them, sufficient, under Divine guidance, to overcome and remove all the wrong things that may arise within our borders.

The following remarks are taken from the last number of the "British Friend." "It has been adduced as a reason for not acknowledging the "smaller body" in New England, that their Yearly Meeting was not established in the right order of our discipline. Those Yearly Meetings, therefore, which so decided, would seem to be going right in the teeth of their former judgment when they have now acknowledged the *small* body in Ohio, whose setting up as a Yearly Meeting was, unquestionably, quite as much out of the right order of the discipline as in the alleged case of New England.

"The separation in New England is thus not only matter of deep regret, for its effects on that Yearly Meeting itself; but because of the party spirit which it has engendered among other co-equal meetings, as once more evinced in the case of Baltimore Yearly Meeting recently held. Further manifestations of this party spirit may yet be apprehended in those Yearly Meetings before which the Ohio separation case may yet come; so that ultimately we may have in each Yearly Meeting of Friends, *two bodies claiming the same designation;* and all this having its origin in the unhappy division in New England; and though the process may be humiliating, the only way, as it appears to us, for satisfactorily adjusting the state of our Society in America, will be for New England to reconsider its proceedings which gave rise to the separation, and so far as these have been shown to be at variance with our discipline, *annul them.* Then, on the part of the *small* one, we have reason to believe there would be no backwardness to make whatever acknowledgments, may, to neutral persons, seem called for, and which do not involve any sacrifice of principle; thus healing the breach and restoring the path to walk in harmoniously. We are also happy to believe there has been a growing disposition on the part of both bodies for this re-union—a consummation, we may add, most devoutly to be wished, as terminating the reproachful spectacle of 'a house divided against itself.'"

These views are in accordance with the religious concern of Philadelphia Yearly Meeting, as expressed in the document it forwarded to the two bodies in New England, where it says:

"We have endeavoured to take an impartial view of the proceedings set forth in the printed documents, and to express a candid opinion respecting them; and inasmuch as it is needful that the accountability of members to their respective meetings, and the subordination of inferior to superior meetings should be maintained according to the Discipline; and inasmuch as divisions and sub-divisions must always be attended by consequences more or less destructive of the peace and welfare of meetings and families; and of the strength and influence of the Society in supporting its testimonies, it is our sincere and fervent desire that all parties, under a deep sense of the greatness of the cause, and the excellency of the church government which our Society has been entrusted with and called to support, may, in the sight of the Lord, examine the respective grounds they have taken; and that where any infraction of private rights or of the discipline has been committed, they may be willing, under the constraining power of Truth, to acknowledge and do it away. We all profess to act under the government of the same blessed Head of the church, who laid down his life for our sakes, and taught us that we should lay down our lives for one another; and we believe that if all classes stand open to the softening influences of the love of God, through his mercy and goodness, everything that has divided and alienated from each other may be entirely removed, and a re-establishment on the right foundation witnessed in that faith, and love, and unity, which in former years bound together the members, and the different Yearly Meetings of our Society.

"It is important that such a re-union should be sought after by the members of the two bodies in New England, not only for their own sakes, but for the promotion of the peace and harmony of the Society everywhere."

Cannot all true lovers of the peace of Jerusalem join in the sentiments and the desires expressed in these extracts? D. C.

WINTER AMUSEMENTS FOR JANE AND I.

In summer days I till the ground,
And tug and toil and get my bread;
No interval can there be found
Between my labour and my bed.
My wife declines to knit by night,
And I to read by candle-light.

But when the south receives the sun,
Beyond the equinoctial line—
When all my summer work is done,
Substantial pleasures then are mine.
Then Jane begins to knit at night,
And I to read by candle-light.

I'm then content, and never sigh,
Nor fly from home some bliss to find;—
And Jane is pleased as well as I—
It so completely feasts her mind,
To sit her down to knit by night,
And hear me read by candle-light.

For when I read, she always hears,
And what she hears she tries to scan;
When aught to her obscure appears,
Then I explain it—if I can!
Oh! how she loves to knit by night,
And hear me read by candle-light!

SUFFERING.

Why should I regard
Earth's little store of borrowed sweets? I, sure
Have had enough of bitter in my cup,
To show that never was it His design,
Who placed me here, that I should live at ease,
Or drink at pleasure's fountain. Henceforth, then,
It matters not if storm or sunshine be
My future lot, bitter or sweetmy cup;
I only pray, Lord, fit me for thy work,
And make me holy, and my spirit nerve
For the stern hour of strife. Let me but know
There is an arm unseen that holds me up,
An eye that kindly watches all my path,
'Til I my weary pilgrimage have done,—
Let me but know I have a friend that waits
To welcome me to glory and to joy,
And I will suffer on, nor ask a higher bliss.

Exploration of the White Nile.

The following notice of an exploration of this remarkable river, has been condensed from a chapter in Bayard Taylor's "Journey to Central Africa."

"The exploration of the river within the last fifteen years constitutes the most interesting chapter in the annals of African discovery. It has been ascended to lat. 4° north, at least eight hundred miles, following the course of the stream, beyond the island of Aba. The most satisfactory account is that of Dr. Knoblecher, who ascended about fifty miles beyond the point reached by previous expeditions. During my stay in Khartoum, I received from him full particulars of his adventures, and was allowed to inspect his journals and sketch books. His reports are exceedingly curious and interesting, and I herewith present a brief outline of them. Dr. Knoblecher, in his capacity of Catholic missionary, was directed to accompany the annual trading expedition up the White Nile, for the purpose of ascertaining the practicability of establishing a missionary station among some of the negro tribes near the equator. He experienced much difficulty at the outset, on account of the jealousy of the Egyptian traders, who find the company of a European a restraint upon their violent and lawless practices, but through the influence of the Pasha, who was at last brought to give his consent, the missionaries secured a place in the expedition, and, on the 13th of November, 1849, set sail from Khartoum. There were seven vessels in the flotilla, and that of Dr. Knoblecher, though the smallest, proved to be the best sailer, and usually kept the lead. He had on board a faithful and experienced Nubian pilot, named Suleyman Abaw-Zeid. After fourteen days' sailing, the expedition passed the islands of the Shillooks, and reached that part of the river where the banks are covered with continuous villages. The number of these is estimated at seven thousand. It is worthy of notice, that their circular tokuls (huts) of mud and reeds are precisely similar in form and construction to those of the tribes on the Niger and Senegal rivers, with whom the Shillooks have no communication, and from whom they differ in language, appearance, and character. While threading the mazes of the archipelago, a violent whirlwind passed over the river, and completely dismasted one of the boats. Beyond the islands the river expands, so that the marshy shores are barely visible in some places. The lotus grows abundantly in the shallows, and the appearance of the thousands of snowy blossoms as they flash open at sunrise, is described as a scene of vegetable pomp and splendour, which can be witnessed in no other part of the world. The forests of Sont trees which cover the islands, give place to doum-palms and immense tamarinds; and beyond lat. 10°, in the land of the Dinkas, the beautiful dhelleb-palm is first seen. It has a tall, graceful trunk, thick in the middle, but tapering towards the top and bottom, and a rich crown of large, fan-like leaves.

On the 28th of November the expedition succeeded, after some difficulty, in establishing an intercourse with the Dinkas and Shillooks, who inhabited the opposite banks of the river. The

latter, in consideration of some coloured glass beads, furnished a number of oxen for provisions.

Dr. Knoblecher described their running, when they drove the cattle together, as resembling that of the gazelle; they leap high into the air, drawing up their long legs as they rise, and clear the ground at a most astonishing speed. The next day the vessels reached a large town called Vav, where the people received them without the least appearance of fear, and brought quantities of elephants' tusks to trade for beads. Herds of wild elephants and giraffes were now frequently seen on the banks of the river, and the former sometimes threw up their trunks and spirted water into the air when they saw the vessels. Numbers of white herons were perched composedly upon their backs and heads. The giraffes, as they gazed with wonder at the fleet, lifted their heads quite above the tops of the mimosa trees. On the second of December, the expedition passed the mouth of the Sobat river, the only tributary stream which comes to the White Nile from the east. Its source is supposed to be in the country of the Gallas, south of the kingdom of Shoa. Its breadth, at its entrance into the Nile, is six hundred and fifty feet. Ulerne, who ascended it about eighty miles, with D'Arnaud's expedition, states that its shores are higher than those of the Nile, and that the surface of the country became more elevated as he ascended, whence he infers that the White Nile, as far as it has been explored, flows in a depressed basin of the table-land of Central Africa.

From lat. 9° 26′ to 6° 50′ N. there is a complete change in the scenery. The magnificent forests disappear, and the shores become marshy and unhealthy, covered with tall grass, whose prickly stalks render landing difficult, and embarrass the navigation of the shallows. The air is heavy with noxious miasmas, and filled with countless swarms of gnats and mosquitoes. The water of the river is partially stagnant, and green with vegetable matter, occasioning serious disorders to those who drink it. The Gazelle lake lies in lat. 9° 16′ N. It is thus named from the Gazelle river, which flows into it on the western side, and which has never yet been explored. Its depth is about seven feet, but the reeds and water plants with which it is filled reach to the surface, and render the navigation difficult. Its shores are inhabited by the Nuchi negroes, a stupid, imbruted race, many of whom are frequently carried off by the traders and sold as slaves. For this reason it is now very difficult to procure elephants' teeth from them.

(To be concluded.)

For "The Friend."

Review of the Weather for Twelfth Month, 1854.

The first two days of the Twelfth month were clear. On the morning of the 3d, thick clouds seemed to cover the sky, and at 7½ A. M., it commenced snowing. For half an hour snow fell copiously, when it turned to rain. It rained moderately with some sleet, most of the day, till about 4 P. M., when it again commenced snowing, and increased in a short time to quite a storm, with a strong N. W. wind. There fell, on an average, but about two or three inches of snow; but it drifted so as to cause obstruction on some of the railroads in the country. Still snowing some on the morning of the 4th, and there was a stiff gale from the N. W. all day. There was some snow on the 7th. On the 9th, people were filling their ice-houses, the ice being five or six inches thick. There was again a slight fall of snow on the 11th, then clear till the 17th, on which and the following day, snow fell. The 23d was very dull, with thick heavy clouds, and a cold raw air from the E., which led many to expect that the next morning's light would disclose a great snow. But

> Soon as the silent shades of night withdrew,
> The ruddy morn disclosed at once to view
> The face of nature in a rich disguise,
> And brightened every object to our eyes;
> For every shrub, and every blade of grass,
> And every pointed thorn seemed wrought in glass.

Against noon there was a heavy sleet, but the temperature becoming more mild, the trees were eased of their load by its falling off considerably before night.

The 28th was marked by a heavy fog all day.

In some places a little north of us, they have had good sleighing; and in parts of New York and the New England States they had two or three feet of snow early in the month. On the 20th, at Albany the temperature was 14° below zero at 6 A. M., and 3° below at mid-day. Teams were crossing the river on the ice at that place, it being very thick and strong.

The average temperature for the month was 27⅜°, more than 4° colder than the last Twelfth month. Amount of rain and melted snow was 3.132 inches—of snow, about 4 inches.

The mean temperature of the year 1854, was 51½°.

The amount of rain and melted snow that fell during the year, was 40.416 inches,—about 10 inches below the average fall for this latitude. There were fifty inches of snow in the year. The range of the thermometer, was from zero on the 3d of First month, to 96° on the 21st of Seventh month. For 1853, the medium temperature was 51½°, and amount of rain, 48.25 inches.

Selected.

That which is of God gathers to God; that which is of the world is owned by the world.

Thou, who sometimes travels in the work of the ministry, and art made very welcome by thy friends, seest many tokens of their satisfaction, in having thee for their guest. It is good for thee to dwell deep, that thou mayest feel and understand the spirits of people. If we believe Truth points towards a conference on some subjects in a private way, it is needful for us to take heed that their kindness, their freedom and affability, do not hinder us from the Lord's work. I have seen, that in the midst of kindness and *smooth conduct*, to speak close and home to them who entertain us, on points that relate to their outward interest, is hard labour; and when I have felt Truth lead toward it, I have found myself disqualified by a superficial friendship; and as the sense thereof hath abased me, and my cries have been to the Lord, so I have been humbled and made content to appear weak, or as a fool for His sake; and thus a door hath opened to enter upon it. To attempt to do the Lord's work in *our own way*, and to speak of that which is the burthen of the word, in a way *easy to the natural part*, doth not reach the bottom of the disorder. To see the failings of our friends, and *think hard* of them, without opening that which we ought to open, *and still carry a face of friendship, this tends to undermine the foundation of true unity.*

John Woolman.

"Let not a false humility, or a wrong delicacy restrain me either from the testimony which it is mine to give, or the authority which it is mine to exercise. O, may I be kept from the fear of man, which is a snare."

Emery.—Although emery has been sought for in all parts of the world, it has been found only in two places—in the island of Naxos, in Greece, and at a few spots in Turkey. The annual production is at present limited to two thousand tons of Naxos stone and sixteen hundred tons of Turkish.

A Curious Surprise—A Seven Years' Sleep.—The Rochester Union relates the following fact. The captain of the Plover must have realized something of the feeling that Rip Van Winkle experienced when he woke up from his extraordinary nap in the Catskill mountains:

Taken by Surprise.—A letter from San Francisco to Mr. R. R. Harris, of this city, from his brother, relates a curious incident that occurred there a short time since, which we do not recollect having seen in print. Her Britannic Majesty's exploring ship Plover arrived at San Francisco a short time since from the Polar Sea, where she had been ice-bound since 1847.

When she left San Francisco, some years ago, it was a mere trading station, resorted to by a few vessels in pursuit of hides, and the town or place contained only a few adobe houses. The captain and crew of the Plover expected to find the same San Francisco, in 1854, that they left in 1847. The captain, therefore, sailed into the bay without a pilot, and approached the city in the evening. He was much amazed at the numerous lights he saw.

When he awoke from his dream of seven years the next morning, he found a noble city occupying the site of the ancient San Francisco. He had known nothing of the Mexican war, and cession of California to the United States, and the many other great events that had taken place during the time he had been locked up in the frozen regions of the North.

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

RICHARD GOVE.

(Continued from page 134.)

At Jamaica, the 22nd of First month, 1708, they addressed an epistle to the ministering Friends at home. This epistle, according to one of the minutes made on its receipt, gave account "that they had been at Barbadoes, where several were convinced of the Truth, and one Jew,—that

they had been at Anquilla, where the governor had been convinced some time before by reading a book of James Parnell's, and had laid down his commission, as believing it unlawful for him to fight,—that upon their going thither, many of the people of that place were convinced and hopeful, —that they had two meetings at the house of the present governor, and that they had settled some meetings among them, exhorting them to wait on the Lord in silence for renewing of their strength in him, &c., with sundry other matters very satisfactory to the meeting."

On the way to Jamaica, the vessel in which the Friends were, had a narrow escape from a privateer, and after leaving Jamaica for England, the vessel was several times chased by French ships of war. On one occasion, nothing appeared to preserve them, but the three topmasts of the enemy coming down together, occasioned by the spread of canvass on them in a storm. After escaping others by superior sailing, they reached the coast of Ireland, where, to escape from two privateers, the captain concluded to run the vessel ashore. He ran in so nigh the rocks, that the privateers were afraid to venture, and though his ship and passengers were in great peril, yet the latter were safely landed and the ship securely carried into the harbour of Kinsale. Of their labour in Ireland, Thomas Chalkley says: "In this nation we had many and large meetings after our landing, visiting Friends' meetings along to the north, many not of our Society coming to them, among whom we often had good service, to our and their satisfaction, as they often declared, Richard Gove being still with me. Friends from their National Meeting, certified to our brethren in America, of our service and labour of love among them, after we had travelled several hundred miles, and visited Friends' meetings generally, and some other places where it was not usual."

Passing over into Scotland, they held their first meeting at Glasgow, where they were shamefully treated by the rabble, who threw dirt, coal, and stones amongst those assembled. After visiting Scotland, they, about the beginning of the Ninth month, 1708, came to Berwick on the Tweed. Thomas Chalkley says: "At this place my dear friend and fellow-traveller, Richard Gove, and I parted. I was going by the east sea coast up to London, and he inclined towards Cumberland. We had travelled about a year in the work of the ministry, in great love and true fellowship, in which work we were true helpers one of another; and as we had laboured together in the work of Christ, so we parted in his love." The two Friends were but little together again, Richard Gove paying a more general visit to the meetings in England, whilst Thomas spent a considerable time in Holland and Germany. They met at London before Thomas went to the continent, after which Richard continued travelling, but his health declined rapidly, and evidence of a pulmonary complaint manifested itself in him. Becoming unable to travel, he was nursed at the house of his friend Richard Richardson, at Uxbridge, near London, where he deceased about the close of 1709 or beginning of 1710, aged fifty-eight years.

"He was" says Samuel Smith, "small of stature, but seems to have been very industrious in the service of his mission; and for the promotion of Truth on the earth, had travelled much in divers countries. He had a sound serviceable and convincing testimony to bear, and was well beloved by most that knew him."

Thomas Chalkley, noting his death, says:— "We travelled together in great love and unity, and the Lord blessed his work in our hands. He was an inoffensive, loving Friend, and had a sound testimony, which was serviceable and convincing, and was well beloved in Philadelphia, where he lived. He left a good savour and report behind him, I think, wherever he travelled."

WILLIAM COOPER.

William Cooper was born in Great Britain, early in the year 1632. He married about the year 1660, and not long after was convinced of the Truth, as was also Margaret his wife. Their residence was in the village of Coleshill, in Hertfordshire, where he followed his trade as a blacksmith. Being faithful to the openings of Divine grace, he grew in religious experience, and after a time received a gift in the ministry of the Gospel. In the year 1678 he thought it would be right to remove with his family to America, and settle in the province of New Jersey. He laid this prospect before his friends, at a Monthly Meeting at Coleshill, and they granted him the following:—

"Whereas, William Cooper, of Coleshill, in the parish of Amersham, and the county of Hertford, hath signified unto us that he hath an intention, if the Lord permits, to transport himself, with his wife and children, unto the plantation of West New Jersey; and hath desired a testimonial from this meeting, for the satisfaction of Friends there or elsewhere, unto whom he may be outwardly unknown. We therefore, whose names are here underwritten, do hereby certify all whom it may concern, that the said William Cooper and Margaret his wife, having lived in these parts for many years, ever since the first of their convincement, have walked conscientiously and honestly amongst us, agreeably to the profession and testimony of Truth, according to the best of our observation and knowledge of them.

"In witness whereof we have hereunto set our hands, this fifth day of the Twelfth month, 1678."

William Cooper and family, on their arrival in the New World, tarried a while at Burlington, but soon settled at Pine Point, opposite the site of Philadelphia. We find but little trace of his life. He was at one time in the Assembly of New Jersey, and he filled some other public stations. A meeting was sometimes held at his house at Pine Point, and although as far as we can learn he did not travel much abroad, in the service of Truth, he yet appears to have been a diligent labourer in his Master's cause at home.

That worthy labourer in the Gospel, Joan Vokens, during her travels in America, became acquainted with William and Margaret Cooper, and some time after her return to England, she addressed them this epistle:—

"To William Cooper and his wife, dwelling in West Jersey, near Delaware river, not far from Burlington, these are:

"Dear and tender friends, William Cooper and M., my love in the unchangeable Truth salutes you, and in the same I still desire your welfare as my own, with all that hold fast their integrity, and retain their first love; they are all near and dear unto me as ever, and my entire love truly reaches to them all. So I desire thou mayest let them know, if they have received my letters and epistles, for I have sent several, but my kinsman dying by the way, makes me question whether what I sent did ever come to any of your hands I sent to you and to S. Spicer, and to Lydia Wright, (as was,) and to her husband, and to her sister, Mary Andrews, and to several on Pennsylvania side, as well as on that side. I should be very glad to hear of your welfare in the Lord Jesus, for this my soul still travails as truly as when I was amongst you. Oh that your faithfulness and living obedience may engage our heavenly Father to answer the breathing desire of my soul for you in those remote places.

"I cannot forget you, but the cry often runs through me for your preservation and prosperity every way, and that the honour of Truth, and the good one of another, may be preferred far more than all other things, that our nearness and dearness unto our tender God, and one unto another may be felt and witnessed, that we may praise his worthy name, and magnify his preserving and delivering power, for it hath been largely manifested, may a little remnant truly say. All have great cause to speak well of his name, and to remember his mercy of old, and to hold the continuation of his favour in great esteem. Blessed be the Lord Jesus, he hath not been wanting to us, but his daily renewed mercies are sufficient deeply to engage us to faithfulness and obedience that our heavenly Father may be pleased to continue and multiply his tender dealings towards us So whatever is yet to come, may never be able to separate us from the sense of his love, or from the seasonedness of his holy fear, or from the cementing life that joins us as members unto Christ our Head; that if trials should abound, we may all feel the love and life of Jesus to superabound. That every bitter cup that is yet to come may be sweetened, and all hard things made easy, and we encouraged to travel on in our heavenly progress, keeping a narrow watch in the precious light, and diligently waiting in the same that we may be filled with heavenly treasure, for all other is very uncertain. We meet here with a sufficient share of many and variable exercises; neither do I expect, that you there, go free, but this I desire above all things, even your living growth in the precious Truth, and that you may endure to the end Such are assuredly happy and a blessed reward is prepared for them. In a living sense of the same, may the Lord our God keep us here and you there, that our breathings may be continued one for another, that we may be refreshed one in another, and praise the God of heaven and earth together, in his eternal Spirit, as with one heart and soul. He is worthy to be had in living remembrance, and his pure power to be magnified and renowned over all, and unto it I commit you all, for it is over all, and worthy to have the disposing of us all. With it I leave all, for there is nothing too hard for it to do, and it is worthy to be exalted over all, and that for evermore, saith the soul of your loving sister in the unchangeable Truth. JOAN VOKENS.

London, 28th of Fourth month, 1690.

We find W. Cooper amongst those who testified against G. Keith, and signing, both the paper that was put forth by the meetings of ministering Friends, and that by the Yearly Meeting of Discipline. After this we can find little trace of him, except as a representative at Yearly Meeting, until we meet with the brief memorial of his Monthly Meeting. That memorial, after stating that he had been "raised to his gift of exhortation" in Hertfordshire, old England, and had removed to West New Jersey, adds, "and lived here in a godly conversation, exercising his gift in the meeting at Newton, whereunto he belonged, to the benefit of God's people, until it pleased God to remove him. He died the 11th of First month, 1710, and was buried in Newton, in the county of Gloucester, in New Jersey aforesaid, being of a good old age, viz., in the latter end of his 78th year. As he lived, so he died, in unity with Friends, and in full assurance of his eternal well-being."

THE FRIEND.

FIRST MONTH 13, 1855.

The Report of "The Philadelphia Association of Friends for the Instruction of Poor Children," and that of the "Ragged School and Home for Coloured Children," are crowded out of the present number, but will appear in the next.

Having given the minutes of Indiana, Baltimore, and N. Carolina Yearly Meetings relative to the separation in Ohio, our readers have had the opportunity to compare them, and draw their own conclusions respecting them.

We have already expressed our convictions relative to the two bodies in Ohio, and given in this Journal the facts of the separation, and the argument drawn from those facts, both of which, in our view, take from the body of which J. Binns is clerk, every rightful claim to be considered as a legitimate Yearly Meeting. It will be observed, that neither Indiana nor Baltimore attempt to vindicate the manner in which J. Binns was nominated and appointed by the body which he served, or to call in question the regularity of the proceedings of Ohio Yearly Meeting in continuing B. Hoyle as its clerk; but both place their acknowledgment of the body with which they have declared their unity, upon the ground of its members having disapproved of certain acts of Ohio Yearly Meeting, which they (Indiana and Baltimore Yearly Meetings) also disapprove; and reject the body of which B. Hoyle is the clerk, because it is identical with the one which, they say, did those acts; that is, it is the original Ohio Yearly Meeting. To estimate the full force of this admission, it must be borne in mind that B. Hoyle was appointed clerk of the Yearly Meeting without dissent, in 1851, subsequent to the time when Ohio Yearly Meeting authorized those acts. How those meetings received official information of those proceedings of Ohio Yearly Meeting which they condemn, or whether they were satisfied with mere hearsay reports, we are not informed.

The substance of the first charge brought against Ohio Yearly Meeting, is, that it had refused to receive or to answer the epistles from N. England.

For Yearly Meetings not to correspond by epistles, is neither contrary to the discipline, nor without repeated precedents. So far as we have been able to discover there is nothing in the discipline of any existing Yearly Meeting having any reference to its receiving or answering an epistle to another co-ordinate body. The whole matter is left to the religious judgment of each Yearly Meeting, and with that judgment no other meeting has a right to interfere. We believe that for some time after Philadelphia and N. England Yearly Meetings were established, they held no epistolary correspondence. Philadelphia and Dublin Yearly Meetings corresponded for a time, then discontinued their correspondence, and after many years renewed it; and New York and Virginia Yearly Meetings sent no epistle to each other until 1828. In none of these cases did any other meeting feel called on to interfere, or manifest any uneasiness on account of it. How comes it that this same act is now to be considered an offence of such gravity as to deprive a Yearly Meeting of its character and standing? Indiana says, the suspension of correspondence with N. England by Ohio, was without "good and sufficient reasons." Surely, Ohio is the sole judge upon that point; and unless she had communicated those reasons to Indiana, how was the latter to know whether they are good and sufficient or not? After the separation took place in N. England, Ohio Yearly Meeting decided to withhold correspondence with either body there; and concluded not to read the certificates brought by the members of those bodies travelling as ministers; but we think no instance has occurred, in which, as charged by Indiana, such have not been "received and recognized as ministers," though their certificates were not read.

The second charge, of recognizing as members persons disowned by New England, involves the whole question relative to the division in that meeting, arising from the treatment of some of its members: into that question we need not now go. Indiana and Baltimore exercised what they doubtless considered their right as independent meetings, to judge respecting the claims of the two bodies in N. England; receiving one, and rejecting the other. Ohio, believing that important principles were involved in the question, in the exercise of the same right, declined acknowledging either body as the Yearly Meeting, but did not refuse to those belonging to either, the right of attending meetings as members of the society. If one meeting had the right of independent judgment in the case, so had the other, and no charge can be brought against Ohio for exercising that right, which does not apply with equal force to each of the others.

The course, for pursuing which these meetings are assigning their reasons, is precisely analogous with that which they charge Ohio with having wrongfully pursued towards N. England, there being no reason assigned by either Indiana or Baltimore for their proceedings towards Ohio, which does not apply with augmented force, in justification of the conduct of Ohio towards the two bodies in N. England. Ohio was of the judgment that certain proceedings in N. England Yearly Meeting implicated the doctrines and discipline of the society, and produced a division within its borders, and had not felt itself prepared to acknowledge either body as the Yearly Meeting, but suspended its epistolary correspondence, and the reading of certificates of those travelling as ministers; according to those belonging to both bodies, as before said, the right of attending its meetings as members in the society. Indiana and Baltimore set in judgment on certain transactions of Ohio Yearly Meeting consummated prior to any division within its borders, and not approving of those transactions, resolve to decline correspondence with it, the regular Yearly Meeting, and to acknowledge unity with those members of it, who being unwilling to submit to the judgment of the legitimate meeting, have withdrawn from it, and set up another. If the course pursued by the meetings of Indiana and Baltimore is right, and according to order, that pursued by Ohio Yearly Meeting cannot be wrong, there being no charge of it having swerved from the due support of the doctrines and testimonies of our religious Society. Not complying with the entreaties of other Yearly Meetings, to substitute their judgment instead of its own, in reference to a case of so much importance as that of the division in N. England Yearly Meeting, can hardly be admitted as a grave charge against a body co-equal with themselves.

Much has been said of late about the independence of Yearly Meetings, and the impropriety of other meetings attempting to interfere in their affairs. The conference, in which Indiana and Baltimore took part, expresses as its belief, "that it is essential for us clearly to understand and inviolably to sustain the rights that belong to distinct Yearly Meetings," and it points out "brotherly entreaty or admonition," as the course to be pursued by other Yearly Meetings towards one which "should promulgate views inconsistent with the principles professed by Friends, or should not maintain our Christian testimonies." "But, (it says,) in the exercise of those functions, which legitimately and exclusively belong to itself,—*as* the forming or administering its own discipline—any interference by another Yearly Meeting, or attempt to control its action in these respects, would be an infraction of our established order, and fraught with consequences perilous to the whole brotherhood of Yearly Meetings." Now there is no suspicion entertained of Ohio Yearly Meeting having "promulgated views inconsistent with the principles professed by Friends," or not having "maintained our Christian testimonies;" which would, (according to the conference,) give force to a charge of its not having heeded the entreaties of other Yearly Meetings. Is it not, therefore, apparent that the attempt "to control its action" in the case mentioned by Baltimore and Indiana, is what they have themselves declared to be "an infraction of our established order, and fraught with consequences perilous to the whole brotherhood of Yearly Meetings?"

In reference to Ohio not receiving or reading the "Address" put forth by the conference, it would be sufficient to say that the proposal for a conference having been deliberately considered, and not united with by that Yearly Meeting, it consequently had nothing to do with its proceedings, nor was bound by its conclusions. Furthermore, the "Address" had been published and widely circulated, producing or increasing, it is to be feared, by the sentiments contained in it, feelings of disaffection and insubordination among the members of Ohio Yearly Meeting, who have now separated from it.

The proposition from N. York for a conference, explicitly stated, that its results were to be submitted to the various Yearly Meetings entering into it, to be adopted or rejected by them respectively, as might appear to them best: those meetings were, therefore, clearly understood not to be deprived of their independent judgment. But according to the tenor of the charges preferred, it is now understood by Indiana and Baltimore, that the decisions of the conference are not only binding on all the meetings represented in it, to which they could not demur, but that they are equally obligatory on those meetings that could not see their way to unite in it. This is certainly a new feature in the church government of our religious Society.

North Carolina Yearly Meeting rests the propriety of its acknowledgment of the body of which J. Binns is clerk, mainly upon the manner in which they state the clerks of the two bodies were appointed. According to its minute, for the clerk of a Yearly Meeting, when the representatives report they cannot agree on a name to be proposed to it for that station, to make a minute of his continuance, is to act "out of the order and usual course of the society," and he is a self-made clerk. This is applied to B. Hoyle, though the minute made by him was in conformity with every case of the kind that had heretofore occurred, and with the previous decision of Ohio Yearly Meeting, acted on for several years, and was united with at the time by much the larger portion of the meeting. But according to their minute, a portion of the representatives, who have prevented the whole from reporting a name unanimously, may get together after* the regular meeting, and without letting

* We think the minute of N. Carolina is incorrect, in conveying the impression that the twelve representatives who nominated J. Binns, held a meeting *after* the meeting of all the representatives; but their conclusion is arrived at under the belief, that such was the case.

the others know of their convening, may agree upon a person whom they will propose: and when the name thus selected is mentioned in the meeting, and a portion of it expresses unity with the report, while others dissent, he is the duly appointed clerk; and the portion of the meeting he serves, is to be considered the true Yearly Meeting. These principles are applied to the nomination of J. Binns, and no notice is taken of the fact, that when the representatives were all together, he was decidedly objected to by two-thirds of their number, and no authority was given to nominate him; and when his name was mentioned in the meeting, and was united with by a portion of it, much the larger part of the meeting did not unite with it, and protested against the proceeding as an act of separation, received the report made, that the representatives could not agree, and continued to transact the business of the Yearly Meeting with the old clerk regularly appointed. The disorganizing consequences that would result from the general admission of the sentiments put forth, must, we think, strike all our readers, and as we have already given the facts and argument in reference to the appointment of the clerk, we will not repeat them now.

SUMMARY OF EVENTS.

EUROPE.—News from Liverpool to the 23d ult.—*The War.*—The dates from the Crimea are to the 13th. No important engagement had occurred. The condition of the allied army, in spite of the arrival of reinforcements, had not improved. Storms of wind and rain continued, and the state of the roads was such, that supplies were conveyed with difficulty to the camps. The British troops had been temporarily placed on short allowance. There was much sickness among the troops, and the deaths from cholera and fever averaged about 60 daily. The Times correspondent says, that the siege had been practically suspended; that the batteries of the allies were used up and silent, and the army exhausted by the excessive labour and watching, to which it had so long been exposed without intermission. The Russian defences, on the contrary, are estimated to be 100 guns stronger than when the siege began. They continue to harrass the besiegers by frequent sorties from the city; the late attacks have been directed against the French, and though always repulsed, each sortie caused the loss of a number of men. The English are said to have constructed a powerful new battery, not yet opened, on an eminence, north of the valley of Inkermann, which commands every part of Sebastopol. The condition of the Russian army outside of the city, is reported to be even worse than that of the allies. The Russian General Liprandi has been deprived of his command for a fault committed at the battle of Inkermann.

Omar Pacha was to embark with his troops in a few days. They are said to number 45,000.

ENGLAND.—The foreign enlistment bill, proposing the employment of 40,000 Germans in the British service, had met with strong opposition in Parliament. It passed the House of Commons by a majority of 38. The measure is said to be strongly repugnant to the feelings of the people. The Chancellor of the Exchequer has given notice that he will propose that the duty on tea remain fixed at 18*d.* per pound, until peace is declared. Lord John Russel stated that the number of troops that France is willing to send to the seat of war, is only limited by the number of transports to be obtained. *Liverpool Markets.*—Cotton had partially recovered from the previous decline. The stock, exclusive of that on shipboard, was 576,000 bales, of which 322,000 were American. Flour in moderate demand at from 42*s.* to 45*s.* *State of Trade.*—The accounts from Manchester represent a fair business, and prices a shade better.

FRANCE.—It is thought the proposed loan may be postponed till the Third month. Additional duties on tallow and other articles are spoken of.

AUSTRIA.—By the recent treaty, Austria engages to defend the frontiers of Moldavia and Wallachia against any return of the Russian forces. Lord John Russel gave it as his "belief," that unless Russia consented to make peace on such fair and moderate terms as the allies might propose, before the opening of the next campaign, the alliance of Austria would be with them, on the offensive and defensive.

EGYPT.—Lesseps, ex-French Consul in Egypt, has obtained a firman granting authority to a joint stock company to construct a ship canal across the isthmus of Suez—the company to collect tolls for ninety-nine years, the canal to be completed in twelve years, and the viceroy, without outlay, to have fifteen per cent. of the profits.

UNITED STATES.—*The Gold Movement.*—The total receipts of gold during the year 1854, are estimated as follows. From California, on freight, $48,065,000; by passengers, $4,806,000; foreign coin, $6,000,000; in all, $58,871,000. The exports of gold from New York and Boston, amounted to $45,100,000; probable amount retained in the country, $13,771,000. Retained in 1853, $31,220,000; in 1852, $30,480,000; increase of gold currency in the last three years, about seventy-five millions.

Immigration.—During the year 1854, 307,639 emigrants landed at New York, of whom 168,723 were Germans and 80,200 Irish. In the year 1853, the numbers were 110,644 Germans and 113,161 Irish.

Losses by Fire.—The destruction of property by fire, in the United States, during the last year, has been very great. The total amount is variously estimated at from fifteen to twenty-five millions of dollars.

Crimes and Casualties.—During the year, 682 murders were committed, and 84 persons were executed. The number of persons who lost their lives by burning buildings, is put down at one hundred and seventy-one. There have been one hundred and ninety-three railroad accidents, killing 186 persons, and wounding 589. There have also been 48 steamboat accidents, killing 587 persons, and wounding 225.

California.—During the Eleventh month, $5,276,562 was shipped from San Francisco to the Atlantic States, to which add $1,844,468, the amount of gold carried by the Sonora, and the total from Eleventh month 1, to Twelfth month 1, inclusive, will be $7,121,030.

Prices of living in California, are rapidly coming down to the Atlantic level, as are also wages and salaries.

The waters of the Upper Sacramento teem with the finest salmon, which are caught and carried to San Francisco, where they are sold at three cents per pound.

Minnesota.—Fourteen years ago, a single log cabin stood upon the site of St. Paul, Minnesota, a city that now supports four daily newspapers, and where upwards of forty-three thousand passengers have been landed within a year.

Nebraska.—At the recent election for a delegate to Congress, Giddings, a Benton Democrat, was elected. Only about 800 votes were polled. Omaha City has been selected as the seat of Government.

Boston.—According to the Custom-house records, there were 3102 foreign arrivals for the year 1854, being an increase of 60 over last year. The clearances of vessels for foreign ports, number 2072. Mortality of the year, 4,418. Estimated population, 160,000.

New York.—There were 28,422 deaths in this city last year. The births numbered 15,115.

Brooklyn.—On the 1st inst., the act consolidating the cities of Brooklyn and Williamsburg, and the township of Bushwick, under the name of Brooklyn, went into effect. Brooklyn now ranks as the third city in the Union, having a population of over 200,000.

Philadelphia.—The sales last year, at the cattle markets, were as follows—76,300 beeves, 16,175 cows, 72,150 swine, and 61,000 sheep. These numbers do not include the entire supply for the city, large quantities of all kinds of meat being brought in by farmers and others, and sold at stalls in the markets, and from wagons. Mortality last week, 157.

Pennsylvania.—The Governor's message presents a favourable view of the State finances. The present reliable revenues of the State exceed the ordinary or unavoidable expenditures, over a million of dollars. The aggregate receipts on the public works for the past year, have amounted to $1,876,078, and the expenditures, (debts all paid,) to $1,101,570, leaving a net balance of $774,508. The condition of the works has been improved during the year, and important reforms in their management effected. The balance in the treasury, on the 30th of Eleventh month, was $1,240,929.72.

During the last three years, about three millions of dollars have been expended in the construction of new works of internal improvement, and at the same time the public debt has been slightly reduced.

Miscellaneous.—African Exploration.—Accounts have been received of the death of the African traveller, Dr. Barth, and also that of Henry Waddington, who have both fallen victims to the pestilential climate. The last letter from Dr. Barth announced his approaching departure from Timbuctoo for the interior.

The English at Japan.—Accounts from China, state that the English admiral, Sterling, has made a treat with the Japanese, opening two of the ports of tha country to the trade of the English.

Cholera in Greece.—At the date of the last account the cholera was raging at Athens, with great violence

Not Annexed.—The treaty by which the U. S. Govern ment proposed to acquire the harbour and port o Samana, in the island of St. Domingo for a naval sta tion, has been rejected by the Dominican Legislature.

Railroads in Canada.—There are 1176 miles of com pleted road, and 1922 under contract.

The Coal Fields of Arkansas.—The geologist, Dr Shumard, gives the results of his experiments at fifteen different points throughout the State, at all of which seams of good coal, many of them, twenty feet deep have been discovered. The field is considered inexhaus tible.

RECEIPTS.

Received from Elijah Haworth, O., $2, vol. 27, for Jos. Burgess and Spencer Ballard, $2 each, vol. 28; from F. C. P. Hill, N. C., per C. E., $2, vol. 28; from M. A. Baldwin, Pa., $2, vol. 27; from J. Ballance, Pa., for Edith Morris and Sarah Ashton, $2 each, vol. 28, for Nathl. Reed, $1, to 44, vol. 28; from St. B. Smith, agt., O., for K. Michener, $1, to 26, vol. 28, for J. M. Smith, $2, vol. 28; from Jos. King, jr., Bal., $2, vol. 28.

WEST-TOWN SCHOOL.

Assistant Teachers are wanted in the Boys' department of this Institution. The opportunity which this station furnishes for prosecuting their studies, free from any expense, presents a favourable opening for young persons, who wish to perfect themselves in the higher branches of learning, or to prepare for the business of Teachers. Those who wish to engage, are requested to make early application to Nathan Sharples, Concordville; Pennock Passmore, Goshenville; or Thomas Evans, or Samuel Bettle, Jr., Philadelphia.

INDIAN CIVILIZATION.

The committee is desirous of engaging the services of a well qualified Friend to teach the school at Tunessassah, &c. Friends, who may feel concerned to engage in that station, are requested to make early application to Joseph Elkinton, No. 377 S. Second street, or Thomas Evans, No. 180 Arch street, Philadelphia, or Ebenezer Worth, Marshalton, Chester county, Pa., or Thomas Wistar, Fox Chase, Philadelphia co., Pa.

Philad., Ninth mo. 20, 1854.

FRIENDS' ASYLUM.

Committee on Admissions.—Samuel Bettle, Jr., No. 101 North Tenth street; Charles Ellis, No. 95 South Eighth street, and No. 56 Chestnut street; William Bettle, No. 14 South Third street; John C. Allen, No. 179 South Fifth street, and No. 227 North Front street; Horatio C. Wood, No. 210 Race street, and No. 37 Chestnut street; William Thomas, No. 242 North Fifth street, and No. 49 South Wharves; Townsend Sharpless, No. 187 Arch street, and No. 32 South Second street; John M. Whitall, No. 161 Filbert street, and No. 138 Race street.

Visiting Managers for the Month.—William Hilles, Frankord; James Thorp, Frankford; William Thomas, No. 242 N. Fifth street.

Superintendent.—Dr. Joshua H. Worthington.

Matron.—Margaret Worthington.

CORRECTION.

In the third column, 15th line from the top, page 134, in our last number, for "Father" read Truth.

DIED, at her residence, in Burlington, N. J., on the 12th ult., in the 91st year of her age, SUSAN J. SMITH, widow of Joshua R. Smith, for many years a valuable elder of Burlington Monthly Meeting. She was a diligent attender of religious meetings, until within a year of her decease, during which time she was confined to the house by the effects of a fall, occasioning her much suffering which she bore with Christian resignation. In addition to other bereavements, she had been for a number of years deprived of her sight, but retained her mental faculties in a remarkable degree to the last. As a shock of corn fully ripe, we doubt not she has been gathered into the heavenly garner.

From the London Quarterly Review.

How London is Supplied with Food.

(Continued from page 138.)

The foreign supply last year of cattle, sheep, pigs, and calves was more than a seventh of the entire number sent to London. The Daily Bill of Entries at the Custom-house furnishes us with a valuable indication of the fields from which we have already received, and may in future expect to receive still further additions of what Englishmen greatly covet—good beef and mutton at a moderate price. The arrivals by steam in the port of London in 1853 were as follows:—

	Oxen.	Sheep.	Calves	Pigs.	Total.
From Holland	40,538	172,733	24,250	9,370	246,848
" Denmark . . .	9,487	7,905	60	.	17,062
" Hanseatic Towns	1,336	37,443	1	662	42,442
" Belgium . . .	449	12,066	1,244	.	13,699
" France	105	224	125	129	593
" Portugal . . .	100	. .	. .	. .	100
" Spain	17	. .	. .	. .	17
" Russia	3	. .	. .	. .	3
Total . .	55,035	229,918	25,720	10,121	320,834

Holland, Denmark, and the Hanseatic Towns, it will be seen, were the principal contributors. A more striking example of the influence of the legislation of one country in modifying the occupations of the people of another could not be cited, than the manner in which Sir Robert Peel's tariff revolutionized the character of Danish and Dutch farming. Before 1844 the pastures of the two countries, more especially the rich marshes of Holland, were almost exclusively devoted to dairy purposes: the abolition of the duty on live stock in that year quickly introduced a new state of things. The farmers began to breed stock, and consequently turnips and mangel-wurzel have been creeping over fields, where once the dairy-maid carried the milking-pail, as gradually as one landscape succeeds another in the Polytechnic dissolving views. We get now from both countries excellent beef, especially from Jutland, whose lowing herds used formerly to go to Hamburg—and who has not heard of the famous Hambro' beef? We may expect in time to receive still finer meat from this quarter, for the Danes have been sedulously improving their breed, and agriculturists, who saw the beasts which were sent over to the last Baker-street show, admitted that they were in every respect equal to our own short-horns. It is gratifying to note how ready the world is to follow our lead in the matter of stock-breeding. Bulls are bought up at fabulous prices by foreigners, and especially by our cousins on the other side of the Atlantic, for the purpose of raising the indigenous cattle to the British standard. An American, for instance, purchased last year, for 1000*l.*, the celebrated bull bred by Earl Ducie, though unfortunately the animal broke his neck on his passage out. Another noble specimen was secured, we have heard, for the same quarter, for 600*l.*

A considerable proportion of the pork consumed in London—a much larger proportion than people imagine—is 'town made,' or at least is the produce of the immediate suburbs. Shepherd's Bush might perhaps be termed *the* pigsty of the metropolis; for here every house has its piggery, and the air is sonorous with the grunting of porkers. Again, in those portions of the outskirts, such as Kensington, which are inhabited by Irish colonies, the Celtic population does not forget its old habits or companions, especially that all-important 'jintleman who pays the rint.' The Cockney taste for pork must have greatly fallen off during the past century and a half, for last year there were sold in Smithfield only 24,287 pigs, against 250,000 which Stow tells us were disposed of in the same market in 1698; that is not a tenth of what were eaten when the population was only 550,000! With this and the still more remarkable exception of sheep, the arrivals at Smithfield have in some degree kept pace with the increase of the population. The supply of sheep and lambs has, during the last twenty years, stood nearly still; for in 1828 there were brought to market 1,412,032, and in 1849 but 1,417,000—or only an extra four thousand for the 500,000 mouths which have been added to the metropolis between these two periods. That London has of late years abjured mutton, as our immediate ancestors appear to have done pork, the evidence of our senses denies. How then are we to explain this stagnation in the Smithfield returns? By the fact that a new channel has been found in the rapid rise of Newgate market, the great receptacle of country-killed meat brought up to town by the railways. Those who remember the place forty years ago, state that there were not then 20 salesmen, and now there are 200! This enormous development is due to steam, which bids fair to give Newgate, in the cold season at least, the lead over Smithfield. The new agent has more than quadrupled the area from which London draws its meat. Twenty years ago, 80 miles was the farthest distance from which carcases ever came; now the Great Northern and North-Western railways, during the winter months, bring hundreds of tons from as far north as Aberdeen, whilst some are fetched from Hamburgh and Ostend. Country slaughtering will in time, we have little doubt, deliver the capital from the nuisances which grow out of this horrible trade. Aberdeen is in fact becoming little else than a London abattoir. The style in which the butchers of that place dress and pack the carcases leaves nothing to be desired, and in the course of the year mountains of beef, mutton, pork, and veal arrive the night after it is slaughtered in perfect condition. According to returns obligingly forwarded to us by the different Railway Companies, we find that the following was the weight of country-killed meat by the under-mentioned lines:—

	Tons.
Eastern Counties . . .	10,398
North-Western . . .	4,602
Great Western . . .	5,200
Great Northern . . .	13,152*
South-Eastern . . .	1,035
South-Western . . .	2,000
Brighton and South Coast . .	100
	36,487

Thus no less than 36,487 tons of meat are annually 'pitched' at Newgate and Leadenhall markets. As the Scotch boats convey about 700 tons more, we have at least 37,187 tons of country-killed meat brought into London by steam, and these immense contributions are totally independent of the amount slaughtered at Smithfield, which is estimated to average weekly 1000 oxen, 3000 sheep and lambs, and 400 calves and pigs. We have given the average supply, but on some occasions the quantity is enormously increased. The Eastern Counties line, during last Christmas week, deposited at Newgate about 1000 tons of meat; and the weight sent by other companies on the same day would be proportionately large. No less than 40 wagons were waiting on one occasion to discharge their beef and mutton into the market. And what does our reader imagine may be the area in which nine-tenths of this mass of meat are sold? Just 2 rods 45 perches, having one carriage-entrance, which varies from 14 to 18 feet in width, and 4 foot-entrances, the widest of which is only 16 feet 6 inches, and the narrowest 5 feet 8 inches. No wonder that, as we are informed by more than one of the witnesses before the Smithfield Inquiry Commission, there is often not sufficient space to expose the meat for sale, and it becomes putrid in consequence. Though we have acquired the fame of being a practical people, it must be confessed that we conduct many of our every-day transactions in a blundering manner when we cannot provide commodious markets for perishable commodities, or even turn out an omnibus that can be mounted without an effort of agility and daring.

Giblett, the noted butcher, late of Bond Street, calculates that the amount of meat brought by the railways into Newgate is three times that supplied by the London carcase butchers, who annually send 52,000 oxen, 156,000 sheep, 10,400 calves, and 10,400 pigs. Taking this estimate, and applying it also to the Leadenhall market, we shall have at

	Beasts.	Sheep	Calves.	Pigs.
Newgate, meat	156,000	468,000	31,200	31,200
Leadenhall, ditto . . .	5,200	41,600	. .	. .
Live stock bro't to London	161,200	509,600	31,200	31,200
	322,188	1,630,713	101,776	127,852
Total supply of live stock and meat to London . .	483,388	2,140,393	132,976	159,052

This, we are convinced, is still below the truth, for we have not included the country-killed meat sold at Farrington and Whitechapel markets. The

* This return contains some small proportion of game, the quantity of which is not stated.

total value of this enormous supply of flesh cannot be much less than 14 millions annually.

These figures demonstrate that the falling off of sheep sold at Smithfield is solely because they now come to town in the form of mutton. It is sent to a much greater extent than beef, in consequence of its arriving in finer condition, being more easily carried, and better worth the cost of conveyance on account of the larger proportion of prime joints. Indeed, the entire carcase of the oxen is never sent, since the coarse boiling pieces would have to pay the same carriage as the picked 'roastings.' Newgate, be it remembered, is eminently a West End market, and fully two-thirds of its meat find its way to that quarter of the town. Accordingly most of the beef 'pitched' here consists of sirloins and ribs; and, in addition to whole carcases of sheep, there are numerous separate legs and saddles of mutton. This accounts for a fact that has puzzled many, namely, how London manages to get such myriads of chops. Go into any part of the metropolis, and look into the windows of the thousand eating-houses and coffee-shops in the great thoroughfares, and in every one of them there is the invariable blue dish with half-a-dozen juicy, well-trimmed chops, crowned with a sprig of parsley. To justify such a number, either four-fold the supply of sheep must come to London that we have any account of, or, in lieu of the ordinary number of vertebræ, they must possess as many as the great boa. When the prodigious store of saddles which the country spares the town have once been seen the wonder ceases. 'Sometimes I cut 100 saddles into mutton chops to supply the eating-houses,' says Banister, of Threadneedle Street.

(To be continued.)

For "The Friend."

To the Philadelphia Association of Friends for the Instruction of Poor Children.

The Managers report:

That they have continued their attention to the duties of their appointment, committees of the Board having visited the Schools twice every month, while in session. The order of the Schools, and the progress of the scholars in the branches taught them, have been generally satisfactory. The teachers appear to be interested in their duties, and to endeavour to perform them faithfully. The instruction given is necessarily of an elementary character, but there can be no doubt, that it is of great advantage to the individuals, not only in after life, but also during their school days. While at school, they are comparatively out of the way of evil associations, and we trust that they receive good impressions that may tend to counteract the evil influences to which this class of our population are peculiarly exposed. We cannot estimate the advantage that may in many instances result to the objects of our care from the instruction obtained at our Schools. Considerations like these should encourage the managers and teachers to renewed diligence and continued perseverance, and incite the members of the Association and its friends to increased liberality in contributing to the funds required for conducting the Schools. Those who are reaping the benefit of a good education, should be willing freely to contribute a portion of their spare time and means for the benefit of those whose opportunities are comparatively very limited.

We believe that the coloured people themselves appreciate the advantages furnished by our Schools, and are glad to have their children instructed there. On one occasion, a few months since, when the visiting committee were present, a coloured man came to enter two of his daughters; he stated that he was among the first who received instruction at that house, and he seemed much pleased to place his children under our care, expressing a very favourable opinion of the character of our Schools.

The same branches have been taught as heretofore, Spelling, Reading, Writing, Geography, Arithmetic, and Bible Lessons in the Infant department; and in the Girls' School, these, with the addition of Grammar and Sewing. The last we consider a very valuable and important branch of instruction.

In the Third month last, we made an addition to the library of 90 volumes, most of them of a juvenile character. Eight of these were presented to the School by the booksellers; the remainder cost 25 dollars and 31 cents. A few shoes were distributed last winter among the most needy children, at a cost of $10.12.

Since vacation, the appearance of the Schoolhouse has been much improved by painting the outside, and by other repairs, which were needed for the preservation of the building.

The assistant in the Girls' School, having resigned, another was appointed to succeed her, who entered upon her duties on the 1st of Tenth month.

Sixty-nine children have been admitted into the Infant School during the past year, making the whole number since its establishment, 1256; the number now on the list, is 113; average attendance during the year, 68.

In the Girls' School, 33 children have been admitted this year, making 653 since its establishment. There are 70 now on the list, and the average attendance has been 42.

Signed by direction, and on behalf of the Board of Managers,

CHAS. J. ALLEN, *Clerk.*

Philad., Twelfth mo. 28, 1854.

OFFICERS OF THE ASSOCIATION.

Clerk.—Edward Richie.

Treasurer.—Richard Richardson.

Managers.—Joel Cadbury, Israel H. Johnson, Thomas Lippincott, Richard Richardson, Mark Balderston, James Kite, Charles J. Allen, Benjamin H. Pitfield, Joseph S. Elkinton, Edward Sharpless, Jabez Jenkins, Jr., and Caleb Wood.

For "The Friend."

"Many are the afflictions of the righteous, but the Lord delivereth him out of them all." Some may be ready to conclude, that some of the afflictions of the righteous in this day, are of a peculiarly exercising and trying nature, and when musing on the present divided state of our once closely united Society, deep discouragements and painful anticipations pervade the mind; and under such feelings, the query is, I presume, made by not a few, What will become of our poor shattered Society? Will it be permitted by the great Head of the Church, that it shall be broken to pieces, and a people *afresh* gathered from the lo here's! and lo there's! to the same standard that our first Friends were concerned to uphold? But, is there not a danger in giving place to this suggestion? Will it not have a tendency to discourage an endeavour to bind together that which is broken, and to heal the wounds that either an unsanctified zeal or a want of true zeal may have made? May we not hope that there will be a remnant preserved over all the besetments of our unwearied enemy, who is going about, not only as a roaring lion, but as a cunning subtle serpent, seeking whom he may destroy; a remnant of humble, honest-hearted, clear-sighted, devoted servants of the Most High, who "shall see eye to eye," and be enabled to labour unitedly for the promotion of truth and righteousness in the earth? —unto whom, and to the pure standard these will be enabled to uphold, others will be gathered, and this people be again made to shine as lights in the world.

But, is it profitable to dwell much on this?—to be querying, What shall befal our beloved Society? May we not instructively remember the reply of our dear Lord, when queried of by Peter, "What shall this man do?"—"If I will that he tarry till I come, what is that to thee?—*Follow thou me?*" It has seemed to me, it will be found of the greatest importance for us to obey this injunction, "Follow thou me?" If concerned, above all things, to be found watching and waiting, eyeing the great Captain of salvation that we may be enabled to discern the pointings of his Spirit, and receive from Him ability to walk in the way he may point out, being willing to follow him into suffering and unto death, to endure the baptisms and provings, which he may see meet to introduce us into, that we may be washed from all defilements of the flesh and spirit, and made a clean-handed and pure-hearted people, prepared to be made use of as stones in his building, to the praise of the great Architect, we shall be prepared for the place allotted us in the church by the great Master Builder, who has a work and service for each.

In what way may we hope that our Society will be brought out of its lapsed condition into the state of purity and oneness that marked its early days? Can we hope for it in any other way than by the members individually being willing to be brought into this secret exercise and travail of spirit for themselves and for one another, that they may come to know the way of God more perfectly, and walk therein with a perfect heart and a willing mind? The perfect law of God would exclude not only all evil speaking, but all evil surmisings one of another, and would lead into a sincere desire for the best welfare one of another, and to seek to help, as ability might be afforded, an erring or halting brother or sister, that they might be *restored*. It would lead into individual faithfulness and devotedness to the service of Him, who would have the reign and government in our hearts, while at the same time we should be preserved from putting forth a hand unbidden for the support of the tottering ark, or, like Saul, from presuming, for want of faith and patience, to perform the service appointed to another.

"In returning and rest shall ye be saved; in quietness and in confidence shall be your strength." If a concern is maintained, by those who are sincerely desirous for the prosperity of Zion, and the advancement of the all-important work in their own hearts and in others, and that they may be found faithful in the day of account, to return unto first principles, and to confide the cause, which is dear unto them, to the Lord, whose cause it is, and *who will care for it*, these, as quietness and confidence are abode in, as patience and faithfulness are maintained, and the clothing of humility and love to God and man are experienced, will know "Jerusalem to be a quiet habitation," and that though "many are the afflictions of the righteous," yet "the Lord delivereth him out of them all; and will, I believe, have to acknowledge that "truly God is good to Israel, even to such as are of a clean heart."

First mo., 1855.

When friends out of love overvalue thee, it concerns thee not to overvalue thyself, nor take more than thy due, though they give it.

Exploration of the White Nile.

(Concluded from page 141.)

After leaving the Gazelle Lake, the course of the White Nile becomes exceedingly tortuous, and its current sluggish. Innumerable estuaries, or blind channels, which lose themselves among the reeds, perplexed the pilots, and delayed the progress of the expedition. The land of the Kyks succeeded to that of the Nuchis, which terminated about the 8th parallel of latitude. The Kyks are a race of herdsmen, who have great numbers of cattle and sheep. Dr. Knoblecher found them exceedingly shy, on account of the threats of one of their soothsayers, who had warned them against holding any intercourse with the traders. On the 22nd of December they reached the village of Angwin, where the king of the Kyks resided. The monarch received them with great kindness, and paid distinguished homage to Padre Angelo Vince, Dr. Knoblecher's companion, whom, on account of his spectacles and grey beard, he took to be a magician. South of the Kyks dwell the Elliabs, who are less timid than the other tribes, because they come less frequently into contact with the traders. In their country the White Nile divides into two branches, and here the expedition separated, each division taking a different channel.

The water was so low that the vessels stuck fast in the mud, but were relieved by the friendly natives, who dragged them through the shallows by means of long tow-ropes. For this service they were paid in glass beads. The further the vessels went into regions where intercourse with the Egyptian traders is rare, and therefore fewer outrages are perpetrated, the more friendly, confiding and unconcerned, was the behaviour of the natives.

On the 31st of December they reached the country of the Zhirs. The people came down to the water's edge to greet them, the women clapping their hands and singing a song of welcome. On the 2nd of January, 1850, Dr. Knoblecher saw in the south-east the granite mountain of Nierkanyi, which lies in the Bari country, in about the fifth degree of north latitude. It was the first elevation he had seen since passing lat. 10° 35′. All the intervening space is a vast savannah, interspersed with reedy swamps of stagnant water. The Zhirs own numerous flocks and herds, and cultivate large fields of sesami and dourra. They are very superior to the Nuchis and Kyks in stature, symmetry of form, and their manners towards strangers. Dr. Knoblecher confirmed the statement of Werne as to the modesty of their demeanour, and the evident morality of their domestic life.

After leaving the Zhirs, the expedition entered the country of the Baris, and on the 14th of January reached the rapids of the White Nile, at the island of Tsankir, in 4° 49′ N. This was the farthest point reached by all previous expeditions, as they found it impossible to advance further with their vessels. The Nubian pilot, Suleyman Abaw-Zeid, determined to make the attempt; and on the following day, aided by a strong north wind, stemmed the rapid and reached the broad lake-like expanse of river above it. Continuing his voyage, Dr. Knoblecher sailed sixteen miles further, to the Bari village of Tokiman. The country was exceedingly rich and beautiful, abounding in trees, and densely peopled. The current of the river was more rapid, its waters purer, and the air seemed to have entirely lost the depressing miasmatic exhalations of the regions further north. The inhabitants of Tokiman showed great astonishment at the sight of the vessels and their white occupants. Nothing, however, affected them so much as the tones of a harmonica, played by Dr. Knoblecher. Many of the people shed tears of delight, and the chief offered the sovereignty of his tribe in exchange for the wonderful instrument. On the 16th, the expedition reached the village of Logwek, which takes its name from a solitary granite peak, about six hundred feet high, which stands on the left bank of the Nile. It is in lat. 4° 10′ N., and this is the most southern point which has yet been reached on the White Nile. Dr. Knoblecher ascended the mountain, which commanded a view of almost the entire Bari country. Towards the south-west, the river wound round out of sight between the mountains Rego and Kidi, near which is the mountain of Kereg, containing iron mines, which are worked by the natives. Towards the south, on the very verge of the horizon, rose a long range of hills, whose forms could not be observed with exactness, owing to the great distance. Beyond the Logwaya range, which appeared in the east, dwell the Berri tribes, whose language is distinct from the Baris, and who are neighbours of the Gallas—that war-like race, whose domain extends from Abyssinia to the wilds of Mozambique, along the great central plateau of Uniamesi. The natives of Logwek knew nothing whatever of the country to the south.

The farthest mountain range was probably under the parallel of lat. 3° N., so that the White Nile has now been traced nearly to the equator. At Logwek it was about six hundred and fifty feet wide, and from five to eight feet deep, at the time of the visit, which was during the dry season. Such an abundance of water allows us to estimate, with tolerable certainty, the distance to its unknown sources, which must undoubtedly lie beyond the equator.

The great snow mountain of Kilimandjaro, discovered in 1850 by Dr. Krapf, the German missionary, on his journey inland from Membas, on the coast of Zanzibar, has been located by geographers in lat. 3° S. It is therefore most probable that the source of the White Nile will be found in the range of mountains, of which Kilimandjaro is the crowning apex.

The shortness of Dr. Knoblecher's stay among the Baris did not permit him to obtain much information concerning them. They are brave and fearless in their demeanour, yet cheerful, good-natured and affectionate towards each other. Ulerne frequently observed the men walking along the shore with their arms around each other's necks. They are even more colossal in their stature than the Shillooks, many of them reaching a height of seven feet. Their forms are well knit, symmetrical, and indicate great strength and activity. In smelting and working up the iron ore of Mount Kereg, they show a remarkable skill. Many of the spears in Dr. Knoblecher's possession are as elegantly formed, and as admirably tempered, as if they had come from the hands of a European blacksmith. They have also war clubs of ebony, which are nearly as hard and heavy as iron.

On the 17th of January the expedition left Logwek, on its return to Khartoum, the traders having procured all the ivory which the natives had collected since the previous year. The missionaries were prevented from accomplishing their object by the jealousy of the traders, who persuaded the Bari chiefs that they were magicians, and that if they were allowed to remain, they would bewitch the country, prevent the rains from falling, and destroy the crops of dourra. In consequence of these reports the chiefs and people, who had been on the most friendly terms with Dr. Knoblecher and Padre Angelo, suddenly became shy and suspicious, and refused to allow the latter to take up their residence among them. The design of the mission was thus frustrated, and the vicar returned with the expedition to Khartoum. He designed leaving for the Bari country in November, 1852, but up to the present time (1854) no account has been received of the fulfilment of his plans."

For "The Friend."

A New Year's Gift to the Aged.

"As an aged man, I would say to my fellow pilgrims who are also in this advanced stage of the journey of life, *endeavour to be useful*, as long as you are continued in this world. We are, it is true, subject to many peculiar infirmities, both of body and mind, to bear up under which requires much exertion, and no small share of divine assistance; but still we have some advantages not possessed by the young. We have received important lessons from experience, which, if they have been rightly improved, are of inestimable value. We can look back and contemplate 'all the way along which the Lord hath led us.' The lessons we have learned from thence, are like the name upon the 'white stone,' which none can read but he that hath it. The successive events of our lives we can make known, but the connection which these events have upon our character, our sins, and our prayers, can be fully understood only by ourselves. He who neglects to study the pages of this book (his past life,) deprives himself of one most important means of improvement; yet too many appear to pay little or no attention to the providence of a wise and merciful God, in relation to themselves. If they meet with some severe judgment, or some great deliverance, they are ready enough to acknowledge the dispensation; but as to the succession of ordinary events, they seem to have no practical belief in their important relation to their duty or interest. I would affectionately entreat my aged friends to make the dealings of the Lord's providence towards themselves a subject of careful reflection. How many have been his mercies towards us! I have given the exhortation to endeavour to be useful. To comply with this, we should, in the first place, guard vigilantly against those faults and foibles, into which old people are apt to fall. We must be careful not to mistake moroseness for seriousness, austerity for gravity, or discontent with our condition, for deadness to the world.

"Why should the aged be more peevish and morose than others? If they are religious, there can be no good reason for it; but it is not difficult to account for the fact. In the decline of life a gradual change takes place in our physical system, by which the mind is considerably affected; and often positive disease is added to this natural change. The nervous system is debilitated, and in consequence, the spirits are apt to sink, or to become irregular. To these may be added the afflictions and disappointments which most experience in the course of a long life, by which the temper is apt to be soured. And when men, by reason of the decline of mind and body, become disqualified for the same active services which they were long accustomed to perform, and these fall into the hands of juniors, whom they knew when children, it is natural to feel as if the world was turning round—as if everything was going wrong. Old men have always been wont to laud the times long past, when they were young, and to censure all the innovations which have come in since. But, that old age is not necessarily accompanied by these unamiable traits of character, is proved by many happy examples. Some aged persons exhibit an uniform cheerfulness and sere-

nity of mind; and in some, a naturally irritable temper has been softened and mellowed by an increase of years. And, I rejoice to know, that with many aged Christians, their religion does not decrease by their descent into the vale of years, but goes on advancing; and their growth in grace is much more evident in this period of their lives, than any other. As they approach nearer the end of their journey, their hearts and their conversation are more in heaven. Oh! that it might be thus with us all. It is truly a delightful thought, that when in the wreck of mind, the whole cargo of knowledge seems to be impaired, and much lost, and parents can scarcely recognize their own children, *religion*, where it was possessed, still remains. *Jesus Christ is never forgotten.* Pious sentiments are never obliterated. Cicero says, that he never heard of a miser forgetting the place where he had buried his treasure. What the mind prizes most is longest retained in the memory.

"It is often remarked, and justly, 'how beautiful does unaffected piety appear in youth!' But it may as truly be said, how amiable and venerable is exalted piety in old age.

"It has been said that avarice is peculiarly the sin of age: we often hear of an old, but seldom of a young miser. This may be true in regard to those who have cherished the love of the world all their lives: they will hug their treasure with a closer grasp, and their affections will be more concentrated on them, when other objects are removed; but this vice does not originate in old age, it is only the mature fruit of the seed planted in early life; and though it becomes deeply radicated in old age, it is not now so much the desire of acquiring wealth, as of holding fast what they have got. The folly of the miser who hoards his money without a thought of using it, is easily shown, and has often been ridiculed. But the truth is, that all ardent pursuit of worldly objects beyond what is necessary for the real wants of nature, might be demonstrated to be equally absurd. But whatever men of the world may do, let not Christians dishonour their holy profession by an inordinate love of the world. Especially let not the aged professor bring into doubt the sincerity of his religion, by manifesting a covetous disposition. 'Take heed,' said our glorious Redeemer, 'and beware of covetousness; for a man's life consisteth not in the abundance of the things which he possesseth.' Beware of the deceitfulness of the heart. If you indeed find in yourselves an increasing disposition to consecrate all that you have to the glory of God, and the advancement of Christ's kingdom, then it may be lawful to go on acquiring further means of usefulness. But whatever you now possess, or may hereafter acquire of this world's good, for your soul's sake, set not your affections on these perishable things. Be not proud of your wealth. Neglect not to do good and communicate. Remember you are but the stewards of what you possess, and faithfulness will be required for what is put into your hand. If you have tried the plan of parsimony lest you should lessen your estate, now try the plan of wise liberality, and see whether that saying of Christ is not verified by experience, that, 'It is more blessed to give than to receive.'

"Whether in the former periods of our lives, we have had prosperity, or have had to pass through the deep waters of affliction, it is nearly certain that in our old age we shall feel the strokes of adversity. If our friends have been preserved in life thus far, yet we know they must all die. If we have hitherto enjoyed good health, yet now we must expect to encounter pain and disease. Then, my dear friends, let us set an example of patience and cheerful resignation under the afflictions which may be laid upon us. The passive virtues are more difficult to be exercised than the active; and our Father in heaven is perhaps more honoured by quiet submission to his will under sufferings, than by the greatest achievements of zeal and exertion.

"But let us never forget that we have not the least strength in ourselves. We are dependent on the grace of God for every good thought and desire. But if we trust in him we shall never be ashamed. And there is for all such as these that hold out to the end, a home in Heaven, where there is the fulness of blessing, and life for evermore."

First mo., 1855.

For "The Friend."

Weather Statistics.

We find in a daily paper the following table compiled by Dr. Conard, from the journal kept by him at the Pennsylvania Hospital:—

"The following table shows the highest and lowest and mean temperature of each month of 1854:—

	Highest.	Lowest.	Mean.		Highest.	Lowest.	Mean.
Jan.	59	12	32¼	July	98	64	78¾
Feb.	63½	16	34¼	Aug.	96	57	75¾
March	78	21	43	Sept.	93½	47	69½
April	84	28	51¼	Oct.	80	34	58¾
May	83	36	64¾	Nov.	70	26	45½
June	96	51	71¾	Dec.	49½	6	31

The warmest day in the year was the 21st of July, when the lowest of the thermometer was 81 degrees and the highest 98. The coldest day was the 20th of December, when the lowest was 6 degrees, the highest 18½.

The temperature of the seasons, as deduced from observations for 29 years, is as follows:—

Winter months	33.19	Summer months	73.36
Spring "	51.87	Autumn "	54.61

The mean temperature of the year was 54¾, *being* 1½ degrees above the average. The mean temperature of the 29 preceding years was 53¼.

Amount of rain for each month of 1854:

January,	2.33 inches.	August,	0.84 inches.
February,	4.20 "	September,	3.80 "
March,	1.62 "	October,	1.54 "
April,	7.75 "	November,	2.84 "
May,	6.94 "	December,	2.91 "
June,	2.39 "		
July,	3.02 "	Total,	40.18 inches.

Amount of rain for each year, from 1838 to 1854:

1838,	45.29 inches.	1847,	45.09 inches.
1839,	43.73 "	1848,	35.00 "
1840,	47.40 "	1849,	42.09 "
1841,	55.50 "	1850,	54.54 "
1842,	48.53 "	1851,	35.50 "
1843,	46.91 "	1852,	45.74 "
1844,	40.17 "	1853,	40.66 "
1845,	40.00 "	1854,	40.18 "
1846,	44.38 "		

The average amount for these 17 years is 44.16 inches. The greatest amount, in 1841, 55.50 inches. The least amount, in 1848, 35.00 inches.

The greatest amount of rain which fell in any month, was, in July, 1842, 11.80 inches. The least amount was, in September, 1846, ¼ inch."

The Great Bell of Vienna.—For a birth-day excursion I, yesterday, ascended the tower of St. Stephen, which rises up to the enormous height of 439 feet. About 200 feet above the floor we reached the Cathedral bell, the largest in Germany, weighing 35,400 pounds. A small family could live conveniently under the immense structure. It is eleven feet high, and ten and a half wide. Eight men are required to ring it, and the clapper alone weighs 1,400 pounds. It was cast in 1711 by the Emperor Joseph I., from 180 Turkish cannon taken by the Austrians. At the height of 250 feet is the clock. In the room with the latter is stationed a man to watch for the breaking out of fires in the city and suburbs. He takes the angle by means of a fine telescope, and on a chart prepared for the purpose, finds the street and house. The alarm is then given. I ascended to the top of the tower, but as it inclines three feet from a perpendicular, and trembles at the slightest blow, I did not remain long at so dizzy a height.—*Correspondence of Northern Advocate.*

Thoughts for the Times.

"Can two walk together except they be agreed?"—Amos, iii. 3.

I have been fearful of latter times, lest in our zeal for the support of our christian discipline, we should lose sight of the fact, that the present difficulties in society have been in great measure produced by the dissemination and support of unsound doctrines among us.

One of the prominent means made use of to prepare the way for the introduction of unsound doctrines, has been to disparage the writings of our early Friends. In the life (lately published) of one, whose doctrinal works have given much uneasiness to Friends, he intimates in his diary, that all other writings except the Holy Scriptures, are uninspired. Now, although we admit the plenary inspiration of the latter, in which respect no other writings are to be compared with them, can we believe that Robert Barclay, whilst feeling the necessity of Divine guidance in his ministerial communications which were confined comparatively to but few individuals, would undertake to write an exposition of our principles, the benefit of which was to extend to thousands unborn, without experiencing the same Divine aid accompanying him. And is there not sufficient evidence that such help was afforded him in the fact that thousands, on reading his Apology, have found that it answered to the witness for Truth in their hearts, as face answereth to face in a glass; and many others have had the same truths opened to their understandings by the Light of Christ, before perusing it. A valued friend once remarked to me, that the writings of early Friends had to him a savour attending them, which he seldom could feel in reading those of later authors.

Numbers have been convinced by reading the Apology, and should the day arrive when it is discarded, I believe Quakerism will be but an empty shell.

Habits of the Wasp.—The subterfuges resorted to by animals in search of food have been regarded by the general reader as the most interesting and instructive portion of the works of the naturalist. An incident illustrative of the cunning of the wasp was recently related to us by an observing gentleman.

A blue wasp, known as the solitary wasp, because it lives alone in its little clay nest, was seen to hurl itself upon the strong wheel shaped web of a large spider. Here it set up a loud buzzing, like that of a fly when accidentally entangled in a similar web. The spider, watching at the door of his silken domicile, stole cautiously forth. His advance was slow, for he evidently felt that he was approaching no common enemy. The apparently desperate yet fruitless attempts of the wasp to free himself, encouraged the spider,

and lured him forward. But when within some three inches of his intended victim, the wasp suddenly freed himself from his entanglements, and darting upon the poor spider, in a moment pierced him with his deadly sting in a hundred places.

The wasp then bore his ill-gotten spoil to his lonely home. His house is built of clay, thimble shaped, and originally containing but one apartment. In the lower part of this *cul de sac* the wasp deposites its eggs. Immediately over them it draws a thin, glutinous curtain. Upon this curtain it packs away the proceeds of its hunting excursions, such as spiders, flies, and other insects which it regards as suitable food for its young. Consequently, when the young escape from the ova, they find above them a well stocked larder, and gradually eat their way through the choice depository, finally appearing to the delighted world in the agreeable form and stature of perfect wasps.—*Exeter News Letter.*

For "The Friend."

Ragged School and Home for Coloured Children.

Few persons are perhaps aware of the movement that has been made toward the permanent establishment of such an institution in this city. The Ragged School for coloured children, located for several years in Bedford street, has recently been removed to a more commodious building on Lombard street, above Seventh. There is now a daily attendance of from fifty to sixty children. The parents of many of them are of the most degraded class, inebriates and vagrants, living by begging or by stealth, and of course very unfit to provide for their offspring. The children generally make their first appearance at the school in a very untidy and destitute condition. To furnish them with suitable clothing in which to attend, is often the first duty of the teacher. A wholesome dinner is provided for each child, and thus, after being washed, clothed, warmed, fed, and instructed, they return again to their homes. A very considerable number that come under the care of the institution, are even more forlorn, being literally friendless and homeless. Several answering to this description are now lodged at the house. The school is in some degree an *industrial* one, as the older girls are taught sewing, and some of them employed in making up garments for themselves and others.

The institution is under the care of a few female Friends, who are desirous of making it as useful as the means placed at their disposal will admit. To enable them still further to extend the benefits of this excellent charity, they ask the assistance of those who feel interested in befriending this much neglected portion of our population. Contributions of provisions for the table, materials for clothing, or part worn garments, will be gratefully received by the teacher, Sarah Luciani, at the school, No. 218 Lombard street, above Seventh.

Donations in money may be sent to either of the undersigned.

THOMAS WILLIAMSON, S. W. corner Seventh and Arch streets.
M. C. COPE, 286 Filbert street.
JOSHUA L. BAILY, 153 Filbert street.

Philadelphia, Twelfth mo. 28th, 1854.

Foreigners in the United States.—According to De Bow, there are, in the United States, 961,719 persons born in Ireland, 278,675 in England, 70,550 in Scotland, 29,868 in Wales, or in Great Britain and Ireland 1,340,812—considerably more than half of the foreign born residents of the country; in France, 54,069; Prussia, 10,549; rest of Germany, 573,225; Austria, 946; Switzerland, 13,358; Norway, 12,678; Holland, 9848; Sweden, 3559; Spain, 3113; Italy, 3645; West Indies, 5772; Denmark, 1838; Belgium, 1313; Russia, 1414; Portugal, 1274; China, 758; Sandwich Islands, 588; Mexico, 13,317; South America, 1543. The number of foreigners who arrived in the United States in 1853, was 372,725; in 1854, 368,643. About 40 in every 100 Irish live in the large cities, and about 36 in the 100 Germans. 56,214 persons born in the United States, reside in Canada.

Selected.

Ah! when did wisdom covet length of days?
Or seek its bliss in pleasure, wealth, or praise?
No: wisdom views, with an indifferent eye,
All finite joys, all blessings born to die,
The soul on earth is an immortal guest,
Compell'd to starve at an unreal feast:
A spark that upwards tends by nature's force;
A stream diverted from its parent source;
A drop dissever'd from the boundless sea,
A moment parted from eternity!
A pilgrim panting for a rest to come;
An exile anxious for his native home.

H. MORE.

Selected.

I have seen
A curious child, who dwelt upon a tract
Of inland ground, applying to his ear
The convolutions of a smooth-lipped shell;
To which in silence hushed, his very soul
Listened intensely; and his countenance soon
Brightened with joy; for murmurings from within
Were heard, sonorous cadences whereby,
To his belief, the monitor expressed
Mysterious union with its native sea.
Even such a shell the Universe itself,
Is to the ear of Faith.

For "The Friend"

Safety of the Church.

Of the body of Christ, which is his church, there are many members, and to each one is assigned his office and place therein, which, being kept, there is no jarring or confusion. But when one member steppeth aside from the line of Divine appointment, by aspiring above or sinking below the pointing of duty, *then* is the door opened for the entrance of discord, to the grief of the body, which is united in the Head, from which it receiveth nourishment, and is supplied with that wisdom, which is profitable to direct in all things, whether in doing or suffering.

It is a great favour to know, and to be able to keep our places in the militant church, for this is the only way to the church triumphant. "Obedience is better than sacrifice, and to hearken than the fat of rams." The will and wisdom of the flesh cannot work the righteousness of "God," who "is a Spirit." If our allegiance is not unto Him, who is given for our lawgiver, judge, and king, we are the servants of the author of confusion, who will scatter and divide us, one from another, as sheep without a shepherd.

According to the exhortation of the apostle, "Let *all things* be done decently, and in order, endeavouring to keep the unity of the Spirit in the bond of peace," lest our house become desolate, and we left a prey to the prince of darkness, having the things that belong to our peace hid from our eyes. If we are children of the light, let us walk in the light, lest we stumble upon the dark mountains of an empty profession. How many, by losing a feeling of humble dependence upon the Source of all true wisdom and strength, have left that place of safety wherein they once moved, and spake with fear and trembling. God is the author of order and unity, and *not* of confusion and division, and as we abide in him, and he in us, we are qualified to see eye to eye, and to put shoulder to shoulder in the work, which he has appointed for us to do; but if we become vain in our imaginations, thinking ourselves to be something while we are nothing, our foolish hearts become darkened, and our hands weakened, so that we forsake our own mercies, having *not* the Spirit, which is ordained for our help.

Let us, then, remember the oneness of the hope of our calling, for in unity is our strength. Christ is not divided, neither are they that *are* in him, and they know that though Paul may plant, and Apollos may water, yet it is God that giveth the increase. These know no man after the flesh, but their union and communion is with God, and one with another, through him; so that there is no strife after lordship and dominion; but all are subject unto the Head of the church, and one unto another to the edifying of the body in love.

What a precious harmony, and how simple the means of attaining to it. But, alas! the idolatry of covetousness, and the desire to be something great in our own estimation, and that of others, are but too plainly to be seen, giving rise to the leanness of soul, which is found amongst us. The love of worldly riches, is not more evident or pernicious, than the thirst for human praise which leads into a party spirit—that root of bitterness whereby many are defiled, begetting rents and divisions.

Christ was sent as our deliverer, and upon his shoulders the government of the church *is* to rest, and woe be to him, who rebels against it, or puts forth a hand unbidden to support the ark of the testimony. He hath chosen the house of the faithful, as his servants, to confound the wisdom of the wise, and to bring to nought the works of the mighty, that his name *alone* may be exalted, and his kingdom established in righteousness. "He will not give his glory to another, nor his praise to graven images." His works *alone* can praise him, and these alone can stand. "If he build not the house, they labour in vain that build it. If he keep not the city, the watchman waketh but in vain;" so that our duty, as well as our interest, is, to hearken and obey, lest we build upon a sandy foundation a fabric to be destroyed by the wind of false doctrine, or the storm of worldly temptation,—"a house divided against itself, cannot stand."

To look toward a division in, or separation from our Society, in order to avoid the suffering, which is brought upon the church by unsound doctrines, or the baulking of its testimonies, are alternatives which will not stand the test of Truth; for we must be willing to abide with the Head of the church in his sufferings and temptations, if we expect or desire to answer the end of our high calling, and attain to the crown of righteousness, which is peace, joy, and love in the Holy Ghost.

If we are honestly engaged to examine and prove our own selves, with the desire that all our diseases might be healed, we can but see and acknowledge our shortcomings and backslidings, and the need we have of the mercy and forbearance of God, which are promised to all those who are rightly exercised in the accomplishment of his will and work in the earth. "Let him that thinketh he standeth, *take heed* lest he fall."

It is only by submitting our necks to the yoke of the cross, to the subduing of our own selfish wills, that order, unity, and harmony can be restored and maintained. "The work of righteousness is peace, and the effect thereof quietness and assurance forever."

Sure I am, it is far better to be sick, providing Christ come to my bed-side, and say courage, I am thy salvation, than to enjoy health, and never know the sweet visitations of His pure Spirit.

[The following forcible Appeal has been recently put forth by Friends in England]:—

"A Christian Appeal from the Society of Friends to their fellow-countrymen, on the present war.

"We would respectfully bespeak the serious attention of our fellow-countrymen, whilst we earnestly plead with them, on behalf of the claims of religion and humanity, in reference to the sanguinary conflict now raging in the East.

"It is, we reverently trust, in the love of Christ, and it is in the spirit of true patriotism, that we make this appeal. Our country is dear to us; we honour our Sovereign, and prize our free institutions; and we can but desire that our national policy may accord with the spirit and precepts of that Redeemer who came 'not to destroy men's lives, but to save them.' We feel it to be a solemn thing thus to stand forth as the advocates of inviolable peace; and the events which are passing around us, and the warlike spirit which meets us in every direction, have led us very seriously to review the grounds of our Christian testimony in this matter. But this review has only confirmed the conviction, which we dare not shrink from avowing, however unpopular at a crisis like the present, that all war, on whatever plea of policy or of necessity, is unlawful under the Gospel dispensation.

"It will be admitted as a truth, applicable alike to individuals and to nations, that it is only in the use of those means which are sanctioned by the law of Christ, that we can expect the Divine blessing upon our efforts. When these means are exhausted, it becomes man, as a dependent being, to commit all results unto God—a trust which will never be confounded.

"Can it then be that war, with all its attendant misery and crime, is a means the employment of which is sanctioned by Christianity? We unreservedly make our appeal to those inspired records, which, as Christians, we all profess to accept as a revelation from heaven. True it is, that in the Old Testament we find not only war, but retaliation also, permitted, and, under certain circumstances, even commanded. As regards the command, we presume that no such commission to wage war against the Lord's enemies, as that given to his chosen people formerly, is claimed, or even expected, now. And in regard to the permission, it is sufficient to say, that the provisions of the old covenant, as to the return of evil for evil, like those bearing upon the conjugal relation, are expressly contrasted by our Lord himself with his own precepts, for the purpose of showing that that which, in both these cases, was allowed to them of old time, by reason of the hardness of their hearts, is prohibited by the higher and holier morality of the new covenant. To the Gospel standard, therefore, whether exhibited by prophecy, or more fully developed by Christ himself and his Apostles, must his disciples resort for their practical guidance. In the face then of all the glorious anticipations of prophecy in regard to the peaceable reign of the Messiah, and of the deep significance of that name by which he is called 'The Prince of Peace;'—in the face of the annunciation of the heavenly host which characterised the new dispensation, as that which was to bring 'glory to God in the highest, and on earth peace, goodwill towards men;'—in the face of the express commands of our Redeemer himself, 'Love your enemies, bless them that curse you, do good to them that hate you, and pray for them that despitefully use you and persecute you;'—who will venture to say that Christianity affords any authority or justification for war?

"And not alone by precept, but by his example also, has our Lord and Saviour emphatically taught us the lesson of forgiveness, forbearance and love. How touching is his prayer for his bitterest enemies! How wondrous the forbearance of Him who said, 'Thinkest thou that I cannot now pray to my Father, and he shall presently give me more than twelve legions of angels?' What power might not He have commanded, and that not in any doubtful controversy, but in the vindication of eternal right; yet he used it not:—a forbearance, exercised not merely with a view to the accomplishment of that most precious sacrifice which he made of himself for our sins; but also, as a holy example for our imitation, of abstinence from all self-defensive violence, even in the best of causes. For, as is declared by the Apostle, who was himself 'an eye-witness' both of the majesty and the sufferings of his Lord, 'Christ also suffered for us, leaving us an example, that we should follow his steps:—who, when he was reviled, reviled not again; when he suffered, he threatened not; but committed himself to Him that judgeth righteously.'

"Now, although it may be admitted that the precepts and example of our Lord have a primary reference to the conduct of individuals, they can surely be no less binding upon a nation professing allegiance to Christ the Supreme Ruler, than upon the individuals of whom it is composed. Let us never forget the high authority of Him who hath thus showed unto man what is good. Let us never forget that the Gospel is not a transitory, but an abiding dispensation; that it is the dispensation under which we are now actually living; and that these blessed principles are among its most glorious and essential characteristics. To affirm that they are impracticable, or not to be practised, is to set at naught their supreme authority, and to put dishonour upon their divine author. To postpone their application until all shall act upon them, is, in scarcely a less degree, to deny his present authority; and involves the practical contradiction of supposing that he has prescribed a series of duties for a state of things, in which the occasion for their exercise shall have ceased to exist. It is *now*, in this still tossed and conflicted world, that the Christian is called upon to act out these lessons. It is *now* that he is bound to prove his allegiance to his divine Master; and, so far as his influence may extend, to promote the spreading of his kingdom upon the earth. That kingdom is one of righteousness and peace; and all who adopt the petition, 'Thy kingdom come,' at once confess the duty of their own present subjection to it, and pray for its universal establishment.

"With such precepts, and such an example, what have Christians to do with the moral or political standard of Greece or Rome,—nations, which, with all their brilliant qualities and intellectual refinement, knew not the gospel of Christ? Yet must it not be confessed that it is from sources such as these, that the maxims of the military code, and the prevailing ideas of glory in connexion with successful bloodshed are principally drawn? And what are the results of this heathen standard on the practice of the professed followers of the Lord Jesus? Without carrying our thoughts back to the miseries of past times, if we turn to the affecting details of the war in which our country is now engaged, and contemplate the vast amount of physical and moral suffering inflicted on the wounded and the dying, and on innocent widows and children; when we see professing Christians of one nation engaged in deadly conflict with their fellow Christians of another nation, in the presence of the infidel, and, above all, when we think of the thousands of immortal beings, believers and unbelievers, hurried into eternity, many of them, we must fear, altogether unprepared to meet the righteous judgment of God, can we believe that these things, at which even humanity shudders, bring no dishonour on the religion of Jesus, or that they are not offensive in the sight of Him whose name is Love, who 'hath made of one blood all nations of men,' and on whose authority we learn the value of a single immortal soul? Can any prospect of temporal good, either to ourselves or to others, compensate for such evils? Oh that these things were felt, not as calamities only, but as national sins! then we cannot doubt but that means would be found for their early termination.

"To the members of the government of our beloved Sovereign, in the first place, would we address our earnest but respectful appeal, imploring them to use every Christian effort for the restoration of peace. We are not insensible to the difficulties of their position in this momentous crisis, in having to deal with a powerful enemy, and at the same time, to stem the mighty torrent of martial excitement in the public mind, or to satisfy its exaggerated expectations with reference both to the war itself and to the results to be obtained by it. Yet we believe, that trust in God, combined with humbling views of our national sins and a temperate estimate of our own position, even when convinced that we have clearly the right on our side, will be found at all times, and especially in the present peculiar and critical circumstances of the country, the best preparation for obtaining peace.

"We implore our senators, now assembling in both houses of parliament for the avowed purpose of aiding the vigorous prosecution of the war, to remember that that which is morally or religiously wrong cannot be politically right; that the non-recognition of the peaceable doctrines and precepts of the gospel by the nation which is opposed to us, a nation too, intellectually and spiritually, far less enlightened than our own, constitutes no valid plea for our violation of them; and that Parliament may more truly serve the country by promoting temperate counsels and wise and conciliatory negotiation, than by urging forward a war which has already been so fearfully destructive of British life and treasure, and which threatens in its progress to involve the whole of Europe in one wide spread conflagration.

"We appeal to all who possess authority or influence, whether by their secular or their religious position, and especially to those who are looked up to as the ministers of the gospel of peace, to use that authority and influence of which they are stewards, not in stirring up the martial spirit of the nation or in nerving the arm of war, but in promoting peace on earth and good will towards men, even towards their enemies.

"We appeal as Christians to our fellow-Christians, as Englishmen to our fellow-countrymen of every class; we implore them to view their present position and duties calmly and temperately, not under the impulse of vindictive excitement, but with that practical wisdom which recognizes it as a political not less than a religious truth, that righteousness exalteth a nation, and with that far-sighted patriotism which comprehends within its scope the moral not less than the material, the future as well as the present welfare of our country, and the still more enduring interests of eternity.

"We pray the Almighty Father of the universe to breathe the spirit of reconciliation into the hearts of his contending children, British, French, Turkish and Russian, and guide them to the pro-

motion of their mutual well-being, in conforming themselves to his universal law of love.

"Given forth by a meeting representing the Society of Friends in Great Britain, held in London this 8th day of the Twelfth month, 1854, and in and on behalf thereof signed by

"ROBERT FORSTER, Clerk."

Selected.

Death of Old Humphrey.

"Most readers of this journal probably know that 'Old Humphrey' was the assumed name of a very popular writer for the public press of London—whose real name was George Mogridge. G. M. died Eleventh mo. 1st, 1854.

"The following account of his last sickness is from the pen of his widow, and will be read with interest by the many (young and old) in our country, who have been entertained and edified by the quaint but striking illustrations of truth with which his voluminous writings abound.

"After an illness of ten months, in the sixty-seventh year of his age, it has pleased God to remove from me my beloved husband, and from many others their cheerful and much valued friend, Old Humphrey. It will rejoice the hearts of many to know that in the midst of much pain, and great bodily weakness, the poor sufferer's hope, faith, and thankfulness, were undiminished; and that, like David of old, he could feelingly say, 'It is good for me that I have been afflicted.' Psalm cxix. 71. His mind, during this trying season, seemed to attain a deeper solemnity than ever; and he saw more and more the beauty of holiness; and found in the precious promises of God's holy word all that was necessary to reconcile him to the merciful dealings of his heavenly Father, and to enable him to say, 'I know, O Lord, that thy judgments are right, and that thou in faithfulness hast afflicted me.'

"A friend having alluded, in a note, to the useful writings of Old Humphrey, he remarked, 'I am a poor, weak, sinful creature; no praise is due to me; give God all the glory. If he has enabled me, in any way, to be useful to my fellow-creatures, to him be all the praise.'

"His sufferings were often very great, but not one murmuring or fretful word escaped from his lips. In a little piece that he dictated for me to copy for him, while lying in bed, he observed, 'My burden is very heavy, but God in his wisdom and goodness has laid it upon me. My furnace of trial is very hot, but a merciful Saviour is with me therein, comforting me, and sustaining me. In his faithfulness he hath not failed me, nor been unmindful of his promises. He has kept my lip from repining at his holy decrees, and my heart from rebelling against his righteous commandments.'

"I have laid myself down on my bed,
I have leaned myself back in my chair,
To get ease to my heart and my head,
If haply relief might be near.
But the cordial that makes my heart glow,
Is to trust in my Saviour alone;
And the easiest posture I know,
Is to kneel very low at his throne."

"At one time my husband remarked, 'I am never alone; I see God in the darkness, I hear his voice in the silence, he is ever present with me. His ways are often mysterious: there are many things we cannot now understand, but there is a needs-be for all our suffering; much sin in us that wants purging away; and when in glory, the contrast may heighten our bliss. Here, we are often sinning and sorrowing; but there we shall enjoy entire freedom from sin, peace and rest forever! Earth will be exchanged for heaven! Gloom for an eternal weight of glory; and pain, sickness, and sorrow, for everlasting joy. There is nothing fearful in death. What is it? 'Tis but a removal to our happy home.'

"* * * For the last two days his bodily sufferings were very great, but his faith and love were still greater; and his almost inaudible voice was employed, at intervals, in prayer and praise, and encouraging those about him to '*look upwards.*' 'We shall meet again,' he said to me, with a smile."—*S. School Journal.*

For "The Friend."

"In this world ye shall have tribulation; but be of good cheer, I have overcome the world."—John xvi. 33.

There is encouragement for true believers in Christ. To those who are partaking of varied tribulations, and at times feel pressed down in spirit by them, it may be comforting to recur to some of the precious promises which the blessed Redeemer gave to his drooping disciples; and which may be adopted by the dedicated, humble followers of Him.

In these sifting, proving times in our religious Society, it is an unspeakable blessing to realize that there is One who is able and willing to succour the afflicted, tribulated ones, who humbly look unto him, to save them from sinking into the gloomy cavern of despair, and to uphold them amid the storms of adversity; enabling them to stay their minds on Him who is the alone source of comfort that is enduring. If our trust is rightly centered in his invisible arm of power,—if we are truly pursuing the narrow path which leads to those joys that are enduring, and to a happy eternity, there will be a stay to the mind even amid the most discouraging seasons which at times attend the most faithful servants of the Most High. And what matters it to the Christian, when his pilgrimage in this life is ended, if tribulations have been somewhat his portion, if his heart has been saddened by them, and he may have felt his trials grievous and numerous?

He, by whom those sweet promises, contained in the records of holy writ, were given, for the consolation of his faithful ones, passed through trials from the unregenerate multitude, yet when reviled, he reviled not again. He set the example of humility and meekness to those who should be buffetted for his sake, and left the impressive language of encouragement to believers, "In this world ye shall have tribulation; but be of good cheer, I have overcome the world."

Maryland, First mo., 1855.

For "The Friend."

REFLECTIONS.

How important it is for those who are desiring to enter in at the "strait gate," to remember that while they retain anything in possession the Most High has manifested to them must be parted with for his sake, (however dear it may be to the possessor,) they are unworthy of his merciful regard. He does not require anything of his disciples that He will not enable them to perform, if He is rightly sought unto for aid. He is altogether pure; and those who will be permitted to partake of his consolations, must ask rightly of him, "who giveth liberally and upbraideth not," and He will enable such to lay aside the sins which do most easily beset, and to become pure.

Maryland, First month, 1855.

Flour to China.—This is a cheering feature, "California sending Flour to China," for instead of our gold leaving the country, to pay for tea, sugar and spices, silks, shawls and other necessaries and luxuries, we send the products of our soil and the labour of our hands. This is what builds up our State. Four thousand quarter sacks of California flour from the Eureka Mills, were sold recently by Friedlander & Co., at satisfactory prices, (about $9 per barrel,) to ship to China. Other shipments of like character will shortly follow; and thus, at length, California has become an exporter of breadstuffs.—*S. Francisco Herald.*

THE FRIEND.

FIRST MONTH 20, 1855.

The Friend who has kindly furnished this journal for so long a time with a monthly meteorological notice, informed us, some time since, that he expected to discontinue his contributions with the account for last month. In the press of other things, his announcement to us was overlooked, and hence our apparent neglect, in not thanking him for the favour he has conferred on our readers, and not expressing our regret that they are likely to be deprived of his continued labour. The weather tables, which have been published regularly for several years in "The Friend," are highly valued by many, perhaps most of its readers; and we hope that some one at the institution where they have been prepared, will take charge of the subject, and favour us with the usual information, commencing with the present month.

While the slaveholders at their convention in New Orleans are discussing the propriety of recommending to Congress repealing the laws for the suppression of the slave trade,, it is gratifying to know that Christian light and feeling have so far prevailed in Brazil, as to induce the government and the inhabitants generally to set their faces resolutely against the traffic. The zealots in the cause of African slavery living in the southern portion of this Republic, have none, even among what are considered the most despotic and depraved of civilized governments, to share with them, in bearing the ignominy of advocating this most atrocious, of all the schemes ever resorted to for gratifying the lust for gold.

THE SLAVE TRADE IN BRAZIL.

A very striking illustration of the complete change of opinion in Brazil on the subject of the African slave trade, is given in the communications received by the last mail.

A slaver, hoisting the colours of the United States, was driven by stress of weather into a small port, called Itapui, at the entrance of the harbour of Rio de Janeiro. The captain landed and proceeded to offer to the neighbouring planters his unhappy cargo for sale. *But not a single slave could he dispose of; and, instead of meeting with either succour or sympathy, he was denounced by the inhabitants to the local authorities.* Unluckily, he suspected what was going on, and had just time to escape before the police arrived to capture him and his ship. No advice of the vessel having touched at any other point of the Brazilian coast had reached Rio, and, it is supposed, the master had proceeded to Cuba, which he stated at Itapui was his original destination.

This evidence of a resolve not to revive the African slave trade, proceeding from the planters and agriculturists themselves, is, of course, the more encouraging and satisfactory, because it proves the complete accord which exists between the imperial government and the classes supposed to be most deeply interested in the continuation of the traffic.—*London Globe.*

SUMMARY OF EVENTS.

EUROPE.—News from England to the 30th ult.—*The War.*—The dates from Sebastopol are to the 20th, when affairs were unchanged, though the Russians claimed to be doing considerable damage to the approaches of the allies. The weather had improved, and the heavy frosts having hardened the ground, both armies were resuming their activity. The Turkish troops began to arrive from Varna on the 18th; 5000 had landed at

Eupatoria. The destination of Omar Pacha's army was kept secret, but it is thought he will invest the north side of Sebastopol. Prince Menschikoff was sick, and General Osten Sacken had taken the command of the Russian forces. Several sorties from the garrison were reported in which the Russians were repulsed. These sorties are made by small bodies of troops, for the purpose of annoying the allies, and destroying their batteries. The chief engineer who has so successfully conducted the defence of Sebastopol, is General Destieur, a Frenchman. The correspondent of the Morning Herald, after having obtained a near view of the city, says, "Sebastopol is *not* in ruins, and what is more important still, the defences are four times stronger and more vigorous than the first day we opened fire." The damage, he states, has been mainly confined to the suburbs outside the walls, a wretched quarter occupied by the poorer classes, and which has been laid nearly level with the earth. Within the walls, but few buildings had been destroyed, and all the streets which could be seen, were cleanly and in good order. Numerous bodies of soldiers were to be seen in the streets, but neither women nor children. Many formidable new redoubts and batteries have been constructed by the Russians, making the defences almost impregnable. The expedition for the building of a railroad from Balaklava to Sebastopol, is now on its way to the Crimea, in seven steamships and two sailing vessels, with all the materials required. On the 18th, the reinforcements of the allies had amounted to 18,000 men.

A high diplomatic conference was to be held at the residence of the British Minister at Vienna, on the 28th ult. The Ambassadors of England, France, Austria, Prussia, and Russia, were to be present. Prince Gortschakoff was to take part in the discussion, and the conference was to be of the most positive character.

ENGLAND.—Parliament has adjourned, the Royal assent having first been given to the bill authorizing the enlistment of foreign mercenaries. The measure is unpopular. *Liverpool.*—Cotton was in fair demand at slightly lower prices. Flour unchanged. Consols had declined to 91⅝.

FRANCE.—The Emperor's speech at the opening of the Legislative Assembly, was warlike. The land army is stated in the speech at 518,000, and 113,000 horses, with 62,000 sailors on ship-board. He asks for an additional levy of 140,000 men, and states that the revenues of the country remain undiminished. The Assembly authorized a new loan of five hundred millions of francs.

RUSSIA.—A Ukase has been published, ordaining that whoever, after a battle, shall commit acts of cruelty on the wounded, unresisting, shall suffer death. A levy of ten men to every thousand has been ordered in the Eastern half of the Empire, to be completed by the 15th of Third month.

SPAIN.—The Spanish Government declines the proposition of the British Ambassador, that Spain should proclaim the slave trade to be piracy, but it has given orders for the strict execution of the conventions already existing with England on that subject.

INDIA AND CHINA.—The overland mail has dates from Calcutta to Tenth mo. 18, and Canton, Eleventh mo. 5th. The Chinese insurgents had been defeated in several engagements. They still held Shanghai. There was much apprehension in British India of the effects of Russian movements and intrigues.

WEST INDIES.—The cholera has not yet ceased its ravages in all the islands. At St. Kitts, out of a population of 24,000, two thousand six hundred and sixty-five persons had been carried off, within a short time.

SOUTH AMERICA.—Peru continues to be distracted by internal dissensions. The Government forces, under General Moran, have been defeated by the troops under Domingo Elias. Moran was taken prisoner, and shot. Politicial commotions are also rife in New Granada. The dates from Carthagena are to Twelfth mo. 14, and confirm the total defeat of the Melo party at Bogota on the 4th ult., after an obstinate resistance. There was great loss among the Revolutionists. General Herrera was killed, and other prominent officers badly wounded. Melo and many of his leading partizans were captured. *Paraguay.*—President Lopez has ordered the American Consul, Hopkins, and all North American citizens to quit the territory of the Republic. He has also stopped all further operations of the United States Surveying Expedition. All foreign vessels of war are forbidden to enter the river Paraguay.

AUSTRALIA.—Dates from Sydney to Tenth mo. 12. The returns of gold and exports show a decrease in the yield. The revenue of the colony was in a flourishing condition. The dry weather was doing injury to the grain and fruits.

UNITED STATES.—The Mesilla Valley Territory, which the U. States purchased from Mexico, was formally taken possession of by the United States authorities on the 15th of Eleventh mo. The southern boundary of the United States possessions in that part of the continent, is in the latitude of 31 deg. 52 min.

Railroads.—The Boston Railway Times gives the number of railways in the United States as 274, having an aggregate length of 21,310 miles, which have been made at a cost of $621,316,103. Besides these works, 16,975 miles are in course of construction. The longest railway in the world, is stated to be the Illinois Central, which, with its branches, is 731 miles in length.

Loss of the U. S. Sloop of War Albany.—This vessel, which was cruising in the Gulf of Mexico, has not been heard from for the last three months. It is supposed she must have gone down in a hurricane last Tenth month, with all on board.

California.—On the 10th inst., the North Star at New York, from Aspinwall, brought 200 passengers and $1,119,623 in gold. The breakwater and wharves at Aspinwall had been badly damaged by a violent storm, which occurred about the first of the year. Several vessels and a number of lives were also lost. The Kamschatka, a Russian Privateer, armed with ten guns, and having a crew of 120 men, was lying in the port of San Francisco. The Stockton and Sonora Telegraph was nearly completed. Tobacco of very superior quality has been raised in some portions of the State.

Boston.—In the year 1840, the year the Cunard steamers commenced running, the whole amount of imports into Boston in foreign vessels was about $600,000; last year the importations in foreign vessels was $17,000,000, more than two-thirds of which came in the steamers.

New York.—The exports from New York, in the year 1854, amounted to $101,377,087, including $37,169,406 in specie. This is the largest amount of export yet reached at this port.

Pennsylvania.—The aggregate valuation of real and personal estate, as fixed by the Board of Revenue Commissioners, amounts to $531,731,304. The State tax on the same is $1,649,667. The revenue from tavern licenses amounts to $187,662.15, being an increase since the previous year, of 90,607.84. The odious license system, now in operation in the city of Philadelphia, adds largely to this item.

Philadelphia.—The direct foreign importations to this port, during 1854, amounted to $18,705,024. Of this amount $8,903,751 were for dry goods. The arrivals of vessels during the past year, at this port, were 29,001: 551 foreign, and 28,450 coastwise. Mortality last week, 186.

The result of the experiments in making gas from wood at the Philadelphia Gas Works, has been so successful as to justify operations on a large scale. In making the experiments, different kinds of wood were employed, with different results, the production of gas varying from 14,000 to 19,000 cubic feet from one cord of wood. The illuminating power of the gas is said to be fully equal to that from coal, and the cost less.

Miscellaneous.—The Austrian authorities have ordered that in future all legal proceedings before the courts in Hungary, shall be in the German language. The Magyars are to have nothing left to remind them of their lost independence.

The Mild Weather, has opened navigation again on Lake Erie, and steamers are running from Buffalo to Cleveland.

Indian Claims in Vermont.—The Caughnawaga Indians claim all that part of Vermont lying north of Otter creek, the better half and most valuable agricultural region of the State, having never ceded it away. A report on the behalf of the Legislature, which has been made and printed by a committee, proposes to pay the Indians for the lands embraced in their claim.

Sea Island Cotton in Africa.—The French colony of Algeria is likely to compete with the United States, in the production of fine Sea Island. Two years ago, ten bags were grown; last year one hundred and forty, and this year two thousand bags will be produced. This cotton so far has been sent to Havre, and the prices realized were from 58 cents to $1 per pound.

Ocean Steamers.—The average passages of the Collins, Cunard, and Bremen lines, are given as follows:

	Sailing East.	Sailing West.
Collins, average time,	11d. 6h.	12d. 2h.
Cunard, " "	11d. 14h.	13d. 15h.
Bremen, " "	13d. 19h.	15d. 11h.

The Wool Trade, is said to be unusually depressed, and prices lower than at any time since 1842.

Southern Fanaticism.—In the Commercial Convention of delegates from the Southern States, in session at New Orleans, on the 12th inst., resolutions were offered and referred, declaring the acquisition of Cuba necessary for the protection of our commerce, and the security of the Southern coast, and urging the immediate action of Congress in reference thereto. They also recommend the *repeal of the laws for the suppression of the slave trade.* Marshall, a delegate from Mississippi, read a report, declaring that everything of value had its origin in the institution of slavery, and that the institution was of Divine origin.

RECEIPTS.

Received from John Embree, Pa., $2, vol. 28; from Sl. Leeds, jr., N. J., $2, vol. 28; from E. Bundy, agt., O., for Peter Sears, $2, vol. 27; from Rachel Kearsley, Mich., $4, vols. 27 and 28; from Jos. W. Hibbs, Pa., $2, vol. 28, and $8, for Moyamensing Soup So.

INDIAN CIVILIZATION.

The committee is desirous of engaging the services of a well qualified Friend to teach the school at Tunessassah, &c. Friends, who may feel concerned to engage in that station, are requested to make early application to Joseph Elkinton, No. 377 S. Second street, or Thomas Evans, No. 180 Arch street, Philadelphia, or Ebenezer Worth, Marshalton, Chester county, Pa., or Thomas Wistar, Fox Chase, Philadelphia co., Pa.

Philad., Ninth mo. 20, 1854.

WEST-TOWN SCHOOL.

Assistant Teachers are wanted in the Boys' department of this Institution. The opportunity which this station furnishes for prosecuting their studies, free from any expense, presents a favourable opening for young persons, who wish to perfect themselves in the higher branches of learning, or to prepare for the business of Teachers. Those who wish to engage, are requested to make early application to Nathan Sharples, Concordville; Pennock Passmore, Goshenville; or Thomas Evans, or Samuel Bettle, Jr., Philadelphia.

DIED, on the 6th inst., at his residence, in this city, in the 78th year of his age, JOHN ELLIOTT; a member of Philadelphia Monthly Meeting. With respect to this dear friend, it may be truly said he was of a meek and quiet spirit. His health had been declining for several weeks, and it was evident he was preparing to meet the final change, of the near approach of which he appeared sensible, expressing a humble hope that his name would be written in the Lamb's Book of Life. He bore his sufferings with much patience and resignation, and we believe his end was peace.

—— suddenly, on the 9th inst., GEORGE VAUX BACON, in the 53d year of his age; a member of the Western District Monthly Meeting, Philadelphia.

From the London Quarterly Review.

How London is Supplied with Food.

(Continued from page 146.)

The weather preserves a most delicate balance between Newgate and Smithfield. Winter is the busy time at the former market, when meat can be carried any distance without fear of taint. As soon as summer sets in Smithfield takes its turn; for butchers then prefer to purchase live-stock, in order that they may kill them the exact moment they are required. Sometimes as many as 1200 beasts and from 12,000 to 15,000 sheep are slaughtered in hot weather on a Friday night in the neighbourhood of Smithfield for Saturday's market. Every precaution is taken on the railways to keep the meat sweet. The Eastern Counties Company provide 'peds,' or cloths cut to the shape of the carcase or joint, for the use of their customers, and somctimes it is conveyed from the north in boxes. When, in spite of care, it turns out to be tainted, the salesman to whom it is consigned calls the officer of the market, by whom it is forthwith sent to Cow Cross, and there burnt in the nacker's yard. According, however, to a competent witness—Harper—bad meat in any quantity can be disposed of in the metropolis to butchers living in low neighbourhoods, who impose it upon the poor at night. 'There is one shop, I believe,' he says, 'doing 500*l.* per week in diseased meat. This firm has a large foreign trade. The trade in diseased meat is very alarming, and anything in the shape of flesh can be sold at about 1*d.* per lb. or 8*d.* per stone.'

If the reader is not already surfeited with the mountains of meat we have piled before his eyes, let us beg his attention for a few minutes to game and poultry, which we bring on in their proper course. Leadenhall and Newgate, as all the world knows, are the great metropolitan depots for this class of food, especially the former, which receives perhaps two-thirds of the entire supply. The quantities of game and wild birds consigned to some of the large salesmen almost exceed belief. After a few successful battues in the Highlands, it is not at all unusual for one firm to receive 5000 head of game, and as many as 20,000 to 30,000 larks are often sent up to market together. All other kinds of the feathered tribe which are reputed good for food are received in proportionate abundance. If it were not for the great salesmen, many a merry dinner would be marred, for the retail poulterers would be totally incapable of executing the constant and sudden orders for the banquets which are always proceeding. The good people of the Crystal Palace have already learned to consume, besides unnumbered other items, 600 chickens daily, and from this we may guess how vast the wants of the entire metropolis. The sources from which game and poultry are derived are fewer than might be imagined. The Highlands and Yorkshire send up nearly all the grouse; and scores of noblemen, members of Parliament, and other wealthy or enthusiastic sportsmen, who are at this present moment beating over the Moors, and walking for their pleasure twenty-five miles a-day, assist to furnish this delicacy to the London public at a moderate rate.

Pheasants and partridges mainly come from Norfolk and Suffolk; snipes from the marshy lowlands of Holland, which also provides our entire supply of teal, widgeon, and other kinds of wild fowls, with the exception of those caught in the 'decoys' of Cambridgeshire and Lincolnshire. From Ostend there are annually transmitted to London 600,000 tame rabbits, which are reared for the purpose on the neighbouring sand dunes. We are indebted to Ireland for flocks of plovers, and quails are brought from Egypt and the south of Europe. In most of our poulterers' windows may be seen the long wooden boxes, with a narrow slit, in which these latter little birds are kept until required for the spit. Not long since upwards of 17,000 came to London via Liverpool, whither they had been brought from the Campagna near Rome. Of the 2,000,000 of fowls that every year find a resting-place *vis-à-vis* to boiled tongues on our London tables, by far the greatest quantity are drawn from the counties of Surrey and Sussex, where the Dorking breed is in favour. Ireland also sends much poultry. No less than 1400 tons of chickens, geese, and ducks are brought to town annually by the Great Western Railway, most of which are from the neighbourhood of Cork and Waterford, whence they are shipped to Bristol. Londoners are accustomed to see shops of late years which profess to sell 'West of England produce,' such as young pork, poultry, butter, and clouted cream. All these delicacies are brought by the Great Western Railway, and are principally the contributions of Somersetshire and Devonshire. The bulk of the geese, ducks, and turkeys, however, come from Norfolk, Cambridge, Essex, and Suffolk—four fat counties, which do much to supply the London Commissariat, the Eastern Counties Railway alone having brought thence last year 22,462 tons of fish, flesh, fowl, and good red herrings.

For pigeons we are indebted to 'our fair enemy France,' as Sir Philip Sidney calls her, but now we trust our fast friend. They proceed principally from the interior, and are shipped for our market from Boulogne and Calais. How many eggs we get from across the Channel we scarcely like to say. M'Culloch considers that the capital receives from 70 to 75 millions—a number which we think must be much below the mark, seeing that the Brighton and South Coast line brings annually 2600 tons, the produce of Belgium and France. At Bastoign, in the latter country, there is a farm of 200 acres entirely devoted to the rearing of poultry and the production of eggs for the supply of London.

No perfectly accurate account can be given of the number per annum of poultry, game, and wild birds which enter Leadenhall and Newgate markets; but the following estimate was handed to us by a dealer who turns over 100,000*l.* a year in this trade. As the list takes no account of the quantity which goes direct to the retailer, nor of the thousands sent as presents, it must fall short of the actual consumption:—

Grouse	100,000
Partridges	125,000
Pheasants	70,000
Snipes	80,000
Wild birds (mostly small)	150,000
Plovers	150,000
Quails	30,000
Larks	400,000
Widgeon	70,000
Teal	30,000
Wild ducks	200,000
Pigeons	400,000
Domestic fowls	2,000,000
Geese	100,000
Ducks	350,000
Turkeys	104,000
Hares	100,000
Rabbits	1,300,000
	5,759,000

In addition to its dead game and wild fowl, Leadenhall market is quite a Noah's ark of live animals. Geese, ducks, swans, pigeons, and cocks, bewilder you with their noise. Intermingled with these birds of a feather are hawks, ferrets, dogs and cats, moving about in their wicker cages, and almost aggravated to madness by the proximity of their prey. The major portion of the live stock is designed either for sporting purposes or for 'petting' and breeding, and do not belong to the commissariat department. Of the dead game and poultry, the seven railways bring to London about 7871 tons weight in the course of the year.

In taking leave of the poultry-yard we are reminded of the dairy, and of the large establishments required to fill the milk-jugs of London. There are at the present moment, as near as we can learn, 20,000 cows in the metropolitan and suburban dairies, some of which number 500 cows apiece. Even these gigantic establishments have been occasionally exceeded, and one individual, several years ago, possessed 1500 milkers—a fact fatal to the popular superstition, that, notwithstanding many attempts, no dairyman could ever muster more than 999. The terrible ravages of pleuro-pneumonia, which many believe to be a contagious disease, have cured the passion for such extensive herds. The larger dairies of the metropolis are on the whole admirably managed, and the cows luxuriate in airy out-houses, but the smaller owners are often confined for space, and the animals are sometimes cooped in sheds, placed in tiers one above another. The country dairy-maid laughs at the ignorance which the Londoner betrays of rural matters when on a visit to her master, but she would be perplexed in her turn if told that in the capital they fed the cows chiefly upon brewers' grains, and milked them on the *second story!* A few years since —— Rugg appalled the town, which had forgotten Matthew Bramble,

and the 'New Bath Guide,' by detailing a nauseous process which he affirmed was in use among cunning milkmen for the adulteration of their milk. There was, however, a great deal of exaggeration in the account, and Dr. Hassell, whose analyses of various articles of food in the 'Lancet' are widely known, states that the 'iron-tailed cow' is the main agent employed in the fraud, and that the only colouring matter he has been enabled to discover is annatto. Nearly all the cream goes to the West End; and one dairyman living at Islington informed us that he made 1200*l.* a-year by the trade he carried on in that single article with the fashionable part of the town. It must be evident, upon the least consideration, that the London and suburban dairies alone could not supply the metropolis. If each of the 20,000 cows give on the average 12 quarts a-day, the sum total would only be 240,000 quarts. If we suppose this quantity to be increased by the exhaustless 'iron-tailed cow' of which Dr. Hassell speaks, to 300,000 quarts, the allowance to each individual of the two millions and a quarter of population would be little more than a quarter of a pint. This is clearly below the exigencies of the tea-table, the nursery, and the kitchen, and we do not think we shall make an over estimate if we assume that half as much again is daily consumed. Here again the railway, which in some cases brings milk from as far as eighty miles, makes up the deficiency. The Eastern Counties line conveyed last year to London 3,174,179 quarts, the North-Western 144,000 quarts, the Great Western 23,400 quarts, the Brighton and South Coast 100 tons, and the Great Northern as much perhaps as the North-Western. The milk is collected from the farmers by agents in the country, who sell it to the milkmen, of whom there are 1347, to distribute it over the town. In course of time it is possible that town dairies may entirely disappear. Cow-sheds, often narrow and low, in thickly populated localities, cannot be as healthy for the animals as a purer atmosphere; and though experiment has shown that they thrive admirably when stalled, the food they get in these urban prisons can hardly be as wholsome as that provided by the verdant pastures of the farm. The milk which comes by railway has, however, this disadvantage, that it will not keep nearly so long as the indigenous produce of the metropolitan dairies. The different companies have constructed wagons lightly hung on springs, but the churning effect of sudden joltings cannot be altogether got rid of.

(To be continued.)

An Indigestible Meal.—An immense anaconda recently arrived in Boston from the neighbourhood of the Congo river, in Africa. It is said that his length is between twenty and twenty-five feet, with a girth of thirty inches in the largest part of his body. There are a few curious circumstances connected with this great reptile stranger since his arrival, which are worth chronicling. Just before leaving his native land, he took a hearty meal of a dog, and no other food was eaten by him for seven months after. About the first of October, this king of snakes arrived in Boston, and was lodged in a large case with very strong glass walls, and a double English milled blanket, folded into four thicknesses, furnished for his bed. On the 20th of November, Sears, the proprietor, thought it was full time to tempt his appetite, and therefore introduced a rabbit into his den just at evening. On viewing the interior the following morning, the blanket was missing, while the rabbit was still alive! On Wednesday, seven days after, the blanket was discharged, whole and unimpaired, after a circuitous journey through an intestinal tube of nearly one hundred and fifty feet. It may now be seen in the apartment, being six feet wide by seven in length.

Since that period he has exhibited excellent health, and has devoured a fowl. Every few days he drinks about three quarts of water, sucking it all up at once. When an animal is given for food to one of this family of serpents, it is eyed intently for an instant, and then the poor trembling creature is suddenly crushed in the huge folds of the terrible monster, the cracking of the bones being distinctly heard at quite a distance. Thus prepared for swallowing, the body is still held in a coil, which is equivalent to a hand, and kept steady, while it is gradually sucked down the throat of the animal into the stomach, where it is slowly digested. It is the opinion of Sears that when the anaconda sprang at the rabbit mentioned above, by some mistake in calculation the latter escaped, and the edge of the blanket was seized by the teeth. When these are once engaged, being for holders and not for mastication, it is quite impossible to disengage them; and hence whatever is once drawn into the mouth must necessarily go down the throat. Even the muscles of deglutition seem to act independently of volition, and urge the morsel along by strong, convulsive, peristaltic contractions.—*Boston Surg. and Med. Jour.*

For "The Friend."

Thomas Wight, of the city of Cork, was born in the year 1640. His father, Rice Wight, was minister of the town of Bandon, a zealous man in the duties of his office, and of a more tender conscience, and devoted in that respect, than the generality of the priests, and very strict in the education of his children, according to the manner of the Church of England. His son Thomas served a hard apprenticeship with a clothier in Bandon, and whilst in his service, hearing of a Quakers' meeting to be held in the neighbourhood, he went to it out of curiosity. Finding that Friends sat silent for a long time, he grew very uneasy, and began to think, that as he heard the Quakers were witches, he might become bewitched if he should stay much longer in the meeting. However he waited a short time, until Francis Howgill, then on a religious visit in these parts, stood up, and uttered these words: "Before the eye can see, it must be opened; before the ear can hear, it must be unstopped; and before the heart can understand, it must be illuminated." As Francis opened these three sentences to the congregation with great clearness and energy, his ministry made a deep impression on Thomas's mind, and he was in great measure convinced of the truth of the doctrine preached by this distinguished servant of the Lord Jesus. But the prejudices of education, and the reproach cast upon him by his relations for going to the Quakers, very much wore off the impressions received at that meeting. Some time after Edward Burrough came into these parts, to visit Friends and others in the work of the gospel, under whose powerful preaching the state of his soul was so effectually reached, accompanied with such evidence of Truth, that he, as well as many others, was no longer able to withstand it, and he now resolved, through Divine assistance, to be faithful, according to the light received, through all the difficulties that might attend him. In yielding to the requisitions of his divine Master, following him in the way of the cross and true self-denial, he became as a proverb and by-word among his relations and former acquaintance, which he bore patiently, not entering into unnecessary disputations, but rather giving himself up to silence, solitude, and reading the Holy Scriptures. From a principle of conviction in himself, he adopted in a short time the plain language and a plain apparel, upon which accounts he was rejected by his connections, and lived some time with his master, who had a great respect for him, because of his peculiar fidelity, and trustiness in his service.

He married in the year 1670, and when his family increased, he enlarged his business in the clothing trade, and in commissions from abroad, so that in a short time it appeared probable he would have acquired considerable wealth. But in the prosecution of his temporal concerns, he received a Divine intimation, that he could not be heir of two kingdoms, which brought him under serious reflection that resulted in lessening his business. He grew more retired from the world and its concerns, and devoted himself to the service and promotion of Truth, preferring it to all worldly aggrandizement. From a religious impression he undertook the duties of transcribing clerk for the meeting of Cork, and for the province of Munster; he was also chiefly concerned in compiling a historical account of the rise and spread of Truth in Ireland, through the ministry of Friends, which furnished materials for Rutty's history. He was a man of exemplary life and conversation, a pattern of plainness, a diligent attender of religious meetings, and careful in the education of his children.

He was taken ill in the Ninth month, 1724, and showed great composure of mind and resignation to the Lord's will, and testified great satisfaction that he had not deferred the work of salvation to that period, but that he had the evidence of its accomplishment sealed upon his mind, which was a great comfort to those present. He had his grandchildren called, whom in much brokenness he counselled to fear the Lord, be dutiful to their parents, and cautioned them to beware of the vain fashions, and the hurtful conversation of the world; expressing with sorrow and mourning, that there was much height and grandeur got into, and lived in, in many Friends' families. Some Friends remaining in town after the province meeting, he had them invited to his chamber, who came, and by his bedside had a solid, silent opportunity of waiting on the Lord together, which concluded in some serious conversation, and in prayer, to their mutual comfort. After which he said, "Friends, we read that Jacob said, the Lord was in this place, and I knew it not; but we can say, the Lord is here, and we know it, or are sensible of it, glory to his name forever." Growing gradually weaker, he lay in a sweet tender frame of mind, and so continued to the 9th of the Tenth month, 1724, on which day he died in the 84th year of his age. "Mark the perfect man, and behold the upright, for the end of that man is peace."

For "The Friend."

Southern Soup Society.

Having recently attended at the soup house, No. 16 Green's Court, I have thought it might not be uninteresting to the readers of "The Friend," and perhaps not without its use, to give a sketch of the scene, which was presented there.

Nearly an hour before the stated time of delivery, the door was thronged by a crowd of fifty or one hundred persons, from five or six years old to decrepid age, waiting with eager expectation the arrival of the moment when they should be admitted to receive the food, which was to allay the gnawings of hunger.

It was touching to see the anxiety with which some watched the gathering crowd of eager appli-

cants, with evident fears lest the swelling numbers should absorb the whole supply before their turn came to be served. Some struggled to wedge themselves through the dense mass nearer to the doors, while the aged and feeble, though evidently enduring the same fears, stood for an hour or more with looks of almost hopeless anxiety, yielding to the superior strength of those who pressed through, and forcibly removed them further from the entrance. Little children pushed and squeezed themselves between the larger bodies in hopes to get nearer to the door, and obtain an earlier admittance; and thus placed themselves in positions of some danger.

When the doors were opened, the violence of the rush excited apprehensions for the safety of the parties. Persuasion and commands were alike powerless for a time to restrain the eager expectants from pressing on each other, so fearful were they that all would be given out, before they were supplied. It was necessary to extricate some of the children, as they seemed in danger of being injured, and some of the aged and infirm were not a little overcome by their efforts to resist the surrounding pressure.

For nearly two hours the doors were thronged by persons waiting to be served, although five or six individuals were constantly employed in delivering the soup and bread, and marking the tickets of the recipients. In less than two hours, upwards of 700 quarts of soup, and nearly as many loaves of bread were given to the applicants.

One person, who had neither ticket nor recommendation, and according to the general rule, was not entitled to the charity, on being requested to bring a recommendation next day, and he should be supplied; remarked, with a look of earnestness, "Ah! but we shall starve by to-morrow." It is hardly necessary to add that his appeal was not in vain.

During nearly thirty years that I have been a member of this soup society, I have never before witnessed such eagerness to procure from this source the means of preventing starvation, nor so large an amount of suffering and destitution among the poor. The society expends in bread alone, about thirty dollars for each day on which it is given out; and yet large as this expenditure seems, it is the most economical mode of administering relief to the poor, as probably not less than two thousand persons are fed by that quantity of bread, and the proportionate allowance of soup.

Donations in meat, vegetables, flour, rice, &c., will be gratefully received at the house; and in money, by Jeremiah Hacker, Treasurer, No. 144 S. Fourth street, and Thomas Evans, No. 180 Arch street.

For "The Friend."

In 1783, the Meeting for Sufferings in London prepared the following paragraph as part of the preface to the book of Advices of their Yearly Meeting. 'We mourn over the departures of many among us from our holy profession, and the wickedness abounding in the world at this day,' but it would appear from it, that in those purer years of the society, as great degrees of degeneracy prevailed as at the present time. They say, "although it be our lot to live in an age of great dissipation, luxury, and profaneness, when the genuine fruits of the spirit of Christianity are so rarely seen, that everything sacred and serious seems threatened to be overwhelmed by the torrent of vice and irreligion, yet we are bowed in thankfulness to the Author of all good, in that we have abundant cause to believe there are still many, of various ranks and ages, mercifully preserved both among ourselves, and in other Christian communities, who, through faithfulness to the measure of grace, which is given to every one to profit with, have been strengthened to retain their integrity, and to hold fast the profession of their faith without wavering. Many of them, doubtless, are at times secretly mourning over the great desolations, which infidelity and immorality have made in the Christian world; nevertheless, they are comforted at seasons *in the hope of better times*, and helped to look forward with an eye of faith, and with unshaken confidence, to the gradual increase of that day, when darkness shall no longer cover the earth, nor gross darkness the hearts of the people; when the *spiritual kingdom* of Christ shall be exalted over all, and that glorious ancient prophecy shall be fulfilled, when He shall have the heathen for his inheritance, and the uttermost parts of the earth for his possession; when nation shall not lift up sword against nation, neither shall they learn war any more; and when the saving knowledge of the Lord shall cover the earth, as the waters cover the sea." Amidst the present commotions in the visible church, and in the kingdoms of the world, the Redeemer's kingdom is making its way in many hearts, and faith is given to those that it will continue to prevail, and that no power will be permitted to arrest it. Clouds may veil it from their view for seasons, to prove their faith and fidelity, but these also are dispersed, and the assurance afresh granted that his covenant with his church and people shall not be broken, but he will hear their secret cries under affliction, and grant deliverance for his name's sake, and the exaltation of his honour and his cause before men. His righteous seed are cheered from time to time with the belief, that better and brighter days are ahead, and while they are enduring afflictions, they are filling up their measure, which contributes to the spread of the spirit and principles of the gospel, and which also work for them a far more exceeding and eternal weight of glory, while they look not at the things that are seen, which are temporal, but at the things that are not seen, which are eternal.

From "Chambers's Journal."

The Great Iron Steamship.

The many thousands who pass daily up and down the Thames, have had their curiosity excited for some months past by the gigantic looking structure of iron which is gradually rising on its bank, about four miles below London Bridge. In the locality familiarly known as the Isle of Dogs, where the river suddenly takes a sweep round three-fourths of a circle, enclosing a morass of more than a mile in length and half a mile in breadth, the greater part of which is several feet below highwater mark, some of our most extensive and eminent iron ship-builders have erected their factories. It is to one of these, at the southern extremity of the peninsula, we wish to conduct our readers. The works are of great extent, and cover a large area of ground, which here, although so well suited to the operations carried on, and so close to the metropolis, is comparatively valueless for other purposes. In Scott, Russell & Co's. factory, iron ships and steamers of all sizes are being constantly constructed; and the clank of thousands of hammers riveting red-hot bolts, and the heavy booming sound of sledge and steam hammers, with the dense clouds of smoke and bursts of flame which meet the visitor as he approaches the works, must remind him, if he have any military experiences, of a fiercely-contested battle-field, whilst it indicates to all the extent and activity of the operations carried on within. The whole expanse of the interior of the factory is covered with sheets, and ribs, and bars of iron; ropes and pullies, winches and shears, railways to facilitate the conveyance of materials, and portable furnaces for heating the iron bolts, are encountered at every turn; and iron vessels, in every stage of progress—their sterns pointing towards the river—occupy the numerous building slips. But our business is with none of these; and proceeding to an inner yard, with a wide frontage towards the river, we come upon the gigantic iron steamship which is now being built for the Eastern Steam Navigation Company.

The present appearance of this leviathan, for as yet she has received no name, is as unlike that of a ship as can well be imagined. Four or five lofty walls of iron, standing some sixty feet apart, and supported by other transverse walls, would lead one to believe that here is the shell or framework of some enormous iron warehouses about to be shipped off to one of our colonies; and it requires a considerable stretch of the imagination to believe that these walls form portions of the interior of the hull of a merchant ship. At one extremity of the yard stands a flag-staff, on which a Union-jack is hoisted, which, we are told, will be her stern; and at the other extremity another, to indicate her bows; and between these two points is a space of nearly 700 feet in length! The project of building a ship of her extraordinary dimensions when first made public, created a good deal of discussion, and, we may add, ridicule. It was urged that it would be impossible to construct a ship of 675 feet in length of sufficient strength, and that the first heavy sea she encountered would break her in two; that no port or harbour would have depth of water sufficient to float her; and that no amount of steam power she could carry would propel her at an average speed. Nevertheless, the Eastern Steam Company put faith in the calculations of their engineer, Brunel; Scott Russell undertook to build her, and she is now more than half completed.

The preparation of the ground on which the leviathan ship is being constructed, was in itself a work of considerable labour and cost. An embankment of about 1000 feet in length, and 500 feet wide, was formed along the river side, by driving massive piles to a depth of 40 or 50 feet; and where the greatest weight is to be supported, along the line of the keel, the piles were driven in at intervals of five feet. The cargoes of two 600 ton ships loaded with earth were then emptied upon these piles, and rammed firmly down, so as to form a solid foundation. On this platform, which is a few feet above high-water mark, solid blocks of timber were placed at short intervals; and on these blocks, which stand about four feet high, the keel was laid, and is now carried out its full length of nearly 700 feet. The position of the ship is about forty yards from the water, and parallel to the line of the river, with her head down the stream, as it would be impossible to turn a vessel of her length without great difficulty, even on the broad bosom of the Thames. The whole of the hull, even to the upper deck, will be formed of iron plates of considerable thickness, and from her keel to about eight feet above the water line she will be double, or two perfect hulls one within the other, with an interval between them of about 36 inches. She will have ten water-tight compartments, at intervals of 60 feet; and these will be crossed by two longitudinal walls of iron, running the entire length of the ship, and again sub-dividing these compartments. While adding very materially to the strength of the hull, these longitudinal divisions will effect the further object of completely isolating and separating the coal, which will be stowed in the sides, from the furnaces, boilers and machinery, which will be

placed in the centre. The hulls are kept in their relative position to each other by longitudinal iron stringers or keelsons, at intervals of five feet; and in the event of any accident occurring to the outer covering, the inner hull will be strong enough to insure the perfect safety of the ship. The bottom is flat for a distance of 12 or 15 feet either side of the keel, which, by the way, is on a line with the outer hull, and presents no obstruction to her lying perfectly flat, and without straining, on the floor of a dock or cradle when repairs are needed. The iron plates of which her hull and compartments are formed are upwards of an inch in thickness, ten feet long, and weigh about half a ton each. The lower part of the hold will contain the machinery, boilers, stores, coal, and merchandise; while the upper part will consist of three tiers of decks for the passengers, one above the other, and running the whole length of the vessel. The lowest of these tiers will be at least six or eight feet above the water line, and the decks will be eight feet apart, affording ample space for light and ventilation—the latter being provided for by port-holes of large size, running at intervals along the sides, and which can be kept open in any weather. For greater security, there will be a strong iron deck interposed between the furnaces and machinery below and the passenger department above, thus cutting off all communication. The sleeping berths will be ranged round the sides, and there will be large saloons in the centre for each of the three decks, 60 feet in length, and of proportionate width. The upper deck, which covers all, will be flush from stem to stern. This deck, which will add very materially to the strength of the hull, will be double and slightly arched. Its construction will be cellular, like that of the tubular bridge across the Menai Strait, and it will resist any amount of strain or concussion that can possibly be applied to it.

(To be concluded.)

For "The Friend."

DIVINE WORSHIP.

In the performance of Divine and spiritual worship in spirit and in truth, we become partakers of the new covenant's dispensation, and disciples of Christ indeed, sharing with him in the spiritual worship, performed in the spirit and in truth; because as he was, so are we in this world. For the old covenant-worship had an outward glory, temple and ceremonies, and was full of outward splendour and majesty, having an outward tabernacle and altar, beautified with gold, silver and precious stones; and their sacrifices were confined to a particular place, even the outward Mount Zion; and those that prayed, were to pray with their faces towards that outward temple; and therefore all this was to be protected by an outward arm. Nor could the Jews peaceably have enjoyed it, but when they were secured from the violence of their outward enemies; and therefore, when at any time their enemies prevailed over them, their glory was darkened, and their sacrifices stopped, and the face of their worship marred: hence they complain, lament and bewail the destroying of the temple, as a loss irreparable. But Jesus Christ, the author and institutor of the new covenant-worship, testifies, that God is neither to be worshipped in this or that place, but in spirit and in truth; and forasmuch as his kingdom is not of this world, neither doth his worship consist in it, or need either the wisdom, glory, riches or splendour of this world, to beautify or adorn it; nor yet the outward power or arm of flesh, to maintain, uphold, or protect it; but it is and may be performed by those that are spiritually minded, notwithstanding all the opposition, violence, and malice of men; because being purely spiritual, it is out of the reach of natural men to interrupt or obstruct it. Even as Jesus Christ, the Author thereof did enjoy and possess his spiritual kingdom while oppressed, persecuted, and rejected of men; and as in despite of the malice and rage of the devil, "He spoiled principalities and powers, triumphing over them, and through death destroyed him that had the power of death, that is the devil;" so also all his followers both can and do worship him, not only without the arm of flesh to protect them, but even when oppressed. For their worship being spiritual, is by the power of the Spirit defended and maintained; but such worships as are carnal, and consist in carnal and outward ceremonies and observations, need a carnal and outward arm to protect and defend them, else they cannot stand and subsist. And therefore it appears, that the several worships of our opposers, both baptists and protestants are of this kind, and not the true spiritual and new covenant-worship of Christ; because, as hath been observed, they cannot stand without the protection or countenance of the outward Magistrate, neither can be performed, if there be the least opposition: for they are not in the patience of Jesus, to serve and worship him with sufferings, ignominies, calumnies and reproaches. The nature of his worship, which is performed by the operation of the Spirit, the natural man being silent, doth appear from these words of Christ, "But the hour cometh, and now is, when the true worshippers shall worship the Father in spirit and in truth: for the Father seeketh such to worship him. God is a Spirit, and they that worship him, must worship him in spirit and in truth." This testimony is the more specially to be observed, for that it is both the first, chiefest, and most ample testimony, which Christ gives us of his christian worship, as different and contra-distinguished from that under the law. For, first, he showeth that the season is now come, wherein the worship must be in spirit and in truth: for the Father seeketh such to worship him: so then it is no more a worship consisting in outward observances, to be performed by man at set times or opportunities, which he can do in his own will, and by his own natural strength: for else it would not differ in matter, but only in some circumstances from that under the law. Next, as for a reason of this worship, we need not give any other, and indeed none can give a better than that which Christ giveth, which I think should be sufficient to satisfy every Christian, to wit, "God is a Spirit, and they that worship him must worship him in spirit and in truth." As this ought to be received, because it is the words of Christ, so also it is founded upon so clear a demonstration of reason, as sufficiently evidenceth its verity. For Christ excellently argues from the analogy that ought to be betwixt the object, and the worship directed thereunto: God is a Spirit; therefore he must be worshipped in spirit. This is so certain, that it can suffer no contradiction; yea, and this analogy is so necessary to be minded, that under the law, when God instituted and appointed that ceremonial worship to the Jews, because that worship was outward, that there be an analogy, he saw it necessary to condescend to them as in a special manner, to dwell betwixt the cherubims within the tabernacle, and afterwards to make the temple of Jerusalem, in a sort, his habitation, and cause something of an outward glory and majesty to appear, causing fire from heaven to consume the sacrifices, and filling the temple with a cloud: through and by which mediums, visible to the outward eye, he manifested himself proportionably to that outward worship which he had commanded them to perform. So now, under the new covenant, He seeing meet in his heavenly wisdom to lead his children in a path more heavenly and spiritual, and in a way more easy and familiar, and also purposing to disappoint carnal and outward observations, that his may have an eye more to an inward glory and kingdom, than to an outward, he hath given us for an example hereof the appearance of his beloved Son, the Lord Jesus Christ, who, (as Moses delivered the Israelites out of their outward bondage, and by outwardly destroying their enemies,) hath delivered and doth deliver us by suffering, and dying in the hands of his enemies; thereby triumphing over the devil, and his and our inward enemies; and delivering us therefrom. He hath also instituted an inward and spiritual worship: so that God now tieth not his people to the temple of Jerusalem, nor yet unto outward ceremonies and observations; but taketh the heart of every Christian for a temple to dwell in; and there immediately appeareth, and giveth him directions how to serve him in any outward acts. Since as Christ argueth, God is a Spirit, he will now be worshipped in the spirit, where he reveals himself, and dwelleth with the contrite in heart. Now, since it is the heart of man that now is become the temple of God, in which he will be worshipped, and no more in particular outward temples, since, as blessed Stephen said, out of the prophet, to the professing Jews of old, "The Most High dwelleth not in temples made with hands," as before the glory of the Lord descended to fill the outward temple, it behoved to be purified and cleansed, and all polluted stuff removed out of it; yea, and the place for the tabernacle was overlaid with gold, the most precious and cleanest of metals; so also before God be worshipped in the inward temple of the heart, it must also be purged of its own filth, and all its own thoughts and imaginations, that so it may be fit to receive the Spirit of God, and to be actuated by it. And doth not this directly lead us to that inward silence, of which we have spoken and exactly pointed out. And further, this worship must be in truth; intimating, that this spiritual worship, thus acted, is only and properly a true worship; as being that which, for the reasons above observed, cannot be counterfeited by the enemy, nor yet performed by the hypocrite.

New Jersey.

Olive versus Lard Oil.—At a late meeting of the Farmers' Club, connected with the American Institute, Professor Mapes asserted that what "we receive as pure olive oil in the market, is nothing more nor less than the surplus lard sent by our pork merchants to France, where it is transformed into the *genuine article* of sweet oil, and returned to be used at the tables of those very persons who exported it in the solid state." This is certainly refreshing information for the lovers of pure sweet table oil among us, and is no doubt perfectly true. We venture to say that not one-tenth of the oil sold for that of the olive, in our country, is any thing else than lard oil. Any person can convert the common lard oil sold for burning in lamps, into as good sweet oil as that which is generally sold for olive oil, by the following process:—Take, say about a quart of the common oil, and place it in a clean tin pan, and set it on a stove, bring it up to about the heat of scalding water, and then add about one-quarter of an ounce of sal soda dissolved in half a teacupful of hot water. Stir this into the oil for about five minutes, then take off the vessel, and allow it to cool. When the sediment settles on the bottom of the vessel, the clear should be poured off into a clean bowl through a white

cotton cloth, to strain it. The oil obtained by this treatment is sweet and pure, excellent for oiling fine machinery, and for making perfumed oil for the hair.—*Scientific American.*

ON THE TENDERNESS DUE TO ANOTHER'S FEELINGS.

There is a plant that in its cell,
All trembling seems to stand,
And curls its stalk and folds its leaves,
From each approaching hand.
And so there is a conscious nerve,
Within the human breast,
That from the rash and careless hand,
Shrinks back again distrest.
The pressure rude, the touch severe,
Will raise within the mind,
A nameless thrill—a secret tear,
A torture undefined.
Oh! you who are by nature formed,
Each thought refined to know,
Repress the word—the glance that wakes
That trembling mind to woe.
And be it still your joy to raise,
The weak plant from the shade,
To bind the broken, and to heal
The wounds you never made.
Where'er you see a shrinking mind,
Oh! let this care begin;
And though the cell be rude or low,
Respect the guest within.

Selected.

"*Thou preparedst a table for me in the presence of mine enemies.*'—DAVID.

Oh Thou! who, bounteous to their need,
Dost all Earth's passing pilgrims feed,
Dost bid for them in every clime,
The pregnant harvest know its prime,
The flocks in verdant pastures dwell,
The corn aspire, the olive swell,
How shall we thank Thee for the care
That doth our homely needs repair?—
Thou pour'st us from the nested grove,
The minstrel-harmony of love,—
Thou giv'st us of the fruitage fair,
That summer's ardent suns prepare,
Of honey from the rock that flows,
And of the perfume of the rose,—
And of the balmy breeze that brings
Health on its light and viewless wings.
Though Care the withering brow may trace,
Or Toil the sportive smile deface,
Or dark Dejection teach distrust,
Or Sin debase the soul to dust,
Still Thou, Oh Lord, in love divine,
Forbearance dost with wisdom join,—
Still in the midst of these our foes,
Dost grant the wearied frame repose,—
And still with more than Parent's care,
Our daily banquet dost prepare. L. H. S.

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 142.)

MARTHA CHALKLEY.

Martha Betterton, who resided in the city of London, was convinced of the Truth as professed by the people called Quakers, early in life. She left behind her a paper, entitled "An account of the exercise of Martha Betterton," from which her husband has given the following extract, viz.

"As I was walking in the city of London, with a concern on my mind, in beholding the abominable pride of the people, it opened upon my mind in this wise: Wo, wo! to the crown of pride! And then I was deeply bowed in my spirit before the Lord, and it was said to me, I will yet spare a little longer. I have sheep which I will gather home to me, and there shall be one shepherd and one sheepfold. Then I said in my heart, Oh! Lord, shall I be one of the sheep belonging to thy sheepfold of eternal rest? And again it was answered me, My sheep hear my voice, and they follow me. Then a cry was raised in me, Cause me to hear thy voice; and not only so, but enable me to obey the same. And then, this charge was returned to me, Be thou faithful."

By obedience to the manifestations of truth in her mind, she grew in grace, and a gift in the ministry of life and salvation was conferred on her. Thomas Chalkley, becoming acquainted with her, had his affections strongly drawn towards her, and he says, he "entirely loved" her, "for the piety, virtue, and modesty which he beheld in her." He acquainted his father how he felt towards her, and of his desire to obtain her for his wife, and was gratified with cordial unity of his beloved parent, who said, "if thou wert worth thy weight in gold, she deserves thee." Upon laying this concern before her father, a similar feeling of unity was apparent, and he said warmly, "the Lord bless you together."

Thomas says, "The heartiness of both our fathers in this matter, was more to me than a portion of silver or gold, of which we had but very little; but our love to each other was very great, and being honourably grounded, it was not easily shaken. After having twice published our intentions before the Monthly Meeting, we had liberty of the said meeting to proceed to the solemnization of our marriage, which was accomplished at Devonshire-house in London, at a meeting appointed for that end, on the 28th day of the Seventh month, in the aforesaid year [1699], in the presence of many hundreds of people, and many worthy brethren and elders. A day of days it was to my soul! wherein I was made sensible of the love and goodness of God in a particular manner which to me was an earnest of our future well doing. My dear wife was one who truly loved and feared God, and had an excellent gift of the ministry given unto her, and was serviceable therein."

In the year 1700, under a sense of religious duty, Thomas and Martha Chalkley removed to America. On the passage they were in imminent danger of being shipwrecked on the Goodwin sands, the cable parting, by which the best bower anchor was lost, and the vessel driving towards apparent destruction, dragging three anchors with her. Whilst in the extremity of the peril, the passengers being assembled in the cabin, a concern came upon Martha, and in the language of her husband, "she prayed to God, the Father, in the living power and sense of his Son; and he heard from his holy habitation, and answered the prayer: for immediately the wind abated, and our anchors held us. This was a great deliverance, which is not to be forgotten."

They had a stormy passage of about eight weeks, to Chesapeake Bay, where they landed, and proceeding to Herring bay, remained there during the winter. In the following spring, they removed to Pennsylvania, and settled near the city of Philadelphia. Thomas, in a few months, left her, being called to visit, in the service of his divine Master, the Island of Barbadoes. He sailed on the 20th of the Ninth month, and did not return until the ensuing Second month. Of her labour during the year 1701, we have no account, and it is probable that during her husband's absence, she carried on some little business for a support. This she had done in London during the short period which elapsed between their marriage and removal to America.

Soon after her husband's return from Barbadoes, they went into Maryland together, and held at Patapsco a meeting, which Thomas reported to the Meeting of Ministers and Elders to have been the "largest of world's people" that he ever was at in America. All the vestry-men were present, and great openness manifest. Martha was now in a situation more readily to leave home, and during the year 1702, we find her attending many meetings around Philadelphia, and in the Ninth month, with a certificate from her meeting, visiting Friends of Chester county, in company with Mary Lawson. Their concern embraced Salem, in New Jersey; but on their return, after reporting a comfortable time in their labours in Chester county, they add, that they had been unable to obtain a passage across the Delaware, so as to reach Salem. In the early part of 1703, although her husband was again away from her on religious service, leaving her in charge of the children and servants, we find various traces of her religious labours, confined however to such meetings as she could attend and return to her own home at night. Such also may be said of her travels during the years 1704 and 1705. In the year 1706, she paid a religious visit to New England, and in 1708, to Maryland. This last labour was performed whilst her husband was abroad on a religious service. After this, her path of duty appears to have been confined to the neighbourhood of Philadelphia.

Her husband, who had been from her on religious service for about three years, returned home, in the Seventh month, 1710. Early in 1711, they removed to Maryland, where they resided for some months. She attended the Yearly Meeting in Philadelphia, in the Seventh month of that year, in which "she was so wonderfully carried forth in her ministry by Divine grace, that divers of her friends believed she was near her end." She signified in her ministry something to the effect, "that she should not live to see another Yearly Meeting;" and so it came to pass.

Soon after her return to Maryland, she was taken with the disease which occasioned her death. Many had been her trials through life. She had had five children, all of whom she had seen laid in the silent grave, before they had attained their third year, and now in her extreme suffering, she felt as if she longed to flee away, and be at rest in the kingdom of everlasting blessedness. Her husband, desirous of having her in a more healthy situation, or in hope of obtaining better medical advice for her, was anxious to get her to Philadelphia. She was carried to Chester, in a litter, where remaining for rest at the house of David and Grace Lloyd, she became so feeble, as to be confined there for several months. These hospitable friends treated her and her husband with great kindness, during the period of their painful sojourn, under their roof, and on her recruiting somewhat in strength, accompanied them to Philadelphia. At Philadelphia, she remained all that winter, in great suffering, and feeling that death tarried long, she was engaged to cry mightily to the Lord that he would come and take her to himself. This appeared to be her only desire; her labour in the church was accomplished, and death seemed the only remaining service called for from her. So, longing for her dissolution, and waiting on the Lord for his good pleasure in ordering it, she passed the few days allotted her, until the time of her release came. Her death took place early in 1712. She was then about thirty-five years old.

Her husband thus writes concerning her. "As we had lived together in great love and unity, being very affectionate one to another; so being now left alone, I was very solitary, and sometimes sorrowful, and broken into many tears, in the sense of my loss and lonesomeness. My dear wife was a virtuous young woman, and one who truly feared God, and loved his dear Son, from whom she had received a good gift in the ministry, and was serviceable to many therein." "Her body

was carried to the meeting-house in Philadelphia, and buried in Friends' burying-ground, being accompanied by many hundreds of our friends, in a solemn manner; and my heart was greatly broken in consideration of my great loss; and being left alone, as to wife and children, I many times deeply mourned, though I well know my loss was her's, and their gain."

(To be continued.)

From "The Leisure Hour."

Insect Curiosities.

Among the many marvels which are continually before our eyes, there are few more worthy of observation, or which more forcibly illustrate the condescending wisdom and beneficence of the great Maker of all thing, than the wonderful instincts, if instincts they are to be called, implanted in the minutest creatures, to enable them to provide for their hourly wants, and to secure the welfare of their progeny, which, in the case of insects, for the most part come into existence after the death of the parent. We demur somewhat at the word "instinct," because, from occasional observation of the doings of these little creatures, and from what we have read of the observations of others, persons of very good authority, we feel inclined to question the appropriateness of the term. It is our object at present to bring together a few of the characteristic performances of the insect race, some of which have passed under our own notice, while for others we are indebted to the writings of a celebrated naturalist, Rymer Jones, from whose second volume on the "Natural History of Animals," we shall make a few abbreviated selections. We shall confine our instances to the facts which we have personally observed, and to others already recorded but not generally known.

The most casual observer must have remarked at times, in field or garden, upon the leaf of an oak, or some fruit-bearing tree, a brownish patch of a downy texture, looking not very unlike a mole on the human skin. Did he ever imagine that this was a moth's-nest? "Several kinds of moths," says Rymer Jones, "construct very beautiful and curious nests, impervious to wet, and entirely composed of hair stripped from their own bodies. With this material, which they tear off by means of their pincer-like ovipositor, they first form a soft couch on the surface of some leaf; they then place upon it, successively, layers of eggs, and surround them with a similar downy coating; afterwards, when the whole number is deposited, they cover the surface with a roof of hairs, the disposition of which cannot be too much admired: those used for the interior of the nest are scattered without order, but those that are placed externally are arranged with as much art and skill as the thatch of a cottage, and as effectually keep out water; one layer of these hairs partially overlaps another, and, all having the same direction, the whole resembles a well-brushed piece of shaggy cloth or fur. When the mother has finished this labour, which often occupies her for twenty-four hours, and sometimes for even twice that period, her body, which before was extremely hairy, is rendered almost wholly naked; she has stripped herself to clothe her offspring, and having performed this last duty of her life, she dies."

Many have seen the chrysalis of the butterfly hanging by its tail to a leaf of the hawthorn or a rose-bush, without perhaps considering how the caterpillar accomplished the business of suspending himself by the tail by means of silk spun from his mouth while encased in a skin which must be cast off before the process is finished. Let us see how he sets about it. "When the caterpillar has selected an object to which it proposes suspending itself, the first process is to spin upon it a little hillock of silk, consisting of loosely interwoven threads; it then bends its body so as to insinuate the anal pair of prolegs amongst these threads, in which the little crotchets which surround them become so strongly entangled as to support its weight with ease. It now hangs perpendicularly from its silken support, with its head downwards. In this position it often remains for twenty-four hours, at intervals alternately contracting and dilating itself. At length the skin is seen to split on the back, near the head, and a portion of the pupa appears, which, by repeated swellings, acts like a wedge, and rapidly extends the slit towards the tail. By the continuance of these alternate contractions and dilatations of the conical pupa, the skin of the caterpillar is at last collected in folds near the tail, like a stocking which we roll upon the ankle before withdrawing it from the foot. But now comes the important operation. The pupa being much shorter than the caterpillar, is yet at some distance from the silken hillock upon which it is to be fastened; it is supported merely by the unsplit terminal portion of the latter's skin. How shall it disengage itself from this remnant of its case, and be suspended in the air while it climbs up to its place? Without arms or legs to support itself, the anxious spectator expects to see it fall to the earth. His fears, however, are vain; the supple segments of the pupa's abdomen serve in the place of arms. Between two of these, as with a pair of pincers, it seizes on a portion of the skin, and bending its body once more, entirely extricates its tail from it. It is now wholly out of the skin, against one side of which it is supported, but yet at some distance from the leaf. The next step is to climb up to the required height. For this purpose it repeats the same ingenious manœuvre: making its cast-off skin serve as a sort of ladder, it successively, with different segments, seizes a higher and a higher portion, until in the end it reaches the summit, where, with its tail, it feels for the silken threads which are to support it. But how can the tail be fastened to them? This difficulty has been provided against by Creative Wisdom. The tail of the pupa is furnished with numerous little hooks pointing in different directions, and some of these hooks are sure to fasten themselves upon the silk the moment the tail is thrust amongst it. Its labours are now nearly completed; but one more exertion remains: it seems to have as great an antipathy to its cast-off skin as one of us would when newly clothed, after a long imprisonment, to the filthy prison-garments we had put off. It will not suffer this memento of its former state to remain near it, and it is therefore no sooner suspended in security than it endeavours to make it fall. For this end, it seizes with its tail the threads to which the skin is fastened, and then very rapidly whirls itself round, often not fewer than twenty times. By this manœuvre it generally succeeds in breaking them, and the skin falls down. Sometimes, however, the first attempt fails: in that case, after a moment's rest, it makes a second, twirling itself in an opposite direction; and this is rarely unsuccessful. Yet now and then it is forced to repeat its whirling not less than four or five times; and Réaumur has seen instances where the feet of the skin were so firmly hooked that, after many fruitless efforts, the pupa, as if in despair, gave up the task and suffered it to remain. After these exertions, it hangs the remainder of its existence in this state, until the butterfly is disclosed."

Some larvæ, in an equally ingenious manner, suspend themselves horizontally, by means of a girth of silk wound many times round their bodies. Others, the leaf-rolling caterpillars, roll up a portion of a leaf of a plant in the form of a cylinder, in the interior of which they spin their cocoons and pass their pupa condition. The work is managed thus: the little labourer first begins by spinning silken threads, which it fastens to the edge of the leaf by one end, whilst the other is attached to a distant part of the leaf's surface; she then pulls at these cables one after another with her feet, so as at each effort to bend the edge of the leaf a little inwards, in which position she fastens it by means of additional threads. This operation is repeated again and again; and as the ropes are thus progressively shortened, the leaf becomes gradually folded more and more, until at length it is bent into a roll, and securely tied in that position by innumerable silken filaments of sufficient strength to resist the resiliency of the material employed.

The above instances of ingenuity, which, were it necessary, we might multiply a hundredfold, show the insect providing for its self-preservation, or for the preservation of its offspring. Let us glance as briefly at the singular measures which some of them adopt, and the management they display in procuring food. The ant-lion, which in its perfect state closely resembles the dragon-fly, is in its larvæ condition more like a spider in the shape of its body: it has a small head, a very moveable neck, and jaws like a strong pair of callipers, toothed along their inner margin. This creature will feed only on such game as he catches himself; nevertheless, he is unable to hunt even the slowest-paced insects, for not only are his movements excessively tardy, but, from the construction of his legs, he is only able to move backwards. But as he cannot go in quest of his prey, it must come to him—so he employs a stratagem by the effect of which the game positively falls into his jaws. Selecting a sandy soil, and choosing a situation beneath the shelter of some wall or tree, so as to be protected as much as possible from rain, the ant-lion proceeds to excavate a pit, which he accomplishes by throwing out the sand with his long jaws, walking backwards round and round until a deep conical excavation is formed in the loose sand, at the bottom of which he buries himself, remaining quietly concealed, with the exception of his jaws, which are kept half open and ready for action. No sooner does a thoughtless insect approach the fatal pitfall, than the loose sides giving way beneath its feet, the unfortunate traveller is precipitated to the bottom of the ant-lion's den, and falls at once into the jaws of its destroyer. The insect sometimes perceives the danger, and tries to lay hold of the grains of sand at the border of the dreadful gulf: some yield beneath its feet, and it sinks lower and lower still; at last, with desperate efforts, it succeeds in getting hold of some piece of earth more stable than the rest, whereby it holds, or even attempts to regain the top of the dangerous steep; but the bandit has still a resource to enable him to secure his escaping prey; with the top of his flattened head, which he uses as a shovel, he throws up a deluge of sand, which, falling in showers upon the miserable victim, already exhausted with its futile efforts, soon brings it to the bottom, there to become an easy prey to the ruthless savage.

It is interesting and amusing at times to watch the motions of a working bee in its busy pursuit after the two things which constitute its treasures, the pollen and the honey. The visit which it pays to each flower is of very short duration, and, according to our experience, it invariably helps itself to pollen first, and to honey, if there be any, which is not always the case, afterwards. Honey, indeed, in the proper sense of the word, it does not get at

all from the flowers; but it sucks a sweet fluid, which is afterwards elaborated into honey in its own stomach, and thence regurgitated into the waxen cells of the hive: we may add, moreover, that the bee does not collect the wax, as some suppose—the wax being nothing more than a secretion from its own body, a provision of nature for the exigencies of its architecture. The bee appears to sweep the pollen together, making besoms of its hairy hind-legs, and then in a manner to dredge it into certain small receptacles on the outward surface of its thighs. This is not always a silent process, but is mostly accompanied with a subdued hum, while the performer straddles and fidgets about, sweeping the whole calyx of the flower by no means in a neat and cleanly fashion, and leaving a portion for the next comer. The sucking process, however—by which it is to be supposed he pumps the sweet fluid which is to become honey, into his stomach—is always one of profound stillness, and it is to be hoped of enjoyment as well. It happens sometimes that the industrious and thirsty gentleman is balked, after having secured the pollen, in his attempts to get at the delicious nectar; but if he is perplexed, it is but for a moment: if he cannot get at it one way, he tries another. Look at him engaged with a larkspur in full bloom. There is but little pollen, or bee-bread, to be got from this flower, and he has soon done with the open blossom; but the larkspur wears a long and slightly curling horn in the rear, which sticks out like an old gentleman's pigtail in a picture; and in that, at the very extremity of it, is the fluid which Master Bee is in search of. To reach it at the natural opening is out of the question. The orifice would not admit the smallest pin's head, and the tube is two-thirds of an inch long. What does he do? He quietly crawls round to the end of the tube, and by means of some apparatus with which a kind Providence has furnished him, drills a small hole in the extremity of it, inserts his pumping engine, and drains the vessel dry. We are not aware that this curious circumstance has been remarked before; but we have watched the operation many times in our own garden. Upon plucking the flowers thus rifled, and examining them, we found the holes neatly drilled, the soft fibre of the flower being removed in the operation, the hole being clean, without jagged edges, and not larger than would be made by the puncture of a shirt-maker's needle. Any person who is sceptical as to the object of the bee in this proceeding, may, by biting off the ends of a few of these larkspur tubes, taste very perceptibly the saccharine matter which attracts him. Is this also an instinct?

(To be continued.)

For "The Friend."

We suppose there are few who are not at times exposed to the liability of having their feelings shocked with hearing oaths or imprecations uttered by the irreligious and profane. Those who live in cities can hardly walk the streets without being struck with the profanity that is manifested by numbers whom they pass, both adults and children, exciting fearful apprehensions of their moral depravity, and the direful consequences in which it must result if unchecked and unrepented.

The following remarks upon swearing, both of the kind alluded to, and of judicial oaths, are from the "Providence Daily Post," and are offered for insertion in "The Friend," as a gratifying evidence that Friends' testimony against oaths continues to attract the attention and secure the approbation of some not in membership with them.

"Swear Not at All."

Among all the schemes of religious, moral and social reform so zealously advocated at the present day, it is surprising that so little attention should be directed to the sin of swearing. We do not mean what is so singularly called "profane swearing." That is freely condemned from the pulpit, universally regarded as irreligious and immoral, and, however prevalent, the practice is always denounced as ungentlemanly and indecent. Its prevalence is indeed deplorable, the more, perhaps, from being so generally considered a vice—a venial offence against society—rather than a heinous crime in the sight of God. No denunciation against it can be too forcible, no attempt to eradicate it but will meet with approval. The people who shall have purged their language of the disgusting profanities now in common use, will have made a long stride toward a better civilization than has yet been attained. Something has already been gained, no doubt. Much, very much, remains to be done, at least in American society. Not only our religious teachers, but our men of letters and our leaders of fashion must join in the work. The sickly attempts at swearing which pass for wit in the fashionable drawing room, are more disgusting than the loud-mouthed oaths which salute our ears at the street corner. Every agency that can be employed is needed. The hope may be indulged that in the progress of education and refinement, with the rapid increase of religious influences among our growing population, this sad evil will gradually disappear. All would gladly hail the day, and if it seem too nearly to resemble the dawning of the millenium for us to anticipate with sanguine faith, it may yet be cherished as one of those possibilities of human perfection worth striving for, though never attained.

We wish to speak of another description of swearing, what is known as a "legal oath." Remembering the Christian rule, the heavenly command, "Swear not at all," how can it be reconciled with the requirements of law and the practice of courts? It is a question which we will not answer, although a reply satisfactory to many honest minds may readily be given. Whether it can properly be so reconciled, is for every man's conscience to decide. Certainly the Society of Friends owe much of the respect always entertained toward them to their rigid persistence in refusing to take an oath. If we admit, however, that an oath may be taken without violating the requirements of religion, there is still a grave question which is worthy of discussion, and of more serious reflection than it generally receives. The oaths which are administered by law may be right; are they necessary, are they useful, or rather, can they not safely and even advantageously be dispensed with? Every one acknowledges that these are pertinent inquiries, but how few have given to them a moment's investigation, or if called upon for an answer, could give it otherwise than from habit or tradition?

Those who are accustomed to meet the subjects that concern society in a different spirit, should be able to furnish a more satisfactory reply. Because an oath has in past ages been the best security against falsehood, it is not certain that it still continues so. We have removed the Bible from our court rooms, we have shorn the oath of its solemnity, and the most careless observer cannot fail to notice that nearly all to whom it is administered, however truthful and conscientious they may be, regard it only as a legal formality. This is often painfully evident. Men call down upon themselves the vengeance of One who abhors lying, with a heedlessness, a flippancy, fearfully inconsistent with the imprecation they utter. It may well be doubted if, once in a thousand instances, a listener would feel convinced that the oath of a witness had given an added sanctity to his words, or any pledge of his truthfulness. For we must remember that any one who chooses can in our courts decline to take the obligation of an oath. Whoever fears the consequences of a violated oath, has only to make his affirmation, invoking the penalties of the law instead of the wrath of Heaven. It is very often done, and by men who would not be prevented by conscientious scruples from taking on oath, if it were necessary. There is no distinction between evidence under oath and that upon simple affirmation. The law makes none, nor does common sense. We form our judgments of a witness's veracity not from the form of engagement to tell the truth, which he may have chosen, but from his language, his bearing and his character. Why then have any distinction in these forms, why publicly invoke the future punishment, which every one who knows the obligation of an oath is conscious will be surely visited upon him, if guilty of falsehood? These and other considerations will be suggested to any who are inclined to examine this grave subject. We think it demands a careful examination. It should have a special interest in connection with the crime of perjury, a crime, we are sorry to say, so prevalent as to need urgent efforts to stay its fearful course.

Hydrostatic Machine.—A powerful hydrostatic machine, for raising heavy brick and stone buildings, has been in full operation the past week in elevating the banking-house of James King. The principle of its operation is very simple. It consists of a number of perpendicular cylinders, about seven inches in diameter, each fitted with a piston, forced upward by the pressure of water. A small copper tube connects with each cylinder, and also with a powerful forcing pump, by means of which an equal pressure is exerted upon all the pistons. With this machine two men can exert a power sufficient to raise 75,000 tons.—*California paper.*

"To live contented, in a moderate estate, we must never consider those that have more, but those that have less than ourselves."

THE FRIEND.

FIRST MONTH 27, 1855.

Our readers will, we doubt not, be interested in the short account in the columns of the present number, of a scene at a soup-house. Those who are in attendance at these houses, are obliged daily to witness such evidences of want and suffering. There is a much larger number of the poorer classes out of employment this winter than in ordinary times, and many who never before were unable to provide for the comfortable subsistence of themselves and families, are now out of work; and having parted with much of the furniture of their dwellings, and the clothing indispensible for comfort, in order to buy the necessaries of life for those who are dear to them, are obliged to resort to the public bounty to keep off starvation.

A liberal spirit has been manifested by very many who have the means to give, and there is a great deal doing for the relief of the poor in a variety of ways; we trust none will grow weary of well doing in this respect, but continue their efforts to meet the emergency, and in the end they will have their reward.

SUMMARY OF EVENTS.

EUROPE.—News from England to the 6th inst.—*The War.*—On the 28th ult., the Austrian, French, and

English plenipotentiaries met at Vienna, and signed a declaration of the exact and precise terms which their Governments all attach to the "four points." The Austrian Minister then carried this document to an apartment, where the Russian Ambassador, Prince Gortschakoff, was waiting in company with the representatives of Prussia. In their presence the Austrian Minister communicated to Gortschakoff these propositions of the allied powers, and asked him whether he was prepared to accept them, without modification or reserve. He replied that his instructions did not go so far, and requested a delay of fourteen days to obtain instructions from St. Petersburg, which was granted. Hostilities will continue in the mean time. In the terms proposed by the allies, there is said to be no mention of the razing of Sebastopol, or a reduction of the Russian fleet in the Black sea. The dates from the Crimea are to the 28th. It is stated that the allies have now 300 guns ready to open their fire upon Sebastopol, and that after 48 hours' bombardment they will make an attempt to storm on the southern side. Menschikoff's despatch of the 26th states that nothing of moment had occurred between the 20th and 26th, except two sorties, in one of which 11 officers and 33 soldiers were taken prisoners, and a considerable number killed. General Canrobert's despatch of the 22d states that notwithstanding the bad weather, the siege works continue, the French and English co-operating kindly. Scarcely a night passes without some part of the French lines being attacked by sorties. Eight thousand French troops had arrived at the camp between the 13th and 20th, and others were at Constantinople.

ENGLAND.—The London Times urges the immediate removal of Lord Raglan from the command of the British forces, on the ground of incompetency.

The Queen has written an autograph letter sympathising with the wounded soldiers.

The returns of the Board of Trade for the month, show a decrease in the exports of nearly two millions sterling. Morewood and Roger, extensive iron merchants, have failed for upwards of 180,000 pounds sterling. The Liverpool cotton market was without material change. Flour, 43*s.* to 45*s.*

FRANCE.—The subscription to the new loan opened on the 2d inst., with favourable prospects. Considerable sums were received from England. The accounts from the industrial districts, are satisfactory.

SWITZERLAND.—A treaty with the United States had been laid before the Federal Counsel for its ratification. Application had been made to the same body for permission to enlist Swiss troops for the English service.

AUSTRIA.—The cession of the Austrian railways to a French capitalist, for two hundred millions of francs, had been concluded on the 1st inst.

PRUSSIA.—The Prussian Government has issued a notice calling attention to the law forbidding Prussians to enlist in foreign service.

ITALY.—A labour riot had broken out at Carara, and the city had been placed in a state of siege.

RUSSIA.—An Imperial manifesto was issued on the 26th, calling on the nation to make every sacrifice for the war. Additional revenue was to be raised on salt and tobacco. The export of furs from Poland had been forbidden.

UNITED STATES.—*Congress.*—The Pacific Railroad bill has been under consideration in the House of Representatives, and various plans proposed for the accomplishment of this great work, have been discussed. It does not, however, appear probable that any measure will be matured, and receive the sanction of Congress at the present session. Memorials have been presented to both Houses, signed by more than fourteen thousand of the surviving officers and soldiers of the war of 1812, setting forth the inadequacy of the pension laws, and demanding further grants from Congress. On the 18th, a message was received from the President, transmitting a communication from the Secretary of War, in relation to the hostilities of the Indians on our western borders. It represents that vigorous measures and more men will be required at once to protect the overland emigrants to California, and settlers along the route. For this purpose, it is proposed to call out 3000 volunteers, mounted men. The message was referred to the Committee on Military Affairs.

California.—The steamship Northern Light arrived at New York on the 14th, with 227 passengers and $533,000 in gold. The California news was to 23d ult. The committee appointed by the railroad meeting at San Francisco, decided that a stage route, across the plains, was the most practicable means for securing a speedy completion of the railroad. The State Legislature will be called upon to make an appropriation for the purpose.

New Orleans.—The firm of Shutz, Hadden & Latting, the heaviest produce house of the city, has failed. Two cotton houses have also failed with liabilities amounting to $2,500,000. These houses are said to have assets exceeding their debts. The most reliable estimate of the present cotton crop is, that it will not exceed three million bales.

New York.—The new Mayor insists that all the places at which intoxicating drinks are sold, shall be closed on the first day of the week. His course in this respect meets with general approval. There is much distress among the poor this winter, and many thousands of operatives of all kinds are still without employment.

Philadelphia.—Mortality last week, 151. The receipts of the Philadelphia and Reading Railroad Company for the year 1854, are stated in the annual report at $3,781,639.91, the expenses at $1,641,219.94, and the net profits of the year at $2,140,426.97. The capital and debts of the road now amount to $18,464,114, which will have to be still further increased, in order to meet the continually expanding demands of the coal trade. The receipts of the Schuylkill Navigation Company the last year, amounted to $798,157.91, and the current expenses, to $295,366.32.

Miscellaneous.—Spain and Cuba.—In the sitting of the Spanish Cortes on the 19th ult., the Minister of Foreign Affairs declared emphatically, that the sale of the island of Cuba would be the sale of Spanish honour itself, and that the Government would never consent to it. These sentiments were warmly applauded, and responded to by an unanimous vote of the Cortes.

U. S. Minister to Spain.—Soulé has been recalled at his own request, and J. C. Breckenridge, of Kentucky, has been appointed to succeed him.

Rapid Travelling.—On the 1st inst., an aeronaut, named Green, left New Orleans in a balloon, and in three hours and a half afterwards landed safely in East Feliciana, La., one hundred and ninety miles from New Orleans.

Georgia Gold.—A rich gold mine is stated to have been discovered in Hart county. The ore yields from $10 to $20 per bushel.

Mormons in Michigan.—There are 4971 Mormons in this State, most of whom are on Beaver Island.

The Rum Trade.—In consequence of the distillation of grain having been prohibited in France and Belgium, large orders are run have been sent from those countries to the United States. Every packet ship, from New York for France and Germany, now carries out all the rum which can be had in the market as part of her cargo. It is stated that the distilleries, all through the country, have orders for months ahead at prices, which yield them great profits. Large quantities of molasses have been bought up for shipment, from the United States to France.

Cigars.—Surprising as the statement may seem, it is asserted as a fact, that more money is annually spent in the United States for cigars, than is expended for the common schools of the Union.

Seamen.—For the first time in five years, there is a surplus of seamen in the port of New York.

The Czar's Views of the Contest.—A manifesto issued by Nicholas on the 26th ult., in which he makes a strong appeal to the patriotism and devotion of his subjects, contains the following passages, "Beholding with humble gratitude toward God, the toils, the bravery, the self-denial of our forces, both by land and sea, and also the generous outburst of devotion that animates all ranks of the empire, we venture to recognize therein the pledge and augury of a happier future. Penetrated by our duty as a Christian, we cannot desire a prolonged effusion of blood, and certainly we shall not repulse any offers and conditions of peace that are compatible with the dignity of our empire, and the interests of our well beloved subjects."

RECEIPTS.

Received from G. Michener, agt., O., for Jos. Talbott, $2, vol. 27; from A. Garretson, agt., O., for Jas. Gibbons, $2, to 20, vol. 29; from Z. Hampton, Io., for Jos. Embree, $2, to 14, vol. 28; from Chas. Perry, agt., R. I., for Mary Hazard, $8.20, to 52, vol. 28, for Si. Sheffield, $8.50, to 52, vol. 28, for S. Green, $2, vol. 28, for Nathl. S. Babcock, $2, vol. 28; from John King, agt., N. Y., for Mary Mix, $2, to 20, vol. 29, and $2, for B. Friend; from Benj. Ball, per Jos. Cox, $1.32.

WEST-TOWN SCHOOL.

Assistant Teachers are wanted in the Boys' department of this Institution. The opportunity which this station furnishes for prosecuting their studies, free from any expense, presents a favourable opening for young persons, who wish to perfect themselves in the higher branches of learning, or to prepare for the business of Teachers. Those who wish to engage, are requested to make early application to Nathan Sharpless, Concordville; Pennock Passmore, Goshenville; or Thomas Evans, or Samuel Bettle, Jr., Philadelphia.

Bible Association of Friends in America.

DEPOSITORY NO. 50 N. FOURTH STREET, UP STAIRS, PHILA.

At a recent meeting of the Managers of the Bible Association of Friends in America, it was agreed that the prices of the Bibles and Testaments should be reduced, and that the prices agreed on be the same wholesale or retail, viz.

PRICES OF BIBLES AND TESTAMENTS.

INDIAN CIVILIZATION.

The committee is desirous of engaging the services of a well qualified Friend to teach the school at Tunessassah, &c. Friends, who may feel concerned to engage in that station, are requested to make early application to Joseph Elkinton, No. 377 S. Second street, or Thomas Evans, No. 180 Arch street, Philadelphia, or Ebenezer Worth, Marshalton, Chester county, Pa., or Thomas Wistar, Fox Chase, Philadelphia co., Pa.

Philad., Ninth mo. 20, 1854.

DIED, at Skaneateles, Onondaga county, State of New York, on the 24th of Ninth month last, after a protracted illness, JACOB GRIFFEN; a member and minister of the Society of Friends, in the sixty-seventh year of his age. This dear Friend had, for many years, lived an exemplary life, and been strongly attached to the doctrines and testimonies of the Gospel, as unfolded by the Spirit to our forefathers in the Truth, and to the faithful in our Society to the present day; believing that the truths of the Gospel, like their divine Author, were ever the same. He said but little during his sickness, upon religious subjects, except occasionally to express his anxiety for the prosperity of the Truth, and his grief for the wasting and desolation in the gardea of the Lord, and sometimes to remark that he saw nothing in his way; but his example was more than words, and his surviving friends have the consoling and unshaken belief, that his purified spirit has entered into everlasting rest.

——, at the residence of his son Exum Bundy, in Linn co., Iowa, of lingering illness, on the 1st of Tenth month last, THOMAS BUNDY, in the 77th year of his age, he being on a visit in this land. This aged Friend, for some years past, resigned his interest in the cares, accumulations, and concerns of this world. He lived a peaceful, innocent life; in a full belief in the doctrines, the precepts, and testimonies of our religious Society. During his sickness, he appeared quiet and resigned; said he felt nothing in his way, and has left a consoling belief in the mind of his friends, that he has entered those mansions prepared for the righteous of all generations.

——, on the 13th inst., in Camden, N. J., ISABEL STEWARD, in the 83d year of her age; a member of the Monthly Meeting of Friends of Philadelphia, for the Southern District.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXVIII. SEVENTH-DAY, SECOND MONTH 3, 1855. NO. 21.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 50 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

From the London Quarterly Review.

How London is Supplied with Food.

(Continued from page 154.)

Of the vegetables and fruit that are brought into the various markets of the capital, but especially to Covent Garden, a very large quantity is grown in the immediate neighbourhood. From whatever quarter the railway traveller approaches London, he perceives that the cultivation of the land gradually heightens, until he arrives at those suburban residences which form the advanced guards of the metropolis. The fields give place to hedgeless gardens, in which, to use a phrase of Washington Irving, 'the furrows seem finished rather with the pencil than the plough.' Acre after acre flashes with hand-glasses, streaks of verdure are ruled in close parallel lines across the soil with mathematical precision, interspersed here and there with patches as sharp cut at the edges as though they were pieces of green baize—these are the far-famed market-gardens. They are principally situated in the long level tracts of land that must once have been overflowed by the Thames—such as the flat alluvial soil known as the Jerusalem Level, extending between London Bridge and Greenwich—and the grounds about Fulham, Battersea, Chelsea, Putney, and Brentford. Cuthill, who is perhaps the best authority on this subject, estimates that there are 12,000 acres under cultivation for the supply of vegetables and 5000 for fruit-trees. This seems an insufficient area for the supply of so many mouths, but manure and active spade husbandry compensate for lack of space. By these agencies four and sometimes five crops are extracted from the land in the course of the year. The old-fashioned farmer, accustomed to the restrictions of old-fashioned leases, would stare at such a statement, and ask how long it would last. But his surprise would be still greater at being told that after every clearance the ground is deeply trenched, and its powers restored with a load of manure to every thirty square feet of ground. This is the secret of the splendid return, and it could be effected nowhere but in the neighbourhood of such cities as London, where the produce of the fertilizer is sufficiently great to keep down its price. And here we have a striking example of town and country reciprocation. The same wagon that in the morning brings a load of cabbages, is seen returning a few hours later filled with dung. An exact balance as far as it goes is thus kept up, and the manure, instead of remaining to fester among human beings, is carted away to make vegetables. What a pity we cannot extend the system, and turn the whole sewerage by drain-pipes entirely into the rural districts, to feed the land, instead of allowing it, as we do, to run into the Thames, and pollute the water to be used in our dwellings.

The care and attention bestowed by the market gardeners is incredible to those who have not witnessed it; every inch of ground is taken advantage of—cultivation runs between the fruit-trees; storming parties of cabbages and cauliflowers swarm up to the very trunks of apple-trees; raspberry-bushes are surrounded and cut off by young seedlings. If you see an acre of celery growing in ridges, be sure that, on a narrow inspection, you will find long files of young peas picking their way along the furrows. Everything flourishes here except weeds, and you may go over a 150-acre piece of ground without discovering a single one. Quality, even more than quantity, is attended to by the best growers; and they nurse their plants as they would children. The visitor will sometimes see 'the heads' of an acre of cauliflowers one by one folded up in their own leaves as carefully as an anxious wife wraps up an asthmatic husband on a November night; and if rain should fall, attendants run to cover them up, as quickly as they cover up the zoological specimens at the Crystal Palace when the 'watering-pots are set to work.

Insects and blight are also banished as strictly as from the court of Oberon. To such a pitch is vigilance carried, that, according to a writer in 'Household Words,' blight and fungi are searched after with a microscope, wood-lice exterminated by bantams dressed in socks to prevent too much scratching, and other destructive insects despatched by the aid of batches of toads, purchased at the rate of six shillings a dozen!

The continued extension of London is, however, rapidly encroaching upon all the old market-gardens, and they are obliged to move farther afield: thus high cultivation, like a green fairy-ring, is gradually widening and enlarging its circle round the metropolis. The coarser kinds of vegetables are but sparingly grown in these valuable grounds, but come up in large quantities from all parts of the country; and some of the choice kinds are now reared far away in Devonshire and Cornwall, where they are favoured by the climate. It would be interesting to get an authentic statement of the acreage dedicated to fruit and vegetables for the London market, but we find the information unattainable. Cuthill calculates that there are 200 acres employed around the metropolis in the growth of strawberries, and 5 acres planted as mushroom-beds. Cucumbers were once very largely cultivated. He has seen as many as 14 acres under hand-glasses in a single domain, and has known 200,000 gherkins cut in a morning for the pickle-merchants. Strangely enough, they have refused to grow well around London ever since the outbreak of the potato disease. The disastrous epidemic of 1849, we have little doubt, had much to do with the diminished supply, for the cholera soon brought about the result desired by —— Gamp, 'when cowcumbers is three for twopence,' prices quite explanatory of the indisposition of the land to produce them. The very high state of cultivation in the metropolitan market-garden necessitates the employment of a large amount of labour; and it is supposed that no less than 35,000 persons are engaged in the service of filling the vegetable and dessert-dishes of the metropolis. This estimate leaves out those in the provinces and on the continent, which would, we doubt not, nearly double the calculation, and show a troop of men and women as large as the allied army now acting in the East. There are five marts in London devoted to the sale of fruit—Covent-Garden, Spitalfields, the Borough, Farringdon, and Portman markets—besides a vast number of street offsets, such as Clare-market, in which hawkers generally stand with their barrows. Covent-Garden is not only their type, but it does nearly as much business as all of them put together, and for that reason we shall dwell upon it to the exclusion of the others.

At the first dawn of morning in the midst of squalid London, sweet country odours greet the early-riser, and cool orchards and green strawberry slopes seem ever present to the mind.

'Bright volumes of vapour through Lothbury glide,
And a river flows on through the vale of Cheapside.'

If those who seek pleasure in gaiety have never visited the market in its prime, let them journey thither some summer morning, and note how fresh will seem the air, and how full of life the people, after the languid waltz in Grosvenor-square. The central alley of the 'Garden,' as it is called by the costermongers, is one of the prettiest lounges in town; and, whether by chance or design, it exhibits, in its arrangement from east to west, a complete march of the seasons. At the western entrance the visitor is greeted with the breath of flowers; and there they show in smiling banks piled upon the stalls, or sorted with frilled edges into ladies' bouquets. As he proceeds, he comes upon the more delicate spring vegetables—pink shafts of the oriental-looking rhubarb, delicate cos lettuce, &c.; still further along the arcade, the plate-glass windows on either side display delicate fruits, done up in dainty boxes, and set off with tinted paper shreds. Behind these windows also might be seen those rarities which it is the pride of the London market-gardeners to provide, and in producing which they all struggle to steal the longest march upon time—a sieve-full of early potatoes, each as small and costly as the egg of a Cochin-China fowl—a basin-full of peas, at a guinea a pint—a cucumber marked 5s., and strawberries 18s. the ounce.

The market-gardeners of Penzance are beginning to send up many of these early vegetables, the mildness of the south-western extremity of Cornwall giving them a wonderful advantage over every other part of the kingdom. Gentlemen's gardeners also contribute somewhat, by sending to the salesmen such of the produce of their glazed houses as is not consumed in the family, and receive articles in return of which they happen to have an insufficient quantity themselves. These forced vegetables give way, it is true, as the season advances; but when in, they are always most to be found at that end of the walk nearest the rising sun. As the year proceeds, the lustier and

more natural fruits are displayed—peaches that have ripened with blushing cheek to the wind, gigantic strawberries, raspberries, nectarines, or blooming plums. Feathery pines add their mellow hue; and when these fail, the colour deepens into amber piles of oranges, umber filberts, and the rich brown of Spanish chestnuts, the produce of the waning year.

To leave, however, our fancied procession of the seasons, and to return to the actual business of the market. As early as two o'clock in the morning, a person looking down the dip of Piccadilly will perceive the first influx of the daily supply of vegetables and fruits to Covent-Garden market: wagons of cabbages, built up and regularly faced, with the art rather of the mason than the market-gardener; light spring-vans fragrant with strawberries; and milk-white loads of turnips which slowly roll along the great western road, and bring the produce of the fertile alluvial shores of the Thames to the great West End mart. The pedestrain proceeding along the southern and eastern roads sees the like stream of vegetable food quietly converging to the same spot. From this hour, especially upon a Saturday morning, until nine o'clock, the scene of the market itself is of the most exciting description.

(To be continued.)

London, Fifth mo., 1854.

It may seem to some a very little thing I am about to speak of, yet to me it is not; when anything we read or hear strikes at the precious life, it seems not of small moment; let me query, Why need we copy even in *this* little thing after the world? "Come out from among them, and be ye separate, saith the Lord," (2d Cor. vi. 17,) was in the beginning, and continues to be, I believe, a command extended to us, as a people: if we want our speech and language to bewray us, let us keep to that we profess; even of being followers of a meek and crucified Saviour.

"Father" and "mother" is the language of the Bible; it was the language of our holy pattern himself; it was the language of our early Friends; why should we depart from it?

Ah! this "day of refinement," what will it not lead some of us into? though we may be saying as Peter did, when Jesus showed his disciples how that he "must suffer many things," "Be it far from thee, Lord: this shall not be unto thee." But remember, "he turned and said unto Peter, Get thee behind me, Satan; thou art an offence unto me: for thou savourest not the things that be of God, but those that be of men." Then said Jesus unto his disciples, "If any man will come after me, let him deny himself, and take up his cross, and follow me."

Nothing short of following in simplicity a meek and crucified Saviour, will preserve to us as a people, that "*life* which is hid with Christ in God."—Col. iii. 3.

Chester Co., First mo., 1855.

For "The Friend."

DIVINE WORSHIP.

Having largely shown in preceding essays, that no one can be a disciple of Christ, or a follower of the Lamb of God, but by submitting to the cross, and steadily walking in the path of self-denial; I feel a tender solicitude of mind, that Friends everywhere, when they assemble together to perform worship to God; may be weighty in spirit, watching unto prayer; keeping to the life, which the enemy cannot counterfeit, because he is out of it. As the right performance of Divine worship is a subject of great importance, it is very desirable that Friends, old and young, should become more fully acquainted with this solemn act of duty. I hope the views of our early Friends on this subject may prove salutary and beneficial to the readers of "The Friend."

"The ground of our worship, and how it cometh to pass that we cannot conform to the spirit of this world, or the will of men therein, but only to the Spirit and will of our God, is, because we fear God, who made heaven and earth, whose power is over all, who hath caused the light of his holy Spirit to shine in our hearts, thereby teaching us how to worship him acceptably in spirit and in truth; which worship he hath required of us, that we meet together so to do in those assemblies, which he hath gathered by his power, and ordereth by his Spirit, either in silence or sound of words, according to his pleasure. And God, who hath appointed us thus to worship him, willeth not that we should deny the truth and way of worship, which he hath taught us. Yea, if we should deny this way of worship, we should deny Christ, and be denied by him before his Father in heaven. For he himself hath said, that neither at the mountain of Samaria, nor at Jerusalem, should men worship; but they that worship the Father, must worship him in spirit and in truth. Now men cannot worship in spirit and in truth as they please, or in the ways of their own inventing and setting up; but he that worshippeth in spirit and truth, must first be made spiritual, and then must wait in silence of the flesh for God's Spirit, to quicken him unto spiritual worship. For they that worship otherwise than thus, worship at best, but after the oldness of the letter, and not in the newness of the Spirit, which is the only worship God seeketh, and requireth under the New Testament. Besides, we have found God's presence with us, and blessing upon us, in this way of worship; and our hearts greatly melted and warmed therein, and power given us over our passions and corruptions inwardly, and to order our lives and conversations holily, righteously and innocently outwardly: which presence of God and holy power over sin and vanity, affections and lusts, we would not lose for ten thousand worlds."—*Penington.*

"Our work then and worship is, when we meet together, for every one to watch and wait upon God in themselves, and to be gathered from all visibles thereunto. And as every one is thus stated, they come to find the good arise over the evil, and the pure over the impure, in which God reveals himself, and draweth near to every individual, and so he is in the midst in the general, whereby each not only partakes of the particular refreshment and strength, which comes from the good in himself, but is a sharer in the whole body, as being a living member of the body, having a joint fellowship and communion with all. And as this worship is steadfastly preached and kept to, it becomes easy, though it be very hard at first to the natural man, whose roving imaginations and running worldly desires are not so easily brought to silence. And therefore, the Lord oftentimes, when any turn towards him, and have true desires thus to wait upon him, and find great difficulty through the unstayedness of their minds, doth in condescension and compassion cause his power to break forth in a more strong and powerful manner. And when the mind sinks down, and waits for the appearance of life, and that the power of darkness in the soul wrestles and works against it, then the good Seed, as it ariseth, will be found to work as physic in the soul, especially if such a weak one be in the assembly of divers others in whom the life is arisen in greater dominion, and through the contrary workings of the power of darkness, there will be found an inward striving in the soul. And from this inward travail, while the darkness seeks to obscure the light, and the light breaks through the darkness, which it always will do, if the soul gives not its strength to the darkness, there will be such a painful travail found in the soul, that will even work upon the outward man, so that oftentimes, through the working thereof, the body will be greatly shaken, and many groans, sighs and tears, even as the pangs of a woman in travail, will lay hold upon it; yea, and this not only as to one, but when the enemy, who, when the children of God assemble together, is not wanting to be present, to see if he can let their comfort, hath prevailed in any measure in a whole meeting, and strongly worketh against it, by spreading and propagating his dark power, and by drawing out the minds of such as are met from the life in them, as they come to be sensible of this power of his that works against them, and to wrestle with it by the armour of light, sometimes the power of God will break forth into a whole meeting, and there will be such an inward travail, while each is seeking to overcome the evil in themselves, that by the strong contrary workings of these opposite powers, like the going of two contrary tides, every individual will be strongly exercised as in a day of battle, and thereby trembling and a motion of body will be upon most, if not upon all, which, as the power of truth prevails, will from pangs and groans, end with a sweet sound of thanksgiving and praise. And from this the name of Quakers, that is, Tremblers, was first reproachfully cast upon us; which, though it be none of our choosing, yet in this respect we are not ashamed of it, but have rather reason to rejoice therefor, even that we are sensible of this power that hath oftentimes laid hold of our adversaries, and made them yield unto us, and join with us and confess to the truth, before they had any distinct knowledge of our doctrines, so that sometimes many at one meeting have been thus convinced: and this power would sometimes also reach to and wonderfully work even in little children, to the admiration and astonishment of many. Many are the blessed experiences which I could relate of this silence and manner of worship; yet I do not so much commend and speak of silence, as if we had bound ourselves by any law to exclude praying or preaching, or tied ourselves thereunto; not at all: for as our worship consisteth not in words, so neither in silence, as silence; but in a holy dependence of the mind upon God: from which dependence silence necessarily follows in the first place, until words can be brought forth, which are from God's Spirit; and God *is* not wanting to move in his children to bring forth words of exhortation or prayer, when it is needful; so that of the many gatherings and meetings of such as are convinced of the truth, there is scarce any in whom God raiseth not up some or other to minister to his brethren; and there are few meetings that are altogether silent. For when many are met together in this one life and name, it doth most naturally and frequently excite them to pray to and praise God, and stir up one another by mutual exhortation and instructions; yet we judge it needful there be in the first place some time of silence, during which every one may be gathered inward to the word and gift of grace, from which he that ministereth may receive strength to bring forth what he ministereth; and they that hear may have a sense to discern betwixt the precious and the vile, and not to hurry into the exercise of these things so soon, as other Christians do."—*Barclay.*

New Jersey.

From "Chambers's Journal."

The Great Iron Steamship.

(Concluded from page 156.)

The principle on which the ship is being constructed, is one which is now recognized among all practical and scientific men—namely, that the strength of iron depends upon the plates being placed at right angles to each other; and the whole framework of the hull has been arranged with a view to this object. Internally, it is a combination of iron walls—ten running transversely, two intersecting these longitudinally, and four crossing horizontally. All the walls are strengthened still further at the junctions by solid angle-irons; and the whole of this cellular arrangement is enclosed in a double iron-casing or hull, which gives the enormous mass perfect rigidity, and a strength which, we are assured, equals what it would be if formed of solid iron. The plates, although numbered by thousands, are all cut out, in the first instance, by means of wooden models in the moulding-loft; each of them has its peculiar list or inclination and shape, with the number of holes to be punched; and each of them, as it leaves the rolling-mill, where it is gauged to the sixteenth-part of an inch, has a particular letter and number marked legibly upon it; and by means of this name, which the plate ever afterwards retains, the workmen, on its arrival, know at once its position in the vast pile, and it proceeds straight to its destination.

We now come to the machinery by which the vessel is to be propelled. She will be furnished both with paddle-wheels and a screw—the former, of a nominal power of 1000 horses; the latter, of 1600 horses; but, practically, the combined power may be estimated at 3000 horses. The paddle-wheel machinery is now being constructed in the same building-yard, in which a shed had to be built for the purpose of fitting and erecting the engines. The four cylinders in which the piston are to work are the largest in the world, and the castings the largest that have ever been attempted in one piece. For each cylinder, about thirty-five tons of melted metal was required; and when the dressing and clearing of superfluous metal was accomplished, they weighed twenty-eight tons each. Of these unwieldy masses of iron, three have been already successfully cast, and without a flaw. For the castings, an enormous iron cofferdam was constructed in the foundry to a depth of 25 feet; and after the mould had been properly prepared, into this the contents of several caldrons of molten metal were simultaneously poured, and the casting made. Some idea of their great size may be formed when we state, that lying on their sides on the ground, a man with his hat on may walk through without touching the upper side; and that a table and seats, calculated to accommodate eighteen persons, were laid in one of them. The engines, when erected and put together, will be upwards of 50 feet in height. The machinery for the screw-propeller is being made by —— Watts of the Soho Foundry, and will be of similar gigantic proportions. To set in motion this powerful machinery, there will be twenty vast furnaces and as many boilers, the smoke and waste steam of which will be carried off by five funnels. The boilers and furnaces will occupy five of the central sixty-feet compartments of which we have already spoken, and the engines will be placed in two others. The weight of the entire machinery will be about 3000 tons, and of the hull 10,000 tons—making 13,000 tons. She will carry, in addition, several thousand tons of coal and merchandise, 1000 first-class, and 600 second-class passengers, and her measurement capacity gives her something like 25,000 tons burden! Notwithstanding her enormous dimensions, her draught of water will be comparatively small—not exceeding 20 feet when light, and 30 feet when fully loaded. When afloat, she will present an appearance very different from that of any merchant-ship yet built. She will carry five or six masts and five funnels, and will resemble a huge three-decker, like the *Duke of Wellington*, only that she will be nearly three times the *Duke's* length. The three decks appropriated to passengers will rise, tier above tier, to a height of 35 feet out of the water; and the rows of port holes will, at a little distance, present the appearance of a formidable battery of heavy artillery. At present about half of her hull has been completed: she will be ready for launching next year, and will be sent into the water, broadside in, upon two enormous ways. Her cost will be upwards of £400,000.

One of the great features in this gigantic undertaking is, that the vessel will carry coal for the whole voyage out and home; and the quantity required may be guessed at when we state that her voyage will be round the world. The great cost of coal has hitherto been the obstacle to the profitable employment of steam-ships on long sea-voyages. Coal will be put on board this leviathan at about 10s. per ton, while the cost of this necessary article at the Cape of Good Hope and Australia varies from £2 10s. to £5 per ton, to say nothing of the impracticability at times of procuring a sufficient supply at any price, and the loss occasioned by the delay in coaling, and the risk to the vessel. It is this which has hitherto prevented the ordinary class of steam-ships from competing successfully with sailing-vessels in the Australian trade; and at the present moment there are only two steam-ships trading between England and Australia. Clipper-built ships can run the whole way from England to Port Philip without stopping, unless short of water, or compelled to touch at some port from some other emergency. Another important object which the company expect to achieve by the construction of this large ship is, that they will obtain a speed far superior to that of any vessel now afloat. At the recent meeting of the British Association in Liverpool, Scott Russell demonstrated that length was one of the essentials of speed; and he believes that it will be as easy to propel this vessel at eighteen or twenty miles an hour, as one of the ordinary size and dimensions at twelve miles an hour. Up to a recent period, our naval and mercantile ships were built with round bluff duck's-breast bows; and when any attempt was made to propel them at great speed, they heaped up a mound of water before them, which no power of sails or steam could drive the vessel through at a rapid rate; in fact, the greater the attempted speed, and the more powerful the machinery, the greater was the resistance. At length the idea suggested itself, of making the water lines of the ship correspond with the waves of the sea, by means of which she should gently and gradually divide the particles; instead of convex, therefore, fine hollow lines were substituted; and the broadest part of the ship was gradually removed from near the bows to within a third of the stern. This form, which completely reverses the old model, has within the last twenty years been universally recognized and adopted in Europe and America; but it is by no means new. The old London wherries were built on this principle; the Indian boats, which are the finest of their class in the world, and the Turkish caiques, were all constructed with fine lines; and Scott Russell has reduced the form and speed to mathematical principles and calculation. Entering-lines, 24 feet long, will give a speed, under ordinary circumstances, of 8 miles an hour; to obtain 16 miles an hour, the entrance-lines must be 100 feet long; and to accomplish a speed of 24 miles an hour, the ship must be upwards of 400 feet in length. This is the secret of the speed of the *Himalaya* steamship, which has the greatest speed, with the smallest expenditure of steam-power, of any vessel of her class; and this will be the secret of the success of our leviathan steamship.

As she now lies on the river's bank, she is apparently one of the most unwieldy-looking, misshapen masses to which the term 'ship' could be applied. On the water, she will present the appearance and form of the finest and fastest clipper, and will cut through the water with comparatively little resistance. If any of our readers will take the trouble to mark off upon a sheet of paper a length of seven inches and three-quarters, and at a distance of about three inches from one end intersect it by a line of nearly an inch in length, and then form a triangle from this intersecting line to the furthest end, they will have a very good idea of the length and fineness of the entering-lines of the leviathan. Her actual measurements are 675 feet long, 83 feet feet wide at her greatest breadth of beam, and 60 feet deep in the hold. She will touch at no port between this and Australia—is expected to make the voyage in thirty days—and return by Cape Horn in thirty days more; thus making the circuit of the globe in two months! Although she will carry masts and sails, it is not anticipated that the latter will be found of much service, as at her ordinary speed of eighteen or twenty miles an hour, she will be in the unpleasant predicament of always having the wind in her teeth. Another of her qualifications, which probably was not dreamed of at the time she was ordered to be constructed, is, that in consequence of her great speed, extreme sharpness, and the solid substantial manner in which she has been built, she will prove, without carrying an ounce of gunpowder, or a single warlike weapon on board, one of the most formidable engines of destruction ever devised. The most powerful three-decker that ever floated would be cut in two, and broken up like an eggshell, if the leviathan, with her tremendous 'weight of metal,' of some twenty-five or thirty thousand tons, her sharp wedge-like bows, and a speed of twenty miles an hour, were to run full tilt at her while lying like a helpless log on the water; and so firmly will she be bound and knitted together, that there is every reason to believe she would herself escape uninjured. Without entering further upon these sanguinary speculations, we may hope that the year 1855 will witness the completion of one of the most magnificent specimens of naval architecture the world has ever yet beheld.

Silvering Mirrors.—The silvering of mirrors is performed in the following manner:—A sheet of tin foil, the size of the proposed mirror, is laid on a flat table, and rubbed over with a little mercury, until the latter, to a certain degree, amalgamates with the tin. A large quantity of mercury is then poured over it, the workmen having certain indications informing them whether the sheet is in a properly prepared state or not. When all is right, the edge of a sheet of paper or cloth is laid upon the edge of the mercury, and the glass is then slid gently along, pushing part of the quicksilver before it, and resting upon the remainder. When the plate is fairly laid on, the surface is entirely covered by heavy weights, for the purpose of ex-

pelling all the mercury except that which has combined with the tin foil, and in this state it is allowed to remain, the table having a slight inclination, until the mercury has drained off. In the case of large plates, this sometimes occupies a long time; and even after the glass has been lifted and set on edge, small quantities continue to ooze out. When the plate is lifted, the tin foil adheres to the back, and the mirror is formed.

For "The Friend."

There is great need for us individually, as well as in a society capacity, to be up and a doing; to see how stands the great account. It behooves us to be seriously concerned to know whether the day's work is going on with the day, lest the night steal upon us "in which no man can work." Surely the day calls for it, and the church hath need of every right help. For it may be truly said, "the ways of Zion do mourn, because few come to her solemn feasts." "O Judah, keep thy solemn feasts; perform thy vows."

There are many, doubtless, at whose doors the Lord hath been waiting long, even until "His head is filled with dew, and His locks with the drops of the night," in whose hearts the precious Babe of Bethlehem yet lives, but owing to the inn being so filled with other guests, there is not much room for Him. Oh, that these may arise before it be too late; shake themselves from the dust of the earth, and of a worldly spirit; and "put on the whole armour of God." How would they yet wax strong in the Lord, and in the power of his might;" and going on from one degree of faith to another, would, in the Lord's own time, grow up unto the stature of a man in Christ Jesus, and becoming as polished shafts in his holy hand, be instrumental in turning others from darkness to light, and from the power of Satan unto God. Being thus made as lights in the midst of a dark world, and faithful in their day and generation, there would not be wanting those who would rise up and call them blessed.

But before this work of thorough sanctification can rightly go on in the soul, according to the blessed Master's own will and way, a reduction of the creature must take place. We must fall upon the stone that is laid in Zion, and be broken; the "government must be placed upon His shoulders whom we desire to serve," even the Lord of glory; and to this end our wills must be subjected to his holy will; we must be broken as it were in pieces; be nothing; and he must be all in all. "Then shall we have help from him, who maketh sore, and bindeth up; who woundeth, and his hands make whole." "For truly in vain is salvation hoped for from the hills, and from the multitude of mountains; truly, in the Lord our God is the salvation of Israel."

Maryland, First mo. 22, 1855.

Northern Soup House,

Situated on the east side of Fourth street, above Brown.

The number of families supplied with tickets upon this charity since its opening this winter, is 987, consisting of 1,636 adults, and 3,069 children—total, 4,705 persons. The tickets entitle them to 1,798 quarts of soup; but owing to unavoidable circumstances, the daily supply has not exceeded 1,385 quarts, which is double the quantity given out in any former year, 1852 excepted. Bread is also given out three days in the week, requiring four barrels of flour and meal for each baking. The demand has steadily increased about seventy-five quarts per day, up to this time, making it necessary to obtain two new boilers, and erect furnaces; thus adding to the current expense of the season.

Half an hour spent at the house, will convince the observer, that the money received from the contributors is not misapplied. Many of the families of able-bodied men, who are anxious for employment, but cannot obtain it, are, from dire want, compelled to resort there for the food necessary to support life, and of these there are not a few that have never before experienced the mortification of asking for daily bread. Our calls, so far, have been generously and liberally met. Any contributions will be gratefully received by either of the undersigned.

JOHN THOMAS, *Treas.*
DAVID SCULL.
JOEL CADBURY.
HORATIO C. WOOD.

Philadelphia, First mo. 30th, 1855.

"Religion naturally tends to all that is great, worthy, friendly, generous and noble; and the true spirit of it, not only composes, but cheers the soul. Though it banishes all levity of behaviour, all vicious and dissolute mirth—yet in exchange, it fills the mind with a perpetual serenity, and uninterrupted pleasure. The contemplation of divine mercy and power, and the exercise of virtue, are in their own nature so far from excluding all gladness of heart, that they are the principal and constant sources of it."

From the Discipline of Life.

"*I will lead them in the paths they have not known.*"—ISAIAH xlii. 16.

How few who, from their youthful day,
Look on to what their life may be;
Painting the visions of the way
In colours soft, and bright, and free;
How few, who to such paths have brought
The hopes and dreams of early thought!
For God, through ways they have not known,
Will lead His own.

The eager hearts, the souls of fire,
Who pant to toil for God and man;
And view with eyes of keen desire
The upland way of toil and pain;
Almost with scorn they think of rest,
Of holy calm, of tranquil breast.
But God, through ways they have not known,
Will lead His own.

A lowlier task on them is laid,—
With love to make the labour light;
And there their beauty they must shed
On quiet homes and lost to sight.
Changed are their visions high and fair,
Yet, calm and still, they labour there;
For God, through ways they have not known,
Will lead His own.

The gentle heart that thinks with pain,
It scarce can lowliest tasks fulfil;
And, if it dared its life to scan,
Would ask but pathway low and still:
Often such lowly heart is brought
To act with power beyond its thought:
For God, through ways they have not known,
Will lead His own.

And they, the bright, who long to prove,
In joyous path, in cloudless lot,
How fresh from earth their grateful love
Can spring without a stain or spot,—
Often such youthful heart is given
The path of grief to walk to heaven:
For God, through ways they have not known,
Will lead His own.

What matter what the path shall be?
The end is clear and bright to view;
We know that we a strength shall see,
Whate'er the day may bring to do.
We see the end, the house of God,
But not the path to that abode:
For God, through ways they have not known,
Will lead His own.

For "The Friend."

SEPARATION IN OHIO.

In recording the circumstances of the late mournful separation in Ohio, it appears to be necessary for the clearing of truth, as well as for the information of all, not only to give a correct view of the disorganizing measures resorted to, to effect the secession that took place on the 5th of Ninth month last, but also to show the cause of the disunity that has prevailed within our borders for several years past, by which the ground was prepared for an event so *destructive to society*, and *to the cause of vital religion*. Should this be entirely omitted, it might not only leave the facts of the present eventful day imperfectly set forth, but also be a disservice to the cause of Truth, and weaken the hands of the testimony bearers, which, for a long season, have been ready to hang down.

As respects the account of the events that took place on that sorrowful occasion, as recorded and commented on in "The Friend," we are satisfied; but feel willing to make a few remarks on the concern, which has been felt by Friends in this Yearly Meeting, on account of the works containing unsound doctrines which have been circulated in this country, and which were the original cause of the divided state of feeling that has sorrowfully existed.

Consistent Friends, feeling it to be their indispensable duty to adhere to the primitive doctrines of the society, and to bear a faithful testimony against any innovations attempted upon them, the Meeting for Sufferings in 1842, under a sense of religious duty, took up the subject, and after mature deliberation, concluded to forward a communication to the Meeting for Sufferings of the Yearly Meeting, of which the author of works containing unsound sentiments, was a member, informing that meeting of their uneasiness with those works.

In 1846, the Yearly Meeting of Ohio came to the judgment, that it would be right to communicate with the aforesaid Yearly Meeting itself on the same subject; accordingly a committee was appointed to prepare an essay, which at a subsequent sitting produced one, that was read and approved at that time without a dissenting voice, the language thereof being as follows: "The peace and harmony of this Yearly Meeting in its several branches, as also in its collective capacity at the present season, have been greatly disturbed, on account of the doctrinal writings of a member or members of your Yearly Meeting, in circulation amongst us, which are not deemed by us to be in accordance with those, on the same subjects, of our ancient approved authors."

In 1847, the Yearly Meeting again had the same subject before it, and after deliberation thereon, it was referred by minute to the Meeting for Sufferings, that body being encouraged to prepare a testification against the aforesaid objectionable writings; and in accordance therewith, the "Appeal for the ancient doctrines of the society," published by Philadelphia Yearly Meeting, was subsequently adopted.

These being facts that cannot be controverted, we believe the spread of those works containing unsound doctrines was a main cause leading to the late separation in Ohio Yearly Meeting.

If a godly concern had sufficiently prevailed in our beloved Society, to uphold its doctrines and testimonies in their primitive purity, both in faith and practice, as also to maintain a firm testimony against any innovations upon them, it would have been saved a large amount of suffering, and our holy profession would not have been reproached, as is now sorrowfully the case, *in consequence of separations and divisions of our once peaceful*

community. It truly calls for mourning from every lover of the Lord Jesus Christ, and of his pure and holy religion; for it is doubtless very offensive in his sight, who gathered us as a people to place his name amongst that his banner of righteousness and peace might be displayed to the nations of the earth.

O, that our blessed and holy Head, who has long borne with the unfaithfulness and backsliding of this people, would, in his condescending mercy, look down upon his church, and grant unto us his holy aid, individually, to turn inward to his unspeakable gift, and by it examine ourselves, that we may be favoured to see wherein we have fallen short of that high calling whereunto we are called. It is through unfaithfulness to the pure principle of light and grace in the heart, that we are subjected to the trials of the present day; for there can be no schism in that body of living members, of which Christ Jesus is the head, who, as they are kept in watchfulness and prayer, are preserved in the unity of the faith, and of the knowledge of the Son of God, and grow up unto him in all things, from stature to stature, to his praise whose right it is to reign in his church militant on earth, as well as in his church triumphant in heaven.

Our religious Society was gathered by the Lord's power into an inward fellowship and communion, wherein they were favoured to see eye to eye in things spiritual. He, having in his mercy and goodness seen meet to bring again Zion, to revive the doctrines of primitive Christianity, and to raise up a people, who, in their life and conversation, by taking heed to the Spirit of Christ in them, should show forth their excellency; these became as lights in the world; their unity and fellowship was in Christ Jesus our Lord; for they partook individually of the virtue that flows from Him into the branches, and thereby they were made one another's joy, and the comfort and edification of the church.

And to this day it remains a truth in the experience of the faithful members of the body, that they feel the uniting bond of gospel fellowship to bind them together. Their unity is in Christ; they eat of the same spiritual meat, and drink of the same spiritual drink; their life is the same, being that which is hid with Christ in God. If all the members were kept within this Divine enclosure, faithful to the gift of God in them, there could be no schism; but where any of them, for want of keeping under the daily cross, lose the savour of life, and in that situation depart from the doctrines and testimonies of our Society, or from its wholesome discipline and order, which *eminate from the same Divine fountain*, a schism in the body takes place, to the grief of those members that keep in the life; and the judgments of God ever have rested, and ever will rest upon all, who forsake the fountain of living waters, and hew out to themselves cisterns, broken cisterns that can hold no water.

Ohio, First month, 1855.

Guano Discoveries.—The guano deposit which was recently discovered by an American shipmaster upon Bird Island, a short distance to the eastward of St. Thomas, towards Barbadoes, is said to be equal to at least three or four hundred thousand tons, and in quality it approaches that of the Chincha Islands. The New York Post says, that another island has been discovered, with at least a million tons on it, the locality of which is yet a secret. Measures are now taking for the organization of a company to bring the guano to market. The value of this article to the farmer makes these discoveries a matter of general importance.

Extracted for "The Friend."

CHARITY.

Fairest and foremost of the train, that wait
On man's most dignified and happiest state,
Whether we name thee Charity or Love,
Chief grace below, and *all in all* above.

Charity has various senses, but *is* excellent in all of them. It imparts, *first*, the commiseration of the poor and unhappy of mankind, and extends a helping hand to mend their condition.

Though scorn repay her sympathetic tears,
She still is kind, and still she perseveres;
Pure in her aim, and in her temper *mild*,
Her wisdom seems the weakness of a child.

Uncharitableness spoils the best gains; and two to one but it entails a curse upon the possessor. Nor can we expect to be heard of God in our prayers, that turn the deaf ear to the petitions of the distressed among our fellow-creatures.

No works shall find acceptance, in that day
When all disguises shall be rent away,
That square not truly with the scripture plan,
Nor spring from love to God, or love to man.

God sends the poor to *try* us; as well as he tries them by being such; and he that refuses them a little out of the great deal that God has given him, lays up poverty in store for his own posterity. To humble us in our fullness, and liberality too, we only give what is given us to give, as well as to use: for if we ourselves are not our own, less is that so which God has entrusted us with.

Self starts nothing but what tends apace
Home to the goal where it began the race.
Such as our motive is, our end must be;
If this be servile, that can ne'er be free:
If self employ us, whatsoe'er is wrought
We glorify that self, not Him we ought.
Such virtues had need prove their own reward;
The Judge of all men owes them no regard.

For "The Friend."

Samuel Crisp was educated at college, in the established church of England, and for some time officiated as a parish curate. But feeling living desires raised in his mind after a more excellent way, he was effectually reached and awakened to the Truth upon reading R. Barclay's works.

After stating that he took Barclay home with him, he says, "I soon read enough to convince me of my own blindness and ignorance in the things of God. There I found a light to break in upon my mind, which did mightily refresh and comfort me in that poor, low, and humble state in which I then was; for indeed I was then, and had been for a considerable time before, very hungry and thirsty after righteousness, and therefore I received the Truth with all readiness of mind. It was like balm to my soul, and as showers of rain to the thirsty earth, which is parched with heat and drought. * * *

"I presently resigned myself to God, and weeping for joy that I had found so great a treasure, I often thanked him with tears in my eyes for so kind a visitation of his love, that he was graciously pleased to look towards me when my soul cried after him. So, though before I was in great doubt and trouble of mind, not knowing which way to determine myself, yet now the sun breaking out so powerfully upon me, the clouds were scattered. I was now fully satisfied in my own mind, which way I ought to go, and to what body of people I should join myself.

So I immediately left the communion of the church of England, and went to Gracechurch street meeting" [of Friends.]

Never blame thy friend for telling a secret which thou *couldst not keep thyself*.

From the Annual Monitor for 1855.

Daniel Brown, of Luton, an Elder, deceased Fifth mo. 27th, 1854, aged 85 years.

The Christian consistency of this dear Friend, throughout a long life, has left a sweet impression on the minds of those who knew him intimately. By example rather than by precept, he taught instructive lessons to all around, walking in the fear of the Lord, and pursuing the path of life with a meek and quiet spirit.

For many years he laboured under severe bodily affliction, which was borne with much patience, though of such a nature as greatly to interfere with his enjoyment of social intercourse, and the participation with his friends in some of their religious privileges; but whenever ability permitted, he regularly and diligently attended our meetings, both for worship and discipline, and faithfully encouraged his family in doing so, striving to promote in others, a due appreciation of the benefits to be derived therefrom; and when unable to enjoy with them these seasons of spiritual refreshment, he still manifested in different ways, his unabated interest. Sometimes he would say, "How I should like to go!" not in a murmuring spirit, but rather as conveying his sense of the value of public worship; or, occasionally, as a gentle reproof to those who he feared were lukewarm in their estimation of the privilege.

From early life he was partial to quiet pursuits, gardening was a favourite employment, and reading occupied very many of his leisure hours. Next to the holy scriptures he valued the writings of Friends, and delighted to read aloud the Christian experience of his fellow-professors; his countenance and voice betraying the varied emotions of his mind, as he traced them through their spiritual baptisms, outward sufferings, faithful service, or peaceful close. On some of these occasions, the Bible alone was the volume chosen; when, with deep interest, he would dwell on the narratives of the Old and New Testament. To many evenings thus spent amid the family circle, the surviving members of it can now revert, as to seasons of peculiar pleasure and profit.

His acquaintance with the Holy Scriptures was accurate and extensive; and when, for the last three years of his life, age and infirmity precluded his going to meeting, the time was regularly spent in retirement and the perusal of their sacred pages. We believe that, "through faith in Christ Jesus," he had found them "able to make wise unto salvation;" and though very diffident of his own attainments, he was strengthened by the humility of his daily walk, his child-like trust in his heavenly Father, the quietness and patience of his spirit, to adorn the doctrine of God our Saviour.

The simple views of Christian doctrine and practice which distinguish our religious Society, found in him at once an apt recipient, and a fitting illustration; yet, "By the grace of God, I am what I am," seemed the appropriate utterance of his unobtrusive character. Frequently would he give a few words of counsel to his younger friends, to maintain entire the principles they professed in that humility which should ever be the clothing of the Christian's spirit.

His latter days were passed in the same tranquil serenity which had so peculiarly characterized him through life, except that the complaint, from which he had so long suffered, became increasingly trying to him, as physical strength declined, so that in seasons of extreme weariness, he would sometimes express a longing desire to be at rest,—a hope that time here might not be much prolonged,—yet he was preserved in great patience; and when at length he entered the valley of the shadow of death, he seemed to fear no evil; and

as the worn thread of life was gently severed, we reverently believe his purified spirit emerged into the glorious light of an eternal day.

Such a life, and such an end, suggest the words of the Apostle, "Not by works of righteousness which we have done, but according to His mercy he saved us, by the washing of regeneration, and renewing of the Holy Ghost; which he shed on us abundantly, through Jesus Christ our Saviour," and illustrate the great truth, that "Godliness is profitable unto all things, having promise of the life that now is, and of that which is to come."

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 158.)

SAMUEL AND MARY ANDREWS.

Of these Friends but little information has descended to us. Samuel appears to have been a son of Edward Andrews, who was one of the early members of the Society of Friends, and who, after suffering various imprisonments in England, settled in Barbadoes, where his conscientious support of his religious principles still brought him persecution. At what time Samuel Andrews went to New England we have no account, but he married Mary Wright, of Long Island, somewhere, between 1670 and 1676, and settled in Mansfield.

In the year 1660, Mary Wright, then quite a young maiden, under a sense of religious duty, went to Boston, there to bear testimony against the wicked law, under which Mary Dyer had just suffered martyrdom, and against the cruel framers and executors of the law. For this act of faithfulness, she was cast into prison, in that town, where many other disciples of the Lord Jesus were then in confinement for obedience to their heavenly Father's will. After an imprisonment of many months, she and twenty-seven of her fellow professors of the Truth, and fellow sufferers for it, were turned out of the prison, and driven by their oppressors into the wilderness, out of the limits of the colony of Massachusetts.

The family of which Mary Wright was one, was distinguished by the early dedication of its members to their religious duties. Mary, Hannah, and Lydia, all in childhood, bore testimony against the cruel outrages of the rulers in New England, and all, being faithful to the manifestations of Divine truth, and to the gifts committed to them, became eminently serviceable in the church of Christ, as ministers of his gospel of life and salvation.

We learn that Mary Andrews, after her marriage and settlement at Mansfield, continued in the exercise of her ministry, to the satisfaction of her friends, and the enlargement of the kingdom of her dear Redeemer. She had several children, over whom she and her husband exercised a watchful care, being religiously concerned that the lambs committed to their charge, might be so guarded and guided that they might all find entrance at last into the fold of everlasting rest. That blessed fold of which the Lord Jesus Christ is the alone shepherd.

Samuel Andrews signed the testimony against George Keith, which is the latest trace I have been able to find of him. He and his wife deceased, not far from the year 1700, but of the time there appears no definite record. They are in divers places spoken of affectionately in accounts preserved, but their dying testimonies, their last acknowledgment of the goodness and mercy, which had followed and preserved them in their way through the wilderness of this world, is wanting.

Their son Edward over whom they had watched with godly concern for his establishment in the truth, in whom they had perceived the growth of the good seed, retarded by briars and thorns of the evil one's planting, was, at the time of their death, far from what they would have wished him to be. Many times had there appeared in him the evidence of a broken and a contrite spirit, and such a submission to Divine grace, as might well cause the heart of Christian parents to rejoice on his behalf; but they had found with sorrow, that his seasons of tenderness and humble walking in obedience to the inward manifestations of Truth, were of short duration. What assurance they might have been favoured with by the Lord, who had been their leader and feeder all their lives long, that this son of their love should not be forsaken by Him, we know not: they laid down their heads in the favour of their Saviour, and left their children in his keeping. A few years after, this son was effectually met with by the redeeming grace of the Lord Jesus, and became a faithful, valiant soldier in his army. As a minister of the Gospel he was fervent and devoted, and the fruits of his labours of love were many. Not only so, the blessing promised on the children of pious parents, seemed to rest on their descendants to many generations, and there has scarcely been a time since the death of Samuel and Mary Andrews, until quite recently, in which some of their descendants have not been labourers for the truth in the Gospel of the Lord Jesus Christ.

Sketches of the lives of several of these descendants we shall hereafter give.

There are many ministers and other valuable Friends, who deceased in the early times of this province, of whom but little account can now be found. Of some, there is doubtless to be found in the families of descendants, information of an interesting character, and that would be of much value to the author of these Biographical Sketches in his present employment. He would be very glad to receive any such contributions. There was early sent to England an account of such ministers who had died in this country; but a copy of the document sent has not been preserved. Many manuscripts of the dying sayings of ministers and others, read and approved before the Meetings of Ministers, and which were directed to be forwarded to certain Friends in London, for publication, are not in Piety Promoted, and no record is to be found among the papers of the meetings. Some of these may be preserved in family collections. The time of the death of ministering Friends, previous to the year 1730, would be desirable information. Can any one inform me at what time Walter Fawcett died? His death occurred between Seventh month, 1703, and and Eleventh, 1704. A short sketch of him is nearly ready, and any particulars relative to his life, would be acceptable, He died, a member of Chester Monthly Meeting.

(To be continued.)

For "The Friend."

The Suffering Poor.

It has occurred to the writer, that there would be quite a propriety in calling, through the medium of some of our periodical publications, the attention of our "*country* friends and *neighbours*," to the vast amount of human suffering and privation that now abounds within the limits of this widely extended city.

In considering this momentous and highly interesting subject, and assigning to Christian humanity, (without reference to local bounds,) a reasonable share of sympathy and regard for the afflicted; may we not conclude there are many of our country neighbours, and others more remote from us, who, if correctly informed from reliable sources, that there never was a time when so large an amount of intense suffering and privation existed in this city and its neighbourhood, as *now prevails*, that many persons would be aroused to a close and serious consideration of the subject, and led to reflect upon the propriety of contributing (of their abundance of the comforts of life) something, in *one form* or *another*, towards the relief of their suffering fellow-beings.

Where cash funds could not be conveniently spared, the *produce* of the *country*, of almost any description, would be accepted with the utmost gratitude, by many poor destitute beings who are writhing under a degree of suffering, which those who never knew a lack of outward comforts, can form no adequate idea of.

The class of sufferers at the present time differs materially, it is believed, from what has heretofore been known. Owing to the *curtailment* of the *operations* in many of our extensive manufacturing establishments, and the *total suspension* of others, a very large number of efficient, ingenious, and industrious mechanics, (on whose earnings, in hundreds of instances, large families of women and children are dependant for a daily subsistence,) are suddenly thrown entirely out of employment, and have no other sources to which they can appeal, but to the sympathy and liberality of their more favoured fellow-citizens; and moreover, this very class of our community have, for a long time, largely contributed, (as consumers,) to the extraordinary *advance* in the *prices* of almost every article of domestic produce, and of which advance, our farmers are well known to have extensively availed themselves.

"CONSIDER THE POOR."

First mo. 29th, 1855.

The Yang-Tsz'-Kiang.—The most interesting account of this most magnificent river is given in the North China Herald. It is from the pen of E. C. Bridgman. We extract from it the following passages:

"Well has this river been called the Girdle of China, and a rich and magnificent girdle it is—connecting together all the central provinces of the empire situated between Tibet and Koko Nor on the west, and the Pacific Ocean on the east. Its entire length, through all its numerous windings, under its various names, can hardly be less, but rather more, than three thousand miles. And if regard be had to its tributaries and to the cities to which its waters give access, to the richness of the soil and the variety of the products along its banks, and, above all, to the vast population scattered far and wide over the valleys, and plains, and hill sides, drained by it and its confluents, this child of the ocean has no equal on our globe. This great river and its branches, natural and artificial, form an inland communication with by far the largest and the richest portion of the whole eighteen provinces of China proper.

"This child of the ocean has no equal on the face of the earth. The *Amazon*, where it disembogues, may present a greater bulk of waters, and the *Mississippi* may travel through a longer course. Those two may rival this one also in the variety, but not in the abundance, of the productions found along their extensive banks. Were the valley of the Yang-tsz' as well explored as that of the Great Western Valley; were those Artesian wells, and golden sands, and bituminous strata, &c., known to exist in Sz'-chuen and other provinces duly examined, there would be found, in

all probability, some of the richest mineral localities in the world.

"But, whatever may be the abundance or richness of *these* productions, they are as nothing in value when compared with the millions of people that have their habitations on and along the banks of the Yang-tsz'-Kiang. In this respect the valley of *Mississippi* is almost a howling wilderness, and that of the *Amazon* little better than a desert. It is the living and intellectual masses that give to any country its chief value, a value that nothing else can equal. In this respect the regions traversed by the child of the ocean are unrivalled."

THE FRIEND.

SECOND MONTH 3, 1855.

"Report of the case of Earle et al. v. Wood et al., argued and determined in the Supreme Judicial Court for the counties of Bristol, Plymouth," &c.

We have received a copy of the above, published at Boston, in pamphlet form. It is the opinion and decision in the trial which took place to determine the right to the property at Swanzea, claimed by the two bodies of Friends in New England. The Court decided "that the plaintiffs [larger body] are entitled to a decree for the establishment of their title to the land and meeting-house, as prayed for in their bill."

We always regretted that Friends in New England allowed their controversy to be brought before a court of law, knowing how difficult, if not impossible, it would be for any such court to understand the peculiar character and merits of the case, and believing that the circumstances did not require it.

How widely misled by the evidence, or incompetent to arrive at a correct judgment respecting the faith, the discipline and the usages of our Society the tribunal was, may be inferred from the following conclusions announced by the Judge:—

"It would seem to be inconsistent with the nature and principles of the Quaker system, as far as it is disclosed in the case before us, to be bound down, as a body—as a Christian denomination—to a precise and unbending rule in matters of speculative opinion. They profess to believe in the continued influence and presence of the Holy Spirit to the mind of each individual, humbly waiting for its manifestation to aid in the discovery of Divine truth. It would seem, therefore, that they must suppose it possible, that new truths may be discovered and so manifested as to require the assent of the true disciple, and thus add something to his existing faith. It is also true, as we understand, that they profess to believe that the scriptures are given by inspiration, and are the unerring guide to Christian truth; and that if any man supposes that he has an inward light, contrary or repugnant to the truth of the scriptures, it cannot be a true light. But perhaps there is no inconsistency in believing that the scriptures of the Old and New Testaments are a true and unerring guide to Divine truth, yet that all the truths of scripture have not been made manifest to the imperfect mind of man, and in the language of Father Robinson, of Leyden, that "more truth is yet to break forth from the holy scriptures." Should such be the fact; should the testimony of the scriptures and the influences of the Holy Spirit concur in bringing to the conviction of humble, sincere and inquiring minds, the knowledge of further Christian truths, manifested with a brilliancy and clearness not to be mistaken; *it seems perfectly consistent with the avowed principles of the Society of Friends, to adopt and sanction them, although they were not known to Pennington, Barclay, Fox, and the respected founders of their Society*, and under a full belief that if the same light had been thrown on the same truths in their day, these sincere and seeking men would have humbly and devoutly embraced them.

"We would not be supposed by this, to intimate that the Quakers have no creed, no theological tenets, to which they are strongly attached, and no superintending watchfulness over the soundness of the faith of their members and subordinate meetings, or that they allow any great latitude of discussion to their members on theological subjects. On the contrary, the discipline expressly prohibits the publication of all writings relating to their religious principles or testimonies, unless first laid before the Meeting for Sufferings, for their advice and concurrence, and their approval of them obtained.

"What we mean to say is this, that, if after solid and weighty consideration, humbly and conscientiously awaiting the guide of best wisdom, the Yearly Meeting should fully unite, in the proper as well as the Quaker sense of that term, *in adopting some modification of their creed, or of their speculative opinions, adhering to their great principles of love and fraternal duty, it would, upon their professed principles, seem too much to say, that they would thereby cease to be Quakers, and cease to be the Society of Friends.* Especially, we think, this could not be asserted by meetings and individuals subordinate to them, who owe, ecclesiastically, allegiance to them, and to whom, so long as they remain subordinate, *the decisions are final and infallible, as well in matters of faith as of conduct.* All disaffected members, having full liberty of conscience, might undoubtedly dissent from such opinions, and adopt different tenets; perhaps they might, by so doing, become better theologians, better Christians, and better men; but they would cease to be Friends in unity with such Yearly Meeting, and with the meetings and individuals subordinate to it. Such dissenting individuals might form themselves into Yearly, Quarterly, and Monthly Meetings, but this would be a new organization, and not the identical body to which they had been formerly attached.

"We should be unwilling to say, that there may not be a departure from the fundamental principles on which the Society is founded, on the part of the Yearly Meeting, the responsible head and representative of the whole body, in fact the Society itself, so deep and radical, as to destroy its identity with the Society of Friends, who had been invested by law with the enjoyment of property and civil rights. But if such a case be possible, it would seem to be a suicidal destruction of the body itself, leaving its property derelict. If heresy should infect individuals only, however numerous, they might be disowned and cut off, and the body remain sound, *but if the ultimate and infallible judge of what is essential to Quakerism judges wrong, who, in pursuance of any of the forms, or principles, or discipline of Quakerism, shall declare the heresy, or pronounce* the disownment? But it is not necessary to pursue such a remotely possible supposition; we have barely alluded to it, by way of protest against the conclusion, that no departure from Christian truth and the principles of Quakerism, can be so great as to work a dissolution of the Society."

According to the decision thus laid down, the Society of Friends has no settled faith or principles; but they may be changed or shaped to suit the views of the different Yearly Meetings, provided each adheres "to their great principle of love and fraternal duty." The decisions of each "are final and infallible, as well in matters of faith, as of conduct;" and any of the members dissenting from, and refusing to submit to such decisions, though they set at naught doctrines, and lay waste testimonies ever held most precious by the Society, would be out of unity, and their meetings forfeit the character of being legitimate meetings of Friends.

This is very different from the truth, as contended for by Friends in the Hicksite controversy. Had it been admitted at that time, what would have become of Baltimore Yearly Meeting? or what even of New York Yearly Meeting? there being at that time a large majority of Hicksites in it.

Every true Friend must know that it is altogether at variance with the principles recognized by our religious Society; and how any in membership with it could have given evidence leading the Court to such a conclusion, seems difficult to reconcile with their holding sound doctrine themselves.

It was the determination to carry out this infallibility, and unlimited power of a Yearly Meeting—to make a member an offender for opposing unsound doctrines,—and others, for not uniting with its decisions on this point, subject to the charge and penalties of being "out of unity with the body," that brought the difficulties in New England to their unhappy issue.

Opposition to the dissemination of unsound doctrines, was construed as detraction, but when the appeal of the member so charged, came before the Quarterly Meeting, the charge of detraction was withdrawn by one of the committee which preferred it, and the meeting sustained the withdrawal, by refusing to the appellant the right of objecting to such as he might deem unsuitable to hear, and decide his case, as provided in the discipline. This, we think, leaves no doubt that the only ground of alleged offence, was the opposition made to the spread of unsound opinions, for we are not to believe the Quarterly Meeting would have refused compliance with the discipline of its Yearly Meeting, securing the important right of challenge in cases of appeal for defamation, and in such cases only, had it not been prepared to endorse the declaration of the member of the committee, that the charge was not intended to include defamation.

This aspect of the subject brings it home to the feelings of those Friends everywhere who believe there are unsound doctrines contained in works disseminated among us, and feel bound to maintain their testimony against them. The right and the duty of the members of our Society, wherever situated, to oppose the spread of unsound views, are main points insisted on by Philadelphia Yearly Meeting in the report adopted by it in relation to the division in New England. "If," it says, "unsound doctrines are not to be testified against, and the flock warned of their pernicious influence, but the consistent exercised members are to be accused of detraction, when they declare their dissent from published errors, then farewell to the maintenance of any sound doctrine in the church of Christ. This would be an inlet to the greatest innovations, and in time, might overturn the Society. How would it be possible for ministers of the gospel, and other religiously concerned members, to discharge their duty as watchmen, if they are forbidden to warn the flock of surrounding danger, arising from erroneous doctrinal works?"

Having felt itself called on to testify against the same unsound sentiments, Philadelphia Yearly

Meeting could not consistently look upon others in other Yearly Meetings as offenders, merely because they had maintained the same testimony.

By the communication from Ohio, published in another part of this number, it will be seen that the dissemination of works containing unsound doctrines, and the maintenance of a testimony against them by that Yearly Meeting, was the primary cause of a divided feeling among its members. The Friends who have separated from that Yearly Meeting, would, we doubt not, be very unwilling to have the principles laid down in the above extract applied to them, and they and their supporters have no ground to complain that Ohio could not consent to act in accordance with those principles, towards the Friends in New England, who it believed were suffering for what appeared to it, to be an incumbent duty.

There are other points in the decision regarding the principles of church government in our religious Society, equally erroneous with what we have given, but it is not necessary to pursue the matter further.

SUMMARY OF EVENTS.

EUROPE.—News from England, by the steamship Pacific, to the 13th ult.—*The War.*—It is said that Russia is willing to accept the terms of peace proposed by the allies. The Austrian *Correspondez*, the paper always employed by the Government for communicating with the public, contains the following statement in a communicated article: "On the 6th inst., the Russian Ambassador informed the Imperial Minister of Foreign Affairs, that the instructions which he had asked of his court, had arrived. A conference yesterday between the French and English Ambassadors, Count Buol, and Prince Gortschakoff, was the consequence. From the mutual explanations there exchanged, it resulted that the Representatives of the Four Powers were essentially agreed in their understanding of the sense, and general bearing of the fundamental points, and consequently, (saving the assent of the Cabinets of Paris and London, yet to be obtained,) a basis gained, upon which negotiations for the restoration of the peace of Europe may begin."

THE CRIMEA.—There had been no change in the state of affairs at Sebastopol. The garrison continued to harass the besiegers by night sorties. The French army has completed immense works, with 160 guns mounted. The line of their trenches is nearly three leagues and a half in extent. The English works are not so well advanced. Ten thousand Turks had landed at Eupatoria, and the transports had returned to Varna for more troops. The Turkish army is expected to take the Russians in the rear, so as to second the attack made in front by the allies. In an engagement with the Cossacks near Eupatoria, the Turks put them to rout, and captured 600 horses.

THE DANUBE.—As a consequence of the withdrawal of the Turkish army from the Principalities, the Russians have again advanced a portion of their forces into the Dobrudscha, and taken two important fortresses, although Austria is nominally in possession of the country on the Danube.

ODESSA.—Large reinforcements for the Russian army continued to arrive. There have been snow storms and severe cold. Two companies of soldiers on their march, and forty wagon loads of sick men, had been frozen to death. The temperature at Odessa, on the 28th of Twelfth mo., was 22° below zero.

SARDINIA, has joined the Western Powers.

FRANCE.—The subscriptions to the new loan, in Paris and the departments, had reached 890,000,000 francs. Large sums had been subscribed in England.

RUSSIA.—The crown serfs have offered to furnish a contingent of 60,000 men to be employed as sharp shooters. Among them are to be all the ermine hunters, 20,000 in number. It is proposed to arm them with the Minie rifle.

ENGLAND.—A number of heavy failures have occurred. At Liverpool, cotton was in fair demand at a small advance. The market for breadstuffs was heavy. Western Canal Flour, 40*s.* to 41*s.* Ohio, 42*s.* to 43*s.* Consols had fluctuated during the week, but closed at 91½.

HAMBURG.—There was a violent storm on the 1st ult., during which the Elbe rose 20 feet above the usual high water mark. Many streets were laid under water, and vast quantities of merchandise destroyed.

Marine Disasters.—The Pacific, on entering the Mersey on her last voyage, ran into and sunk the brig Corinthian. Her cargo was valued at £20,000. The packet ship George Canning has been lost on her passage, from Liverpool to Hamburg; it is supposed that all on board, 160 in number, have perished.

THE CHINCHA ISLANDS.—By an arrival at Boston, information has been received that the Venezuelan Government had summarily ordered all the guano vessels away from the Islands. The U. S. sloop of war Falmouth was at St. Thomas, to sail for Bird Island in a few days, to look into the affair.

UNITED STATES.—One of the most important matters now before Congress, is the bill having for its object the better protection of life and health on board ships carrying passengers to and from ports in the United States. The bill provides for a clear space on deck, in which passengers may take air and exercise. The whole upper deck to be clear of cargo, luggage, or stores of any kind, except water for the passengers. No more than two passengers are allowed for every five tons of tonnage. There are other provisions intended to enforce cleanliness, and promote the comfort and good morals of the passengers. The importation of foreign paupers and criminals has been under consideration in the Senate. In the House, the French Spoliation bill has been largely discussed, and finally passed. It proposes an appropriation of five million dollars to be divided pro rata among the claimants, in full of all demands.

California.—The George Law, at New York, brought $1,251,000 in gold, and a week later news. The dryness of the season had seriously affected business. On the 1st ult., there was a violent storm and heavy rain. The Supreme Court has decided that Sacramento shall be the capital of the State. The schooner Falmouth had arrived at San Francisco, with a full cargo of salt obtained from a mine, near Margaritta bay, Lower California. The salt is in large, clear crystals, and appears to be quite pure. The amount of quicksilver exported, in 1854, was 19,143 flasks, valued at $717,862.

New Jersey.—The House of Assembly has passed a Prohibitory Liquor bill with the proviso, that the people shall vote upon it, in the Tenth mo. The Senate has not acted upon it.

Ohio.—The Supreme Court has decided that the liquor law passed by the last legislature, is constitutional. The law prohibits the sale by retail of intoxicating drinks, with the exception of native wines, beer, and cider, under the penalty of fine and imprisonment. The public sentiment favours the enforcement of the law.

New York.—The steamer Massachusetts has been seized, when leaving the port, on the charge of being about to convey muskets and munitions of war to the island of Cuba for revolutionary purposes. Another steamer is under the surveillance of the United States officers, which is believed to have been fitted out for a similar purpose. A cargo of convicts is expected shortly from Genoa, in the Sardinian frigate Des Genys. Orders have been received from Washington, to seize and retain the ship, until an investigation of the case is had. Mortality last week, 437.

Philadelphia.—The Poor.—There were recently 2543 paupers in the almshouse, being 427 more than at the same time last year. 2959 persons were also receiving out-door relief from the guardians. These numbers represent but a small portion of the necessitous poor, who in various ways are receiving assistance. Mortality last week, 185.

Miscellaneous.—The gale of the 23d ult. extended along the Atlantic coast of the United States, and as far east as Newfoundland. At various points it caused much damage to property on land. A large number of vessels along the shore and in port, were injured, and many wholly lost.

New Orleans Mint.—During the year 1854, the coinage at this branch was in gold, to the value of $1,274,500, and in silver, to the value of $3,246,000.

Onondaga Salt.—5,803,347 bushels of salt were made and inspected at the Salt Spring reservation, in the year 1854. The production increases yearly. The State of New York derives a small revenue from the works.

Sponge.—From $20,000 to $30,000 have been realized by the collectors of sponge near Key West, during the past year. It is obtained among the reefs and inlets of the Florida coast. The manufacture of salt at the same place, is increasing in importance.

A Mild Winter.—A late Florida paper states that peas and other vegetables were budding and blossoming in the open air.

Indian Slaves.—A large number of Indians captured in Yucatan, by Santa Anna's directions, have been landed in Havana, to be sold as slaves. At the remonstrance of the British Consul, the Captain General is about to inquire into the legality of the transaction.

Christian Jews.—The number of Christian Jews in the world, is estimated by one of their number at 15,000, of whom, he says, several hundreds are in the United States, many of them occupying respectable positions in society.

Plain Living.—The New England Society for the promotion of Manufactures and the Mechanic Arts, adopted the following good resolution at its late meeting, in Boston:—Resolved, That we earnestly desire that our people should keep up those habits of *plain living* and *high acting*, in which the foundations of New England Society were laid.

Mortality of London.—The deaths, in 1854, numbered 73,697.

Rum for the War.—The Middlesex (Mass.) Journal states that the distillers, Trull, Brothers, are now engaged in filling orders for N. E. rum, to go to Sebastopol. Their profits amount to twelve hundred dollars a week.

RECEIPTS.

Received from R. K. Williams, Va., $2, to 18, vol. 29; from John Ross, Ark., $4, vols. 27 and 28; from Sarah T. House, Pa., $2, vol. 28; from Wm. Foulke, agt., O., for Wm. Harmen, $1, to 26, vol. 28, and for David Smith and Robt. Milhouse, $2 each, vol. 28.

WEST-TOWN BOARDING-SCHOOL.

In order to avoid disappointment in case the school should be full, members of Philadelphia Yearly Meeting who intend to enter their children for the summer session, will please make application to Joseph Snowdon, Superintendent at the school, or Joseph Scattergood, Treasurer, No. 84 Arch street, Philadelphia, *by the first of the Third month next*, at which time the parents of the children now at the school, will be expected to inform the Superintendent whether their children are to return to the summer session.

West-Town, First mo. 30, 1855.

Auxiliary Bible Association of Philad. Quarterly Meeting.

The Annual Meeting of the Auxiliary, is to be held at the committee-room, Arch Street Meeting-house, on Second-day, the 12th of the Second month, at 7½ P. M. Friends of both sexes are invited to attend.

THEOPH. E. BERSLEY,
Philad., First mo. 27, 1855. Secretary.

INDIAN CIVILIZATION.

The committee is desirous of engaging the services of a well qualified Friend to teach the school at Tunessassah, &c. Friends, who may feel concerned to engage in that station, are requested to make early application to Joseph Elkinton, No. 377 S. Second street, or Thomas Evans, No. 160 Arch street, Philadelphia, or Ebenezer Worth, Marshalton, Chester county, Pa., or Thomas Wistar, Fox Chase, Philadelphia co., Pa.

Philad., Ninth mo. 20, 1854.

WEST-TOWN SCHOOL.

Assistant Teachers are wanted in the Boys' department of this Institution. The opportunity which this station furnishes for prosecuting their studies, free from any expense, presents a favourable opening for young persons, who wish to perfect themselves in the higher branches of learning, or to prepare for the business of Teachers. Those who wish to engage, are requested to make early application to Nathan Sharples, Concordville; Pennock Passmore, Goshenville; or Thomas Evans, or Samuel Bettle, Jr., Philadelphia.

DIED, in West Bradford, Chester county, Pa., on the 12th of Twelfth month last, MARTHA R. HIBBERD, aged 12 years and 10 months; and on the 15th of the same, SUSANNA G. HIBBERD, aged 14 years and 6 months, children of Isaac and Rachel Hibberd.

——, in this city, on the 18th of Twelfth month last, after several months' indisposition, MARTHA B., wife of Dubré Knight, of Wilmington, Del., in the 62nd year of her age. The abiding trust, patience, resignation and peacefulness, with which she was favoured in the latter part of her useful life, afford ground for the consoling belief, that with her all is well.

PRINTED BY KITE & WALTON,
No. 3 Ranstead Place, Fourth above Chestnut street.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXVIII. SEVENTH-DAY, SECOND MONTH 10, 1855. NO. 22.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 50 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

From the London Quarterly Review.

How London is Supplied with Food.

(Continued from page 162.)

Without some organization it would be impossible to receive and display to the advantage of the buyer and seller the varied products that in the grey of the morning pour into so limited a space. Accordingly, different portions of it are dedicated to distinct classes of vegetables and fruits. The finest of the delicate soft fruit, such as strawberries, peaches, &c., are lodged, as we have mentioned, in the central alley of the market—the inmost leaf of the rose. On the large covered space to the north of this central alley is the wholesale fruit-station, fragrant with apples, pears, greengages, or whatever is in season. The southern open space is dedicated to cabbages and other vegetables; and the extreme south front is wholly occupied by potato-salesmen. Around the whole quadrangle, during a busy morning, there is a parti-coloured fringe of wagons backed in towards the central space, in which the light green of cabbages forms the prevailing colour, interrupted here and there with the white of turnips, or the deep orange of digit-like carrots; and as the spectator watches, the whole mass is gradually absorbed into the centre of the market. Meanwhile the space dedicated to wholesale fruit sales is all alive. Columns of empty baskets, twelve feet high, seem progressing through the crowd 'of their own motion.' The vans have arrived from the railways, and rural England, side by side with the continent, pours in its supplies from many a sheltered mossy nook. It is very easy to discover by a glance which are the home-grown, which the foreign contributions. There stand the English baskets and sieves, solid and stout as Harry the Eighth, amidst little hampers, as delicate as French ladies, and seemingly as incapable of withstanding hard usage. Yet some of these have come from Algiers, others from the south of France with greengages, and the majority from Normandy. France is beginning to send large quantities of peaches and nectarines, carefully packed with paper shavings in small boxes; and even strawberries this summer have found their way here from the same quarter. The frost which occurred in the early part of the present year destroyed nearly all the fruit-crops in the neighbourhood of London; and were it not for the bountiful stores which are brought from abroad, Covent-Garden would have been little better than a desert.

The repeal of the high duty upon foreign fruit has so far widened the field of supply that it can no longer be destroyed by an unusual fall of the mercury. By means of the telegraph, the steamboat, and the railroad, we annul the effects of frost, obliterate the sea, and command, at a few hours' notice, the produce of the continent. When there is a dearth in this country the fact is immediately noticed by the great fruit-dealers in the city: the telegraph forthwith conveys the information to Holland, France, and Belgium; and within forty hours steamers from one or other of these countries will be seen making towards the Downs and adjoining coasts, and in another six their cargoes, fresh plucked from the neighbourhoods of old Norman abbeys and quaint Flemish stadthouses, are blooming in Covent Garden. Fruit that will bear delay comes up the Thames by boat, and is discharged at the wharves near London bridge, but the major part eventually finds its way to the 'Garden.' The South-Western and South-Eastern are the two principal lines for foreign fruit; the former brings large quantities of Spanish and Portuguese produce—such as oranges, grapes, melons, nuts, &c.; the latter conveys apples, pears, strawberries, peaches, nectarines, &c., from Dover, to which place they are brought by steamers. To show how enormous is the supply from abroad, we give, on the authority of the goods-manager of the South-Eastern line, the amount brought by them in one night:—

100 tons of green peas from France.
50 " of fruit from Kent.
10 " of filberts from Kent.
25 " of plums from France.
10 " of black currants from France.

In all 195 tons; out of which 135 were from across the water. The Brighton and South Coast transmit the produce of Jersey and Dieppe—apples, pears, and plums—to the extent last year of about 300 tons. Of vegetables the Great Northern is the principal carrier; last year they brought to town the enormous quantity of 45,819 tons of potatoes, besides 1940 tons of other vegetables. The potatoes mainly proceed from the fen country. Walnuts generally come by the Antwerp boats, which sometimes carry cargoes of between 400 and 500 tons. Everybody who has travelled in the Low Countries remembers the magnificent walnut-trees which grow along the sides of the canals as commonly as elms in our own country. These eke out our scantier native stores, and help to make cosier the after-dinner chat over the glass of port. During two mornings that we visited Covent Garden we saw 613 bushel-baskets of strawberries that had just come from Honfleur, and upwards of 1000 baskets of greengages arrived from the same neighbourhood during the week. As we gazed, on one of these occasions, upon the solid walls of baskets extending down the market, crowned with parapets of peach and nectarine boxes, we wondered in our own minds whether it would ever be all sold, and the wonder increased as wagon after wagon arrived, piled up as high as the second-floor windows of the piazza. Venturing to express this doubt to a lazy-looking man who was plaiting the strands of a whip, 'Blessee, sir,' he replied without looking up from his work, 'the main part on 'em will be at Brummagem by dinnertime.' True enough, while we had been guessing and wondering, a nimble fellow had run to the telegraph and inquired of Birmingham and a few distant towns whether they were in want of certain fruits that morning. The answer being in the affirmative, the vans turned round, rattled off to the North-Western station, and in another hour the superfluity of Covent Garden was rushing on its way to fill up the deficiency of the midland counties. Thus the wire and steam, both at home and abroad, cause the supply to respond instantly to the demand, however wide apart the two principles may be working.

The strawberry trade of Covent Garden is not likely, however, at present to fall into the hands of foreigners. The London market-gardeners have long looked with justice upon this fruit as particularly their own. By the skill they have bestowed upon its culture it has advanced enormously, both in flavour and size, from the old standard 'hautboy' of our fathers, and which foreigners mainly cultivate to the present day. Miatt, of Deptford, is the great grower; by judicious grafting he has produced from the old stock half-a-dozen different kinds, the most celebrated being the 'British Queen,' which attains a prodigious size. Large quantities of strawberries are sent to the market in light spring-vans. They are placed in 1lb. punnets or round willow baskets, or they are carefully piled in pottles, and the process of 'topping-up,' as it is called, is considered quite an art in the trade. The rarest and ripest fruit, which goes direct to the pastry-cooks, is still more deftly treated. Lest it should be injured by jolting, horse is exchanged for human carriage. A procession of eight or ten stout women, carrying baskets full of strawberry-pottles upon their heads, may often be seen streaming in hot haste up Piccadilly, preceded by a man, like so many sheep by a bell-wether. It is probable that they have trudged all the way from Isleworth with the fruit, and, as they frequently make two journeys in the day, the distance traversed is not less than twenty-six miles.

After strawberries, perhaps peas are the most important article produced by the market-gardeners. Dealers, in order to consult the convenience of hotel-keepers and such as require suddenly a large supply for the table, keep them ready for the saucepan; and not the least curious feature of Covent Garden, about mid-day, is to see a dense mass of women—generally old—seated in rows at the corners of the market, engaged in shelling them. One salesman often employs as many as 400 persons in this occupation. The major part of these auxiliaries belong to the poor-houses around; they obtain permission to go out for this purpose, and the shilling or eighteen pence a-day earned by some of the more expert is gladly exchanged for the monotonous rations of the parish. In the autumn, again, there will be a row of poor creatures, extending along the whole north side of the square, shelling walnuts, each person having two baskets, one for the nuts, another for the shells, which are bought by the ketchup-makers. The poor flock from all parts of the town directly a job of the kind is to be had. If a fog happens in November, thousands of linkboys and men spring up with ready-made torches; if a frost

occurs, hundreds of men are to be found on the Serpentine and other park waters, to sweep the ice or to put on your skates: there are in the busy part of the town half-a-dozen fellows ready of a wet day to rush simultaneously to call a cab 'for your honour;' and every crossing when it grows muddy almost instantly has its man and broom. A sad comment this upon the large floating population of starving labour always to be found in the streets of London.

(To be continued.)

For "The Friend."

Liberality to the Poor.

The spirit and precepts of Christianity lead to commiserate the wants and the sufferings of those, who have little at their command to meet their daily need of food, clothing and fuel; and it is our duty to search them out, and to furnish proper aid according to our means, especially to persons who have never before been reduced to any direct dependance on the charity of others, but who now may not have it in their power to get employment, and whose modesty or sensibility deter them from exposing their destitution, and the almost famishing condition of their young children. In 1729, the London Yearly Meeting gave this advice: "We find ourselves at this time engaged to request that Friends, in any part of this kingdom, or other places, where provisions and the necessaries of life are dear and scarce, or sickness doth remarkably afflict, would, *in proportion to such scarcity and affliction*, exert their charitable assistance to the poor, which is our christian duty, as stewards of the many mercies wherewith the Lord has intrusted us." In 1741, that meeting further says, "Let your moderation be known unto all men. Warn those that are rich in this world, that they apply not the blessings of God to the indulging their appetites in pleasure and vanity; but that they be ready to do good, and to communicate to the relief of those who are in necessity. The principal, if not only satisfaction, a man of a truly christian disposition can have in the affluence and increase of the things of this world, must arise from the greater advantages and opportunities put into his hands of doing good therewith. But, alas! it is a most melancholy reflection to observe, that the very superfluities of the apparel of one person might sometimes be sufficient to clothe the nakedness of several fellow-creatures."

In a subsequent year, they say, "As it hath pleased the Lord to favour many amongst us with the outward blessings of this life, in so plentiful a manner as that we are placed in a capacity of doing much good, and of exercising the offices of christian love and charity, to the comfort and assistance of the poor and needy, we earnestly recommend to the practice of those, whom God hath so favoured, the excellent advice given by the apostle: "Charge them that are rich in this world, that they be not high-minded; nor trust in uncertain riches, but in the living God, who giveth us richly all things to enjoy. That they do good; that they be rich in good works; ready to distribute, and willing to communicate: laying up in store for themselves a good foundation against the time to come, that they may lay hold on eternal life." This apostolic counsel is also applicable to those, who, though not affluent, have the means of comfortable subsistence for themselves, and to spare for the relief of others requiring aid. It is every one's duty to look carefully into his own affairs, to see that his expenses are not carried beyond the means he possesses, so that he may be kept from pecuniary embarrassment, and be able to meet his engagements; and where this duty is faithfully performed, such will feel bound to contribute their proportion to mitigate the distresses of the needy, which will sweeten their enjoyments of the temporal bounties of their heavenly Father, to which the Divine blessing will be added. "Blessed is the man that considereth the poor; the Lord will deliver him in time of trouble. The Lord will preserve him, and keep him alive, and he shall be blessed upon the earth; and thou wilt not deliver him to the will of his enemies. The Lord will strengthen him upon the bed of languishing; thou wilt make all his bed in his sickness." "And the King shall say unto them, Verily I say unto you, inasmuch as ye have done it unto one of the least of these, my brethren, ye have done it unto me." To his sheep who have thus ministered to his brethren, Christ declared he would say, "Come ye blessed of my Father, inherit the kingdom prepared for you, from the foundation of the world."

From "The Leisure Hour."

Insect Curiosities.

(Concluded from page 159.)

The "cricket on the hearth" is the sentimental and poetical favourite of a good many people who are not obliged to be his near neighbours, while he is the nuisance and plague of a very numerous class whose fireside comforts, when they have any, are on the kitchen floor. Whether we look upon him as a pet or a plague, we are certainly not in the habit of attributing to him anything like sagacity or forethought. We see him and his tribe by hundreds, walking by night, along with silly cock-roaches, into a dish of stale beer, to drink and drown ingloriously—or jumping headlong into a basin of scalding tea, to perish in a boiling bath—or grubbing about in the ashes beneath the fire, at the risk of being crushed by a hot cinder. But the cricket is not altogether a fool. Sitting the other day by the kitchen fire, to dry ourselves after a sudden shower, we noticed a cricket popping up his head from a crack in the hearth-stone. We thought perhaps he might be hungry, and dropped a few small crumbs near his hole. Our shadow startled him, and he disappeared for an instant. In a moment or two, however, he came boldly forth, walked to the largest crumb, seized it and carried it to his hiding-place, returning immediately, until he had fetched them all. We tried him again with larger pieces —several much larger than himself. Most of these he carried off with perfect ease: but mark the perfection of his instinct; the hole in the stone from which he emerged was barely large enough to admit of his passage; when he carried small pieces of bread he ran rapidly down the hole head-foremost; but with larger pieces, he invariably got into the hole backwards, pulling the bread after him, evidently to avoid the possibility of blocking up the hole, and thus preventing his own escape in case of alarm. At last there remained one piece too large for him to remove. He now called a companion to assist; the two together dragged it to the mouth of the hole, where they ensconced themselves safely, and then, with bodies half protruded, set to work to reduce the mass to admissible dimensions, a task which it took them twenty minutes to accomplish ere the last crumb was safely housed.

The destructive insect called by gardeners "the American blight," but known by naturalists as the aphis, must be familiar to every owner of a garden or an orchard. Were it not for its mortal enemy, the larva of the coccinella (lady-bird, or lady-cow), its destructive ravages would be infinitely greater than they are. The aphides cluster round the tender shoots of fruit-trees, and, thick as sheep in a fold, are incapable of flight. Among them comes the coccinella like a wolf, and slaughters them by hundreds. But the most curious fact in connexion with these aphides is the relation existing between them and the ants. Goëdaert, an old naturalist, affirms that these insects are the progeny of the ants, an error still prevalent among the lower classes. There is no doubt a warm attachment exists between the ants and the aphides; but, on the part of the former at least, it is of an interested character—a pure example of "cupboard love." The aphides secrete a sugared fluid, and it is this of which the ants are fond. The ant ascends the trees, says Linnæus, *that it may milk its cows, the aphides;* and its proceedings amongst its cattle, which may be easily watched by any attentive observer, have been thus graphically described:—"The aphides, when no ants attend them, waste the sweet fluid which they produce, and, by a certain jerk of the body, which takes place at regular intervals, they ejaculate it to a distance; but when the ants are at hand, watching the moment when the aphides emit their fluid, they seize and suck it down immediately. This, however, is the least of their talents, for they absolutely possess the art of making them yield it at pleasure; or, in other words, of milking them. On this occasion their antennæ are their fingers; with these they pat the abdomen of the aphis on each side alternately, moving them very briskly till a little drop of the honeyed fluid appears, which the ant immediately takes into its mouth and swallows. But this is not the most singular part of the history. Ants make a *property* of these cows, for the possession of which they contend with great earnestness, and use every means to keep them to themselves. Sometimes they seem to claim a right to the aphides that inhabit the branches of a tree or the stalks of a plant; and if stranger-ants attempt to share their treasure with them, they endeavour to drive them away, and may be seen running about in a great bustle, and exhibiting every symptom of inquietude and anger. Sometimes, to rescue them from their rivals, they take their aphides in their mouths: they generally keep guard around them; and when the branch is conveniently situated, have recourse to an expedient still more effectual to keep off interlopers. They inclose it in a tube of earth and other materials, and thus confine them in a kind of paddock near their nest, and sometimes communicating with it. One species common in our meadows, the yellow ant (*formica flava*), which is not fond of roaming from home, and likes to have all its conveniences within reach, usually collects in its nest a large herd of a kind of aphis that derives its nutriment from the roots of grass and other plants (*aphis radicum.*) These it transports from the neighbouring roots, probably by subterranean galleries excavated for the purpose, leading from the nest in all directions; and thus, without going out, it has always at hand a copious supply of food." The aphides share the care and solicitude of the ants equally with their own offspring, the latter taking every care of their eggs, and tending them as assiduously in all respects as a farmer would his young lambs or his cattle.

What a vast and inconceivable amount of living enjoyment is comprised in the insect world! Of the number of these minute creatures, the mind fails to grasp the most remote idea. It has been proved by a celebrated naturalist, that a single aphis in its short life may be the parent of a progeny more than fifty times as numerous as the whole number of the human inhabitants of the globe. There are other tribes of equal fecundity; but this marvellous fruitfulness is counterbalanced by swarms of deadly enemies, to whose ravages all

in their turn have to submit, and by the sweeping gusts of autumn and winter, which prostrate countless legions at a breath. There is something melancholy in the contemplation of the prodigious havoc committed upon the insect races by the first cold blasts of autumn, and the sight of the once happy swarms reduced to a state of half-animate helplessness. In October, 1850, in walking from the sea-wall at Harwich as far as the Breakwater, we found the margin of the sea for near a mile in length covered with myriads of crane-flies, vulgarly known as father-long-legs. A strong cold wind was blowing from the German ocean, the effects of which had already crippled the whole host so effectually that they were unable to move out of the way, and numbers perished at every step we took. It was impossible to set down the foot without crushing them by dozens. In some sheltered nooks, under the seats, or in crevices in the bank, they had crowded so densely for warmth and refuge, and their long legs had become so entangled together, that thousands might have been lifted in a mass. Thus they continued for several days, until a change of wind carried them out to sea, where in all likelihood they formed an acceptable meal to a shoal of whiting then affording employment to the fishermen of the place. Again, in the early days of September of last year, while making holiday at Southend, we observed a similar phenomenon in connexion with the coccinellæ, or "lady-birds." Innumerable swarms of these pretty little creatures, apparently in a state of stupified inactivity, were clustered about the stones and stakes of the shore, and the wooden piles of the long pier, thousands being submerged by every breaker that fell upon the beach, and the host perishing by millions at the rise of the tide. It would appear to be a law of nature that the survivors of the internecine slaughter which all summer long is going on between the insect tribes, should be devoured in their turn when the combat is over.

Still vast numbers, of the domestic insects especially, contrive to brave the rigours of winter. The common house-fly sets up his winter quarters in a cranny between the the bricks of the kitchen chimney; and we have seen him sally forth before now, lured by the smell of extra sweets and aroused by the warmth of extra roasting, to claim his share of the Christmas pudding. The flesh-fly, too, no favourite with housekeepers, hybernates in huge battalions. We chanced some winters back to have occasion to disturb a set of folding shutters to a parlour window, which had been long unused. We were startled by observing that the plastered wall of the recess for the reception of the shutters was in appearance painted jet-black. On taking a candle, however, to examine more distinctly, we made the unwelcome discovery that the whole area of six feet in length by eighteen inches in width was one compact colony of flesh-flies in a dormant state, clinging layer upon layer three deep. Fortunately they were all palsied or petrified with cold, and were easily swept into a washing-basin, which they more than filled, and not one of them ever woke to buzz again. The window of the room had been left open till sunset every day during summer and autumn, for the sake of ventilation, for many years, and it is more than probable that this convenient nook had long been a favourite wintering-place for flesh-flies. The corresponding recess on the other side of the window did not contain a single one.

But we are warned by the bounds we have already reached, to cut short our remarks on insects for the present. Perhaps we may resume the subject another day.

For "The Friend."

Samuel Crisp, previous to joining the Society of Friends, resided at Norfolk. He was educated at college, and took the order of deacon in the church of England, so called; after which he officiated as a parish curate, also, for a short time, as chaplain in a private family. In the year 1700, being then resident in London, and about thirty years of age, he was convinced of the Truth, as professed by Friends. Soon afterwards he engaged as an assistant to Richard Sawyer, a Friend, who kept a large boarding-school at Wandsworth. In this situation he did not remain long, and subsequently opened a school on his own account at Stepney, near London. His adoption of the principles of Friends, drew on him, not only remonstrances, but also contumely and slander. He published a refutation in detail, of the charges preferred against him by a bitter, envious opponent, with an able defence of some of the principles of Friends. In this he says, "As to my leaving the church of England, God is my witness, I did it in pure obedience to the convictions of my own mind; and the peace which I have often felt returned into my bosom, is more than I can express: I have had a great and abundant reward from the Lord, for what I have done in this matter. I desire to fear God, and am heartily sorry, that I have spent so much time in the vanities and impertinences of this sinful world; taking things upon trust, swayed by temporal interests, and following the prejudices of my education. I was in the order only of deacon; then I pretended to preach, and could talk much of Christ, and heaven, and hell, and extolled the Scriptures highly, which were, nevertheless, a sealed book to me, for though I read them often, both in public and private, yet my mind being outward, and not waiting in silence upon that Holy Spirit that gave them forth, I knew not the Scriptures, nor the power of God; so then the power of death and darkness ruled in me. I had care of souls, as they call it, but was a physician of no value. I knew, indeed, that I had served my time at the university, as apprentices do to a trade; and that I had passed the examination and the ceremony of ordination—and I thought this would do; but as for any immediate call or appointment of God, to the work of the ministry, I knew nothing of it. I had the care of two parishes committed to me by the bishop of the diocese, but had never any call from God to go and preach to that people. So I was like those prophets Jeremiah speaks of, who ran before they were sent, and therefore could not profit the people at all—I expected thirty pounds a year for preaching—that was my wages, and if any should question my commission, I knew I had a piece of paper to show, which I called my orders, if that would satisfy them; so brutish was I in my understanding."

In a letter which he wrote in 1702, he says, "I think I made a little progress in a holy life, and through God's assistance I weakened some of my spiritual enemies, whilst I lived in the communion of the national church. I thank my God, I can truly say, whilst I used those prayers, I did it with zeal and sincerity, in his fear and dread: but still I ceased not my earnest supplication to him in private, that he would show me something more excellent; that I might get a complete victory over all my lusts and passions, and might perfect righteousness before him. For I found a great many sins and weaknesses daily attending me; and though I made frequent resolutions to forsake those sins, yet still the temptation was too strong for me; so that I had often cause to complain with the apostle, in the bitterness of my soul, 'O, wretched man that I am, who shall deliver me from the body of this death?' who shall set me free, and give me strength to triumph over sin, the world and the devil; that I may in everything please God, and there may not be the least thought, word or motion, gesture or action, but what is exactly agreeable to his most holy will, as if I saw him standing before me, and as if I were to be judged by him for the thought of my heart next moment! O, that I could always stand here! for here is no reflection, no sorrow, no repentance; but at God's right hand there is perfect peace, and a river of unspeakable joy. O, that we might imitate the life of Jesus, and be thoroughly furnished unto every good word and work. This was the frequent breathing of my soul to God when I was in the country, but more especially after I had left my new preferment of a chaplain, and taken private lodgings in London. In this retirement I hope I may say without boasting, I was very devout and religious, and found great comfort and refreshment in it from the Lord, who let me see the beauty of holiness. The sweetness that arises from a humbled, mortified life, was then very pleasant to my taste, and I rejoiced in it more than in all the delights and pleasures of the world.

"And now it pleased God to show me, that if I would indeed live strictly and holily as becomes the gospel, then I must leave the communion of the church of England; but I knew not yet which way to determine myself, nor to what body of men I should join, who were more orthodox or more regular in their lives. As for the Quakers, I was so great a stranger to them, that I had never read any of their books, nor do I remember that I ever conversed with any one man of that communion in my life. I think there was one in Foxly whilst I was curate there, but I never saw the man, though I went several times to his house on purpose to talk with him, and to bring him off from his mad and wild enthusiasm, as I then ignorantly thought it to be. I knew that way was everywhere spoken against; he that had a mind to appear more witty and ingenious than the rest, would choose this for the subject of his profane jests and drollery. With this he makes sport, and diverts the company; for a Quaker is but another name for a fool or a madman, and was scarcely ever mentioned but with scorn and contempt. If all was true that was laid to the Quakers' charge, I thought they were some of the worst people that ever appeared in the world, and wondered with what face they could call themselves Christians, since I was told they denied the fundamental articles of the holy faith, for which I ever bore the highest veneration and esteem."

His presentiments of Friends were little likely to lead him to join them. While he was at Bunyan school, his father, afraid he might become an enthusiast, sent him one of Faldo's attacks upon the Quakers, and at a subsequent period, an acquaintance, a priest of the church, on his first showing an inclination to unite with Friends, referred him to Lesly a "non-juring parson," who, he said, was well acquainted with their writings, and he had no doubt of his receiving satisfaction from him. It seems Lesly succeeded in putting him to a stand for a short time, but he soon discovered the fallacy of his arguments and insinuations. Lesly was the author of a book, which he called "The Snake in the Grass," written to calumniate the Society of Friends, and abounding with misrepresentation and falsehood. He was employed by some of the clergy, to render them and their principles odious to the world; but his misrepresentations were disproved, and his crafty imposture made manifest by Joseph Wyeth and George Whitehead, in a book entitled, "A Switch for the

Snake." It was not probable a decided enemy would furnish a fair account of Friends' religious principles, but during his residence in London, living in a private retired manner, walking humbly in the sight of God, and having opportunity to reflect upon his past life, S. C. says, "As I had occasion to be one day at a bookseller's shop, I happened to cast my eye on Barclay's works; and having heard that he was a man of great account amongst the Quakers, I had a mind to see what their principles were, and what defence they could make for themselves; for sure thought I, these people are not so silly and ridiculous, nor maintainers of such horrid opinions, as the author of 'The Snake,' and some others would make us believe. I took Barclay home with me, and I read him through in a week's time, save a little treatise at the end, which, finding to be very philosophical, I omitted; but, however, I soon read enough to convince me of my own blindness and ignorance, in the things of God. There I found a light to break in upon my mind, which did mightily refresh and comfort me in that poor, low, and humbled state in which I then was. For, indeed, I was then and had been, for a considerable time before, very hungry and thirsty after righteousness; and therefore *I received the truth with all readiness of mind.* It was like balm to my soul, and as showers of rain to the thirsty earth, whi. h is parched with heat and drought. This author laid things down so plainly, and proved them with such ingenuity, and dexterity of learning, and opened the Scriptures so clearly to me, that without standing to cavil, dispute, raise argument or objection, or consulting with flesh and blood, I presently resigned myself to God; and weeping for joy that I had found so great a treasure, I often thanked him, with tears in my eyes, for so kind a visitation of his love, that he was graciously pleased to look towards me, when my soul cried after him. So, though before I was in great doubt and trouble of mind, not knowing which way to determine myself, yet now the sun breaking out so powerfully upon me, the clouds were scattered. I was now fully satisfied in my own mind, which way I ought to go, and to what body of people I should join myself.

"So I left the communion of the church of England, and went to Grace-church Street Meeting. I read other books, among which was an excellent piece, called 'No Cross, No Crown.' Thus I continued reading and frequenting Friends' Meetings, but did not let any one know what I was about. The first man I conversed with was George Whitehead; and this was several weeks after I began to read Barclay, and frequent Friends' Meetings. By him I was introduced into more acquaintance; and still the farther I went, the more I liked their plainness, and the decency and simplicity of their conversation. They do not use the ceremonies and salutations of the church of England, but shake hands freely, and converse together as brothers and sisters, that are sprung of the same royal Seed, and are made kings and priests unto God. O, *the love, the sweetness and tenderness of affection* I have seen amongst this people! 'By this,' says Christ, 'shall all men know that ye are my disciples, if ye have love one to another.' 'Put on, therefore,' says the apostle, 'as the elect of God, holy and beloved, bowels of mercy, kindness, humbleness of mind, meekness, long-suffering.'

"Thou knowest, my dear friend, that religion is a very serious thing; repentance is a great work, and one precious immortal soul is of more worth than ten thousand perishing worlds, with all their pomp and glory; therefore, let us take courage; and be valiant for the truth upon the earth—let us not content ourselves with a name and profession of godliness—let us come to the life and power of it—let us not despond of getting the victory. We have a little strength for God: let us be faithful to him, and he will give us more strength, so that we shall see the enemy of our peace fall before us, and nothing shall be impossible unto us. I say, let us be faithful to that measure of light and knowledge which God has given us, to be profited and edified by in a spiritual life; and as God sees we are diligent and faithful to work with the strength we have, he will more and more enlighten us, so that we shall see to the end of those forms and shadows of religion wherein we had formerly lived. But if he sees *we are about to take up our rest in these shadows*, that we grow *cold and indifferent in the pursuit of holiness*, running out into notions, and speculations, and have more mind to dispute, and to make a show of learning and subtilty, *than to lead a holy and devout life*, then it is just with God to leave us in a carnal and polluted state; to *continue yet but in the outward court*, where we may please ourselves with beholding the beauty and ornaments of a worldly sanctuary, and never witness the veil being taken away, and that we are brought by the blood of Jesus into the holiest of all, where alone there is true peace with God, and rest to the weary soul."

Samuel Crisp died of the small-pox, at Stepney, on the 7th of the Fourth month, 1704, aged 34 years.

Extracted for "The Friend."

"How magnificent is this idea of God's government. That he inspects the whole and every part of his universe every moment, and orders it according to the counsels of his infinite wisdom and goodness by his omnipotent will; whose thought is power; and his acts ten thousand times quicker than the light; unconfused in a multiplicity exceeding number, and unwearied through eternity!

"How much comfort and encouragement to all good and devout persons are contained in this thought! That Almighty God, as he hath an eye continually upon them, so he is employed in directing, or doing what is best for them. Thus may they be sure, indeed, that 'all things work together for their good.' They may have the comfort of understanding all the promises of God's protection, in their natural, full, and perfect sense, not spoiled by that philosopy which is vain deceit. The Lord is truly their shepherd; not leaving them to chance or fate, but watching over them himself, and therefore can they lack nothing.

"What a fund of encouragement is here for all manner of virtue and piety, that we may be fit objects of God's gracious care and providence, so particularly for devotion, when we can reflect that every petition of a good man is heard and regarded by him who holds the reins of nature in his hand. When God from his throne of celestial glory, issues out that uncontrollable command to which all events are subject, even your desires, pious, humble Christians, are not overlooked or forgotten by him. The good man's prayer is among the reasons by which the Omnipotent is moved in the administration of the universe.

"How little is all earthly greatness! How low and impotent the proudest monarchs, if compared with the poorest in the world who leads but a good life! for their influence even in their highest prosperity, is only among weak men like themselves, and not seldom their designs are blasted from Heaven for the insolence of those that formed them. 'Is not this great Babylon that I have built by the might of my power, and for the honour of my majesty?' While the word was in the king's mouth, there fell a voice from Heaven, saying, 'The kingdom is departed from thee.' But the poor man's prayer piercth the clouds; and weak and contemptible as he seems, he may draw down the host of heaven and engage the Almighty in his defence, so long as he is able to utter his wants, and can turn the thoughts of his heart to God."—*Ogden.*

From the Pottsville Gazette.

The Burning Mountain.

Through the politeness of J. Maginnis we have been favoured with a more full history of the burning coal vein on Broad Mountain than any we remember to have seen before. The fire is in the Jugular vein, which at that place varies in thickness from 40 to 80 feet; the height of the breast through which the fire has passed, averages about 300 feet; and the longitudinal extent it has consumed is about 3-8 of a mile. Thus making a mass of solid coal averaging 60 feet in thickness, 300 feet in height, and 3-8 of a mile in length. This, allowing a cubic yard to equal a ton, which is the received standard here, gives the quantity of 1,320,000 tons of coal consumed by this fire.

It originated in 1838, from a fire burning at the mouth of the mine, which ignited the timber work sustaining the roof of the drift, and was thus carried to the coal within the mine. Two men who were in the drift, beyond the fire, at the time, were suffocated. Thus far, since the coal ignited, there have been no efforts made to extinguish it. This was owing to the great expense attending, if not the utter impossibility of flooding it. This difficulty was occasioned by the fire starting some 15 feet above water level, and having a breast of 300 feet above that yet, to reach with water, before it could be completely drowned out.

Any efforts now to extinguish the fire would be comparatively unimportant, as it is at present confined within narrow limits, and cannot possibly greatly extend its ravages; for on the N. E. it is in close proximity to a deep ravine, through which passes a small stream that will flood all below its level when the fire reaches it; and on the S. W. end, L. C. Dougherty, several years ago, mined all above water level until the fire was met.

There is an incident connected with this, worth narrating: The miners employed by L. C. Dougherty knew, by the unusual heat, that for some time they had been working in the neighbourhood of the fire, yet to save as much coal as possible, they kept on day after day mining in the direction of the fire; and their labours were persisted in to the very meeting of it, for the last charge of powder was almost instantly ignited by the heat of the coal into which the hole was drilled. Continually, during the drilling of this hole, it was feared they would reach the red-hot coal, and when they had finally driven it as far as they deemed safe, a cartridge was thrust in the boring and rammed home, and the miners ran to places of safety, to await the explosion. In a very short time this took place, and the partition of black coal was completely torn away, bringing with it in its fall an enormous mass in a burning state. From the excessive heat the fire spread rapidly along the timbers, and this, together with the rush of gas from the before imprisoned fire, so rapidly filled the mine that the workman barely escaped.

To this burning vein there are some six or eight craters from which vapour and gas are thrown off, but owing to the number of these vents, and to the fractured condition of the surface in general, which allow the escape of these

gases at so many points, we have no rapid and considerable jetting at any one place in regular volcano style; yet, if all that escapes was discharged through one aperture, our Broad Mountain volcano would make more display, and, consequently, attract more attention. At some points where the surface has fallen in, by going to the brink, we have been told, the fire at a great distance below can be seen, yet owing to the fallen earth, and to the mass of ashes lying on the fire, it is mostly concealed.

Likewise in addition to fire and smoke, we have those sounds common to volcanoes. We are informed that the bursting of rocks underneath, from excessive heat, sounds to a person on the hill like distant, heavy discharges of artillery, and at the foot of the hill there is a small spring of water that comes from near the burning mass, and is heated to a temperature too great for comfortable bathing. Thus our little volcano has most if not all the concomitants of the larger ones. It is true that it does not do up things as magnificent as they are done at Vesuvius or Etna, yet, considering the high price of fuel, it would scarcely be worth while to attempt a competition to any greater extent.

"THY WILL BE DONE."

When sorrow casts its shade around,
And pleasure seems our course to shun;
When nought but grief and care is found,
How sweet to say, "Thy will be done."

When sickness lends its pallid hue,
And every dream of bliss is flown;
When quickly from the fading view,
Recede the joys that once were known.

The soul resigned will still rejoice,
Though life's last sand is nearly run;
With humble faith and trembling voice,
It whispers soft, "Thy will be done."

When called to mourn the early doom
Of one affection held most dear;
While o'er the closing, silent tomb,
The bleeding heart distils the tear;

Though love its tribute sad will pay,
And earthly streams of solace shun;
Still, still the humbled soul will say,
In lowly dust, "Thy will be done."

Whate'er, O Lord, thou hast designed,
To bring my soul to thee in trust;
If mercies or afflictions kind,
For all thy dealings, Lord, are just.

Take all—but grant in goodness free,
That love which ne'er thy stroke would shun;
Support this heart, and strengthen me
To say in faith, "Thy will be done."

Selected.

Learn to tread life's dangerous maze,
With unerring virtue's clue;
Envy's censure, flattry's praise,
With unmoved indifference view.

Void of strong desire and fear,
Life's wide ocean trust no more;
Strive thy little bark to steer,
With the tide, but near the shore.

Thus prepared, thy shortened sail,
Shall, whene'er the winds increase
Seizing each propitious gale,
Waft thee to the port of peace.

Keep thy conscience from offence,
And tempestuous passions free,
So, when thou art called from hence,
Easy shall thy passage be.

Easy shall thy passage be,
Cheerful thy allotted stay,
Short the account 'twixt God and thee,
Hope shall meet thee on the way.

Truth shall lead thee to the gate,
Mercy's self shall let thee in,
Where, its never changing state,
Full perfection, shall begin.

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 166.)

RALPH WITHERS.

Ralph Withers was one of a family of that name, residing at Bishops Cannings, in Wiltshire, some of whom were convinced of the truth, soon after the rise of Friends. In the year 1656, Thomas Withers, one of them, was arrested by a constable in the street, at Market-Lavington, because he was a Quaker, and after being kept in an alehouse all night, was taken before a justice of the peace, who committed him to the county jail. Two of his neighbours, conscious of his innocence, went bail for his appearance at the next assizes, on which he was set at liberty. When the time for the court to sit came, he was in attendance, and although no legal cause was found for his arrest and commitment, he was sent to prison, where he was detained for six years.

In the year 1657, Ralph Withers, being at a Meeting of Friends at Marlborough, was arrested and taken before the mayor of the place, who sent him to prison as a vagabond, although his residence was well known to be at Bishops Cannings, but eight miles off. His imprisonment was probably of short duration. In the year 1660, a private difference having arisen between some Friends of his neighbourhood, probably of a pecuniary nature, he with three other Friends were appointed by the contending parties arbitrators to decide how the difficulty should be settled. For this good and praiseworthy intent, the parties met at the house of William Moxham, of Marden. William Gunn, the priest of that parish, one of the most cruel persecutors of that day, hearing of their meeting, went to Moxham's house with his son, attended by an officer and men armed with pikes, bills, and staves. Entering the premises, they seized on the Friends, who had broken no law, and with violence forced them before a justice of the peace. Here they were required to give security for their appearance at the next sessions. To this they objected that they had been in the commission of no crime for which they could be called to answer. They were thereupon committed to prison, and confined for many weeks.

At what time Ralph Withers was called to the work of the ministry we know not, but we find him, in 1675, signing an epistle issued by the ministering Friends at the Yearly Meeting, in London. In the year 1678, having been married according to the order in use amongst Friends, he was, for this cause, alone, as he supposed, excommunicated and imprisoned. Unawed by the cruel prosecutions carried on against Friends by Priest Gunn, Ralph continued to reside in Wiltshire until the time of his removal to Pennsylvania, which probably took place early in 1682. He was a representative at London Yearly Meeting in 1681, and on the 30th day of the Seventh month, in that year, he was at London with William Penn, and signed as a witness, the instructions given by the proprietor of Pennsylvania to his "commissioners for the settling of the present colony this year transported into the said province."

Ralph Withers took up 500 acres of land in Chester county, where he settled, on his arrival in the new colony.

The reputation he enjoyed for honesty and ability in business, must have been good, for we find in the Eighth month, 1682, James Claypoole, of London, the treasurer of the "Society of Traders," directs, that certain labourers for his farm should be sent "to John Goodson, chirurgeon to the Society of Traders, at Upland, in Pennsylvania, or in his absence, to Ralph Withers, to whom I have given a letter of attorney, to be deputy treasurer to the Society till my arrival."

In the autumn of 1682, Ralph was appointed by the inhabitants of Chester county one of the "provincial councillors" for two years, the duties of which station he continued to exercise until near his death. The last meeting of the commissioners he attended, was held Fourth month 25, 1683. He probably was unable after this to get to Philadelphia, but how long he lingered in his last illness we have no means of gaining information. He appears to have died before the close of the year, and information of his death was forwarded to the Yearly Meeting at London, in 1684. He was a useful man in civil and religious society, possessing the confidence of those who were acquainted with him; and as a humble believer in the Lord Jesus Christ, and a faithful labourer in his gospel, we have reason to believe his end was peace.

When Thomas Chalkley was on board a vessel bound to the West Indies, and from thence to England on a religious visit in 1707, he felt his mind drawn in love to salute his friends in Philadelphia, by a short epistle for the forwarding of which an opportunity presented. This epistle has, as far as I know, never been printed. The only copy which I have found of it, is somewhat worn by age, and a few words are entirely obliterated, but the context in most cases shows what they must have been.

"Dear Friends,—Whereas I am likely to be separated from you for divers years, and having a small opportunity of time, it seemed meet to me, and my duty, to greet you in the dear love of our heavenly Father, and of his Son our Holy Lord Jesus Christ; in which [love] I desire that Friends of our meeting with my own soul, as also the faithful everwhere may be preserved to the end; even to the bright and glorious day of Christ Jesus, he reigning over all in his blessed gospel of light, life and power.

"Dear Friends, when this is over your spirits, then seek the Lord for ministers, that utterance may be given to us, and that God would make his angels ministering spirits to us, and we as a flame of Divine fire burning in holy zeal against all manner of sin and unrighteousness. I think I have great need of your prayers, considering I am likely to go through many deep trials and travels before I see your faces again. Not that I am unwilling to suffer for Christ my Lord's sake! I am not only willing to suffer but even to die for his name, if he require it. But if I travel, let me travel in the unity of the brethren; if I suffer, let it be in the fellowship of the gospel, and if I die, let me die in love and unity with the faithful! From a child I always loved the brethren, and hope I shall to the end. Oh, love and unity! it is the strength of God's people, and it is that in which they ever did prevail, and will to the end of the world.

"So dear Friends and Brethren, having this little opportunity, I was willing to give the salutation of my very dear love in the holy truth, as it is in our Lord Jesus Christ. Therein I remain and subscribe your truly loving Friend and Brother, THO. CHALKLEY.

"If Friends see meet, let this be read before the men and women, met asunder.

"24th of Eighth mo., 1707,
from on board the sloop Mary."

(To be continued.)

"Self-denial is the most exalted pleasure; and the conquest of evil habits is the most glorious triumph."

From the Annual Monitor for 1855.

Mary Chapman, wife of John Chapman, of Ulverston, deceased Fifth mo. 19th, 1854, aged 57 years.

Early brought to the knowledge of the Truth as it is in Jesus, and prepared to receive it in the love of it, the religious course of this humble minded and retiring Christian, though but little known beyond the circle of her own immediate acquaintance, bore instructive evidence that her heart was set on heavenly things; and that amidst the various trials and temptations of life, it was her sincere and earnest desire steadily to follow her Lord, in the simple obedience of faith.

She was educated amongst the Episcopalians, and continued in profession with them till about the twentieth year of her age. At this time she became increasingly concerned for the salvation of her soul, and attracted by the religious zeal of the Methodists, she joined in fellowship with them for about two years. But though she "had no cause to doubt their sincere piety" she found amongst them, and cherished with "kind regard" the remembrance of their Christian concern for her religious welfare, yet, her convictions in regard to the spirituality of true religion, and the practical requirements of the Gospel, constrained her to adopt the principles of the Society of Friends, and ultimately to unite herself in membership with them. A public meeting of worship, appointed at the request of Nathan Hunt, from America, was the first Friends' meeting she attended; but during the silence which prevailed for some time, in the next at which she was present, she "began to query whether or not her present moments were lost," when the convictions which were brought upon her mind, in regard to those who "worship God in spirit and in truth," and the subsequent expression of a few words by a friend, proved a means of encouragement and help to her.

On another occasion, of a similar kind, she remarks in her memoranda, "this meeting was silent as to vocal sound, but He who said, 'Where two or three are gathered together in my name, there am I in the midst of them,' was pleased to own us with his presence. I believe, in this meeting, my judgment was in good measure convinced, as to the propriety of sitting down in silence."

She had, however, still to pass through many conflicts in regard to her spiritual course, and though the principles of Friends "were those with which her judgment united," she greatly shrank from the cross, which the open profession of them involved.

About this time, she attended a public meeting for worship, held at the request of Ann Alexander, then of York, in the place where she resided. In referring to this, she remarks: "During the time we sat in silence, I felt the Lord's presence in a remarkable manner, and I was fully confirmed in my belief, that I must go amongst this people." Whilst thus silently "viewing her situation in this light," A. A. rose to speak, and the occasion appears to have been much blessed to her, so that she observes in regard to it, "This was indeed the day of the Lord to me. He did now appear in the glory of his majesty, and made the earth to tremble at his presence." Henceforward her path seemed plain, and she felt it to be her duty openly to avow her religious sentiments, by a walk in accordance therewith.

Her father had been much displeased when she united herself with the Methodists; and, in now more decidedly becoming a Friend, she anticipated much opposition from this beloved parent.

"But I relied" she writes, "on the arm of the Lord, who had promised to be my strength in weakness, and ever blessed be the name of the Most High, who has the heart of all men in his keeping, he was, in his infinite mercy, pleased to make my way at that time."

Contrary to her fears, her father left her at liberty to attend the meetings of Friends; and notwithstanding many difficulties and trials, in connection with the faithful support of our Christian testimonies, in fully assuming the character and appearance of a consistent Friend, she was strengthened to endure the cross, and to despise the shame, and great was her peace.

In alluding to this time of many sacrifices, she thus records her feelings of gratitude, "Ever blessed and magnified be the Most High. He was near for my help. O what I now enjoyed of my heavenly Father's goodness!"

She was one who, to use her own expression, had "bought the Truth," and she felt it to be very precious. So much did she love the principles which she had been led to adopt, that she said, that "she should be under the necessity to uphold them, even if no one else were of the same sentiments." She was deeply pained when she saw among Friends those who manifested a conformity to the world, and its spirit, and did not support what she believed to be the true standard of Christianity.

Of a meek and quiet spirit, it appeared to be her steady endeavour to pursue her course of humble watchfulness unto prayer in the discharge of her duty as a wife, a mother, and a Friend.

The Christian principles which were her support under the various vicissitudes and deep trials which were permitted to attend her path through life, did not fail her in the prospect of exchanging this mortal scene for one of endless duration. For several months before the commencement of her last illness, she repeatedly expressed her belief, "that she had not long to live," though she enjoyed better health than usual. She was taken ill on the 1st of Fourth month, 1854. A week before this, she told her husband, that "lately she had experienced a great want of the perceptible presence of the Comforter," and that she had been reminded, "that Christ was *forty days* in the wilderness, and did *eat nothing*." Alluding to this conversation, a few days after she became unwell, she said with tears, "It is very different now; I am so abundantly favoured I cannot refrain from tears of joy, that I should be so much favoured above my deserts; and whether I recover or not, I shall have to remember this particular time of comfort. I have felt Satan chained down in such a manner as I never witnessed before." The following morning she again adverted to the great comfort with which she had been favoured, and added, "I feel myself so unworthy." She spoke with much calmness of the prospect of her decease, and gave instructions respecting it. In allusion to her not being brought up in the Society of Friends, she said, "I have *bought* the Truth, but have not *sold* it. I have been too much like Martha; yet I have endeavoured to keep within the *inner* court. If this had not been the case, I should not have received the comfort I have witnessed."

On the morning of the 11th, after a psalm had been read, she remarked, that last night her end appeared very near; but added, in looking at the probability of continuing a little longer, "I feel fully resigned to leave it to the Lord to order as he sees best."

On the 13th, a remarkably precious solemnity was felt during a time of silent waiting in her chamber. She referred to the words of our blessed Saviour, that "he would manifest himself to his disciples;" and spoke of the enjoyment which had been granted her of his presence, adding, "if the foretaste be so precious, what will the fulness be?" She said that her comfort had been so uninterrupted, since her illness commenced, that not a cloud had been permitted to come over her mind.

Though, when in health, her time was unavoidably much occupied with her domestic cares, she was remarkably diligent in reading the Bible, and in meditating on its precious contents. She adverted to this, and observed, that of late she had read but little in any other books, and spoke of the transcendant comfort she had derived from *this*; adding, that however busy she had been, she made it her *daily practice* to seek for private retirement and communion with her Maker; that if this had not been the case, she should probably not have enjoyed so much of his comfortable presence, now that she was so unwell; "but," she added, "it is no merit of mine,—it is all of mercy."

After a time of fresh searching of heart, during which she was brought to have a very clear view of the purity required as a preparation for heaven, she expressed her desire to be sent down again and again to Siloam, that every defilement might be washed away; she gratefully acknowledged the favour of having her mind preserved in calmness, and comfort, and evinced her continued trust in a Saviour's love, by repeating the lines,—

"Rock of ages, cleft for me,
Let me hide myself in thee," &c.

On the 30th, she referred to the sacrifices it had cost her to take up the profession of a Friend, but added, "they have been made up to me a thousand fold." When, a few days after, her mind had been less favoured with the abundance of joy, and the enemy was permitted again to buffet her, she remarked, "that these changes were not unexpected to her;" and on the 3rd of Fifth month, she said in reference to them, "Last night I had a tossing time, both of mind and body. The enemy has had his chain lengthened, but I saw that his power was limited." Fifth month 10th. When in great pain, she expressed her desire, that patience might be granted. On her husband telling her that he believed she would be favoured with strength according to her need; she replied, "I feel that I am not forsaken, support, is underneath." Speaking at one time, of the needful work of the entire sanctification of the soul, and the conflicts she had had with the enemy, she remarked, that now he appeared to have no power over her, not even to show himself; and gratefully added, "I seem to be ready to fall into the arms of my Saviour." Referring, at another time, to the deep trials and exercises she had had to pass through, she said that they had been most beneficial to her, and exclaimed,—

"For all I bless Thee,—
Most for the severe."

A few days after, a change being observed on her countenance, a friend inquired of her, if she still felt Jesus precious. She opened her eyes, and emphatically said, "O yes, as precious as ever!—increasingly so!"

During the few remaining days of her life, her strength appeared much exhausted; but the broken sentences she was distinctly heard to utter, clearly indicated a mind prepared for the "end that was near;" and one of her last expressions had reference to that "city which has no need of the sun, neither of the moon, to shine in it, for the glory of God doth lighten it, and the Lamb is the light thereof."

THE SHELTER.

The Nineteenth Annual Report of the Association for the Care of Coloured Orphans. Adopted First month 5, 1855.

It has been usual, for "The Association for the Care of Coloured Orphans," to present their subscribers and friends at the close of the year, with a brief account of the family and the condition of the institution under their care. The managers may acknowledge, they have cause for a renewal of gratitude to the Author of all our blessings, for the prevalence in so remarkable a degree, of almost uninterrupted health in our large family; and particularly so, as respects our little orphans during the season of extreme heat in the summer months, wherein children are often liable to wasting disease, which in many instances cut short the thread of life. And may we not attribute their exemption from indisposition, (under the blessing of a kind Providence,) to the careful management of our valuable matron, who is ever watchful and concerned for the welfare and comfort of those over whom she presides—continuing to exercise her mild discipline, joined with judicious firmness, in the government of the children.

There are at present 73 children in the institution, of whom eight require the care of a nurse, 65 are of an age to attend school, and some of these, notwithstanding their youthfulness, make good progress in reading, writing, arithmetic and geography; and the girls who are old enough, are carefully instructed in sewing. A change has occurred during the past year in the school department; the principal teacher, who for more than six years had filled that situation with much satisfaction to the managers, and formed at the same time an agreeable inmate in the family, having resigned, her assistant was appointed in her place, and another teacher introduced, who, with her companion in office, appear to be studiously endeavouring to fulfil their duties with care and faithfulness.

In admitting the helpless ones into our sheltering home, we have frequent evidence of the advantages resulting from so comfortable an enclosure for the friendless and destitute orphan; and though there is too much sameness in the oft repeated statements of exposure and neglect, to which under many circumstances such are painfully subjected, to make them of sufficient interest for publication; yet one of quite recent occurrence might be stated, as being rather more than usually touching in its appeal to our sympathy and benevolence.

Application was made during the summer, for the admission of a boy seven years of age, the son of a widowed mother with eleven children; who in her struggles for a maintenance, had placed this child under the protecting care of a family of her own colour, who proposed to adopt it. A neighbour of this family, also a coloured woman, having had repeated reason for supposing that harsh treatment was used towards the child, was induced on one occasion, in consequence of hearing piteous cries, which she believed proceeded from him, to make an investigation into the cause. On going out upon a common in the vicinity of their dwellings, she heard a plaintive wail, which she was sensible was not far from her. Proceeding in her search, she called—the wailing ceased—again she called—"Where are you? don't be afraid, I have come to take care of you." The little sufferer, who had escaped from the violence of his persecutors, and sought refuge on this cheerless common, and who doubtless was silenced at first by the fear that they were in pursuit of him, encouraged by the kind voice he heard, now answered; making known his quiet resting place, where the good woman soon discovered him reclining on the ground, among the tall weeds, his arm encircling a dog, which on further inquiry it appeared, had been his nightly companion when driven from under the roof that ought to have sheltered him, by the severity of those who had undertaken to be his protectors.

Well may this little wanderer prize the new home provided for him!

It is a source of peculiar gratification and cause of encouragement, when we find those who have been partakers of our fostering care, as they mature in years, manifest a growth in those principles, which it is our endeavour to instil. The following account received of the illness and closing moments of one of our orphans, who had enjoyed these privileges, seems to bear evidence, that the labour bestowed, under the Divine blessing, had not been in vain.

Died, Second month, 1854, Hannah Dingle, aged eleven years; she was born in Philadelphia. Before she was one year old her mother died, leaving several children wholly destitute; two of them were received at once into the "Shelter," but Hannah being too young, was not admitted until the following year; there she soon became the favourite of the household, being an example to all, of cheerfulness, gentleness and obedience, while at times the gravity and sweetness of her countenance and behaviour, seemed almost to foreshow, that her tarriance in this world would be but brief.

In 1851 she was apprenticed to ———, of Delaware county, under whose tender care she remained until her death. Here the genuine kindness and integrity of her character were more and more developed—her word was never doubted, and throughout the day her love to all was manifested, by a steady attention to their interest and comfort, while her evenings were generally occupied in reading to her fellow-servants. Although she was by no means insensible to the blessings which surrounded her in her new residence, yet she always evidenced a marked preference for her "Shelter" home, and on several occasions, urged her mistress to allow her to send some of her "nice clothes" to the little children there. During the last year of her life, her health rapidly declined, and for more than a month previous to her decease she was unable to walk without assistance; a week or two before her death, her mistress asked her if she knew that she was very sick? She replied, "I do, and I do not expect ever to get well, but I have been trying to be patient, and to be ready to die." On the morning of her death, she suffered much from difficulty of breathing, and several times expressed her desire to go home. In the afternoon, as if aware that the time of her departure had nearly come, she requested that the family might be called into her room; after addressing them each by name, she said with earnestness, "I want all my friends to hear what I have to say. I have nothing against anyone—I love everybody—I am going to die—I am going to rest—I am going to Heaven." And in a few minutes gently ceased to breathe. And we cannot but believe, is joined to that company, who are unceasingly singing the song of Moses and the Lamb.

In regard to the domestic arrangements of the house, there appears so little variation therein, that perhaps much need not be said; but, as must be evident, the expense in the maintenance of so large a family has been greatly increased within the past year, owing to the rise in the price of provisions of almost every description, which has been sensibly felt in providing for our household. The managers have been under the necessity of incurring considerable expenditure, in the introduction of a cooking range and other improvements in the kitchen, which have proved to be decidedly of great advantage; and upon examination of the heaters for warming the building, it was found they were entirely unfit for further use. A new furnace has been erected, which it is expected will answer the place of the two former ones; these, with painting the whole of the exterior wood-work of the building and fences, also some parts of the inside of the house which was needful, will cause quite a large item in our expenses for the present year.

We may here gratefully acknowledge the receipt of several bequests left by benevolent individuals; thus manifesting an interest in the institution and contributing to its wants, which have been very seasonable and truly acceptable to the managers. And whilst it seems very desirable to invest these bequests, in order, if practicable, to establish a permanent fund for the support of the institution; yet in so doing, with our increased expenditures, we find the income at our disposal to fall short of the demands upon it.

Our obligations are again due to Dr. Casper Wister, who kindly continues his professional services when needed; also to Jacob Snider, in manifesting his readiness to serve us in his office as Alderman, as in former years.

When the last report was adopted, there were in the house:

Children, - - - -		69
Admitted, (1854,) - -		18

Communicated for "The Friend."

The Annual Monitor for 1855.

A supply of this interesting little manual has been received by a Friend in this city, and deposited for sale at the office of "The Friend," No. 50 North Fourth street, and Friends' Bookstore, No. 84 Arch street.

Price 50 cents per copy, or $5 by the dozen.

"They enjoy life best, who are best prepared for death; who look not for more happiness from this world, than it is capable of giving; who live righteously, soberly and piously; who pray to God for the blessings they need, and receive thankfully all good things as his gifts—and who can rejoice in the animating hope of salvation, through a Redeemer."

Seek Grace.—Think not that all is lost, when thy heart is not elevated with that sensible fervour which thou art always coveting. These raptures are allowed thee as sweet foretastes of heavenly bliss, but thou art yet too carnal to be capable of their constant enjoyment. Seek, then, growth in grace, rather than flights of ecstacy. While thou art in war, expect not the rest of peace; while combating, expect the feelings of combat. Thy principal concern and business is, to struggle against the motions of fallen nature, and the suggestions of fallen spirits; and if thou doest this with faithful perseverance, thou wilt give true proof of that Christian fortitude which will be distinguished with the crown of victory.

They that judge in God's divine matters, must *live* in his divine Spirit, power, and life.

THE FRIEND.

SECOND MONTH 10, 1855.

We have on former occasions called the attention of our readers to the Reports of "The Association for the care of Coloured Orphans." The nineteenth Annual Report is published in this number. The increased price of provisions and fuel has materially augmented the expenses of the institution, adding to the difficulty under which the managers labour, to meet them, and its claims on the liberality of all who feel interested in the coloured population of our city.

SUMMARY OF EVENTS.

EUROPE.—News from England to 20th ult.—*The War.*—The French and English Ministers at Vienna, have received the necessary powers to enable them to re-open negotiations. Private letters from Vienna say, that Prince Gortschakoff has instructions to accept everything, and accede to all the allies may demand, except the reduction of the Russian fleet, and the occupation of Russian territory. It is said that the policy of the allies will be to retard negotiations, in the hope that Sebastopol may fall into their hands. Both from Berlin and Vienna, it is stated that great efforts are being brought to bear to obtain the consent of England and France to an armistice. It is surmised that the Austrian Government connived at the invasion of the Dobrudscha by the Russians, wishing to demonstrate thereby the necessity for an armistice.

THE CRIMEA.—The intelligence from the seat of war is meagre. The dates are up to the 10th ult., at which time the situation of affairs was unchanged. Omar Pacha was, on the 5th, at the camp of the allies, in consultation with Lord Raglan and General Canrobert, and on the 6th he returned to Varna. Reinforcements continued to arrive for the English and French armies. The Turkish forces in the Crimea were, it is said, to be increased to 60,000 before the end of the month.

There was great suffering and heavy mortality among the troops near Sebastopol. In the British army, about 1000 men became disabled by sickness and fatigue every week. On the 1st the infantry could muster only 14,000 men fit for duty, and of these but a small part were in really good health. The cavalry no longer existed. The losses of the Russians were also said to be very great. The French army has been better cared for, and has not suffered so severely.

PRUSSIA, has formally refused to place part of her army on Prussian Silesia, to cover the left flank of the Austrian forces, assigning as a reason her confidence in the pacific intentions of Russia.

SARDINIA.—A Turin paper of the 15th states, that the departure of the Piedmontese troops for the Crimea, will take place on the 28th of this month. It is proposed to send 15,000 men.

SPAIN.—The new Constitution has been submitted to the Chambers. The main features are, that sovereignty emanates from the nation—the religion of the nation is Roman Catholic, but toleration is allowed. The Press is to be free; the confiscation of property and the death penalty for political offences are abolished. The Legislature is to consist of two Chambers. The Senators are to be elected for life, with property qualifications. There is to be one Representative for every 50,000 citizens.

RUSSIA.—A six fold land tax, payable in twenty-four instalments, is to be imposed on the Polish proprietors. The reinforcements for the army in the Crimea, were advancing by forced marches through Bessarabia.

ENGLAND.—The Liverpool cotton market is more buoyant, and prices have advanced ¼d. The sales of flour were limited; price from 40*s.* to 45*s.* The state of trade at Manchester was unfavourable. Consols closed at 91⅞. The London Times gives the *war expenses* of the past year at 80 millions of dollars. For the present year, if the war continues, they will be at least 100 millions.

FRANCE.—The whole of the French loan has been subscribed in France. Baring, Brothers, announce that they will repay the English deposits toward the French loan.

SWEDEN.—The Swedish army is to be placed on a war footing, by the addition of 50,000 Swedes and 15,000 Norwegians.

CHINA.—The last accounts are unfavourable to the cause of the insurgents. The Imperialists at the South have retaken several towns held by the rebels, and have, it is said, killed 20,000 of them.

PITCAIRN ISLAND.—These islanders are reported to be in destitute circumstances. Donations in money, clothing, books, &c., have been made for them in Honolulu, and forwarded by the ship Amphitrite.

SANDWICH ISLANDS.—The King, Kamehameha III., died on the 15th of Twelfth mo., in the 41st year of his age. He has been succeeded by his son Liholiho, with the title of Kamehameha IV. These events are of moment, chiefly as making probable a postponement, if not final end, of the annexation scheme, to which the young King is strongly opposed.

CUBA.—The latest accounts from Havana state that the island is in a peaceable state, and the Government appeared to have no fears of its being disturbed. An edict, recently issued, commands all passing in the streets, through which the "communion" shall be passing to assist the dying, to fall on their knees, under a penalty of five dollars.

The Greytown Outrage.—The English Consul at Greytown has presented the claims of English, French, German, and native residents, which amount to about a million and a half of dollars, for damage done, when the town was destroyed by the U. S. ship of war Cyane.

UNITED STATES.—The total indebtedness of the various State Governments, is about 221 millions of dollars divided among twenty-seven States. New Hampshire, Vermont, Delaware, and Florida, have no debt. The State, most in debt, is Pennsylvania, which owes forty millions; the smallest debt is that of New Jersey, which is but $71,000. The entire debt of the nation, including that of the United States, exceeds 275 millions.

Congress.—The President's proposition to call out a volunteer force to act against the Western Indians, has met with much opposition in the Senate, and the measure has been defeated, only thirteen Senators voting for it. Houston, of Texas, recommended that suitable agents who understand the Indian character, should be sent, attended by an escort of 500 cavalry, with presents, clothing, and other comforts for the Indians. He believed that if this kind of policy was pursued, peace might be maintained with all the Indians on our western frontier.

California.—The Star of the West arrived at New York, from San Juan brought $640,000 in gold. Her passengers were only twenty-one days from San Francisco. Copious rains had fallen throughout the State, improving the prospects of the farmers and miners. Emigration was setting towards the territory acquired by the Gadsden treaty, in consequence of the reported discovery of rich mines of gold and copper. Flour was in active demand at $15 per bbl., and wheat, $2.50 to $3.12 a bushel. The deaths in San Francisco, in 1854, numbered 1765.

New York.—Two hundred more Dutch paupers arrived in the ship Arnold, from Rotterdam. The examination of the steamer Massachusetts did not disclose much in her loading, tending to confirm the suspicions respecting her voyage.

Philadelphia.—The deposits at the mint last month, were in gold $4,269,400; silver, $170,000. The gold coinage, $4,645,245; silver, $229,000.

The mean temperature for the last month, was 35½°, which is 3½° above the average for the last thirty years. The highest was, on the 7th, 65°; the lowest, on the 31st, 7°. The amount of rain (including snow) that fell during the month, 2.34 in. Flour and grain were exported from this port last month, to the value of $265,353. Mortality last week, 187.

Miscellaneous.—Col. Kinney's Expedition.—The papers have contained notices for some weeks past, of a formidable expedition fitting out in the United States, under the auspices of Col. Kinney, for the purpose of making a *peaceable settlement*, somewhere in Honduras or Central America. The Washington Star states that the British Minister has sent orders to the squadron in the Caribbean sea not to allow the expedition to land in any part of Central America.

Snow in Illinois.—On the 31st ult., there had been no communication between Chicago and St. Louis or Springfield, for eleven days; the railroads being obstructed by the late heavy fall of snow, which in places was eight feet deep. Seventeen locomotives were frozen up or buried on the Chicago and Mississippi road.

Anthracite for Locomotives.—The Philadelphia and Reading Railroad Company has now fifty-three first class locomotives using anthracite coal, three of which are for passenger trains. One ton of coal is found to be equal to 1½ cords of good dry oak wood.

Telegraphic Communication with the Crimea.—A submarine cable is about to be laid from Varna to either Cape Chernonese or Balaklava, a distance of 300 miles across the Euxine, for the more rapid transit of intelligence between the allied armies in the Crimea and their respective Governments.

Agriculture, has been introduced as a study in the public schools of New Hampshire.

Popery in the United States.—According to the Catholic Almanac for 1855, there was an increase in the last year of 2 bishops, 129 priests, and 112 churches. There are 698 missionary stations, 28 colleges, 117 female academies, and 37 theological seminaries in the United States.

Auxiliary Bible Association of Philad. Quarterly Meeting.

The Annual Meeting of the Auxiliary, is to be held at the committee-room, Arch Street Meeting-house, on Second-day, the 12th of the Second month, at 7½ P. M. Friends of both sexes are invited to attend.

THEOPH. E. BEESLEY,
Philad, First mo. 27, 1855. Secretary.

INDIAN CIVILIZATION.

The committee is desirous of engaging the services of a well qualified Friend to teach the school at Tunessassah, &c. Friends, who may feel concerned to engage in that station, are requested to make early application to Joseph Elkinton, No. 377 S. Second street, or Thomas Evans, No. 180 Arch street, Philadelphia, or Ebenezer Worth, Marshalton, Chester county, Pa., or Thomas Wistar, Fox Chase, Philadelphia co., Pa.

Philad., Ninth mo. 20, 1854.

WEST-TOWN SCHOOL.

Assistant Teachers are wanted in the Boys' department of this Institution. The opportunity which this station furnishes for prosecuting their studies, free from any expense, presents a favourable opening for young persons, who wish to perfect themselves in the higher branches of learning, or to prepare for the business of Teachers. Those who wish to engage, are requested to make early application to Nathan Sharples, Concordville; Pennock Passmore, Goshenville; or Thomas Evans, or Samuel Bettle, Jr., Philadelphia.

DIED, on Fourth-day, the 24th ult., at his residence in Port Carbon, Pa., JOSEPH F. CARROLL, aged 63 years.

——, on the 5th of First month, 1855, of a short illness, at the residence of his son-in-law, Elisha Freeman, of Hamburgh, Erie county, N. Y., JOSHUA VARNEY; a member of Collins Monthly Meeting, in the 88th year of his age. He was firmly attached to the doctrines of our religious Society; diligent in the attendance of our meetings, while his health would admit, and of exemplary life. During his last illness, his mental faculties remained unimpaired; he had a clear sense of the time of his departure, and seemed to triumph over his bodily suffering; manifesting a preparation to meet his final change; several times expressing that he "felt the assurance there was nothing in his way." At one time he said, "I have kept the faith, according to my knowledge, and a crown of sweet peace is my reward." Other expressions frequently fell from his lips, leaving his friends the consoling evidence, that he is gathered with the faithful of every generation to the mansions of eternal rest.

——, on the 3d inst., SAMUEL EARL SHINN, in the 26th year of his age. The decease of this interesting young man presents a striking evidence of the uncertainty of all temporal enjoyments and prospects, and loudly calls upon survivors, in the solemn language, "Be ye, therefore, also ready; for in an hour that ye think not of, the Son of man cometh." In the enjoyment of excellent health, with a good constitution, and in the full vigour of early manhood, with every prospect for long life, he was suddenly removed out of time. While skating on the Schuylkill river, the ice gave way, and he and a young woman in company with him, were plunged into the water, and drowned. He was remarkable for the stability and consistency of his deportment; for a strict conscientiousness in the performance of what he believed to be right; endeavouring to maintain the principles and testimonies of the religious Society of which he was a member. These traits of character, combined with a disinterested and kind consideration for the welfare of others, rendered him the object of affectionate regard to a large circle of relatives and friends, who mourn, yet not without hope, his early removal from a sphere which gave promise of much usefulness.

No. 3 Ranstead Place, Fourth above Chestnut street.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXVIII. SEVENTH-DAY, SECOND MONTH 17, 1855. NO. 23.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 50 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

From the London Quarterly Review.

How London is Supplied with Food.

(Continued from page 170.)

The busiest time at the market is about six o'clock, when the costermongers surround Covent Garden with their barrows, and hundreds of street hawkers, with their hand-baskets and trays, come for their day's supply. The same system of purchase is pursued here as at Billingsgate—the rich dealers buy largely and sell again, and the poorer club their means and divide the produce. The regular street vendor who keeps his barrow, drawn by a donkey or a pony, looks down with a certain contempt upon the inferior hawkers, principally Irish. They only deal in a certain class of vegetables, such as peas, young potatoes, broccoli, or cauliflowers, and have nothing to do with *mere greens*. Another class of purchasers are the little girls who vend watercresses. Such is the demand for cresses, that they are now largely cultivated for the market, the spontaneous growth proving quite inadequate to the demand. They are produced principally at 'Spring Head,' at Waltham-stow, in Essex, and at Cookham, Shrivenham, and Farringdon, on the line of the Great Western, which brings to town no less than a ton a week of this wholesome breakfast salad. The best, however, come from Camden Town. Most people fancy that clear purling streams are necessary for their production; but the Camden Town beds are planted in an old brick-field, watered by the Fleet ditch; and though the stream at this point is comparatively pure, they owe their unusually luxuriant appearance to a certain admixture of the sewerage. A great many hundreds of bunches are sold every morning in Covent Garden; but the largest share goes to Farringdon Market. The entire supply to the various metropolitan markets cannot be less than three tons weekly. Rhubarb is almost wholly furnished by the London market-gardeners. It was first introduced by Miatt forty years ago, who sent his two sons to the Borough market with five bunches, of which they only sold three. From this time he continued its cultivation, notwithstanding the sneers at what were called his 'physic pies.' As he predicted, it soon became a favourite, and now hundreds of tons' weight are sold in Covent Garden in the course of the year. It would be impossible to give any precise account of the fruit and vegetable produce that is poured day by day into London; for the authorities themselves only know how many baskets arrive, not how much they contain. The railway returns give us the quantity brought from a distance, and we find that the seven lines transmit annually somewhere about 70,000 tons of vegetable and soft green fruit. This is irrespective of dried fruit, oranges, &c.—a business of itself, involving great interests and employing an immense capital, and of which we will say a few words.

The foreign-fruit trade has its head-quarters in the city. The pedestrian who walks down Fish Street Hill would assuredly never surmise that at certain seasons a regular fruit exhibition is kept up within those dull brick houses, before which the tall column lifts its head. All the world knows Keeling and Hunt, whose effigies seem to stand in the public eye upon a vast pyramid of pine-apples. This firm hold sales of various kinds of fruit in their auction-rooms in Monument Yard. On these occasions the long apartment makes a show, before which, for quantity at least, that of Chiswick pales. Pine-apples by thousands, melons, forbidden fruit, and mangoes, fill the room from end to end; so famous indeed is this display, that there are lithographic engravings of it, in which the salesmen are seen walking about, as perplexed apparently by the luscious luxuriance around them, as Adam might have been in his own happy garden. The pine-apple market is of modern date. The first cargo was brought over about twelve years ago, and since that time the traffic has rapidly increased, and at the present moment 200,000 pines come yearly into the port of London, of which nine-tenths are consigned to Keeling and Hunt, the original importers. They are principally from the Bahamas, in the West Indies, where they grow almost spontaneously; but of late years they have been more carefully cultivated, and grafts of our best hot-house pines have been taken out to improve their quality. There are five clippers appropriated to the carriage across the sea of this single fruit. The melons come from Spain, Portugal, and Holland. Spain is known to abound in melons, for Murillo's beggar-boys are perpetually eating them; but we believe it will be news to most Englishmen that the land of dykes supplies London with fragrant cargoes of an almost tropical fruit. The largest foreign-fruit trade, however, by far, is that in oranges. We shall perhaps astonish our readers when we tell them that upwards of 60,000,000 are imported for the use of London alone, accompanied by not less than 15,000,000 lemons. Any time between December and May the orange clippers from the Azores and Lisbon may be seen unloading their cargoes in the neighbourhood of the great stores in Pudding and Botolph Lanes. There are 240 of these fast-sailing vessels engaged in the entire trade, and of this fleet 70 at least are employed in supplying the windows of the fruiterers and the apple-stalls of London. All these fruits, together with nuts and walnuts, apples, plums, pears, and some peaches, &c., are disposed of weekly at the auction sales in Monument Yard to the general dealers, the majority of whom are located in Duke's place, close at hand, and are mostly Jews. Indeed we are informed that many of them are the identical boys grown up to manhood that used some twenty-five years ago to sell oranges about the streets, and whose old place has gradually been taken by the Irish. They act as middle men between the importers and the tribe of peripatetics, who at certain times of the day resort hither to fill their baskets and barrows. Covent Garden also supplies retailers with oranges and nuts, especially on Sunday mornings, when the place is sometimes crowded like a fair. The following bill of quantities, drawn up by Keeling, is derived, we believe, from the Custom-house returns:—

Fruit.

Apples	39,561 bushels.
Pears	19,742 "
Cherries	264,240 lbs.
Grapes	1,328,190 "
Pine-apples	200,000 "
Oranges	61,635,146 "
Lemons	15,408,789 "

Nuts.

Spanish nuts } Barcelona }	72,509 bushels.
Brazil	11,700 "
Chesnuts	26,250 "
Walnuts	36,088 "
Cocoa-nuts	1,255,000 "

Of the amount of bread consumed in London we have no specific information, but there are data which enable us to approximate to the truth. Porter, in his 'Progress of the Nation,' gives us the returns of eight schools, families, and institutions, containing 1902 men, women, and children, each of whom ate on the average $331\frac{1}{16}$ lbs. of bread per annum. Now if we multiply this quantity by the number of the inhabitants of the metropolis—2,500,000 or thereabouts—we have a total of 413,760,000 half-quartern loaves of 2 lbs. weight each. The flour used in puddings, pies, &c., we throw in as a kind of offset against the London babies under one year old. Some of this bread is a contribution from the country, and one Railway—the Eastern Counties—brought last year 237 tons 12 cwts. to town.

Now let us see how much sack goes to all this quantity of bread—with what rivers of stout, &c., we wash down such mountains of flesh. According to the excise returns, there were 747,050 quarters of malt consumed in London in the year 1853 by the seventeen great brewers. As each quarter of malt, with its proportionate allowance of hops, produces three and a half barrels of beer, we get as the total brew of last year 1,614,675, or pretty nearly a thousand million tumblers of ale and porter. On countless sign-boards of the metropolis this last is advertised by the title of 'entire,' and it is thus that the liquid and its name arose. Prior to the year 1730, publicans were in the habit of selling ale, beer, and two-penny, and the 'thirsty souls' of that day were accustomed to combine either of these in a drink called half and half. From this they proceeded to spin 'three threads,' as they called it, or to have their glass filled from each of the three taps. In the year 1730, however, a certain publican, named Horwood, to save himself the trouble of making the triune mixture, brewed a liquor intended to imitate the taste of the 'three threads,' and to this he applied the term 'entire.' His concoction was approved, and, being puffed as

good porters' drink, it speedily came to be called porter itself. Of the seventeen great London breweries, the house of Truman, Hanbury, Buxton, and Co., stood last year at the top of the list, having consumed 140,000 quarters of malt, and paid to the excise 180,000*l.*, or enough to build two ninety-gun ships, at the usual cost of a thousand pounds per gun. The visitor in proceeding through this establishment realizes, perhaps better than in any other place, the enormous scale on which certain creature-comforts for the use of the town are produced. As he walks between the huge boilers in which 1600 barrels are brewed nearly every day, or makes the circuit of the four great vats, each containing 80,000 gallons of liquor, or loses himself amid the labyrinth of 135 enormous reservoirs, which altogether hold 3,500,000 gallons—he begins to fancy himself an inhabitant of Lilliput, who has gone astray in a Brobdignagian cellar. There is a popular notion that the far-famed London stout owes its flavour to the Thames water: this, however, is a 'vulgar error.' Not even the —— Barclay, who are upon the stream, draw any of their supply from that source, but it is got entirely from wells, and those sunk so deep, that they and the —— Calvert, whose brewery is half a mile distant upon the opposite side of the river, find they are rivals for the same spring. When one brewery pumps, it drains the wells of the other, and the firms are obliged to obtain their water on alternate days. Whether it is owing to the increase of the great breweries and of other manufactories, which alone consume millions of barrels of water yearly, we know not, but it is an ascertained fact, that the depth of water in the London wells has for the last twenty-five years been diminishing at the rate of a foot a year. 'It is comforting to reflect,' said one of the great brewers, 'that the reason simply is, because the water which used to be buried underground is now brought up to fill the bodies, wash the faces, and turn the wheels of two millions and a half of people.'

(To be concluded.)

For "The Friend."

"I was led a little to consider the weakness and infirmities which are too frequently observed to attend, whilst clothed with flesh, the most devoted followers of the Holy Jesus; when the holy watch is not maintained, when the holy influence is withdrawn, they then become weak, and are like other men. Thus they who are dedicated to the service of the ministry, and bear as in their foreheads the inscription of holiness, having to conflict with all the struggles of a private soldier, may sometimes manifest weaknesses inconsistent with the dignity of the holy office; and he who yet remains to be the accuser of the brethren, will not fail, when he can, under any disguise gain admittance, exceedingly to expose and magnify these, and would lead by little and little to despise the Lord's anointed, to "speak evil of dignities," and lightly to esteem the sacrifices which the Lord hath commanded to be offered in the holy place.

It is not in my heart to justify, to excuse or extenuate, the failings and imperfections of the foremost rank in the Lord's army. I know it deeply behoves them, above all others, to walk circumspectly, to make straight steps to their feet, to be examples to the flock; and I am verily persuaded there are none feel more deeply for their offences, none more deeply under the humiliating sensibility of their own unworthiness, none more frequently covered with blushing and confusion of face, than these. I do not want to excuse or explain away their failings, but I want to impress a proper regard to the dignity of the holy office; I want to revive the ancient precept, "Thou shalt not speak evil of the ruler of thy people." "God forbid," said David, "that I should put forth my hand against the Lord's anointed." If weakness appear, if the enemy prevail in any little matter, O! "tell it not in Gath, publish it not in the streets of Askelon, lest the daughters of the Philistines rejoice, lest the daughters of the uncircumcised triumph." Oh! did the people know, were it but possible for the uncircumcised to consider, the secret travail of their spirits, the painfully distressing conflicts which these have to pass through in the weeks of preparation, while eating the roll of prophecy, and lying on their sides; how often such now are covered with sackcloth, and have secretly to muse on the contents of the roll wherein is written "lamentation, and mourning and woe;" were it possible, I say, for such, who are yet whole, not having yet fallen upon that stone which the Lord hath laid in Zion for a foundation, and been thereby broken, and enabled to offer the sacrifices of a broken heart; were it possible for those who have not trodden the arduous path of regeneration, to consider these things, they would not need to be reminded to mark such whom the Lord hath set over them, to esteem them very highly, to honour them with double honour for the work's sake, because 'they watch for your souls, as they that must give account in the day of the Lord Jesus.'" J. Thorp.

PAPER.

Its Sources of Supply and its Manufacture.—If the art of printing enables a man to perpetuate his thoughts, the art of paper making is no less essential as furnishing the means of diffusing them. The two arts are co-existive and co-operative. Improvements in the first, necessarily require corresponding improvements in the second, and the progress of both must be equal, to enable the world to enjoy the greatest advantages from each. The art of printing has by years of successive mechanical invention, reached in the rotary-press of Hoe, or "Hoe's Last Fast," the principle of perfection as adapted to the requirements of cheap and widely circulated newsapers, and also adequate, with modifications, to supply any demand which may be made upon the press for the intellectual food of the public. With the ability to gratify, arises the desire to indulge appetite, intellectual or physical, and as a consequence of improvements in the printing press, by which publications can be furnished more cheaply, the mental appetite of the public has been more actively quickened into life and sensibility. The demands of the reading public which have become so widespread and universal, especially in this country, where newspapers and books are printed annually by millions, have outrun the means of cheap supply of the usual material from which paper is manufactured, and publishers find that the cost of paper has so much increased within a few years past, as to threaten to curtail the advantages and usefulness of largely circulated publications.

But if man at every step of his progress encounters obstacles and impediments, he is also wisely gifted with the never failing faculty of invention, which shows how they may be overcome. The necessity of a cheaper material than linen and cotton rags, out of which paper could be manufactured, suggested the idea that the fibre of vegetable substances other than flax and cotton, not so costly to produce, universal in their growth, and in a large degree of spontaneous production might answer equally as well. This idea may have been obtained from the Chinese, who for a long period have employed in paper making the fibres of the young bamboo, the inner bark of the mulberry, the envelope of silk cocoons and the cotton tree: But wherever the idea originated, the practical solution of the difficulty has been left to a more civilized nation and era to determine, assisted by their greater knowledge of chemical process and mechanical instruments. The practical development of this idea, we are pleased to say, has been realized to an extent which may surprise many of our readers to learn. By processes recently invented, not only have straws and grasses been converted into good white paper, suitable for printing purposes, (the Ledger has been printed upon straw paper for a number of months,) but even the woods of our forest may be manufactured into paper and assist to carry light and knowledge into the remotest corner of the world which man has made habitable.

We have now before us a newspaper printed in Albany, on paper made of basswood, a common tree growing in our forest. The paper is made from pulp produced from bassword shavings, of a peculiar form, thrown off by Beardslee's planing-machine, which has been improved to produce this result. It contains no mixture of rags, or other material whatever, nor sizing. It is from the pure wood alone. The paper was made at Satterlee's Mills, Little Falls, Herkimer, county, N. Y., on the line of the New York Central Railroad and of the Erie Canal. It has also been used with perfect success by Gavit, for transferring fine line engravings—a result which cannot be attained by any other ordinary newspaper. But B. is not restricted to basswood. He has made experiments which leave no doubt upon his mind that a paper of a texture even superior to that which he has already produced from that wood, can be produced from other native woods, found in equal abundance. We have seen very excellent printing and writing paper, manufactured at Lee, Massachusetts, out of poplar wood, and pulp suited for the same manufacture has been made out of pine trees. The pulp, it is stated, is manufactured very cheaply and by a very simple process. It can be packed in bags or bales, as compactly as cotton, and sent as readily to any part of the country or world, and at rates which must ultimately reduce the price of rags.

A machine, similar to this is in operation in Kensington, at Charles W. Bender & Co.'s mill, and the manufacture of pulp for paper from wood will be commenced in this city shortly. The introduction of the use of wood as a material for the manufacture of paper, will doubtless effect a very great change in the business, independent of its increase. The paper maker will be relieved of a portion of the work by a subdivision of the labour. At present the manufacturer sorts and cleans his rags, reduces them to pulp, and turns the pulp into paper. The necessity of a different arrangement and different character of machinery, for converting wood into pulp, will doubtless make this a distinct business of itself, and the paper maker and pulp producer will be two distinct divisions of the same business.

A discovery so timely must prove of incalculable value to the world. The manufacture of paper ministers to a thousand personal and domestic wants of mankind, as well as to their intellectual requirements. The demand for its annual increase is co-extensive with the diffusion of knowledge and civilization. With this constantly increasing demand, the raw material must come from some source comparatively unlimited in its production, and what source more prolific of a supply than the forests which cover our valleys, our hills,

our mountains?—a source of supply comparatively independent of climate and soil, and limited in extent only by frozen arctic regions, sandy deserts and prairie lands. Like coal, like the metals, like granite, like every natural blessing from a bountiful Creator, it is diffused over the whole broad earth's surface, and especially is a product of our own favoured land. A thousand years would not exhaust it. Acres of forest trees are annually cut down, girdled or burnt off the wild lands of our country, without a thought to their usefulness for any purpose, and generally regarded as an incumbrance, which the hardy settler must get rid off at any cost, before he can make the soil contribute to his support. A pulp manufactory established in the heart of such a sylvan wilderness, could convert all this wasted wealth into material for the paper maker, and send it to a sure market, as easily as the planter sends his bales of cotton to the cloth manufacturer. But in addition to its use as a material for paper, it is suggested by practical minds, that the same fibre in wood, which enables it to be converted so readily and cheaply into paper, may also be found available in the production of domestic cloth, such as is furnished now from cotton and linen. When this idea shall be practically realized, the advantage of having more than the cotton fields of the South to furnish our clothing, suggests ameliorations in the social condition of one portion of the race that humanity must rejoice to contemplate. —*Ledger.*

Letter from Joseph Pike to John Fothergill.

Cork, Eighth mo. 30th, 1725.

In that love which reaches over sea and land, do I at this time salute thee, even in that love which neither time nor distance can ever separate or wear out, so long as we continue to be, and keep in the cementing power and live of this heavenly love. Here it is that we can truly sympathize together, with all the Lord's children, in joy or affliction, especially in those things that relate to the prosperity of Zion, or the contrary; in rejoicing when it flourishes, and mourning when we see anything that mars or stains the beauty of it; as I can truly say, I do with thee, and all those that are heartily and zealously concerned in soul—that spiritual Jerusalem may become the praise of the whole earth, and that her beauty may shine to the nations.

But that which hath greatly obstructed this, at this day, hath very much proceeded from the lukewarmness, easiness or coldness of too many of her watchmen, that should at first have stood in the gap, and endeavoured to make up the breaches that the enemy was making in the walls of Zion. And in a particular manner, by their not standing their ground, and joining hand in hand together, to keep out that floating, high and proud spirit of undue liberty on the one hand, and a spirit of worldly mindedness and covetousness on the other. Here I chiefly mean some of our elders, and indeed, ministers too, who, some of them in time past, were zealously concerned, to stand as watchmen upon the walls of Zion, and not only to give warning, but have themselves for a time helped also to keep out the enemy. But alas, for want of due watchfulness, and giving ground by little and little, another spirit has entered them, whereby they have grown indifferent, cold or lukewarm, and have in great measure quitted their post, and their companions, and have left the burden the greater upon their brethren, that could not do the same for Truth's sake. And then the load became too heavy for them, and they could not stop the torrent which the others had let in, while yet these (yea) ones stood unconcerned at the sight, and have let things go as they will, for them. Surely such as these will have a dreadful account to make in the end, and far more dreadful than such as never knew the truth or the power of it.

The consideration of these things, more or less apparent in most places, has often wounded my drooping spirit, even to the affecting of my poor, weak body. And this great declension is very much owing also to the want of stretching the line of justice and judgment in due time upon offenders, in the way of church discipline, which was left us by our first worthy elders; and the same spirit that led them to it in the beginning, would lead us to it now, if we were all truly led by it. But oh! these easy, careless watchmen will tell us, they must not overdrive the flock, but must persuade and gain the lukewarm by love and softness. And they, by smoothing and daubing with untempered mortar so long, and keeping off and fending the stroke of the discipline from taking hold of these unruly ones, either in their families or others, as truth would lead to, that in the end they have grown so strong and numerous that they are past persuading, bending or ruling, and then in a stout and sturdy spirit they will tell us they will be convinced of this, that, or the other thing, which the testimony of truth has gone out against, before they will leave it off or do otherwise. And this has been the effect of this lukewarm, indulgent and smoothing spirit; whereas, if in the beginning the discipline of truth had been strictly kept to, I verily believe it had been quite otherwise than it is at this day in most of the Churches of Christ.

And indeed, in the seeing and hearing the examples of these lukewarm elders, even for many years past, when I was able to travel, I have made the application to myself with earnest desires in my soul that it might never be my own case, but that the Lord in his mercy would keep and preserve me to the end, from that spirit that had prevailed upon many that I far esteemed above myself, and who had run well for a season, and for a long season too, and also were very zealous for the testimony of Truth in all its branches, and yet for the want of due watchfulness, had not continued zealous to the end. For we right well know, that it is holding out to the end that crowns all, and gives us an everlasting inheritance in the Kingdom of God. And it will be our own fault if we attain not to it, for the Lord hath done his part; he has given us a measure and gift of his Holy Spirit, that will lead us to it, by which we may be preserved to the end.

But if from want of inward watchfulness, we neglect or go from it, then the adversary gets ground; we are led astray by this enemy of souls, and at last miss the crown. And therefore it was that our blessed Lord, knowing the aptness of our natures to frailty, says to his own beloved disciples, watch and pray always lest ye enter into temptation. This was our first parent Adam's case, though created in innocency; for want of watchfulness, notwithstanding the Lord had given him sufficient power to keep his commandment, yet by not obeying it he therefore fell; and likewise it was for want of due watchfulness, that many very great and good men of his posterity, did miss their way, and displease the Lord, as great Moses, Aaron, David, Solomon and others, and all for want of watchfulness, and keeping close to the Lord their guide. And if we descend even to our own times, how many great, bright, and largely-gifted men have greatly missed their way, and others totally fallen, and all for want of keeping close to this inward guide of the Lord's holy light and spirit. And since we have so many and great examples we may draw from them this warning to ourselves, to take diligent heed to our own standing, and keep upon our watch at all times, lest at any time the enemy prevail upon our weak sides. But, dear friend, I don't write any of these things for thy information, who knows them as well, or better than myself, nor yet that I have any ground or cause of fear of thee, but in the flowings of the love of God in my soul, as they came into my mind, in order that it may contribute to our mutual love to one another, and stir up our pure minds by way of remembrance.

I received thy very kind and acceptable letter, from thy own habitation, giving an account, with other things, thou left this nation pretty cheerful and easy, which was a comfort to me, after so long a time and labour spent therein, which I have often thought of with endeared love, in that thou left thy outward concerns, to freely spend thy time in the Lord's service, which I know was great in this nation, and the more so in thy continuance therein so long. And though nothing that the best of men can do is meritorious, yet surely the Lord will reward thee and all those that labour and spend their time in his vineyard. And to this I may add, in freedom, that if it stood consistent with the Lord's Divine Providence, I should rejoice to hear thy lot was likely to be cast in this nation in the service of Truth, for we really want help here, though as to my own part, considering my age, and great infirmity of body, I cannot expect to live to see the benefit of it. I find our dear friend H. Jackson is married, and I hope to a suitable companion, and with it that the good hand of Providence has gone along with him therein; for I truly love him and desire his welfare every way. Give him and his wife my dear love, and to all those who inquire for me, both known and unknown to me, who truly love the Lord Jesus, with whom I have fellowship in the holy seed of life, all the world over, more especially those who are zealous for his name.

I remain thy truly loving and affectionate friend and brother,

JOSEPH PIKE.

John Randolph and Infidelity.

A letter from the celebrated John Randolph, of Roanoke, was published in the Washington Union some time since, which contained the following allusions to his own case. He had been an infidel, and had suffered intolerable misery, and been involved in gross darkness, under that state of mind. At length the losing his mother shook his whole nature. He says,—"I remember to have seen her die—to have followed her to the grave—to have wondered that the sun continued to rise and set, and the order of nature go on! Ignorant of true religion, but not yet an Atheist, I remember with horror my impious expostulations with God upon this bereavement—'but not yet an Atheist.' The existence of Atheism has been denied—but I was an honest one. Hume began and finished me. I read Spinoza and all the tribe. Surely I fell by no ignoble hand. And the very man who gave me 'Hume's Essay upon Human Nature' to read, administered 'Beattie upon Truth' as the antidote—Venice treacle against arsenic, and the essential oil of bitter almonds—a bread and milk poultice for the bite of the cobra capello. Had I remained a successful political leader, I might have never been a Christian. But it pleased God that my pride should be mortified; that by death and desertion I should lose my friends; that, except in the veins of a maniac, and he, too, possessed 'of a child by a deaf and dumb spirit,' there should not run one drop of my father's blood in any living creature beside myself. The death of Tudor finished my humiliation. I had tried all things but the refuge to Christ, and to that, with

parental stripes, was I driven. Often did I cry out, with the father of that wretched boy, 'Lord, I believe; help thou mine unbelief!' and the gracious mercy of our Lord to this wavering faith, staggering under the force of the hard heart of unbelief, I humbly hoped would, in his good time, be extended to me also. St. Mark vii. 17–29. Throw Revelation aside, and I can drive any man by irresistible induction to Atheism. John Marshall could not resist me When I say any man, I mean a man capable of logical and consequential reasoning. Deism is the refuge of those that startle at Atheism, and can't believe Revelation; and my —— (may God have forgiven us both) and myself used, with Diderot & Co., to laugh at the deistical bigots who must have milk, not being able to digest meat. All theism is derived from Revelation—that of the laws confessedly. Our own is from the same source; so is the false revelation of Mahomet; and I can't blame the Turks for considering the Franks and Greeks to be idolators. Every other idea of one God that floats in the world is derived from the tradition of the sons of Noah handed down to their posterity. But enough—more than enough. I can scarcely guide my pen. I will add, however, that no lukewarm seeker ever became a real Christian; for 'from the days of John the Baptist until now, the kingdom of heaven suffereth violence, and the violent take it by force'—a text which I read five hundred times before I had the slightest conception of its true application."

From the Annual Monitor for 1855.

Alice Chipchace, of Cotherstone, wife of John Chipchace, deceased Twelfth mo. 15th 1853, aged 54 years.

Her parents were members of the Episcopal Church, and it was not until the 24th year of her age, that she became a member of the Society of Friends.

She has left an account of her early exercises, nearly as follows: "My dear mother died when I was about nine years of age. I felt the loss very much, and was frequently thoughtful about myself, being thus early deprived of her care, and not knowing how I should be provided for. That passage was brought to my recollection, 'a Father of the fatherless, and a judge of the widow, is God in his holy habitation;' but I thought that this did not apply to my case, as I was not fatherless; however it was shown me that it equally applied to the motherless, and then I was comforted.

"When about seventeen years old, I was offered a situation in the family of Isaac Stephenson, near Stockton, and consulted a female acquaintance on the subject. After remarking that situations in the families of Friends were mostly comfortable, she added, 'I do not know how to advise you; may the Lord be your adviser!' This led me to desire that if it was right for me to go, it might be clearly shown to me. One night after I had retired to rest, I thought on the calling of Samuel, and heard a voice saying to me, 'Go, and I will be with thee.' This was in 1817.

"The exemplary deportment of my master, and his religious communications when the family were assembled to hear the Scriptures read, and at other times, were the means of gradually inclining me toward the Society of Friends; but I continued for some time to attend the national worship, although I saw it to be my duty to go to Friends' meetings. I was dissatisfied with many things in the national worship; particularly with the restlessness which pervaded it, there being a continual change from one thing to another, as well as of the priests garments, so that there seemed to be no time for serious reflection. Yet I was reluctant to give up my attendance, and frequently wept both in going and returning.

"The last time I was there, I went under much exercise of mind, and afterwards rejoiced that I had yielded to attend the meetings of the Friends. After this I underwent great conflict, seeing that my gracious Lord required of me to bear a testimony by dress, address, manners, life and conversation, to the simplicity and purity of the Gospel, according to the manner of the consistent members of the Society of Friends. Some years after, I applied for membership, which I had long been desirous of doing, but I wished that if it was right for me so to do, some one might mention the subject to me. This was permitted to be the case. I then made application and felt resigned as to the result, thinking that I had done my part in the matter, and left the issue to the Lord. My request was complied with. This was in the year 1830."

She was married to John Chipchace in 1831. He then resided at Stockton, but they removed in 1833 to Cotherston, where they brought up a large family.

Alice Chipchace was a devoted mother, caring for the health and comfort of her children, and solemnly exhorting them to fear the Lord in their youth; to read the Scriptures, and to be much in religious meditation and prayer; and she was not only diligent in the right ordering of her own household, but in personal attention to the poor around her. She enjoyed good health for many years, but it began to give way in the spring of 1853. During the summer, however, she was able to enjoy her children's company, while at home from school, &c., and she not only attended as heretofore to their comfort, but gave them much good counsel. In the autumn she became very ill, and often suffered very much, but her serenity and cheerfulness were striking and very cheering to her friends, being, as they believed, the result of a well grounded hope of everlasting life, through Jesus Christ our Lord.

Eleventh month, 1st, 1853, on one of her daughters reading to her a piece respecting Heaven, she said, "O, I often think how delightful it will be to be there for ever and for evermore." 25th, she spoke to her children of the probable termination of her illness, and exhorted them to the duties of prayer, &c., and the next day, while her husband was fervently supplicating, she was heard to join therein.

Eleventh month 27th. Her husband informed her that it was the opinion of the doctor, that she had some very serious symptoms. She received the information with perfect calmness, remarking that she was resigned to the Lord's will, and hoped, that in his mercy, he would receive her into his kingdom. She added, "He can, if he please, restore me to health again; but I am resigned, let the result be as it may. I trust in the Lord, having no dependence in anything which I have done. I am a poor unworthy creature."

28th. She said she hoped that, through unmerited mercy, she might be received into heaven, if it were only within the gates. At another time she said that the Lord Jesus was sufficient for all, and she doubted not that he would grant her patience to bear her sufferings. Twelfth month, 5th, she said to her children, "I desire that you may be a comfort to your dear father, and be consistent members of the Society of Friends; then you will be a blessing to him and to each other." Her end, soon after appearing to be near, she took leave of her family individually, expressing her desire that they might meet again in heaven, and requesting her husband to give her up freely. Seeing them weeping, she said, "I have no tears to shed." Her husband saying, "I hope thou hast no cause," she replied, "I hope to reach heaven through the Lord's mercy; I know the enemy is very subtle, but I trust I am not deceived. I do not feel that triumph of faith, of which some have spoken, but I feel a humble trust in the Lord's mercy, in Christ." To her two eldest daughters she said, "If you be poor in this world, yet if you be rich in faith in Christ, all will be well with you. You may have many deep wadings and trials to pass through, but look to the Lord, and he will lead you through."

After this she unexpectedly revived a little, and on the 8th she said, "The Lord will be my portion for ever—in this world, and in that which is to come." Her illness increased again on the 11th, so that she seemed ready to depart. She had her family assembled, and said, "May the Lord bless you all," but she once more revived, and again remarked, "I cannot speak of glorious things, but I trust that my sins are pardoned through Christ, and that the Lord will receive me into his kingdom." Twelfth month, 12th, on the 84th Psalm being read, she said, "Bless the Lord, O my soul! and may he have mercy upon me. Pardon all my iniquities, O Lord! pardon my iniquities, and forgive my sins, for Jesus' sake. O Lord! in thy time, admit me into thy kingdom." 14th. She said, "I think the Lord will receive me, and then I shall enter heaven in glorious triumph; there will be glory for ever. I called you to tell you this; now I have no more to say."

Early in the morning of the 15th, she quietly departed without a sigh, leaving to those around the consoling evidence, that the Lord had mercifully heard her prayer, forgiven her for Christ's sake, and taken her unto himself.

Value of a Drop of Oil.—Every man who lives in a house, especially if the house be his own, should oil all the various parts of it once in two or three months. The house will last much longer, and will be much more quiet to live in. Oil the locks, bolts, and hinges of the street door, and it will shut gently, with luxurious ease, and with the use of a small amount of force. A neglected lock requires great violence to cause it to shut, and with so much violence that the whole house, its doors, its windows, and its very floors, and joists, are much shaken, and in time they get out of repair in all sorts of ways, to say nothing of the dust that is dislodged every time the place is so shaken. The incessant banging of doors, scraping of locks, creaking and screaming of hinges, is a great discomfort. Even the bell-wire cranks should sometimes be oiled, and they will act more certainly, and with such gentle force that there will be little danger of breaking any part of them. The castors of tables and chairs should be sometimes oiled, and they will move with such gentle impulse, and so quietly that a sleeping child or old man is not awakened. A well-oiled door-lock opens and shuts with hardly a whisper. Three pennyworth of oil used in a large house once a year, will save many shillings in locks and other materials, and in the end will save many pounds in even the substantial repairs of a house; and an old wife living and sleeping in quiet repose, will enjoy many more years of even temper and active usefulness. Housekeepers, pray do not forget the oil. A stitch in time saves nine, and a drop in time saves pounds.—*The Builder.*

"The greatest wisdom of speech, is to know when, and what, and where to speak; the time, matter, and manner. The next to it, is silence."

Selected.

"WHY ART THOU CAST DOWN?"

Be still, my heart, these anxious cares
To thee are burdens, thorns and snares;
They cast dishonour on thy Lord,
And contradict his gracious word.

Brought safely by his hand thus far,
Why wilt thou now give place to fear?
How canst thou want if he provide;
Or lose thy way with such a guide!

When first before his mercy-seat
Thou didst to him thy all commit;
He gave thee warrant from that hour,
To trust his wisdom, love, and power.

Did ever trouble yet befall,
And he refuse to hear thy call?
And has he not his promise past,
That thou shall overcome at last!

Like David, thou mayest comfort draw,
Sav'd from the bear's and lion's paw;
Goliah's rage thou mayest defy,
For God, thy Saviour, still is nigh.

He who has helped thee hitherto,
Will help thee all thy journey through,
And give thee daily cause to raise
New Ebenezers to his praise.

Though rough and thorny be the road,
It leads thee home apace to God;
Then count thy present trials small,
For Heaven will make amends for all.

LITTLE SINS.

O ur evil actions spring
From small and hidden seeds;
At first, we think some wicked thing,
Then practice wicked deeds.

O! for a holy fear
Of every evil way,
That we may never venture near
The path that leads astray.

Wherever it begins,
It ends in death and woe;
And he who yields to litle sins,
A sinner's doom will know.

There is a calm the poor in spirit know,
That softens sorrow, and that sweetens woe;
There is a peace that dwells within the breast,
When all without is stormy and distrest;
There is a light that gilds the darkest hour,
When tempests thicken, and when tempests low'r.—
That calm to faith, and hope, and love is given;
That peace remains, when all beside is riven;
That light shines down to man direct from Heaven.

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 173.)

JOHN SMITH.

John Smith was born in Leicestershire, Old England, in the year 1645. He was convinced of the Truth, when about fourteen years of age, and being faithful to the openings of the Holy Spirit in his mind, he grew in grace, and a gift in the ministry of the Gospel was committed to him. We have no account of his labours in his native land, but he probably had a share of persecution, which was quite prevalent in the neighbourhood in which he resided.

In 1682, he with several of his neighbours removed to Pennsylvania, and settled near Darby, where a meeting was soon established. We can find but little evidence of his having travelled much abroad, though he appears to have been a diligent attender of the General Meetings of ministering Friends at Philadelphia and Burlington. In the year 1708, he met with a close trial in the removal of Eleanor his beloved wife and faithful helper and fellow-labourer in the Gospel, of whose death we have already given account.

He was taken sick the 3d day of the Twelfth month, 1714, and his sickness being violent, his strength was speedily reduced. He was, his memorial states, "well beloved of his friends," and he was visited by many of them during the eight days between the commencement of his illness and his death. Although suffering of body necessarily attended him, yet he lay in patient resignation, and manifested his christian concern for those around him, "encouraging Friends and his children to live in the Truth." On the 9th of the month, being asked by one of his friends how he was, he answered, "I am very poorly and weak, indeed, but much easier than I have been, for I was extremely ill, so sick and full of pain, such as I never had undergone before, so that I could not retire in my mind to God, my extremity was so great: but now the Lord has been pleased to give me ease, so that I can stay my mind on him, for which I am truly thankful. Now I feel the fresh remembrance or renewings of the love of God flowing into my heart, which is of much more comfort to me than all transitory things. Now I feel his living, Divine presence is with me, which bears up my spirit, under that which flesh and blood could not be able to bear."

The Friend, being about to leave him, was desirous to know how John felt respecting the probability of his recovering from his illness. On asking him, he replied, "That I am not worthy to know. However, I am content. This, I know, that if we abide faithful to God to the end, we shall receive a godly portion. So farewell, and the Lord go along with thee."

On another occasion, he said, "I am full of pain, yet can sing of the mercy and goodness of God to my soul, in the midst of affliction." Sometime afterward he said, "Do not mourn for me, but be still and quiet, and let me pass away quietly, that so my soul may enter into God's everlasting rest, for my conscience is clear from guilt, in the face of all men." He spoke with great freshness of spirit and cheerfulness of mind, ejaculating, "Come, Lord Jesus, receive my soul! thy servant is ready; come quickly!"

After this, he added, "Now, I think I am near my end." He seemed as though his departure was near, and his children and those gathered round thought him dying; but after a time he revived, and being raised up, he inquired if his children were all present. On being answered, "Yes," he sat silent a little while, and then said, "I was never covetous to get a great deal of this world's riches, but I have endeavoured to bring you up in the fear of the Lord, and educated you in the way of his truth, to the best of my understanding. If you do but wait upon the Lord in the sincerity of your hearts for the dropping down of the love of God upon your souls in the meetings and gatherings of the Lord's people, he will shed his blessings amongst you, for he hath been and is a Father to the fatherless, and as a Husband to the widow."

So, "fresh in spirit, and perfect in sense and memory," he remained to his last hour. He died the 11th day of the Twelfth month, 1714, aged sixty-nine years and four months.

JOHN LOWDEN.

This Friend and powerful minister of the Gospel came from Ireland into Pennsylvania, in the year 1711, and settled in New Garden, Chester county. Although he had come into a new country, and there was much to do in preparing the ground for culture, he did not allow the pressure of worldly business to obstruct his duty to his heavenly Father. He not only attended neighbouring meetings for worship and discipline, and the meetings in the adjoining province of New Jersey, but was soon led from home on some more extensive journeys in the ministry. In his travels, "he was," the historian, S. Smith, says, "of good service, having a testimony that usually had a great reach upon those that heard it."

In the summer of 1713, he and his fellow-labourer in the Gospel, Francis Swain, obtained the concurrence of the Friends of their Monthly Meeting to visit the meetings in New England. They also laid their concern before the Yearly Meeting of Ministers, on the 19th of the Seventh month, which united therewith, and furnished certificates of unity. On this journey they visited the meetings on Long Island, as well as New England, and their labour of love, which it took about three months to perform, was very acceptable to Friends where they travelled. On returning home, John felt constrained almost immediately to spread before his friends a prospect of extensive labour within the limits of his own Yearly Meeting. With their unity, he soon set forth, attended meetings in and about Philadelphia, and then passing into West Jersey, went up to Burlington. From thence, he visited the meetings in Bucks, and so coming into Philadelphia county, he held a meeting at Abington, in which he was taken alarmingly ill. Being carried to the house of a Friend, the extreme pain somewhat abated, and he was favoured to lay pretty quietly. After a time he told those about him, "that he had done the work the Lord had given him to do, and was easy." He desired his love might be given to Friends, and then he soon in great quietness departed, passing as it were into a soft sleep. His death took place, First mo. 19, 1714.

He was much beloved by those who knew him, and but few who ever came into Pennsylvania, left a more affectionate testimony in the hearts of the faithful, to the purity, living virtue, and reaching effects of their ministry than he did.

Can any of the readers of "The Friend" inform me when John Butcher and John Wilsford, two of the first settlers of West N. Jersey, died? John Wilsford was a member of Chesterfield meeting. They were both valuable ministers, and otherwise useful men.

(To be continued.)

For "The Friend."

Please insert the following in the columns of "The Friend," if thought suitable; that it may afford a little strength or encouragement to some in the present trying time in our religious society.

Washington Co., Ohio, 2nd mo., 1855.

A few words of tender counsel and advice to Friends, given forth by Mercy Johnson, two days before she died; and which she desired might be communicated to Friends.

"Dear Friends,—Both old and young, wherever these may come, my love salutes you, dearly desiring the welfare of your bodies and souls. I have in my measure laboured amongst Friends in many places, whilst with them, for the prosperity of truth, and good of souls; and now that I shall be taken away, I find a great concern upon me, to leave as advice and tender caution to all, that you may keep near to truth, and love it, seeking the honour of it above all things. Dear Friends, love one another, and as you have an eye to truth, and seek the honour of it before your own, then will your love flow one unto another, and whispering with backbiting and tale-bearing will be removed from you: for I have seen the ill effects of such things many times; and dear Friends, in your meetings for business upon Truth's account, have your eye to the Lord, and wait to have your

minds stayed upon him, respecting one another above yourselves, for Truth's sake, and wait upon the Lord to work in you, and for you, and to open your mouths to speak a word in season.

"Reason not, but give up freely to act and speak for Truth, whether you be young or old, not in high mindedness, but in true fear before the Lord. For I must tell you, the humble and those that abase themselves the Lord will exalt; but the highminded, and those of an exalted spirit the Lord will abase and humble, and make them know he is God, and will be bowed to by every high spirit.

"Therefore, dear Friends, let the truth have the reign in you, to govern your words, though never so few, that they may be rightly seasoned with grace, that so you may edify one another. Suffer no unruly spirit to appear in your meetings, neither in old nor young, but stand in the counsel of God, and he will give you a word in due season to stop the mouths of all gainsayers of the blessed truth, and of the work you are called to do in your day. Thus, the Lord will bless and more and more prosper his work in you, to your comfort and his eternal praise, to whom all is due. I can tell you, it will be well with you to be faithful to the Lord when you come to a dying bed, as I now am.

"I feel peace and true consolation with the Lord, and my love herein dearly salutes you, and bid you all farewell, who am your dear and tender sister."

Southern Soup House.

This institution has now about one thousand families on its register, to be fed daily with soup, and three days in the week with bread. To many of the recipients, it is probably the only food they obtain during the week. The demands upon the Society are daily increasing, and though the expenditure is large, and the funds on hand inadequate to meet it, yet the managers deem it their duty to continue the supply, relying on the kind aid of those benevolent citizens who feel the obligation to lend a helping hand at a time of such extensive suffering.

Contributions in produce or money will be gratefully received by the Treasurer, Jeremiah Hacker, No. 144 South Fourth street; or Thomas Evans, No. 180 Arch street.

Selected for "The Friend.

From an ancient book, the title page and conclusion of which are both missing. The authoress was a woman, a member of the Society of Friends.

"I have sometimes thought it would be a singular advantage to the professors of Christianity of all denominations, seriously to examine and inquire of our own hearts, what our religion has done for us; or what benefits have accrued to us from it? Whether the grace we have received has assisted us to resist the temptations of our soul's adversary? and whether we are nearer salvation than when we first believed? For being invested with a power to do a thing, will no longer be of use to us, than as we apply it. The grace and good Spirit, though it instruct us to deny all ungodliness, is of no further benefit to us, but as we obey its teachings, and follow its leadings: therefore I am of opinion it would not hurt the best Christians nor any others, sometimes to ask themselves the following questions. Have I, who assume the name of a Christian, departed from all iniquity? Are all old things done away, (for he that is in Christ is a new creature,) and do I experience new thoughts, new desires, new conversation, a total change, all things become regular, uniform and consistent with my high and holy calling? Is Christ the best beloved of my soul? Does my heart pant and my eyes fail for his salvation? Is my soul athirst for God? Do I long for his presence more than for hidden treasures? Do I love God above all other considerations, and my neighbour as myself? Am I careful lest I offend him? Do I live in constant observance of his laws? Do I live in his fear? Am I circumspect in all my words, that I sin not with my tongue? Does my conversation become the gospel of Christ? And am I careful to adorn his doctrines, which I profess to believe, and be guided by?

"If, upon a candid examination, this be the happy state of the professors of Christianity, my soul can rejoice with them, let them call themselves by what denomination or sect they may: for happy is the people who are in such a case! Yea, blessed are they whose portion is the God of Jacob! On the contrary, if we are only professing, and not in the possession of godliness,—if we have a form, but are insensible of the power to work a change in our hearts, our religion, as yet, has done nothing for us. Therefore I entreat all who are in this case, to consider it as an unfit state for heaven; for if we have not witnessed a being created anew in Christ Jesus, born of the incorruptible seed or word of God; known a death unto sin, and a new birth unto righteousness, born again of the Spirit, our Lord positively says, we cannot enter into the kingdom of God.

"Let the time past then suffice, and for the future redouble your diligence, and no longer hold the Truth in unrighteousness; walk circumspectly as wise, redeeming the time. The kingdom of God does not stand in form, but in power, neither is religion to be taken up by fits and starts, as it suits our leisure and convenience, nor by imitation, but conviction. We must cleave to God with full purpose of heart; what our hand finds necessary to do, in this great business of salvation, we must do with all our might; we must not indolently seek, but (by God's assistance) ardently strive to enter the kingdom of God."

Ohio, First mo. 24th, 1855.

From "The Leisure Hour."

Drifts of the Ocean.

Many a vessel has foundered far out at sea, or perished by fire, been crushed by icebergs, or suffered wreck on an uninhabited, iron-bound coast; and while none of the crew have survived to tell the tale of disaster, no fragment has been met with which could be recognised as belonging to the ill-fated craft. Thus, a few years ago, the "President" steamer vanished from the bosom of the Atlantic, and was surrendered to a mysterious doom, for no certain memorial of the stately ship was ever discovered; an event which made an intensely painful impression upon the public mind in the United States and Great Britain. But more generally, in such cases, the shattered timbers of vessels, articles of their furniture, or parts of the cargo, drift upon the surface of the deep, and are cast upon some distant beach, the sensible evidences that calamity has occurred, though they may not unfold its precise nature. In the recent instance of the burning of the "Amazon," charred remnants of the ship reached our southern coast, and would have revealed the fact of conflagration, had none of the passengers escaped to relate the dismal catastrophe. These remarks have been elicited by a statement, which has lately gone the round of the public journals, that several of what are called "glass balls" have been picked up by the natives at the mouth of the Obi, a river of western Siberia, which falls into the Arctic ocean. Information to this effect has been received at the foreign office from the Russian government. The articles in question are probably glass bottles. They may have been cast ashore, after a long drift, from a high northern latitude, for there is a strong and well-defined current in the north-polar basin, which would bring them from that quarter to the site where they have been found. In the absence of definite description, it is a supposable case, that they may be hermetically sealed bottles, intentionally detached from the missing expedition of Sir John Franklin, containing tidings of it. A request has therefore been despatched to the authorities of St. Petersburgh, to procure some of them, for the purpose of being forwarded to England. However uncertain the result of inquiry, there appears to be no doubt respecting the fact reported; and although the hope of hearing, by this channel, of our long-lost countrymen is certainly of the slightest kind, it would imply great negligence to omit sifting thoroughly every circumstance having the remotest aspect of connection with their fate. But, in all probability, the articles are either the memorials of some ordinary shipwreck, or have been set afloat by mariners in the course of regular navigation—a common and very useful practice, tending to illustrate the direction and power of the oceanic currents.*

These currents are literally rivers of sea-water traversing the ocean. They are of unequal strength and magnitude, like the land streams; as varying, too, in their direction, generally permanent, and of enormous volume. They arise from various causes, as prevailing winds, differences of temperature between different parts of the ocean, variations of atmospheric pressure, the meeting of the polar ice, and other minor circumstances. But we shall deal with effects, rather than with causes, in this paper.

The arctic or cold current, above referred to, is so called from the basin in which it originates, and the low temperature of its waters. It sweeps along the north coast of Asia towards that of Europe, descends from the polar ocean in a south-westerly direction, visits the eastern shores of Greenland, passes from thence to those of Labrador, and terminates its course near the Great Bank of Newfoundland, where it mingles with a current flowing in an opposite direction, or the gulf-stream. Extensive fields of ice, and magnificent bergs, annually sail upon its bosom, and are transferred from frigid to temperate latitudes, to perish suddenly by collision, in hours of storm, or gradually dissolve in the warmer waters. But, what is of more interest and importance, a vast quantity of timber is among its drifts, which proves a signal benefaction to the inhabitants of the treeless shores upon which it is eventually cast. The great Siberian rivers flow through immense pine forests. Upon the banks giving way, undermined by the action of floods, on the breaking up of winter, and at other seasons, detached trees are carried down in great numbers to the ocean, and transported by it to far distant sites. The drift-wood of the Lena, Yenisei and Obi, after a river journey of, perhaps, a thousand miles, thus finds its way to the desolate coasts of Nova Zembla, Spitzbergen, and Iceland. In 1596-7, during the memorable wintering of the Hollanders at the furthest extremity of the former island, within 14° of the north pole, the castaways had reason to appreciate this provision of nature; and the journalist of the forlorn but heroic band has gratefully recorded it. A section of the journal has this marginal summary, "How

* Since this was written, it has been positively ascertained that the articles in question have no connection with Franklin's expedition.

God, in our extremest need, when we were forced to live all the winter upon the land, sent us wood to make us a house, and to serve us to burn in the cold winter." Having decided upon the erection of a house or shed, to protect themselves from the rigour of the climate and the white bears, the mariners found, to their dismay, that "there grew no trees nor any other thing in that country to build it withal." But, it is related, "at last we found an unexpected comfort in our need, which was certain trees, roots and all, which had been driven upon the shore, either from Tartary, Muscovy, or elsewhere; wherewith, as if God had purposely sent them unto us, we were much comforted, being in good hope that God would show us some further favour; for that wood served us not only to build our house, but also to burn and serve us all the winter long; otherwise, without all doubt, we had died there miserably with extreme cold." The same welcome relief was afforded to the four Russian sailors who were cast away upon one of the Spitzbergen islands in the year 1743, and survived, with one exception, through upwards of six years in the dreary solitude. There was no species of tree or even shrub growing around them, but only mosses, and a few creeping plants. Without fire, the intense cold of winter must inevitably have proved fatal; but without wood, how was fire to be produced or supported? The sea supplied, in this particular, the defects of the land. While wandering along its beach, they met with whole trees with their roots, the produce of some more hospitable, but to them unknown climate, which had been conveyed thither by the waves, and driven ashore. To the present day, the Icelanders, who have no natural forests, receive from the ocean an annual supply of useful timber by the same route, which serves for fuel and building materials.

(To be concluded.)

For "The Friend."

The present is a time, in which the truly exercised and concerned members of our religious society are required to dig deep and endeavour to be found abiding on that foundation which is the rock of ages, even Christ Jesus, our blessed Lord and Saviour, waiting his direction in all their actions and movements in the church militant; and as he has promised, I most assuredly believe that such will experience his promises to be yea and amen in all cases of necessity: and when difference of opinion in regard to the exercise of our salutary discipline, doth arise in any of our meetings for business, we will be enabled so to express ourselves in regard thereto, that there will not be a stumbling block placed in the way of the weak; but it will afford an opportunity for the exercise of patience and condescension towards each other, thereby evincing a real concern for the cause of truth, and a willingness to abide in the everlasting patience. By so doing we will be preserved from coming to hasty judgments, which, on after consideration we may find to have been premature, and sometimes erroneous. So that it atresh arises with me, to desire all that speak to the business that may come before us, in our respective meetings, to settle down in the stillness that truth leads into, and there see whether that which is on the mind is required at our hands, and if on examination in the Light, it still remain with us, then let it be given to the meeting, and there let it rest, without too much anxiety as to whether it shall be received or rejected. As the present is a time of peculiar trial as regards offenders in our religious society, it is very necessary that we act in that wisdom which is able to direct all who seek unto it aright, in regard to such as have become offenders to our discipline. Also in reference to the settlement of some of our meetings, there is a danger of too much haste in concluding on the disposition of some that have been stripped by the late mournful secession from our Yearly Meeting; but let us remember that it is written, "he that believeth shall not make haste," and "judgment also will I lay to the line, and righteousness to the plummet;" therefore let us not be hasty in our minds or in our actions towards those who have gone out from among us, but abiding in the patience until we are more of one mind in regard to these things, and I believe we will be enabled to realize, that help is "laid on one that is mighty," and as we individually seek unto Him, we shall be instructed and assisted in doing that which is required at our hands.

Harrison Co., Ohio, Second mo., 1855.

THE POOR.—Friends in the Country.

During this period of severe and extensive suffering, when so many thousands of our fellow citizens are enduring the miseries of want and deprivation, it has been peculiarly gratifying to find that the sympathies of our friends in the country have been awakened, and that several have contributed of their substance to relieve the throngs of needy who abound in this great city. Two meetings in Delaware County have entered into subscriptions, and each collected among themselves, and from their neighbours, not of our Society, a handsome contribution in aid of the poor. In some other places individuals have forwarded sums of money to the city, to be appropriated to the funds of some of the Soup Houses. The generous liberality thus displayed is not only of essential service in procuring the necessaries of life for those whose means are insufficient to command them, but it is cheering to the friends who are labouring to mitigate the sufferings of their fellow creatures. Two of the meetings of Friends in this city have raised funds for this benevolent object, and the others are likely to do the same. Besides contributing to this, friends have also done their portion towards raising the public fund, which has reached nearly $23,000.

But with all that has been done, there is still a large scope for the exercise of a liberal benevolence. It is stated, on the authority of some who have made considerable examination, that not less than 17,000 persons have been thrown out of employment during the autumn and winter. The daily applications at our doors for relief, from those who have not been wont to seek for charitable aid, are a touching proof of the extent and keenness of the suffering.

The past year has been one of great prosperity to the agricultural interest; and we would suggest to Friends in the country, whose tables are daily supplied with plenty, whether it is not a Christian duty, in a time of such exigency as the present, to lend a helping hand in procuring food for those whose means are inadequate to obtain it for themselves. Many females and little children are suffering greatly for victuals and fuel, and if each more favoured one, would give what they can readily, and without inconvenience spare, the aggregate would form a fund sufficient to relieve the wants of many worthy persons. The Soup Houses are particularly useful at the present time, though we do not wish to limit the funds to this channel.

"In the morning say to thyself, what shall I do this day, which God has given me? How shall I employ it to his glory? In the evening consider within thyself, and recollect, what have I done this day, and how have I spent it."

Sponge Fishing.—Sponge fishing is said to have become a very profitable business in the neighbourhood of Key West. One hundred thousand pounds are reported to have been gathered during the last year, and the sales amounted to twenty-five thousand dollars. The article is mostly procured by natives of the Bahamas. This is a new branch of business for Key West, and was formerly confined to the Mediterranean. We believe, however, that the finer quality of sponge is not found on our coasts, although the coarse description is abundant all about the coast of Florida, and the Bahama Banks.

Stephen Crisp, in a postscript to an epistle, addressed to his "dear *friends and brethren*," writes thus:—"Oh! dear friends, consider these are perilous times, and it is needful for every one to watch in that same eternal light, to which you were first turned, that by its righteous judgment ye may be preserved from everything in yourselves that appears contrary to that precious life of which you have tasted. And when you have so done, take heed that the enemy do not do that by an instrument, *(which, through your watchfulness in the light,)* he could not do without. And all beware of that affected tenderness that cries out, be tender to all, and pray for all, and mind the good in all, and love all, and judge none, but leave judgment to God, &c. I say, heed not the plausible words of that spirit, which, being guilty, to save its own head from a stroke, would bereave you of your judgment which God hath given you, and is truly his judgment, and is to be administered in his wisdom and power, for the cleansing and *keeping* clean of his sanctuary: for such as have no judgment in their goings, are they that know not the true way of peace, but make them crooked paths, 'he that goeth in them shall not know peace.'"

If God single me out for special great suffering, I have no reason to judge amiss of it: for such is the state of things, that some individuals must of necessity suffer for the good of the people. And why not I, as well as another? God is my owner, and he may do with me as with any other, even as he pleaseth; and he is my Father, he will use me well, and make me sufficient amends for all my sufferings; and I shall be no loser, but an exceeding gainer thereby in the end.

A True Saying.—According to Lacon, men will wrangle for religion; write for it; fight for it; die for it; anything but—*live for it.*

THE FRIEND.

SECOND MONTH 17, 1855.

Fifteen dollars, received from a Friend, through Chatham Post-office, has been paid to the Treasurer of the Southern Soup Society. The contributions of our distant friends are very acceptable.

Second mo. 12, 1855.

SEWEL'S HISTORY.

"The history of the rise, increase and progress of the Christian people called Quakers, intermixed with several remarkable occurrences, by William Sewel. Written originally in Low Dutch, and translated by himself into English. To which is prefixed a brief memoir of the author."

The above work has been stereotyped, and is now published under the authority of a committee of the Philadelphia Meeting for Sufferings. The whole has been carefully examined, and the typo-

graphical errors corrected. The twelve books, into which it was originally arranged by the author, have been divided into chapters, with headings of their respective contents; and the index has been much enlarged.

There is no history of the early days of our religious Society that gives so full or so graphic descriptions of the trials and sufferings through which its faithful members passed, as the above; and we think no one can peruse its pages with attention, without being struck with the extraordinary constancy and patience with which those sufferings were borne; and convinced that the Divine arm was stretched forth for the support and defence of the despised and persecuted people who gave themselves up to maintain the Truth as it is in Jesus, in the midst of that high professing but carnally minded generation. Our younger members ought to make themselves more thoroughly acquainted with the history of the rise and progress of the religious Society to which they belong, and draw from the accounts recorded therein, lessons of instruction in the value of those testimonies for which so many of our predecessors paid the price of liberty, and of life itself, but which in this day of ease and self-esteem are considered by many of little or no worth.

As this work can now be procured at a very small cost, we hope it may be widely disseminated, and we shall be glad to find that it takes a place on the tables, or in the libraries of all the members of the Society wherever situated.

There are two volumes, bound together or separate, to suit the wishes of the purchaser. They contain 920 pages, octavo,—bound together in sheep, the price is $1.25. A reduction of 10 per cent. will be made to those purchasing by the dozen, or to sell again.

The work is for sale at Friends' book store, No. 84 Arch street.

SUMMARY OF EVENTS.

EUROPE.—News from England to the 27th ult.—*The War.*—The dates from Sebastopol are to the 14th. The relative position of the parties was unchanged, except that the allied forces, especially the English, were gradually sinking into a more deplorable condition. On the 7th, the sick list numbered 14,332. Great numbers of the unhappy victims of this foolish and wicked war, were perishing from cold and exposure. The British army was in a wretched state of mismanagement. The French had presented 10,000 coats to the English soldiers, and many of them were dressed in the French uniform. The Russians report numerous desertions from the allies to the Russian ranks. The sickness was increasing, and the London Times states that if the present rate of mortality should continue, there will be no British army left by the middle of the Third month. The Russian losses in the Crimea, since the battle of Alma, are officially stated at 26,763, of which 7300 were killed, 13,826 wounded, and 4019 died from disease. The siege operations were suspended. Large bodies of Russian troops were concentrating at Perecop, with a view of attacking Eupatoria. The last of the Turkish convoys left Varna for Balaklava on the 14th ult.

Peace.—The public feeling in England seems tending toward peace. Letters from St. Petersburg to the 18th, are of a pacific character. The peace conference is to be opened about the middle of this month.

ENGLAND.—In Parliament the Government has been severely denounced for its management of the war. Lord John Russel has resigned. The Aberdeen Cabinet will probably be compelled to give place to another Ministry. *Liverpool Market.*—Cotton in moderate demand at from 5*d.* to 5¾*d.* for Mobile and New Orleans. Flour, Ohio, 43*s.* Consols, 91¼. Some heavy failures have occurred at Liverpool and other places. The City of Baltimore, a screw-steamer, for the Liverpool and Philadelphia line, has been launched at Glasgow. The City of Baltimore is the largest vessel ever built on the Clyde.

AUSTRIA.—The recent passage of the Danube by the Russians, has given rise to a demand by Austria for explanations from the Russian Envoy. Orders have been sent to the Austrian commander to prevent the Russians from renewing hostilities on the Danube.

SWITZERLAND.—The enlistment of Swiss goes on slowly for the allies.

CHINA.—The dates from China are to Twelfth mo. 12th. Political affairs in the South were more critical than ever. The Canton authorities have applied for assistance from the American and English Consuls. Trade was completely suspended.
